PROLIFIC POINTERS.—Boston, Oct. 30.—*Editor Forest and Stream:* This may be of interest to pointer breeders, showing how prolific a strain may be: Rhoda out of Belle Randolph by Naso of Kippen whelped 11 (8 dogs) Jan. 18, 1889, not being a year old at that date. Aug. 14 she whelped 12 (8 dogs) by Duke, owned by W. H. Thorn, Salem, N. H. Naso's Belle, winner of several prizes, litter sister to Rhoda, whelped Sept. 4, 1889, 11 (8 dogs) by Reading Kennels' Spot Dash, all being evenly marked and so alike as to make a choice almost impossible.—C. W. HODGKINS.

PHILADELPHIA K. C. FIELD TRIALS—Philadelphia, Nov. 2.—*Editor Forest and Stream:* The field trials of the Philadelphia Kennel Club will be held at Richland, Virginia, commencing Monday, No. 11. The entries are numerous and there is excellent prospect of successful trials.—FRANCIS S. BROWN, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Bonnie Doon—Clipper. McEwen & Gibson's (Byron, Ont.) collie bitch Bonnie Doon (Bonnie Dunkeld—Bonnie Knowe) to Jas. Watson's Clipper (champion Eclipse—Nesta), June 14.

Daylight—Red Gauntlet. McEwen & Gibson's (Byron, Ont.) collie bitch Daylight (Caractacus—Pitch Dark) to their Red Gauntlet (champion Charlemagne—Hasty). June 23.

Ailsa—Red Gauntlet. McEwen & Gibson's (Byron, Ont.) collie bitch Ailsa (champion Scotilla—Bonnie Knowe) to their Red Gauntlet (champion Charlemagne—Hasty) July 3.

Jess—Red Gauntlet. McEwen & Gibson's (Byron, Ont.) collie bitch Jess (Heather—Madge) to their Red Gauntlet (champion Charlemagne—Hasty), Oct. 14.

Madge—Red Gauntlet. McEwen & Gibson's (Byron, Ont.) collie bitch Madge (Highlander—Hasty) to their Red Gauntlet (champion Charlemagne—Hasty), Nov. 2.

Toodles—Myrtle. Geo. W. Dixon's (Worcester, Mass.) pug bitch Toodles (A.K.R. 2147) to Mr. Stack's imported Myrtle, Nov. 2.

Juno—Beaumont. J. B. Blossom's (New York) Gordon setter bitch Juno (Glen I.—Flirt) to Beaumont Kennels' Beaumont (Ronald III.—champion Floss), Oct. 31.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Bonnie Doon. McEwen & Gibson's (Byron, Ont.) collie bitch Bonnie Doon (Bonnie Dunkeld—Bonnie Knowe), June 14, six (four dogs), by Jas. Watson's Clipper (Eclipse—Nesta).

Daylight. McEwen & Gibson's (Byron, Ont.) collie bitch Daylight (Caractacus—Pitch Dark), Aug. 30, five (one dog), by their Red Gauntlet (Charlemagne—Hasty).

Ailsa. McEwen & Gibson's (Byron, Ont.) collie bitch Ailsa (Scotilla—Bonnie Knowe), Sept. 3, six (three dogs), by their Red Gauntlet (Charlemagne—Hasty).

Brunette. Chas. York's (Bangor, Me.) Yorkshire terrier bitch Brunette (Bob—Judy B.), Oct. 25, five (three dogs), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Notes mustbe sent on the Prepared Blanks.**

Portswood Tiger. Brindle bulldog, whelped Oct. 1, 1885, by Paul Clifford out of Hussey, by R. B. Sawyer, Birmingham, Conn., to John H. Mathews, New York.

Lion. Brindle and white bulldog, whelped June 30, 1882, by Gambler out of Nell, by R. B. Sawyer, Birmingham, Conn., to John H. Mathews, New York.

Thespian. Red bull bitch, whelped 1885, by Monarch out of Betsy, by R. B. Sawyer, Birmingham, Conn., to John H. Mathews, New York.

Soudan. White bull bitch, whelped Oct. 4, 1884, by Billy out of Zoo, by R. B. Sawyer, Birmingham, Conn., to John H. Mathews, New York.

Lord Elsmere. Silver fawn pug dog, whelped Sept. 1, 1889, by Joe II. out of East Lake Virgie, by Eberhart Pug Kennels, Cincinnati, O., to Frank Searight, Nashville, Tenn.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

M. C., San Francisco.—A setter dog, six years old, eyes brown before affected; six months ago the eyes began to turn blue, and are nearly all blue but a small rim of brown on the outer edge. The dog can see a very little. The blue is transparent and does not look like a skin grown over the eye. Please if possible give the cause and a remedy. Ans. Opacity of the cornea for some reason. It might be of service to use an eye wash of zinc sulphate 2 grains to the ounce. See an eye doctor.

PHILADELPHIA, Oct. 26.—The regular weekly contest for gold and silver medals of the Gafety Rifle and Pistol Club took place at the club's headquarters, 818 South street, this evening. Mr. F. P. Maher, with his large allowance, was the winner of the gold medal, while Mr. J. Hunsinger, having no competitor, was entitled to the silver medal. The official scores of the members at 20yds., standard American targets (reduced), Wurfflein rifles (plain), open sights, off-hand, 10 shots per score, possible 100, were as follows:

J J Mountjoy	10	7	8	10	9	9	10	9	9	8—89
E Travis	8	6	9	9	10	9	8	9	9	9—86
J M Green	6	10	10	5	9	9	6	9	9	9—82

Special cash prize for October to be awarded the best increase of individual shooting was won by Mr. Jos. M. Green.—SPRINGFIELD.

ST. LOUIS, Mo., Nov. 2.—As the weather grows colder the attendance at the regular weekly shoots of the St. Louis Pistol Club becomes better. From now out a good and steady attendance can be looked for. At the last shoot of the club Bauer proved to be the best man, he defeating Alexander in shooting off the tie. Although the scores were not very good, some of the members did very good shooting, the shooting being much better than it would appear from a glance at the score. Below will be found the score on the standard 20yds. target for pistol practice:

W Bauer	7	8	9	8	10	9	8	10	8	6—83
G W Alexander	7	10	7	9	10	10	7	10	5	8—83
O Neuhaus	8	9	8	6	6	8	10	10	8	9—82
W H Hettel	8	9	6	7	6	10	8	8	10	10—82
M Summerfield	9	7	10	7	9	8	8	7	6	10—81
E C Mohrstadt	8	8	8	9	8	7	7	9	7	8—80
W J Land	7	10	9	8	8	6	8	9	6	9—80
J A Lee	8	6	8	8	9	8	7	7	9	5—75
A E Bengel	6	7	9	5	9	6	6	7	8	8—71
W C Mackwitz	8	6	6	10	5	6	10	5	6	6—68

UNSER FRITZ.

PENNSYLVANIA.—Thanksgiving Day, Nov. 28, promises to be unusually interesting for Philadelphia riflemen, owing to the fact that three special events are announced to take place at Hartranft Rifle Range, as follows:

Three Events—Open to all comers, Thanksgiving Day, Nov. 28, 1889, commencing at 10 A. M., close at 4 P. M., at 200yds. only, sporting and military rifles.

Target No. 1—New standard American target, 7 shots per score, three scores to count for prizes of 40, 30, 20 and 10 per cent. of entrance money, less expenses. Original entry $1, reëntry 50 cents, unlimited; military rifles allowed 4 points on each score.

Target No. 2—Creedmoor target, open for pool shooting only, 12 shots for $1, divided *pro rata* on bullseyes, less expenses; two classes, military and any rifles.

Target No. 3—Elliptical target, open for military rifles only; 7 shots per score, 3 scores to count, for prizes of 40, 30, 20 and 10 per cent. of entrance money, less expenses; $1 original entrance, reentry 50 cents, unlimited.

Rules governing this event will be for Targets No. 1 and 2 as laid down by the National Rifle Association, and for Target No. 3 as laid down by Blunt.

All original entries must be made on or before Tuesday evening, Nov. 26, 1889, at W. Wurfflein's, 208 North Second street, by 6 P. M.; at E. Travis's shooting gallery, 818 South street, up to 11:30 P. M., or to J. J. Mountjoy, 917 Chestnut street, up to 12 P. M., and must be accompanied by the cash for the original entry.

WORCESTER, Mass., Nov. 2.—This week there was a meet at Broad Meadow range, of members of the Worcester Rifle Association. The conditions were not good, and the light was poor, but there was, notwithstanding, some lively shooting. The distance was 200yds., shooting off-hand. The work in detail follows:

With Sporting Rifle.

J S Thomas	9	7	8	10	10	7	8	10	9	8—86
J Jones	9	8	9	5	8	9	9	7	6	9—79

With Military Rifle.

J Earley	4454454544—43	W Smith	5444444333—38
C L Macomber	4544453454—42	C Stone	3333444443—35

GERMAN GUN CLUB.—This flourishing organization has closed its trap season with many of its members off after game afield. The club is in good financial condition, and the membership has been steadily growing until it has become one of the most important organizations of its kind in the city. The officers of the club are: J. Boessnecker, President; F. Pfaender, Vice-President; H. Greitner, Treasurer; J. Schlicht, Secretary, and F. Sauter, Shooting Master. Although the club held only five shoots during the year, the scores made show a very fair average, and the meetings at the traps are always of the most enjoyable kind. The club badge has to be won three times, not necessarily in the same year, before it can be retained, and the owner is not allowed to to win it twice in succession.

The first shoot of the year took place at Dexter Park on March 12 and the medal was won by J. Schlicht with 11 birds out of a possible 12. At the second shoot on May 13 J. Cawein and J. Boessnecker were tied on 9 birds killed, and Cawein, who won the medal, had to kill 7 more before he could out shoot his opponent, who is not only the President, but also a veteran of the club. F. Pfaender won the medal on July 19 with a clean score of 10, and also on Sept. 18, with a score equally as good. The last victory won him the medal for good, Mr. Pfaender having carried off the honors in one of the shoots of the previous year, and the treasurer had to open the club's strong box for the purchase of a new badge. E. Blank was the winner on Oct. 16. Mr. Blank who is also a member of the Northside Gun Club, is a new member, and has participated in only two of the New York German Gun Club's tournaments. At the dinner which the marksmen enjoyed on that day, Shooting Master Sauter announced to his fellow members that the club would disband for the winter, and expressed the hope that the members would be all at their posts again at the first shoot in the new year. He called special attention to the fact that, although the organization had been crippled by the secession of a number of dissatisfied members two years ago, the true sportsman's spirit of those remaining in the fold had enabled it not only to survive the shock, but had lifted it to the pinnacle of its present prosperity. Songs and recitations took up the rest of the evening, and it was a late hour when the members started on their way homeward. The year's averages:

	Total.	Killed.	Aver.		Total.	Killed.	Aver.
*J Schlicht	53	40	.755	F Pfaender	30	29	.967
*P Hassinger	53	39	.736	J Goeritz	30	21	.700
F Sauter	50	36	.720	*F Hoff	33	22	.667
P Garms, Jr.	50	36	.720	Dr Cantrell	30	20	.667

SPRINGFIELD, Nov. 1.—The Smith & Wesson Revolver Club made these scores to-day:

Capt W Goodrich	10	10	10	9	9	8	7	7	6	5	—81
J Smith	6	6	8	9	9	10	10	10	10	10	—88
W Stadden	10	10	10	10	10	9	8	7	5	5	—84
C Clark	7	7	6	6	8	9	10	10	9	7	—79
J Boigs	4	4	0	8	0	9	10	10	9	10	—49
G Hammel	0	5	6	7	6	0	9	8	0	0	—41—421
Capt J Goodrich	10	10	9	7	6	8	6	8	7	6	—77
G C Talbot	10	10	10	10	10	9	9	9	8	7	—92
E Dickinson	10	10	9	7	8	8	6	5	5	5	—73
C C Parkhurst	10	9	9	8	8	7	5	0	0	0	—56
H McDonald	0	4	0	6	7	6	0	9	8	9	—49
A L Smith	10	9	4	4	5	6	5	7	6	4	—60—407

MARION, N. J., Oct. 30.—Good scores were made this afternoon by a majority of the Marion Rifle Club marksmen when they contested in the weekly shooting competition of that organization on the ranges at Marion, N. J. The calm winds aided them materially, and the contest throughout was full of interesting incidents. L. T. Hansen, who is still second man in the event, but will shortly be in the lead if he keeps up his good work, is now only 18 points behind Rebhan, who is at present high man. At the beginning of this month Rebhan had a lead of 172 points over Hansen. Following is the score of the leading marksmen at yesterday's shoot: Henry Hoersch 203, William Weber 198, Christian Bauchle 193, George C. Varick 193, John Speicher 189, L. P. Hansen 184, John Rebhan 173, Thomas Stiff 170, and William Sutton 165. The contest occurred on the 200yds. range.

BICYCLE SHOTS.—There will be a shooting tournament on the grounds of the Queens Bicycle Club, at Queens, Long Island, during the months of November, December, January, February and March. The tournament will be open to all bona fide members of bicycle clubs under the following conditions: Teams of 3 men each, 3 shots per man, off-hand, 115yds. range, at a 100yds. Creedmoor target. A handsome trophy will be awarded the team winning the contest, and each member of the winning team will receive a handsome gold medal of appropriate design. In addition the competitor making the highest score will receive a special gold medal.

PARIS AWARDS.—In class 38 devoted to Arms, the catalogue of awards at the Paris Exposition shows as follows: Grand Prix—Winchester Repeating Arms Co., New Haven, Conn. Gold Medals—Colt's Patent Fire Arms Manufacturing Co., Hartford Conn.; Smith & Wesson, Springfield, Mass.; Union Metallic Cartridge Co., Bridgeport, Conn. Bronze Medal—Standard Target Co., Cleveland O. Honorable Mention—Bailey, Farrel & Co., Shot Co., Pittsburgh Pa.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Nov. 13.—Tolley's Trap Shooting Contest, Catskill, N. Y. Geo F. Tolley, Manager.

HARRISBURG TOURNAMENT.

THE first annual tournament of the West End Social Gun Club at Harrisburg, Pa., was a success both socially and financially. A number of visiting shooters were in attendance, and expressed themselves as well pleased with all arrangements. The base ball grounds at the western end of the city, and within easy reach by cable cars, was the scene of action, and there the three days of sport were pleasantly passed. Two sets of five traps were in operation for inanimate targets, one set for Keystones and the other for Standards, and American Shooting Association rules governed. The same rules were strictly adhered to in live bird shooting, the boundary being 80yds. from the score. Five King ground traps were used. The weather was charming throughout the shoot, and as a result of it much interest has been awakened among some who of late have taken no part in trap-shooting matters. The scores follow in full; all ties were divided except where otherwise stated.

First Day.—Event No. 1, 10 single targets, entrance $2.25; three moneys:

Breesford	1101011000—5	Shearer	0110111101—7

LINCOLN, Neb.—Arrangements have been made by the Lincoln Gun Club for a grand tournament to be held on the State Fair grounds, beginning on Nov. 28 and continuing through two days. It will be styled the first annual tournament of the Lincoln Gun Club, and the contests will be open to all comers. Assurances of a large attendance of marksmen from abroad have been received, and the club confidently expect the event to prove the most numerously attended meeting of the kind ever held in the State. An entrance fee of $10 will entitle one to shoot in all prize matches, for which he will receive a card not transferable. No combinations will be allowed. Prize and sweepstake matches can be shot at the same time. Private or other matches may be arranged for on the grounds. All matches will be governed by the American Shooting Association rules. The committee in charge of arrangements comprises Messrs. G. A. Bush, who is captain, G. C. St. John and H. Clarke, secretary. They have compiled the following programme. First event, 15 single bluerocks, shot by members of Lincoln Gun Club only, 3 traps, the winner to receive club badge and a year's subscription to FOREST AND STREAM. Second event, prize match, 7 single live birds, 18yds. rise, 5 traps, use of one barrel. Third event, prize match, 10 single bluerocks, 18yds. rise, 5 traps. Fourth event, prize match, 3 pairs live birds and 3 singles. Fifth event, prize match, 5 pair bluerocks and 5 singles. Sixth event, prize match, 10 single live birds, 18yds. 5 traps. Sweepstakes: First match, 10 single bluerocks, 5 traps, entrance $1. Second match, 7 live birds, 30yds., 5 traps, entrance $5. Third match, 15 single bluerocks, 5 traps, entrance $2.50. Fourth match, 9 live birds, 30yds., entrance $7. Fifth match, 5 pairs bluerocks and 5 singles, entrance $3. Sixth match, 15 single live birds, 30yds. entrance $12.50. Shooting will begin at 9 A. M. sharp on Nov. 28. All moneys divided 50, 40, 30 and 20 per cent. All birds included in entrance money. Ties on all matches will be left to the contestants to decide. Shooting will be done in squads of 5. After the first shot is fired in any sweepstake match the same is closed to entries.

NEW YORK SUBURBAN GROUNDS.

NEW YORK, Nov. 2.—*Editor Forest and Stream:* The critical moment in the life of the New York Suburban Shooting Grounds Association came to-day; result—the association is dead, but the grounds still live—too expensive buildings absorbed all the cash put into the concern, leaving some debts unpaid, the creditors became importunate, put a lien on the building, and the sheriff sold the same to the highest bidder this morning.

The purchasers are strong parties who are able to carry out the fundamental ideas advanced when the grounds were opened over one year ago. They are about as follows:

1st. A paid superintendent on the grounds all the time.

2d. Grounds open every day (except Sunday) to the public for practice or sweepstake shooting.

3d. A testing apparatus for ascertaining the pattern and penetration of shotguns.

4th. Facilities for live bird and inanimate target shooting.

5th. The encouragement of such shooting by providing convenient grounds where marksmen from different clubs may gather, and by giving tournaments from time to time on these grounds.

There ought not to be any antagonism between the clubs located in the vicinity of New York and the management of these grounds; they should work in harmony for the development of the noble sport of wing-shooting. Every member of a club knows what it is to carry a gun and a load of cartridges to the club grounds, only to find no one else there; or if one or two shooters turn up, there are no traps set up and no trappers to work them when they are set up. On the Claremont grounds the traps are always in readiness, and an employee on hand whose business it is to take care of them and run them.

Again, suppose a New York man should buy a gun. Where can he go to test its shooting qualities before taking his new and untried weapon into the field? The writer knows of no place outside of Claremont. The owner would most likely be shut up to the plan of a physician of my acquaintance. He gets his gun out of its case once or twice each week and squints along the barrels at objects around the room. Better than no way, but not much practical use.

Now that the future of these grounds is assured, let the trap-shooters of the vicinity rally and make them a success. Shooting next Saturday, commencing at 2 o'clock.

The shooting to-day was fair, considering the rain and darkness. Below are the scores; ties divided unless otherwise reported:

Sweep No. 1, 10 blue rocks:

Miller	0111111011—8	Simpson	0010011011—5
Johnson	1101111111—9	Nixon	0101011011—6
Hathaway	0001111101—6	Tatham	1011011011—7

No. 2, same:

Miller	1011111011—8	Simpson	0011011111—7
Johnson	1111011010—7	Nixon	0101110001—5
Tatham	1101111111—9	Hathaway	1111111101—9

No. 3, same:

Miller	1111011111—9	Simpson	1101111111—9
Johnson	1111001110—7	Nixon	0110001011—5
Hathaway	1100011011—6	Tatham	1010011110—6

Miller first, Hathaway third on shoot-off.

No. 4, same:

Miller	0111101111—8	Simpson	1111010110—7
Johnson	1111011010—7	Nixon	1100100010—4
Hathaway	1111011110—8	Tatham	0000001101—3

No. 5, same: Miller 10, Johnson 7, Hathaway 8, Simpson 6, Nixon 3, Tatham 7.

Sweep 5, same: Miller 9, Johnson 5, Hathaway 7, Simpson 6, Nixon 5, Tatham 3, Lindsley 8.

No. 7, same: Miller 10, Johnson 8, Hathaway 8, Simpson 5, Nixon 6, Tatham 8 Lindsley 7.

No. 8, same: Miller 8, Johnson 7, Hathaway 9, Simpson 6, Nixon 4, Tatham 8, Lindsley 6.

Sweep 9, same: Miller 9, Johnson 9, Hathaway 8, Lindsley 6, Nixon 7, Simpson 4, Tatham 7.

Sweep 10, 25 bluerocks, 50c. entry:

Miller	1111111111111111111111111—25
Johnson	1101111111111011111011—22
Hathaway	0011101010111111011110111—18
Lindsley	1111010010011100111100110—15
Nixon	1001011011000110110101101—14
Simpson	0110111011110000111011110—16
Tatham	0101111101011011100100111—16

In the shoot above Johnson, Hathaway, Lindsley and Tatham scores count for Lefever trophy.

TRAP SHOTS IN A PALACE CAR.

EVER since the inception of the American Shooting Association, its president, Chas. W. Dimick, of Boston, has had in view a grand scheme for furthering the interests of trap-shooting, increasing the number of shooters and thereby swelling the volume of trade in guns, ammunition, targets, etc., etc. This plan was to give exhibitions of shooting by teams of men representing the East and the West, in the principal cities of the South and West. It was his idea to have the Association back this trip and its members derive any benefits accruing therefrom. The Association, however, did not take kindly to the idea, the cost rather deterred them from undertaking it, so Mr. Dimick decided to make the trip himself, or rather the company he represents, the United States Cartridge Co., which will stand all expenses. The plan provides that the shooters shall go as guests of this company. All arrangements have been made with the railroad companies to haul the private car, in which all will travel, sleep and be fed. Every convenience, including a steward, cook, waiter and general utility man, has been provided to attend to the wants of the travelers. The personnel of the teams is as follows: The East will be represented by H. McMurchy, of Syracuse, N. Y.; H. B. Whitney, of Phelps, N. Y.; W. H. Wolstencroft, of Philadelphia, Pa.; O. R. Dickey and Wm. E. Perry, of Boston, Mass. The Western team has for its members C. W. Budd, of Des Moines, Iowa; Rolla Heikes, of Dayton, Ohio; Jas. R. Stice, of Jacksonville, Ill., and either Frank Parmelee, of Omaha, Neb., or R. E. Sheldon, of Cleveland, Ohio. S. A. Tucker, of Davenport, Iowa, will go along as an extra man. The proposed route is as follows: Starting as Cincinnati, Ohio, about Jan. 14, the following cities will be visited in the order named: Louisville, Ky., St. Louis, Mo.; Memphis, Tenn., New Orleans, La.; Houston, Dallas, Austin, San Antonio and El Paso, Texas; Los Angeles, San Francisco, Stockton and Sacramento, Cal.; Portland, Ore.; Tacoma and Seattle, Wash.; Ogden and Salt Lake City, Utah; Leadville and Denver, Col.; Kansas City, Mo.; Omaha, Neb.; Des Moines, Iowa; St. Paul and Minneapolis, Minn.; Milwaukee, Wis.; Chicago, Ill.; Detroit, Mich.; Toledo and Cleveland, Ohio; Pittsburgh, Pa.; Buffalo, Syracuse, Albany and New York city and Boston, Mass. In each city a match will be shot between the teams at 200 targetss a side, 20 singles and 5 pairs per man, thrown from 3 screened traps at unknown angles. In all probability dealers in sportsmen's goods in the various cities will offer handsome prizes for the high scores made in their cities or for the best average on the trip. The scheme is a liberal and enterprising one, and the result will be to make the wheels go round the Hub livelier than ever.

BROOKLYN, Oct. 30.—The Glenmore Rod and Gun Club held a very successful shoot at the Dexter Park grounds this afternoon. The weather was favorable and the scores made were very good. The winner of the Midas badge, T. T. Edgerton, Jr., had to kill 15 birds to defeat his competitors. Mr. Edgerton shot at 29yds. and won in class A with a clean score; J. Oaks, 26yds., won the class B prize, with 6 out of 7, and H. Max, 21yds., carried off the honors of class C. The summary follows: Club shoot—Seven birds each, Long Island rules. Class A, 27 to 30yds. rise; class B, 23 to 26yds.; class C, 19 to 22yds. C. Helgans, 29yds., 7; W. Bennett, 29yds., 7; T. T. Edgerton, Jr., 29yds., 7; W. Selover, 29yds., 6; P. Suter, 29yds., 6; J. Oakes, 26yds., 6; A. Powell, 29yds., 5; C. McGee, 26yds., 3; W. Linnington, 24yds., 5; J. Schlichtner, 25yds., 4; H. Max, 21yds., 2. Ties for medal, three birds each, then miss and out:

Helgans	111 11110—7	Edgerton	111 11111—8
Bennett	111 0 —3	Levens	0

NEWARK, N. J.—A big team match will take place at Erb's on the 12th instant, between Frank Class, of Pine Brook, and Phil. Daly, Jr., of Long Branch, on one side, and J. Frank Kleinz and Richard S. Irwin, of Philadelphia on the other. The match will be for $200 a side, Hurlingham rules, at 50 live birds each man. Shooting will begin at 1 P. M. The stakeholder is Ed. Updegrove, of Trenton, president of the Mercer Gun Club, who holds a $50 forfeit from either team, the balance of the stake to be put up before the shoot begins. The birds are to be the hardest flyers that can be selected.

FALL RIVER, Oct. 31.—An exciting clay-pigeon shoot took place here to-day for $250 a side, between George W. Russell, of Worcester, and John A. Congdon. It resulted in a victory for Russell. Each had 250 birds. Russell killed 173 and Congdon 172.

DEXTER PARK.—There will be trap-shooting at Miller's Dexter Park, Jamaica, Long Island, every Saturday until further notice. Reached by East New York cars.

WALNUT HILL, Oct. 30.—The fortnightly shotgun meeting of the Massachusetts Rifle Association was held to-day under the best possible conditions of wind and weather. In the gold coin match the shooting was very strong, Wheeler leading at the finish by only one bird. The work done in the match for the Standard Target Company's medal was also very creditable. Gold coin match, 15 clay birds and 15 standard targets; Keystone system of squad firing:

	Clays.	Standards.
Wheeler	111111111111011—14	111111111111111—15—29

Nelson, clays 8, standards —12. Watson, clays 8, standards 1—9.

Standard Target Company's medal match, 20 targets, handicap:

Stanton	20	Chase	17
Wheeler	20	Swift	17
Black	19	Gale	16
Nichols	19	Nelson	15

POTSDAM, N. Y., Nov. 1.—Potsdam Gun Club match against 6 kingbirds, 3 traps, 18yds., National rules.

First event:

Holmes	110110—4	Leete	100111—4
Heath	111011—5	Watkins	110116—4
Witters	110111—5	Lewis	011100—3
Weed	101111—5		

Second event: Heath 2, Witters 1, Watkins 2, total 5, against Holmes 3, Leete 3, Lewis 1, total 7.

Third event: Holmes 2, Leete 3, Lewis 3, total 5, against Heath 2, Witters 2, Watkins 1, total 5.

Yachting.

CLASSIFICATION BY CORRECTED LENGTH.

THOUGH the time has finally come when yachtsmen must summon sufficient resolution to form opinions on the measurement question and to stand by them, and when the clubs must face the responsibility of making a decision of some sort, it is evident that the subject has not received that careful study which its importance demands, and that a large number are unwilling or unprepared to force the issue. In fact, there are not a few who are content to let the matter go by default, with the plea that does not even amount to the dignity of an argument, that if Minerva can beat the "brutes," the present rules are good enough and there is no necessity for any change.

The weakest point of this very weak excuse for inaction lies in the looseness of the statement that the present rules are good enough; which is as far as any advocates of such a course have gone. The races of the year have been sailed under many rules; that of the N. Y. Y. C. with its light tax on sail, that of the Seawanhaka and Eastern Y. C. with a heavier tax on sail and with two different tables of allowances, the length rules of the Larchmont Y. C., and others. As these rules are each radically different, it follows that some must be good and others bad, and the mere general statement that all are good enough is too superficial and flippant to be worthy of serious consideration.

The tests of the length and sail area rules, which have been in progress since 1883, have proved by no means satisfactory or complete, chiefly because the principal rule, the one which exerted the greatest influence on building, included sail to so slight a degree as to leave it practically unlimited. At the same time, there is conclusive proof in the progress of yachting during the last half dozen years that the principle of combining length and sail in a rule is more nearly correct than any method based on length alone, on cubic contents, displacement, tonnage or the three dimensions; and that for a long time, in all probability, all advance in measurement will be in the direction of improvements in the methods of combining length and sail area in a rule.

As to the question whether the present rules *are* good enough; even if we take the rule which is heaviest on sail, that in use by the Seawanhaka and Eastern, as well as the Lake Y. R. A., together with a number of smaller clubs, the first striking fact is that the increase in size of sail plans is general throughout the fleet. In all classes, from the little Kathleen up to the great Constellation, the sail spread has increased with each successive season, until no one can say where the final limit will be. The idea that this general movement of American yachting, that has gone on for years undisturbed, is to be stopped by the performance of one little yacht, is simply absurd. Judging from past history, if no change be made, it is very likely that next season will see an assortment of alleged Minervas of all sizes afloat in American waters; that Minerva's proportions and leading features will be copied more or less perfectly by designers, both amateur and professional, with a result easy to predict; that they will fail to equal Minerva; in which case the craze for modern dimensions will die out after one season, to be followed by a further development of the "brutes" a year later. This is but a rough prediction, but its fulfilment is by no means improbable under existing conditions, and should events shape themselves in this way, the great benefit which must accrue from the influence of moderate ideas will be entirely lost, and the result will be the pushing of the present extremes of lead and canvas to still greater limits.

One rather specious plea has been put forward to support this policy of inaction; the fact is cited that in all classes the larger rigged and more heavily powered boats have been beaten by the less extreme craft; Grayling beats Sea Fox, Titania beats Katrina, and Pappoose, of 36.5ft., makes a good showing with the newer and larger forties.

This is all very true, and at first sight would seem to be conclusive, but two very important points are kept carefully in the background. In the first place, every yacht of moderate size and sails which has won has been in the charge of a man confessedly at the head of his class as a racing skipper. Capt. Terry in Grayling, Capt. Haff in Titania, Capt. Barr in Clara, Capt. Watson in Pappoose, and Mr. Fowle in Saracen, rank among the best sailor men in the fleet. No one who has seen Sea Fox and Grayling together from the first race in New York Bay in 1888 to the run from Vineyard Haven to New Bedford this year, can doubt that Sea Fox is the faster boat or that Grayling has held her place so long by sheer handling. The superior generalship of Capt. Haff in the actual work of racing, as well as the condition in which he took his boat and crew into the races, has been one of the chief features of the season in Titania's class, while it is chiefly through the skill and local knowledge of her skipper that Pappoose has been able to carry the handicap of 3ft. 6 in. length so well.

The second point in connection with the success of these boats is that every one, though heavily rigged in the first place, has had her sail and lead increased within the past two years to enable her to keep up with the procession. Grayling was forced to resort to a lead keel in place of inside ballast, with larger sails; Titania is now over the class limit of 70.t. through added ballast, while her original rig has been replaced by a larger one; Pappoose has had lead added to keel and more sail, while Saracen's keel was recast and made deeper and heavier. An equally important point in this connection is that the yachts of only last season, boats with larger rigs than had ever been seen before, are admitted to be out of the racing; neither Baboon, Xara, Chiquita, Nymph nor Banshee have any place with Liris, Tomahawk or Gorilla.

We, in common with many yachtsmen, would be only too glad to have convincing proof that the "brutes" in all classes cannot win from more moderate craft, and that the thought and labor involved in a change of rule, to say nothing of the responsibility, might be avoided for an indefinite time; but we are unable to accept the very slight evidence presented to support this view. True, Minerva has beaten Liris and some think she can always do so and the big ones have on the whole made a poor showing; but it must be remembered that this season was not only an exceptional one in the matter of very strong winds, but also an exceptional one in regard to extreme dimensions and power, at least in the 40ft. class, from which the most thorough lessons must be drawn. Besides the general handicap under which all the new boats suffered, of delay in building and time lost in working into shape compared with the older boats, Liris had her chances ruined by a defective rig, Tomahawk, instead of being constantly raced and worked up during the season, was neglected for another boat, and Gorilla, as an experimental boat, showed faults which could be cured in another of the type.

Even under such disadvantages the three showed themselves more than equal to any of the smaller boats, with the single exception of Minerva; while there is plenty of speed left in each of them for any one who cares to develop it next season. Not one of the three can be set down as a failure, or as showing that the type cannot be made successful in racing, and if properly rigged and sailed next year they have a fair chance of reversing the hasty verdict of this season, and proving that size and sail do pay under the Seawanhaka as well as the New York rules, as past experience in all classes showed up to Minerva's advent. In each of the three big boats of the year the designer has taken a far greater step than he has ever before done; Mr. Burgess from Baboon to Tomahawk, Mr. Smith from Banshee to Gorilla, while Mr. Gardner in Liris has gone to an extreme in light construction, heavy displacement and area of canvas never before attempted. The mere fact that none of the boats are decided failures makes the experiment a success, and promised greater speed in the next attempt in the same direction.

So far then from any conclusive proof that Minerva can always win and that the "brutes" are out of the racing it is much more in accordance with all the facts to assume that the very different types represented by Liris and Tomahawk on the one hand and Minerva on the other, are with the same handling so nearly equal in possibilities for speed that it becomes a question not which of the two is fastest, but what type can be developed that while fast enough for racing, shall give the best results in the way of cost, accommodation, and other desirable qualities.

In all discussions on measurement for the past two seasons the forties have claimed a far greater importance than they deserve, as the welfare of the large yachts, from 60 to 90ft., is really the first consideration. At the same time the size of the 40ft. fleet, the number of its races and the reputations of the many designers directly interested, have not only presented a larger body of facts, but made them of more importance as a basis of comparison than those gathered from the races of Grayling and Sea Fox, or Titania and Katrina. The 40ft. class then must of necessity be taken as the chief basis for a test of the rules, even though it may not follow that all conclusions drawn from it must apply directly to the larger yachts. While spars and canvas have reached their greatest extreme in this class, it is evident that the sizes of sails have not only increased to a most undesirable degree in even the largest yachts, such as Volunteer and the big schooners, but that such increase must go on in spite of the heaviest tax now laid on sail by any of the existing rules.

As it is generally admitted that sail and length are the two factors on which a rule must be based, at least until something very much better is discovered than has ever been tried in the past; and as at the same time there is ample proof that the present combination of these factors is most unsatisfactory, the question arises, how the present condition of affairs can be bettered.

The application of length and sail area to the rating of yachts for racing must be by one of the two following systems:

I. *By grouping the yachts in classes on the basis of their waterline lengths, time being allowed for difference in size between those in the same class according to "corrected length" made up of certain proportions of waterline length and sail area.*

II. *By making "corrected length" the basis of classification as well as allowance, any further difference in size between vessels in a class being allowed for on the same basis of "corrected length."*

Incidentally it may be noted that if desirable, some unit approximating to tonnage instead of linear measurement may be used in place of corrected length, as is done in Great Britain, the final results being the same in either case. As tonnage rules are unknown in America, while "corrected length" of some kind has long been a familiar quantity, only the formulas which give a result in the latter unit need be considered.

The first system has always been used in America, and is now familiar to all yachtsmen, while the results which follow from it in practice are too plain to be mistaken. By it the limits of each class are set at certain lengths of waterline in feet, beyond which no designer is supposed to go. According to the theory on which this system is based, the formula for allowance, as well as the time scale, are proportioned as to compensate for any difference in size within at least the limit of the class, thus allowing the designer the most complete freedom in the choice of length, beam, draft and sail; in other words, any desired length may be taken, with any good type as a model, and the resulting boat will have the same chance of success as any larger or smaller boat in the class of equally good model. If this theory were borne out in practice there could be no objection to the system, but, unfortunately, the very opposite is the case. The whole history of yacht racing for an unlimited time back proves that, under the climatic and other conditions affecting American yachting, and under any rules thus far tested, with a limited length it is size that pays. Instead of being perfectly free in the choice of all elements of speed so long as the total sum does not exceed a certain limit, the designer has but one course before him. He must take the greatest possible length allowed at the risk of being out of the class, and on this length he must hang all the load and spread all the canvas that he dares, the only limits being his skill or recklessness. As Mayflower beat Puritan through length and size, so Volunteer in turn outdid Mayflower, the advance in two years from Puritan to Volunteer being represented by 1,200ft. of sail for an additional 5ft. of length. In the schooners the new boats are chiefly remarkable for their large rigs, while both Titania and Katrina far overtop anything ever seen in the 70ft. class. Going down to the forties the same conditions hold true, Chiquita, Xara and Baboon, of full 40ft., follow Papoose of the preceding year, and the maximum limit of sail and draft in 1888, under 3,000sq. ft. for one and 8ft. 3in. draft on either, have pushed up to 3,600sq. ft. and 11ft. respectively in 1889.

For every inch of advance in the science of designing in the last five years is found a yard of canvas and a hundredweight of lead. While this expansion of size, sails and lead is the rule in every class, there is thus far but one or, possibly, two exceptions to it—Minerva and Pappoose. The latter is easily disposed of. True, with 3ft. 6in. lesss length, she has succeeded in holding a very fair place in the fleet this year, but in addition to being a very good boat, she has had the great advantage of two seasons of careful trial and preparation in skillful hands, besides being well sailed this year; while she has suffered nothing from the early delays, poor sails and disasters which have attended the new boats of the year. Why Minerva wins, unless it be from general harmony of proportion and excellence of model, is a hard question to answer; win she does, and the remarkable point is that she is the first proof of the possibility of winning under existing conditions with a boat not built to the utmost limit of the class.

Now that Mr. Fife has demonstrated the possibility of winning on model and moderate proportions rather than on mere brute force, there will be plenty to follow him, and some perhaps successfully; but it is too much to hope that Minerva alone will cure all the evils that now exist. The truth seems to be that, while it is possible to win through harmony of design and perfection of form, it is very much easier and safer for most designers to trust to beam, lead and sail, as in the past, and that a few unsuccessful attempts on Minerva's proportions will nullify the good influence she is at present exerting, and leave the brutes in possession of the field. No one would seriously think of building a racer of less than the extreme length to-day, and, saving the Minerva, no one would think of taking anything but extreme dimensions in beam and depth, with a proportionate sail plan; as the rules and allowance tables almost invariably favor the longest and largest boat.

Thus, the theory on which the whole system of classification by waterline length is based amounts to nothing, as it does not hold in practice; nor is it possible, as some believe, to correct the trouble by a rearrangement of the allowance tables giving more time to the smaller yachts, as this would imply a degree of perfection in the rule and allowances never approximately reached in practice. The vital fault of the whole system is that it does not allow any liberty to the designer, but compels him to take a maximum length and to follow a certain type, thus shutting the door almost entirely on experiment and advancement.

The actual advance of yacht designing in the past ten years is generally overestimated on account of the great number of improved mechanical features that have been introduced in a comparatively short period. That the yacht of to-day is far ahead of her sister of 1880 is beyond question, but a great part of the improvement is due solely to the lead keel, the cutter rig, improved construction and the better blocks, wire cordage and canvas that have been brought out to meet the demands of yachtsmen. A point has been reached where improvement in this direction will be much slower than in the immediate past, and where progress must be looked for in the direction of model and design rather than in mere mechanical details; and the initial question is whether the present system will give a proper scope for such progress.

This we believe that it will not do, for the reason that a fixed length of class confines the designer practically to one particular type, only varying with the formula used. Thus there are found to-day in each class only boats of comparatively large beam, great depth and very long spars. Some are centerboard and some are keel craft, the beam and draft varying a little in inverse ratio, but the leading characteristics in the class are very plainly marked, as in the forties, where the beam varies from 33 to 40 per cent. of the length and the draft is about 17 per cent. of length in the centerboard and from 25 to 27 per cent. in the keels; the ratio of sail being about 1.45 per cent. Under the influence of competition and aided by the mechanical advance alluded to the type of one year differs from that of the preceding by being larger in all ways, as Liris, Tomahawk and Gorilla of '89 differ from Baboon, Xara and Nymph of '88, but if the present influences continue in power for a couple of years more it is likely that each class will contain a number of boats of nearly the same type, save the difference of keel and board. What this type may be will depend mainly on the proportion of sail to length in the principal rules, it may be a good one or it may be a very bad one, the point is that one type only will prevail, that there will be no standard by which to test its merits and no incentive or even opportunity to break out of the rut.

Even though the resulting type should prove an excellent one at first, there is every chance of its degeneration in a few years, as various changes are made. The old Thames tonnage rule had brought out a very fair type of moderate keel boats some 18 years since when lead keels first came in, and with a continuance of the old methods of ballasting a comparatively wide beam would have been retained. With the advance in the use of outside lead the whole influence of the rule was changed until the modern cutter of 6 or 7 beams to length was reached. How poor a tool such a yacht really was is now admitted by all, but the very influences which led to its development necessarily shut off all opportunities for trial and comparison, and fostered a belief in its merits which experience has shown was based on a very slender foundation.

The same danger exists here to-day as in England a few years ago; as the use of the lead keel stimulated development in a certain direction, and gave full scope to the bad tendencies of the rule, so any improvements in hollow spars of wood or metal, or the discovery of a metal at once stronger and lighter than steel for rigging and metal work, would lead to rigs that would be more unmanageable than any yet seen. The tendency of any rule is to lead to one type and to encourage a false belief in its excellence, which will be shattered some day by yachts built under very different conditions, as was the case with the British challengers in the late Cup races, and the present system seems to be peculiarly liable to this objection.

The proposal that has been made by some to attempt the limitation of the present large rigs by a direct heavier tax on sail might give a temporary relief, but it in no way affects the system itself or its bad tendencies. It is an easy matter to combine length and sail in formulas by the score that will encourage any required proportion of canvas on a given length, but what would be the result? It may be assumed that the products of the New York rule $\frac{2L+\sqrt{S}}{3}$ with its light tax on sail, are Merlin, Quickstep, Katrina, Liris and Tomahawk. If now the Seawanhaka rule $\frac{L+\sqrt{S}}{2}$ be generally adopted the sail will be somewhat reduced, for instance in the 40ft. class to the rigs of Xara, Chiquita and Baboon, 3,000ft. in place of 3,300 to 3,600 in the other two. If the proportions of the New York rule be reversed $\frac{L+2\sqrt{S}}{3}$, a boat of Minerva's type will result, and so on down until the tax on sail is so heavy that only a narrow cutter like Ulidia could compete. In each of these successive stages the length is rigidly fixed by the classification, while the sail area is just as rigidly fixed by the rule; the designer must accept the two as he finds them, and with them certain other elements of beam and draft which he may vary only within very narrow limits. He may break away from them, as Mr. Fife has done in Minerva, and venture in a new direction, but the chances are all strongly against his success; the easiest and safest way to win is to stick to the general type in vogue, and to cheat the rule by light construction, more lead, by pushing to an extreme some element that is the least heavily taxed.

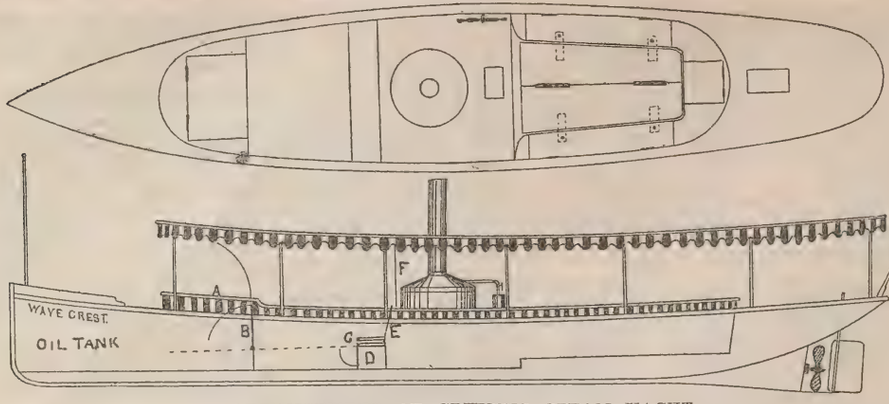
The other system is based on directly opposite principles; instead of length being arbitrarily fixed by the classification and the influence of the allowance tables, and the limit of sail as firmly fixed by the formula, both quantities are variable in an inverse ratio, and the designer is left to himself to choose from each according to his skill. In the 40ft. class, for instance, the elements laid before him would be as follows:

Sail area, sq. ft., 3364 3234 3128 3025 2916 2809 2704 2601 2500 2401 2304

W. L. length, ft. 38 39 40 41 42 43 44 45 46 47 48

The believer in Liris could take her proportions of length and sail, 38ft. and 3364sq. ft., and with them a beam of about 12.5ft. and a draft of nearly 10ft.; but if he should chance to be on the other side, a believer in great beam, shoal draft and centerboard, he would be at liberty to take the greater length due to a smaller sail plan, say 40ft. and 3136sq. ft., with a beam of 16ft. and a draft of 4 to 5ft. If, again, he favored the moderate type of keel or centerboard boat, there is room for a very fine craft on the dimensions 42ft. and 2916sq. ft., with probably 12.5ft. beam and 9ft draft, for a keel, or 14ft. beam and 6ft. draft, for a centerboard. Beyond this he may go to any extreme he may deem desirable, building a scow or Popotka on the one hand, or an 8-beam cutter on the other. The prize would go, as it should, to the ablest designer, while the greedy or ignorant would suffer. If, for instance, a man was tempted by the length offered, and after taking 45ft. should attempt to combine with it a beam of 13ft. and a draft of 10ft. in order to overpower his opponents, building a boat so large that the sail allowed for the length would fail to drive it, he would have no one to blame but himself. If, on the other hand, he is an adept, and through perfection of form and detail can drive a little longer boat with the sail allowed him than his fellows, he reaps the reward of his skill in increased accommodation at no greater cost.

The responsibility and the tax on the skill of the designer are certainly greater than under the present system, but the more proficient a man is the less he has to fear, and the greater will be his reward in the event of success. Undoubtedly the boats built under this system will after a few years be mainly confined to perhaps a couple of leading types, but there will always be an incentive to experiment, and in the event of an over-development in any special direction, as in length, depth and lead in England and beam, depth and sail in this country at present, there will always be an opening for improvement in some other direction that will tend to correct the evil. Apart from the principles involved, the success or failure of the system must depend largely on its details, such as the formula and class limits. These we have not space to discuss now, nor the possible objections to the system, most of which are probably due to an imperfect study of the subject and an attempt to judge it by the present standard of fixed length classes. The principal objection urged thus far applies not to the system itself but to the method now proposed for its application, and this we will discuss next week. In the meantime we will gladly give place to any criticism of the system which will tend to throw light on its merits and defects.



MINERVA AND CORRECTED LENGTH.

IN a recent letter Mr. Geo. A. Stewart, of the Boston *Globe*, argues as follows against the proposed change in the classification:

"Suppose the classification by the corrected length is adopted in connection with this formula, $\frac{L+\sqrt{S}}{2}$. The limit of the present 40ft. class would then be, say, 48ft. of racing length. A 40ft. boat carrying 3,136sq. ft. of sail would just come into this class. The Minerva now carries but 2,700ft. of sail, and rates at about 46. A boat of the Minerva type 42½ft. long, with sail increased proportionately, would just come into the proposed 48ft. class. Similarly, a boat of the Liris type would have to be reduced to a waterline length of less than 38ft. to bring her into the proposed 48ft. racing length class. We should then have a boat of the Minerva type, 42½ft. long on the waterline, racing on even terms, without giving any time allowance, with a 40-footer of the modern American type, and with a boat of the Liris type, 38ft. long on the waterline. As the 40ft. Minerva has demonstrated her ability to beat Liris and moderate American forties, boat for boat and length for length, there would seem to be little doubt of a 42½ft. Minerva beating the others when she has an advantage of from 2 to 4½ft. of length for which she is not taxed at all."

Minerva's length is 39.96, beam 10.5, ratio of length to beam 3.8, and ratio of sail 1.306, her corrected length being 46.07. A little arithmetic will show that if these figures be enlarged in proportion to make 48ft. in place of 46.07, the length will be not 42.5ft. but 41.6; in other words, Minerva, in giving up her allowance of 2 to 3 minutes from the average American 40, would be entitled to but 1.5ft. more length instead of 2.5. That she is also taxed for this extra length is fully proved by the fact that she would be allowed but 2,950ft. of sail, or nearly 200ft. less than the 40ft. boat. Probably the supposed Minerva of 41.6ft. would beat the others of the class as badly as the present 40-footer does, but no one would be any the worse. The new boat would be a very fine sort of craft, her beam being 11ft. compared with the 7ft. of the old cutters of like length, while her draft would still be moderate compared with the American boats. If we are to accept Mr. Stewart's conclusions, that Minerva with 10ft. 6in. beam can beat any American 40 from Liris to Pappoose, then it follows that the Minerva type will survive to the exclusion of the others, at least for all racing. If this is the case, then in the 41.6×11×7.5ft. boat yachtsmen will have a larger and better craft than in the 40×10.5 Minerva, and at most will not be very badly off; while it is by no means certain that the experiments in various lengths which would follow the adoption of the proposed rule would not lead to a type more in accordance with American ideas than Minerva is, and at the same time far removed from the present breed of "brutes" and "monsters."

KATHLEEN.—This fast 30-footer is advertised for sale in another column.

ARRANGEMENT OF CRUISING STEAM YACHT.

A CRUISING STEAM LAUNCH.

Editor Forest and Stream:

As considerable has been published in the FOREST AND STREAM during the past year concerning small steam yachts and their convenience as a means of pleasure and locomotion, I venture to add my mite to those already contributed, trusting it may aid some one who is contemplating a similar effort. I inclose a drawing which is more or less self-explanatory as to how my launch is fitted out for cruising. After one summer's use I do not see how it could be much improved at the same expense. I used her for two months, sleeping on her most of the time through rainy and cold nights, without getting at all wet or catching cold. Never slept better or felt better, and used her the same as though she had an enclosed cabin.

The Wave Crest is 26ft. long, 5ft. beam, with permanent watertight deck covered with duck and painted in the usual way. Around the sides are curtains of thick drilling, which keep out the wind and rain. The one immediately in front has a window in it similar to those in carriage curtains. In the front end of the cockpit is a locker 2ft. 6in. long and of the full width of the boat. This has a cover *A*, which opens up and forward as indicated by the arrow, with a mirror 10"×16" on the under side. This serves to dress by and is out of danger when the locker is closed. At *B* is a hinged bulkhead which folds forward and down toward the bow, and forms the bottom for a part of the bed when used for sleeping. It is held in place when upright by a small sliding bolt on each side at the top. The crack through the wainscoting is covered by a half round bead, its curved form giving it the appearance of an ornamentation. The dotted line indicates the cleats along the inside, which support the bed bottom. At *C* are three folding leaves, hinged on alternate sides, the lowest one being hinged to the front of the seat. These leaves fold out forward, completing, with the dropping bulkhead, a space 6ft. 6in. long for sleeping. When folded back on the seat, as shown, there are triangular spaces left at the end of each leaf, owing to the decreasing length of each, which are filled up by blocks made to fit, and each held in place by a peg projecting from the block into a hole in the seat.

At *D* are two drawers which slide out in front after turning up the door, and are large enough to contain the underclothing of two individuals. *E* is a sliding cane-back to the seat, extending across the boat in front of the boiler. By lifting this out of its slots, one can easily pass astern, stepping over the seat. *F* is a roller shade, such as are used in dwellings, extending across the boat. This, with the side curtains, completely incloses the forward sleeping space. This space is nearly as large as a modern bed, quite enough at all events for two persons. The drawers, *D* make a safe place of deposit for valuables during the night. Even the floor—if carpeted, as in this case—can be used for one's clothes on retiring, as there are some 7in. between the bed bottom and floor of the boat.

I had hair matresses made to fit the spaces. These with a thick comforter, two woolen blankets, two sheets, two pillows and a night shirt will go in the locker. An extra comforter can be put in by a little squeezing. You see it is a sort of sleeping car arrangement, the bedding being out of sight during the day. The cushion which belongs on the seat I used under the mattress or pillows as a bolster.

The after-cabin or space is fixed as follows: Two wide boards with iron cleats on one edge, fill up the space between the locker seats. These boards have legs on their inner sides, each let into the board and pivoted to turn down and form supports when in place. The iron cleats hook over pins in the edge of the lockers, under the cover. Thus arranged there is one level smooth surface for the bedding. The regular cushions form the mattress as far as the seats are concerned. Other cushions are made to fit the movable bottoms, these being in the form of cushions (sectional mattresses) can be stowed away together with the comforters, blankets, ect., through the opening (12in.×20in.) in the after deck into the locker below. This is sleeping car arrangement No. 2. By such devices one gets a really comfortable bed. With the exception of the springs it equals a good modern bed. One cannot expect everything on a 26ft. yacht, although I am not sure that I shall not have devised a set of springs to be used and stowed away with the bedding, before I am satisfied. The movable bottoms can be thrown on upper deck during the day.

There are other conveniences, such as an icebox in one locker seat, side-steering wheel (besides the tiller) and short ropes with handles to hook into rings in the steering rope at *C*, so that a pilot can steer from his seat on a camp stool in front during a storm when the curtains must be down.

In conclusion I may mention the device for taking up the slack in the cord which runs around the boat. At a convenient point (right hand locker astern) I introduced a long (10in.) spiral spring, about ¾in. in diameter, slipping the cord (window-sash) through the spring lengthwise, leaving it slack about 8in. between the ends and then fastening the ends firmly to the cord; thus when the cord shrinks from moisture the slack inside the spring is about taken up. When the cord is dry the spring will take up the slack. In steering it is the tension of the spring which turns the rudder until the slack is taken up. This keeps the cord tight at all times and yet avoids all overstrain and breakage due to a wet cord.

So much for the boat and some of its equipments. If acceptable to yourself and readers I may sometime give an account of her cruises. WAVE CREST.

A RACE OF ST. LAWRENCE RIVER SKIFFS.

THE towns of Prescott and Brockville have for a long time cherished a healthy rivalry as to which place could turn out the fastest sailboat; the outcome of which was the race at Prescott on Oct. 28. A gentleman of Brockville made a wager with some Prescott citizens that he could name a Brockville boat that could beat any Prescott boat yet built. His offer was accepted, and Mr. Wallace, of Montreal, was asked to sail his Sauvé (Brockville) built sailing skiff Yukwa against the Evangeline, a new Prescott boat by E. Dubeau. The course was to have been at Maitland, and the time limit for the 10 miles 2h. 15m. Several starts were made, but the wind dropping the race had always to be called off, and it was decided to hold it at Prescott, where as good a course and better accommodations could be obtained. After three postponements the race was finally started in a very stiff northeast blow on Monday at 2 P. M. The course was three times around a triangle, about 11 miles in all. The Yukwa got the best of the start by some 15s., but on the first leg, which was a quartering run, the length of the Evangeline had to tell, and she made up all but 6s. of the lead. From this buoy the Yukwa seemed to make a steady gain, only losing probably a few seconds on the free run. At the windward work she proved herself by far the better boat, clawing to windward in great shape.

The following is the time taken at end of each round:

	Yukwa.	Evangeline.
First round	2 33 11	2 34 19
Second round	3 05 50	3 07 40
Third round	3 36 15	3 39 15

The Yukwa winning the race by 3m., or 2m. 45s. elapsed time. A. R. Porte and C. P. Lyons, of Ogdensburg, were judges, and Edward Jessop, of Prescott, referee. Both of these boats are representatives of a class of sailing craft peculiar to the St. Lawrence River. They are undoubtedly the fastest design of boats for their size that are sailed on any waters. Their dimensions are as follows:

	Length.	Beam.
Yukwa	20ft. 4in.	3ft. 11¾in.
Evangeline	22ft.	4ft. 6 in.

The Yukwa holds the St. Lawrence Y. C. championship cup for skiffs, besides first place at all regattas about Montreal, and it was surprising to many the way she walked to windward of her larger rival, and held her off the wind. She was sailed by her owner, W. J. Wallace, with Ford Jones, of Brockville, winner of A. C. A. trophy, as crew. Mr. H. G. Wiser sailed the Evangeline, with E. Dubeau and A. Tripp, crew. The excitement over the race was intense, and in spite of rain a large crowd was present, who were well repaid by seeing one of the prettiest and most closely contested races yet sailed on these waters.

A SHOAL-DRAFT CRUISER.—*Editor Forest and Stream:* I hand you herewith the dimensions, etc., of a light-draft yacht I have just commenced building for a Philadelphia yachtsman. She is to be ready for sea within six weeks, and on completion will go to Florida. Model, Nonpareil sharpie with yawl rig, length over all 41ft., length waterline 31ft., beam 12ft. 3in., depth amidship 4ft., draft of water 20in., height inside cabin 6ft; all timbers 5×3in., of chestnut, spaced 12in., and strengthened at angles of bilge with 80 hackmatack knees. She will be neatly fitted up inside with handsome woods oiled and varnished, and will have two staterooms, galley, toilet room, with w. c.; also stationary washroom with two large water tanks of galvanized boiler iron under the main deck aft. These tanks will be connected by water pipes to all parts of the yacht as far forward as the galley. Her cost, completely furnished and ready for sea, will be $2,000. She is to be fitted out and rigged in the best manner, and will have clubtopsail, balloon jib, a mizen staysail, etc., etc.—THOMAS CLAPHAM.

A NEW ENTERPRISE.—The firm of Charles L. Seabury & Co. have lately started into the yacht building business at Nyack, N. Y., where they have erected work shops and propose to put a class of high speed steam yachts and launches on the market. They have already made a decided success of the few so far built by them; one, a 55ft. yacht, 8ft. 6in. beam, being a model cruiser. She is of light draft, with new style high class engine, triple expansion, with water tube boiler of their own design, and makes 15 miles per hour. A high speed, clean and safe steam launch, inexpensive to run and with light-weight machinery, has long been needed, and should find favor will all yachtsmen, who want a handy boat that can stand a sea, with room enough on board to make a comfortable cruiser, without the danger of blowing up. Mr. Seabury, of this company, was formerly Vice-President of the Naphtha Launch Company, and is an expert on all classes of machinery, having had years of experience with yacht work.

NAVAL RESERVE.—On Oct. 28 the preliminary organization of the New York Naval Reserve Artillery was begun by the enrolment of four companies. The recruits, to the number of 58, met at the Second Battery Armory, Seventh avenue and Fifty-third street, Capt. Henry Erben, U. S. N., being elected chairman, and Mr. F. W. Houghton, secretary. Capt. Erben appointed four senior lieutenants, Geo. E. Kent, F. R. Colvin, Louis M. Mowbray and William King, to enroll their respective companies, J. W. Blair acting for Mr. King, who was absent. Mr. Philip B. Low was chosen temporary captain.

A LONG CRUISE.—On Nov. 3 the 23ft. yacht Fearless started from Chicago on a voyage to Nicaragua, the route being via the Illinois and Michigan Canal, the Illinois and Mississippi Rivers to the Gulf; thence along the northern shore of the Gulf stoping at Pensacola, Cape St. Blas and Tampa. From there the route will be to Key West and Havana, then along the Cuban coast as far as possible before making an open sea run from Cape San Antonia to Cape Catoche in Yucatan. From this latter point they will sail along the coast to Bluefields, Nicaragua, which is within 70 miles of Greytown, perhaps cruising up the San Juan River. The proposed cruise is expected to occupy about 3 months, the distance being some 4,000 miles. The two venturous mariners who form the crew are Messrs. Ball and Brainard, of the Chicago Corinthian Y. C.

NEW YACHTS.—Mr. Burgess is at work on a design for a 45ft. keel yacht similar to Alga for Mr. F. B. McQuesten, of Boston, and also for a 30-footer similar to the Shark for Mr. Wm. Amory, of Quincy; Lawley will build both. Mr. John Jameson, owner of Irex, will build a cutter of about 117 rating from a design by Mr. Richardson, the designer of Silver Star, Samoena and Irex. She will be a composite boat, built by Fay & Co., builders of Irex and Valkyrie. As she is to be a comparatively wide boat her length will probably be that of Genesta or Irex, 81 to 83ft., so she need hardly be looked upon as a possible challenger for the America Cup.

FIXED BALLAST ON THE ST. LAWRENCE.—The St. Lawrence Y. C., of Montreal, has at its last meeting adopted the following resolution by a vote of 23 to 8: "No shifting of ballast or planking out shall be permitted during any race, and all vessels must carry the ballast they start with throughout the race; the crew limit to be one man to every three feet waterline or fraction thereof." This rule was proposed last spring, but was laid over until the fall, and the results of the racing during the season have been such as to insure its adoption. It is a much needed step in advance, and is likely to do much to extend the racing next season.

JEFFRIES MARINE GLUE.—This standard article has been awarded a silver medal and honorable mention at the Paris Exposition. It has gained greatly in favor in this country within the last two years, and is rapidly supplanting all other materials for paying the seams of yachts' decks, as well as for other uses in building. It is used in nearly all the new yachts of the year.

HOUSE BOATS.—Our old friend and contributor "Podgers," once master of the house boat Tulle Belle, commonly known as the "Mud Hen," has a very interesting article on these useful craft in the New York *Herald* of Nov. 3.

LADY EVELYN, schr., Sir Roderick Cameron, sailed from New York on Oct. 30 for Cowes, whence she will go to the Mediterranean for the winter, returning to New York next spring.

MORE FIFE CUTTERS.—Mr. Will Fife has already an order for a 42ft. design for Canadian waters and a 40ft. and 25ft. for the United States.

SEAWANHAKA CORINTHIAN Y. C.—The November meeting will be held on Nov. 9 at the club house.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Canoeing.

ON THE SHENANDOAH.

LEAVES FROM THE LOG OF THE FRANKIE.

THE gray mist was rising from the smooth, still surface of the river, and floating away in fleecy folds above the treetops, and up the wooded slopes of the adjacent mountains, enveloping their lofty summits and shrouding them from view, as I aroused the camp at half past four on Saturday morning, by the tintinnabulations of a gong, extemporized from a tinplate and a stick; and by half past eight breakfast was over, the tents struck, everything was packed, the canoes slid down the bank into the river and we were once more afloat, and the lovely, long, narrow willow-shaped sand bank upon which we had so pleasantly sojourned for the past three days, was left to its original solitude, disturbed only by the birds flitting from bough to bough in the leafy coverts above.

It was a beautiful sunny morning, and as we moved slowly off over the still, deep waters around the bend, past the confluence of the North and South rivers, and into the Shenandoah—the "Beautiful Daughter of the Stars" of the Indians—the rippling waters, kissed by the fresh morning breeze and sparkling in the sunlight, the bright green slopes of the mountains, the blue dome above us flecked with fleecy clouds, the gracefully moving flotilla with the paddles flashing in the sunlight and the water falling in diamond drops from their uplifted blades, all combined to make a charming picture, which filled us with enthusiasm and anticipation of a fine day's sport.

We were aiming to reach Milnes—2¼ miles below Port Republic and our last camp—by evening, and in view of the fact that the river is but little else than a continuous rapid for the first 50 miles of its course, the distance could have been easily accomplished; but the numerous dams caused us so much trouble and delay that we went into camp at 7:30 at Coffman's farm, 5 miles above Milnes, after a hard, fatiguing, but most magnificent day's cruise to the experienced canoeist, but a most disheartening, discouraging series of trials and disasters to the inexperienced ones of the party, the crew of the heavy open skiff Mac in particular, faring so badly that they declared that evening that nothing could induce them to continue in the river another mile.

The rapids are deep, magnificent stretches of swift water, some of them over a mile long, plentifully strewn with rocks, which were not always easy to avoid; and, though a little rough, were hardly lumpy enough to wash our decks, while the scenery was most lovely. All around us lay the superb Valley of Virginia, with its undulating, fertile, highly cultivated fields; dotted with imposing mansions and thrifty farm houses; the scars of the war, which once made it desolate, all happily obliterated by more than twenty years of peace and prosperity. On the right, close at hand, towered the imposing heights of the Blue Ridge; its spurs and foothills washed by the waters of the river, while on the left the lofty peaks of Massanutton reared their summits to the clouds; the long range stretching away down the valley almost as regular and clean-cut as a wall against the western horizon, until lost in the hazy mists of the distance.

We had a tedious portage around the end of the Shavers' mill dam, below which was the finest rapid we had yet encountered. The head of the rapids was cut up by several small islands, narrowing the channel materially, and in shooting one of them the Frankie received a tremendous thump from a sunken rock, doing no apparent damage, however. This rapid was a couple of miles long and afforded us magnificent sport in shooting it; a heavy fish dam about half way down it, which we were obliged to take on the fly, adding to the excitement of the run. I hurriedly selected the only available chute, which was a crooked one, compelling us to turn sharply to the right while on the very brink of the fall, which was fully 3ft. and almost perpendicular, and with a hasty "look out for yourselves!" at the parts behind, I drove the Frankie safely over without touching anywhere.

The heavy Mac was unable to make the turn quickly enough and struck heavily on the rocks on one side of the chute. Mr. Murray was thrown out into the dam, while Dunbar jumped out into the deep water on the down-stream side and was compelled to swim for it. The Mac then drifted over, shipping so much water that she was compelled to lie to and bail out. The other boats and canoes got over without mishap, although all struck more or less heavily.

As we proceeded further down the river the rapids grew stronger and rougher, and the fish dams were very numerous, and soon became objects of terror to the inexperienced in our party. The light, narrow, sharp-ended, round-bottomed canoes generally managed to slip over them without much trouble, but the broad, flat-bottomed Stranahan skiff had to pick her way over more cautiously, while the heavy wooden Mac hung up on most of them, and her crew were frequently in the water to assist in getting her over.

We stopped for lunch at noon at the mouth of a clear, cold stream, marked on my chart by the unpoetic name of Two-Mile Run, which came brawling and sparkling down from the mountain fastnesses, its crystal waters being very strongly suggestive of trout. The spot was an inviting camping place, but it was too early to camp, so after a stop of an hour for lunch, rest and a smoke, during which time I went for a short essay of fly-fishing for bass in the clear waters of the mouth of the creek (but as he affixed a heavy sinker to his line above his flies, his success was not marked), we were off again.

We slid the boats over the end of the river bank mill dam (managing to pour a couple of inches of water into the Frankie during the operation) and also over the end of the next dam a mile or two below; and while stepping into the boat again Lacy was a little too familiar with the Clyde, and capsized her so suddenly and completely that he was unable to realize what had happened until he came sputtering and blowing to the surface and saw the round black bottom of his canoe shining in the sun, like the back of a huge turtle. He quickly righted her again, as the water was only waist deep, and it was found that—owing to having followed my instructions in regard to keeping hatches closed and fastened, and articles lashed fast that were stowed in the open part of the cockpit—he did not lose a single article, nor did he get his canoe more than half full of water.

We had a tedious and difficult portage over the end of the dam at Conrad's store, in accomplishing which we were all compelled to take to the water; followed by a rough passage down a long, rocky rapid, where more or less trouble was experienced by the different boats, according to the skill and address of their respective skippers, and the trials and tribulations of the day finally culminated at a dismal, deserted old dam a few miles below, which we reached about 6 o'clock.

The river was cut up by islands and the dam extended irregularly from one to the other. The dam looked vicious and the water flowed ominously black and swift above it. The mill had been burned, and the gaunt, blackened timbers still standing looked spectral in the dense dark green of the surrounding forest and added to the desolate and forbidding look of the place. The shoot—such as it was—was in the upper end of the dam, obstructed by logs and drift, over and among which the water rushed and surged with great power and violence and then went shooting swiftly down among the islands, under overhanging banks, lined with a vicious tangle of roots, branches and tree trunks. It was a forbidding place altogether, and the shoot was utterly hazardous to negotiate, and the lay of the land rendered a portage impracticable, so Gibbs and Beall got out into the water in the shoot and eased the boats gently over as they were dropped down to them one by one. By hard work and skillful management, I escaped the snares of the roots and branches, and was shot out from among the islands into a furious rapid, thickly strewn with great boulders and vexed with cross currents, where the great waves tossed the Frankie around like a cockle shell, and rolled over her decks in sheets from stem to stern. I dodged the rocks and the waves rolled harmlessly from my decks and tightly closed hatches, and I next found myself shooting along a magnificent, down-hill stretch of rapid, which extended straight away for a mile or more.

After proceeding some distance and finding that none of the party were following me, I hung up in midstream, in the lee of a big rock, the nose of the Frankie resting in a convenient crevice, where I easily held her by an occasional stroke of the paddle, to wait their arrival; the Doctor, who had made his way out ahead of me, being by this time just discernible a mile or more down the river, his paddle blades flashing in the last rays of the sun as he sank to rest behind the neighboring peaks of Massanutton.

I waited so long that I began to grow uneasy, when finally one of the canoes shot out around the bend at the head of the rapid, a quarter of a mile above, and presently I recognized Lacy, and as he approached I observed that he was chasing my coal oil can and George's minnow bucket, part of the cargo of the Mac, which were bobbing along serenely on the troubled waters a little ahead of him.

"Hi, Commodore! pick up the bucket," he shouted, as he swept past.

"What's wrong?" I shouted in reply, as I left my moorings and darted out across the swift flood to meet him.

"The Mac is sunk up in that nasty hole below the dam, and Mr. Murray and the boys had to swim for their lives."

"You don't say! Did they get out safely?"

"Yes."

"Is the boat lost?"

"Completely sunk and everything in her lost. These two articles here are all that could be seen," pointing to the rescued bucket and oil can.

"Where are the rest of the party?"

"Gibbs and Beall were working at the Mac trying to get her out when I put out to pick up what I could."

"Well, we are in a pretty pickle," said I, as we laid up under the bank, holding on by the overhanging branches, to await the arrival of the rest of the party.

"The Mac carried the entire culinary outfit of the expedition, as well as a large part of the provisions, and here we are, five miles from nowhere, and to-morrow is Sunday at that!"

"Gosh! You don't say!" exclaimed Lacey in consternation, "and I'm wet and as hungry as a bear; haven't we anything to eat at all?"

"Well, I've a can of coffee and one of sugar, and some biscuits, and butter and crackers in the Frankie's mess chest, and possibly a bag of eggs and one of bacon stowed somewhere, but the camp stove, and every tin bucket, coffee pot, frying pan and plate in the party were in the Mac, and our outlook for anything hot for supper is exceedingly dubious."

"I certainly feel right sorry for Mr. Murray and the boys," said Lacey, after a short interval of silent reflection on the supper problem, in which he apparently gave it up.

"Yes, so do I, for they have had a hard time of it all day to-day in that unsuitable, heavy, open boat."

"And yet the Mac is a right good boat?"

"That's perfectly true, but a boat like that is not adapted to cruising on such a rough, rapid stream. Every summer, to my positive knowledge, somebody attempts to descend the Shenandoah in an open skiff, and I have never yet heard of such a party that did not come to grief."

In the meantime the Doctor had reappeared in sight at the bend of the river, nearly a mile below, and in the course of half an hour's paddling against the swift current he joined us. I think it was at this time and after this little episode that the Doctor finally and definitely abandoned any lingering notions he yet entertained of turning at Harper's Ferry and paddling back up the river, a project which, in his enthusiasm for the cruise, he warmly advocated at the start.

In half an hour more the rest of the party came drifting down in the gathering twilight, and a forlorn looking set they were in the Mac. As Lacey had said, she had been drawn in irresistibly among the overhanging roots and branches and capsized and swamped; her crew were so thoroughly demoralized by the disaster that it was with great difficulty that they were induced to board her again, after she had been rescued by Gibbs and Beall, and trust themselves in her on the treacherous river. I was glad to learn that with the exception of a few minor articles none of her cargo was lost, as according to my suggestions it was nearly all lashed fast.

It was growing late when they joined us; they were thoroughly cold, wet and disheartened; Gibbs and Beall were also wet, and Lacey was shivering from the effects of his capsize a couple of hours before. Night was rapidly approaching and Milnes was five miles away, so we gave up all idea of reaching it, and turned our attention to finding a place to go into camp at once.

We drifted on down the river, around the bend and into the dam, half a mile of very rough, heavy, rocky rapids, the black rocks gliding swiftly by us like threatening shadows, while the big foam-crested waves gleamed whitely in the gathering shades of night, their deep angry roar chilling the spirits of our jaded party. A big two-story brick farm house loomed up on the right bank at the foot of the rapid, giving promise of needed supplies, and we at once swung into the bank, where we found a very good camping place.

Permission was readily obtained to camp on the land, and we were soon all at work with a will. I at once started a fire in my stove and a huge camp-fire alongside of it, and made it my immediate business to get up a plentiful hot supper for the party. Gibbs and Beall got up the canoes and the big tent with a rush, ably assisted by Merriken and the Doctor. Dry clothing was procured from waterproof bags, or loaned by some fortunate member of the party; a good supper stowed away, and cheered by the warmth and light of our blazing camp-fire, aided by the soothing influences of our pipes, comfort reigned again. F. R. WEBB.

AMERICAN CANOE ASSOCIATION.

THE annual meeting of the Executive Committee will be held in New York on Nov. 23. Com.-elect Stanton has issued the following order:

To the Members of the American Canoe Association:

Please take notice that the following named gentlemen are hereby appointed to be the Regatta Committee of the A. C. A., the first-named being chairman. Gen. Robert Shaw Oliver, of Albany, N. Y.; John N. MacKendrick, of Toronto, Canada, and D. S. Goddard, of Lowell, Mass. Very respectfully yours,

HENRY STANTON, Com.-Elect.

By the Commodore-elect, F. L. DUNNELL, Sec'y-Elect.

NEW YORK, Oct. 22.

OAKLAND C. C.—The quarterly race for the Mayrisch badge was sailed on Oct. 13 in a very strong wind, the times being as follows:

	Start.	Finish.	Corrected.
Frolic	2 35	3 12 00	37 00
Dart	2 35	3 13 30	38 30
Whisper	2 35	3 14 45	39 40
Mystic	2 35	3 14 50	39 50
Bonita	2 35	3 20 30	45 20
Surprise	Did not round stake.		
Gypsy	Retired.		
Tuck	Retired.		

The judge was Oscar W. Davis of the Mohawk C. C., of Troy, N. Y. Timekeeper, Harvey Darneal. Frolic thus wins for the third time, Mystic having won once.

PEQUOT CANOE ASSOCIATION.—The P. C. A. held its third annual dinner at Heublein's, in New Haven, on Oct. 31. The business meeting resulted in the election of the following officers: Com., W. A. Braden; Vice-Com., F. P. Lewis; Rear-Com., G. S. Ford; Sec., W. H. Hale; Treas., W. W. Cornwall; Fleet Captain, E. H. Everitt; Meas., J. H. Taylor. The dinner was very pleasantly relieved between the courses by toasts and singing by the quartette. The Pequot Glee and Banjo clubs furnished the music, and the affair altogether was the most thoroughly enjoyable in the club's history. No action was taken regarding the location of the meet for 1890, it being resolved to await the action of the A. C. A., hoping that the committee may decide on salt water for that year. Should this be the case, the P. C. C. would have a goodly delegation to send.

BROOKLYN C. C. CAMP-FIRE.—The first camp-fire of the Brooklyn C. C. was held last week in the Brooklyn Library Building, Mr. H. C. Ward delivering a lecture on "Knots and Splices." The next camp-fire, on Nov. 21, will have for a subject a cruise on the Delaware River.

Answers to Correspondents.

☞No Notice Taken of Anonymous Correspondents.

F. W. S.—The .32 will answer your purpose well, but you would find a good breechloading shotgun more useful.

N. T. B.—Is the new process of stuffing birds without skinning reliable as advertised by the Naturalist's Supply Company in your paper? Ans. We believe it to be.

E. B., Boston.—Who is the best person to send to to get all kinds of fittings for rods? I have hard work getting what I want from dealers here. Ans. Thos. H. Chubb, Post Mills, Vt.

F. B., DEERFIELD, Mont.—Can you give me the address of a dealer in birds' eggs and nests in answers to correspondents, and greatly oblige? Ans. Goodale & Frazar, No. 93 Sudbury street, Boston, Mass.

10-BORE.—Will you please tell me in your answers to correspondents the best breed of dogs for treeing partridge, also where I could get one at a fair price? Try a cocker spaniel, and see our advertising columns for addresses of breeders.

PISECO, U. S. Receiving Ship Vermont. A pet chicken, highly valued, has some trouble which I fear may prove fatal. He has warty blotches on comb and throat, and gags and drools. What is it? Ans. The trouble is presumably chicken pox, for which the treatment is a dose of 3grs. bromide per day in doses of 1gr. dissolved in a teaspoonful of water. Swab the affected parts with weak glicerite carbolic ½ of 1 per cent.

T. A.—I would like to start in the business in a small way of breeding dogs, as I expect to live out of town next season and to have a little time to spend in that way, if I could make anything out of it. What breed would you suggest for me to start with, and how to commence? Ans. There is demand for good specimens of all breeds; but owing to the large number of those who have taken up the business there is not to be found in it the individual profit there was when breeders were fewer. In selecting a breed you must be governed by your own natural taste; if you lack this you may not expect a very great measure of success. Pointers, setters and cocker and field spaniels are always marketable if of merit.

L. I. F., New Brunswick.—On July 30 I saw two specimens of a bird, the name of which I would like to know. The following is a description, as I saw it at about 40yds. distance: Size about the same as an English sparrow; head black, with a bright yellow sparrowlike bill; neck black; back and wings black, mottled with white, something like those of certain small woodpeckers that are common around here; breast and under parts of an ashy gray, except that just under the throat was a large shield-shaped spot of bright scarlet, the top or broad end of the spot being next its throat, and more than half an inch wide, and the pointed end terminating near the middle of the breast. The two were chasing one another among some alder bushes on the bank of a brook. This summer I saw the first flock of bluebirds ever seen in this vicinity. Ans. The description fits the common redpoll or redpoll linnet (*Acanthis linarius*) reasonably well. The red crown of the male would easily be overlooked at a distance of 40yds. The chin is blackish. This bird is resident in the northern regions, coming south in winter, occasionally as far as the District of Columbia.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

BY EVERETT HAYDEN, Marine Meteorologist, U. S. Hydrographic Office, Washington.

ILLUSTRATED BY 23 PLATES. PRICE ONE DOLLAR.

Beginning with a description of the great Bay of North America, Mr. Hayden firs describes in detail the formation of the ordinary tropical cyclone, and then proceeds to trace the origin of the great blizzard, following it day by day by means of colored charts, and bringing into relief every interesting feature of this memorable storm. Valuable as this record is to the navigator who may be exposed at any time to similar dangers, it is no less interesting to the casual reader, as the mechanism of these powerful forces of nature is laid before him. Even the landsman, who looks upon the wind as blowing from one direction or the other, according to chance, and independent of any control or direction, cannot fail to be interested in the manner in which the track of a cyclone is marked out and its probable direction foretold, while to the mariner the same problem has a far more vital significance. In addition to much that will interest the non-technical reader or the scientist, the book contains a great deal of clear practical information relating to the handling of a vessel in a cyclone, the use of oil at sea, and similar important matters.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

WILD RICE

AS AN ATTRACTION FOR WILD FOWL CANNOT BE EQUALLED; FOR PLANTING IN FISH PONDS IT IS ESPECIALLY DESIRABLE. New Crop now ready price 40 cts. per lb. postpaid, by express 30 cts. per lb.
NORTHRUP, BRASLAN & GOODWIN CO.,
Seed Growers, Minneapolis, Minn.

Ligowsky C. P. No. 3

The only target having the patent

INTURNED EDGE.

2,000 shots out of each 1,000 targets on account of non-breakage in shipping, trapping and falling upon ground. The only target made with the INTURNED EDGE, producing the surest breaker when hit, and surest non-breaker when not hit. Our traps are sold for the sole purpose of shooting our targets.

SPORTSMEN SMOKERS

SHOULD ALL SMOKE OUR CELEBRATED

HAVANA CIGARS.

The favorite cigar of Rod and Gun Clubs generally. These cigars are made of the choicest tobaccos, grown and selected with the greatest care. They cannot fail to suit the taste of all lovers of the fragrant weed. Each cigar has the brand impressed on it, and every box has a label, fac-simile of the title of the popular journal, and our firm signature, without which none are genuine. We are the only authorized manufacturers of the above brand.

We will deliver free of express charges

LONDRES PERFECTO.....@ $7.50 per 100
CONCHAS ESPECIALS.....@ 6.50 "
Upon receipt of price.

A. W. FOOTE & CO., Sole Manufacturers,
125 Maiden Lane, New York.

ASK YOUR DEALER

For **NELSON'S** Cartridge Belt. The only **PRACTICAL** contrivance for carrying ammunition in the field. For Shot Guns, Rifles and Pistols. Nothing like it in the market. Patent lateral action.

Increasing Sales Attest the Popularity of THE GENTLEMEN'S CIGARETTE.

SPECIAL FAVOURS.

Manufactured only by
KINNEY BROS.
(KINNEY TOBACCO CO. Successors). Also manufacturers of the Old Reliable
SWEET CAPORAL.

REPELLENE.

An Infallible Preventive of the Attacks of Mosquitoes, Black Flies, Gnats and all other Insects.

Neat, clean and easily applied. No unpleasant odor, will not *stain* or *injure* the skin, easily washed off. May be carried without danger of *leaking* or *spilling.* In neat, oblong round-cornered box.

Price, 30 Cents, Postpaid.

Sold by Dealers in Sportsmen's Goods.
If your dealer does not keep it, I will send it on receipt of price.

A. FERGUSON, Proprietor and Manufact'er,
Office, 65 Fulton street, N. Y.

J. N. DODGE,
276 & 278 Division Street,
DETROIT, MICH.

Manufacturer of White Cedar Duck Decoys of all kinds. Also Swan, Geese, Brant, Coot, Shell Drake, Plover, full-shaped and flat folding Snipe Decoys, Duck and Turkey Calls. Decoys made like any pattern furnished without extra charge. Bottom prices to the trade. Illustrated price list.

ABOUT GLOVES.

When you are buying **gloves,** kid or dogskin, for driving or street wear, remember that there is such a thing as a price that is too **cheap.** It is best to pay a fair price and get good gloves like **Hutchinson's.** They are made from selected stock in the **best** manner and are **warranted** to be the most serviceable made. If you want to know more about gloves in general and Hutchinson's gloves in particular, enclose stamp for the book **"ABOUT GLOVES."** No matter where you live or what you do it will interest you. It gives a history of gloves and illustrations of their use, prices of the different styles and qualities, directions for measurement and ordering, also testimonials from those who **know the value** of Hutchinson's gloves. **Established 1862.**

ONE-MAN POWER.

WE took occasion last week, in commenting on the Anglers' Association of the St. Lawrence, to note that the inception and performance of that society's work was due in very large measure to the personal activty of one individual, Mr. W. W. Byington, and it was pointed out that what was true of the St. Lawrence Association was likewise true of other associations working in the field of fish and game protection.

A conspicuous illustration of the truth of this is found in a New England society which is just now attracting a large share of attention in its own State and elsewhere. The Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish is the most active and efficient organization of the kind now in existence. The newspapers are constantly giving among their items of current news reports of the society's detection and punishment of law breakers, usually of men who have for years carried on their netting and trapping and other illegal practices without interruption. Yesterday's papers, for example, reported that the Association's detectives had brought to justice one Charles Blackman, of Woodbury, a market-hunter, who for the past ten years has shipped his hundreds of snared grouse to market with perfect immunity. He was taken before a justice last Tuesday, pleaded guilty and paid a $29.84 fine. One after another of these old offenders are finding their way into court, thanks to the Association detectives; and Connecticut communities are gradually waking up to a realizing sense thaat the game laws mean something. The snaring of ruffed grouse cannot be broken up in one year nor in two years; it is an illicit practice which has many ramifications; the trappers are leagued with railroad and steamboat hands and game dealers in Connecticut cities and in New York. But if the Association goes on as it has begun, the market-hunters will surely find their occupation unprofitable and too hazardous to be engaged in with comfort.

Observers who have followed this work in Connecticut cannot have failed to perceive that the credit for it chiefly belongs to Mr. A. C. Collins, who is the president of the Association and the head and front of its aggressive campaign against the lawless element. Mr. Collins is demonstrating in his own person the value and efficiency of individual activity. The Connecticut society of the long name is in effect Mr. Collins. He does the work. And when he shall have reformed the State of Connecticut, we hope some of its neighbors will invite him to take a contract to render like service for them. If there were a Collins in every State in the Union, the outlook for efficient execution of our game and fish laws would be much brighter than it is at present. One man who will put his hand to the plow is worth a thousand after-dinner orators.

THE DARLING CASE.

SOME further particulars of the Darling case are given in our game columns this week, and it is there suggested by our well-informed correspondent "Special" that, in event of defeat in the lower courts, Darling may carry his case up to the higher courts for a final decision as to the constitutionality of the Maine game law. That is surely a course of proceeeding most desirable. Darling has for years contended, not only in print, but in deed as well, that the State had no constitutional authority to deprive him of the privilege of killing game when and how he chose, nor to forbid him to market his venison in the Boston markets. He has persisted in dogging deer into Nicatous Lake; and if he has not shipped all his venison to Boston his failure has been due to the vigilance of the game wardens and the refusal of transportation companies to receive the goods. Having thus done so much to set at naught the laws, of which he has complained, Darling will now perform a distinct service to the State, if he shall spend his money in testing the constitutional character of those laws.

No apprehension need be entertained of the final outcome of such a test; the statutes which forbid the employment of hounds to drive deer to water butchery, and those which forbid the shipment of game to market, are based on principles of sound public economy; they are quite in keeping with the spirit of the age; and their constitutional integrity will be absolutely demonstrated, if Darling shall furnish the opportunity for such a demonstration. It is to be hoped that his determination will not fail him.

It must not be forgotten that Nicatous Lake has been the resort of numerous visitors from Boston, New York and elsewhere, who have taken part with Darling in his deer dogging. He has not been without the moral support and substantial backing of that class of people which is made up of reputable business and professional men, who, while to all intents and purposes honest and law-abiding members of society at home, when they go into the woods seem to inhale with the odor of balsam a spirit of contempt for law and decency. If Darling has dogged deer into Nicatous Lake, he has done it because such men paid him to do it.

This phase of the subject is more worthy of consideration than Darling's own attitude toward the law. Darling had for years been doing lawfully certain things, which upon the enactment of new statutes became unlawful; this meant for him personal hardship and loss; if he rebelled and sought to evade the law and stoutly held out that he would not submit, this was nothing more than other misguided men have done and will continue to do so long as human nature shall remain unchanged. But the city hunters, who have gone into the Maine woods and tempted Darling and others of his ilk to break the law, have done it in pure wantoness; theirs is not the excuse that to obey the law meant for them any personal hardship. They were bound by all the constraints and obligations of their position to set a good example, to encourage to law-respecting citizenship, and to array themselves, in the woods as when at home, on the side of intelligence, self-respect and good order. If the men who conduct our business enterprises, teach in our schools, contend for the supremacy of legal right in our courts, and preach in our pulpits, aid and abet the unlawful jigging of trout and dogging of deer, what can we expect of the Jock Darlings? Is it not vain to expect from a guide and camp proprietor in the depths of the Maine woods a higher standard of morality than we exact of our merchants and lawyers and doctors and teachers and ministers of the gospel when they visit those woods?

STOCKING NATIONAL PARK WATERS.

IN the early autumn we mentioned the visit to the National Park of Col. M. McDonald, U. S. Fish Commissioner. Our correspondent's letter spoke of the enthusiasm felt by Col. McDonald over the opportunities for experiments in fishculture offered by the then barren waters of the Yellowstone Park, and mentioned that the Commissioner had promised that next year he would send out 5,000 Eastern brook trout for the Gardiner River, and other fish for other waters.

It has proved that these waters did not have to wait even until next year to be stocked. There are now in the middle and west branches of the Gardiner River above the falls 5,000 Eastern brook trout; in the Gibbon River above the Virginia Cascade 1,000 rainbow trout; and in the Firehole River above Keppler's Cascade 1,000 European trout. These were all fingerlings, and under the favorable conditions presented by these waters should nearly all reach maturity and spawn.

Mr. E. R. Lucas of the U. S. Fish Commission has transplanted from the Madison tributaries to the East Fork of the Gardiner River above the falls the native black-spotted trout of the mountains to the number of 1,000. A large number of whitefish, over 2,000, have been introduced in the Twin Lakes, and about 1,000 as an experiment in the Yellowstone River above the falls. During his sojourn in the Park Mr. Lucas worked very hard, scarcely taking time to eat or sleep, and the results of his labors must be very gratifying to himself, as they certainly are to all who take an interest in the work that he has been doing.

During the past autumn Professor Jordan and Dr. Gilbert, of the State University of Indiana, have made an extended examination of the waters of the National Park with a view to determining their adaptability to the propagation of fish. These gentlemen are convinced that there is nothing needed except to stock the waters, and that after that the fish may be left to take care of themselves. Professor Jordan has expressed the opinion that the grayling will do well in nearly all the waters of the Park, and believes that the whole reservation might be turned into a great grayling farm. There is no difficulty about securing an abundant supply of this superb fish, which is found native in large numbers in some streams on the west side of the Park.

In our fishcultural columns this week are announced Col. McDonald's plans for the introduction of fry into Park waters next year. It will certainly be delightful to find in Shoshone and Lewis lakes, grand sheets of water as they are, such splendid fish as the landlocked salmon. The turning of whitefish into the Yellowstone River above the falls is an interesting experiment. It may be remembered that this was recommended by a special correspondent last fall in a letter from the Park, on the ground that the whitefish would supply food for the native trout, which appear now to be underfed. At all events, it is well known that the trout of the Yellowstone River, below the Cañon, sometimes run up to six, seven and eight pounds weight, while those caught above the falls rarely exceed a pound and a half, and are often diseased. If enough of these whitefish escape their enemies to spawn, we are inclined to look for a marked alteration in the character of the trout of the Yellowstone Lake.

The introduction of the brown trout of Europe to these Western waters is another experiment which may be followed by the best results. *Salmo fario* is destined to become a widely distributed and popular game fish. It is highly thought of wherever it has been introduced. At present it is designated by a clumsy circumlocution and needs a distinctive popular name to identify it everywhere. Since we owe its introduction in this country to the courtesy of the Deutsche Fischerei Verein, it might very well be named after the distinguished head of that organization, and be called the Von Behr trout.

All the conditions in the National Park lead to the conclusion that the waters there are especially adapted for the propagation of game fish. The waters are cold, clear, ever flowing, and abound in fish food. It must be a matter of general congratulation that, given such favorable natural conditions, Col. McDonald is so intelligent, so thoroughly informed and so energetic as to push on the work of stocking these waters in such a way as to carry out this work to a successful conclusion. It is evident that in a few years we shall have in the National Park the grandest and most diversified sport for anglers to be found anywhere in the world.

The Sportsman Tourist.

A WINTER IN FLORIDA.

AFTER a week's tour through the interior of the State, and while sojourning for a time in the quaint old city of St. Augustine, my attention was attracted by observing a large number of men, women and children, gathered upon the long bridge that spans the St. Sebastian River, busily engaged in casting with all manner of tackle into the water below. This was just at the beginning of ebb tide, and they were taking out in goodly numbers the beautiful sea trout. It was too much temptation for an old angler to withstand, and the result was that a trip ensued to the hotel, an Acme seven-ounce split-bamboo rod, with accompaniments, was quickly put in readiness, and I made an arrangement with a boatman to furnish a supply of shrimps and pull his boat to the fishing ground. A light float was adjusted just above the six-foot leader, and the bait was allowed to run with the tide until some fifty or sixty feet of line had been payed out, unless in the meantime the shrimp in mid-water had tempted a hungry trout, which in turn was struck by the "man at the wheel," and would then take the "bit in his teeth" and pay out line with more rapidity until brought to check, and eventually to the landing net. The fish were biting with avidity, and in two hours enough had been captured to suffice for supper, for the sea trout is worthless for food unless killed and cooked within a very short time after being taken from its native element, and the guests at the hotel apparently enjoyed the treat. Their capture certainly afforded me considerable sport, and elicited the admiration of the oarsman and a number of spectators, who had never before seen game fish brought to creel with "such light rigging," and could scarcely comprehend it. During the next few days a succession of trips were taken up the Matanzas and also down to the inlet, and a few channel bass of moderate sizes rewarded my piscatorial efforts.

My objective point for a few weeks of salt-water fishing being the Mosquito Inlet, whose ebb and flow gives current to the so-called Halifax and Hillsborough rivers, I went by train via Palatka to the handsome tropical-looking Daytona, situated on the Halifax, seven miles above the inlet. The broad streets, in which are left the native palmetto and live oak trees festooned with moss, the gentle rise from the river front, the neat residences on the ridge land, the enterprising class of citizens, and the comfortable hotels, all combine to make the place very attractive. Oranges of the finest quality are here grown in the greatest profusion, and command good prices. It will repay one to visit, as I did, Mr. White's famous Anita Grove and note the results of systematic cultivation, as also to partake of his hospitality. At Daytona the principal recreation is sailing and rowing upon the river, and numerous are the craft, and many among them have won a record for fleetness. On a bright moonlight night scores of gaily decked boats freighted with youth and beauty—and frequently, too, with those who are older and perchance not given to beauty—may be seen enjoying the outing, and making merry with voices and musical instruments. There are also a few private steam launches owned by residents here. A steamer makes regular trips from Daytona to Titusville on the (so-called) Indian River, making connections with the regular line of boats from there to Rock Ledge and Melbourne, as well as through the Jupiter River.

A peninsula that extends down from the Matanzas Inlet to the Mosquito Inlet, shuts off a view of the ocean, but a ferry—if not indeed at this writing a bridge—affords opportunity for a carriage drive across it to the shores of the Atlantic, one-half mile distant, and at low tide a drive on the hard smooth sand beach may be had extending many miles each way. No finer beach for that purpose can be found anywhere, and it affords a magnificent view of old ocean in all its glory of rolling surf through boundless space. One can spend hours in the enjoyment of the scenes presented on this elegant drive; and the curiosity hunter is well rewarded by the number and beauty of the shells that may be obtained for the trouble of picking up.

The Halifax, at and above Daytona northward, is partially freshened by the streams that flow into it, yet it affords very fair fishing at this point. The principal sport in this line, however, is had in surf fishing across the peninsula, and many a fine catch has been duly recorded in the *Halifax Journal*, whose editor, Mr. Mann, is one of the most enthusiastic anglers, and ever ready to extend a hearty welcome to all true sportsmen. It was my good fortune to form the acquaintance of an attorney, Captain ——, who was a charming entertainer and a devotee of the sailboat, and I was invited to form one of a party of ladies and gentlemen to sail with him to Ponce Park, the name given the post-office at the little hamlet on the peninsula side, a short distance north of the Mosquito Inlet. Here, finding filled to repletion the anglers' hotel, the unpretentious home of the veteran fisherman B. Pacetti (known to all readers of the FOREST AND STREAM through the articles from the pen of your old correspondent, C. C. Clarke), we were kindly taken into the hospitable home of the genial Captain Hasty, and well bestowed.

The next day was set apart for a fishing picnic, in which the ladies were to join; and when the morning came all were found ready for embarkation upon the sailboat, with tender, that soon landed the party on the sandy beach near the inlet. In a short space of time each was engaged in affixing the lively fiddler crab to hooks adapted for catching the sheepshead that were abundant in that locality. It was enjoyable to witness the excitement and efforts of the ladies in landing their first fish ever caught. They soon grew more accustomed to the *modus operandi*, and in many instances handled their rod with considerable skill for novices. When sufficient had been caught for immediate use a halt was called, and all hands turned in to assist in gathering fuel and getting dinner. Mrs. Pacetti, by unanimous consent, superintended the cooking of the fish; and when all was in readiness the avidity with which they were devoured testified to their excellence, as well as to the appetite of the party, sharpened somewhat doubtless by the exercise and invigorating sea breeze. Then an hour or two of lounging, smoking and shell gathering over the dunes and the near sea coast was indulged in, prior to again resuming aggressive operations at the fishing bank. When enough sheepshead, together with a few channel bass, and two remarkably fine sea bass that the veteran Pacetti caught in the surf, had been obtained to furnish another meal for the party and their friends at their hotel, all but the writer returned to Daytona.

Finding a promise of varied sport, and being fortunate in securing excellent accommodations at Captain Hasty's house, which had but a short time previous domiciled our old friend "Nessmuk," whose 16 pound cedar boat, Nessmuk, Jr., had become the property and was reserved for the use of Mrs. Hasty, I determined to spend a couple of weeks here. Pacetti and the few other well-known oarsmen having been previously engaged by some genial sportsmen from Louisville and Nashville, I cast about for some one acquainted with the intricate channels amid the labyrinth of mangrove-covered islands to handle a boat and in some degree act as a guide to the fishing localities. Happily I found Bert Stevens ready and willing to do the best he could; and before we finished our two weeks' cruising he proved, for a novice, quite an expert in properly handling the oars after a large fish had been struck, and I wanted no better man. Bert was used to throwing the Spanish cast net, and was consequently an adept in securing all the mullet desired for bait. The usual method of luring the red channel bass was by the use of split mullet rove on to the hook and the upper part fastened in place by a bit of thread or fine wire. Casts would then be made at the foot of a bar or where a swift current ended in deeper water, or in the vicinity of an oyster reef. My favorite way, however, was by the use of a moderate-sized live mullet, hooked either through the lips or through the body just beneath the dorsal fin, as it required more skill to hook the bass; and although not as many could be caught, it afforded more sport, and enough were obtained to supply two tables, besides an occasional string supplied to the workmen engaged in finishing Uncle Sam's new lighthouse in the vicinity. Occasionally in going to and from the fishing grounds I would put out a Hill's spinner, from which I had filed off the superfluous third hook, and woe to the bass or sea trout that snapped at it.

The only fish that I found in this locality that would take a fly were the ladyfish and sea trout, and occasionally finding a school of these, I had plenty of sport in that way. When using split mullet for bottom fishing, the bait would sometimes be taken by a prowling shark, and if by a large one a section of line would be certain to go with it. I succeeded in reeling in three of moderate size, and when they were near the boat despatched them with my rifle. Their carcasses were utilized for fertilizing the garden of my friend Stevens. A stingaree or sting ray occupied my time and undivided attention for two hours one afternoon, and after having broken a ferrule on the second joint of my rod, was nevertheless finally reeled up to the boat and shot, and then towed upon a sand beach, and his sting of about 6in. length secured as a trophy. The beast was estimated to weigh about 36lbs., and was a dead weight when attached to the bottom.

This reminds me to state that the naturalist who visits Ponce Park can find quite a collection of birds, incident to this portion of Florida, at Capt. Hasty's house, all prepared, and many of them procured by the hands of Mrs. Hasty herself, who as a self-taught taxidermist, is entitled to much credit. In addition thereto, she is well posted as to the name, species and habits of each, and takes pleasure in showing her "curiosity shop" to visitors. One finds in this vicinity some of those remarkable shell mounds that have excited the attention of scientists. Of course a trip up the Spencer Creek to the spot where "Nessmuk" camped during the greater part of his sojourn here, was quite in order, and I felt well repaid for the trip.

During my stay at Ponce Park the greater portion of time in favorable weather was spent with rod and reel. On two occasions only did I go out for a day's sport with rifle. I saw but one deer, and that so small and scrawny, when compared with the deer of the Adirondack region, that although opportunity presented, I would not draw trigger. A few squirrels and ducks made up the extent of my bagging. I saw a number of birds of beautiful plumage, that with a fowling piece could have been secured for specimens, but I did not disturb them. I was informed that but a few years ago there were hundreds of these natural beauties where now they are rarely seen, having been almost exterminated by hired hunters to supply the demands of fashion and her votaries.

While sitting on the wharf at Ponce Park one afternoon, I saw three fine tarpon playing in the water within a hundred feet, and as they leaped from their native element their bright scales shone like silver. They were the first that I had seen alive, and their size and beauty convinced me that the appellation of "Silver King" had been correctly bestowed. Hailing Bert, I told him to run for his cast-net and find some fresh mullet, while I rigged my heavier rod with reel, line and hooks appropriate; and as an incentive for briskness on his part, promised him an extra five-dollar bill in case we got out in time to find their whereabouts and I succeeded in getting a single strike. Bert did his best; but mullet were apparently scarce just then, for it was a full half hour before he got a single cast. In the meantime my tarpon had not been seen for twenty minutes. We pulled out to the vicinity and cast here and there, letting the bait drift in every favorable spot, and until darkness set in did we persevere in our attempts to obtain a strike, but without avail. These were the only tarpon seen by me on the East Coast. I was informed that a few had been taken at Indian River Inlet during the season.

Ponce Park is truly a delightful spot. Situated on the peninsula, with salt water washing each side, and far enough—one-fourth of a mile—from the sea, so that the live oak, palmetto and orange trees protect from the full force of the breeze. The air is balmy and delicious, and what is yet a greater consideration, there is a perfect immunity from those pests of the mainland—mosquitoes, fleas and malaria. Here is a charming location for a good and commodious hotel. It is easily reached by a daily line of steamers from the railroad terminus above and below Daytona and New Smyrna. The sea shore is conveniently near both for rambles, surf bathing and surf fishing, while the view from the lighthouse is one never to be forgotten. Nearly all varieties of East Coast fishes are found here, and afford any amount of sport.

After a pleasant stay of two weeks I started on a tour through the lower country. Leaving Ponce Park in a sailboat with an expert skipper, we soon passed from the Halifax into the Hillsborough, touched at New Smyrna, Oak Hill and Shiloh, noted for their orange groves, all on the broad Mosquito Lagoon; thence through the canal at the head of Merritt's Island, into a wide bay at the north end of the arm of the sea known as the Indian River; and running under fair canvas with wind astern, we soon reached the enterprising town of Titusville. At this point the skipper was dismissed, and an arrangement made with the captain and owner of a natty little steam launch—using kerosene for fuel—whereby the captain and his launch were to be at the disposal of a party of three, who desired to take all the time necessary for an exploration of the Indian River, the Banana River, St. Lucie Sound, St. Lucie River; Halpatiokee River, Jupiter River, North Creek, Logoohoochee River, as well as for fishing and hunting when the spirit so moved.

The first run was to Rock Ledge, where we spent a couple of days very pleasantly in rambling through this long one-street town, or towns, for City Point, Cocoa and Rock Ledge are virtually but one, with an orange grove background and handsome water frontage. We also visited Merritt and Georgiana, pretty hamlets on Merritt's Island, and while cruising about shot a few of the numerous coots that could be seen in every direction. Having a satiety of oranges and groves, as well as of the enterprising real estate dealers, who did their utmost to induce us to invest, we provisioned our craft, and, with colors flying and band playing—the writer with cornet, composed the band—we steamed down to Tropic, and landed to feast our eyes on extensive banana and pine-apple plantations in that vicinity, partaking also of pine-apples freshly plucked, and delicious; and then passed around the needle point at the foot of Merritt's Island, and steamed northward as far as Canaveral, on the Banana River.

Retracing our course through the Banana to the Indian River, we found at Melbourne quite a settlement of principally Ohio people, whose enterprise was apparent in the appearance of the town. Here we were nicely accommodated at the neat and home-like hotel, and were also invited to attend a hop that was to take place in the vicinity that evening. The tourists were too modest to think of appearing at a society ball in sportsman's outfit and with faces so sunburned that rouge gave no contrast, and so excused themselves; but were afforded a look at the merry dancers. The Captain, however, having a spare suit in the locker, arrayed himself in nobby attire, and went in for "all the fun that could be shook out," and being withal good-looking, and an excellent dancer, he did not lack for partners, and cut quite a figure. Parties attended from miles up and down the river, all coming by sail or rowboats, except such as came from longer distances by the regular steamer line.

Leaving Melbourne, our next run was made to Sebastian, consisting of one store and dwelling near the mouth of the Sebastian River (fresh water). Here we indulged in some very palatable peach cider, obtained good meals and had good beds, but the Doctor was astounded at the number and size of the immense spiders that appeared to be holding a conference in his apartment, and he commenced a war of extermination, in which he was soon joined by the Commodore and the Captain. The writer philosophically concluded to live and let live, but before retiring drew the bed into the middle of the room, and raised the bed clothes to cut off communication, unless by a drop from the ceiling. But these herculean spiders were not so well educated as the Irishman's bed bugs—as related in the story—and his slumbers were not disturbed.

A short excursion up the Sebastian River was made, and then a run down through the famous and truly picturesque Narrows of the Indian River, without particular incident other than a stop for fresh water at the Narrows post office, kept by a family from Iowa, living in a neat palmetto thatched cottage that was quaint and picturesque in the extreme. Here we strolled about the island for exercise and sight-seeing, and after an hour thus pleasantly spent pushed on, making a short stop for oil at Fort Capron, and thence to the comfortable hotel at St. Lucie, kept by Mrs. Johnson, of Warren, Ohio, where we secured accommodations to our satisfaction. St. Lucie is an unpretentious hamlet of but few buildings, but being situated directly opposite the Indian River Inlet, a famous fishing ground, is sought out by numerous anglers, who spend more or less of the winter months at this attractive resort. We engaged oarsmen and spent a few days in fishing for cavalli, sea trout, channel bass and the gamy cobia, or sergeant fish, also picking up a few groupers and snappers.

A 22lb. sergeant, caught with light rod and tackle, gave the writer more sport than anything heretofore taken. No more fish would be taken each day than were sufficient to supply the table at the hotel, and the wants of a few of the natives in the vicinity, who were glad to obtain an addition to their larder without money or work. Next to the sergeant fish the cavalli proved an admirable second in fighting qualities. A solitary flounder was taken, and was an exception to the general rule that this species of fish does not take bait. Here also we found extensive reefs of the finest oysters that we had met with on our trip, and our out-of-doors mid-day meals invariably had two courses of the bivalves, raw and roasted. Excursions to the beach, across the narrow intervening Hutchinson's Island, were daily had, that surf bathing and a propensity for collecting the beautiful sea shells here abounding might be indulged.

One day—it being necessary to lay in a supply of oil to run the engine on our more extended trip to the south—the Commodore and Captain having decided to take the launch and run to Port Pierce, while the Doctor and the Scribe were to be landed on the island side and put in the time at the seashore. After a delicious bath, the Doctor decided upon surf fishing, but was at a loss for bait. This the Scribe soon supplied by standing on a coral reef and firing a rifle ball into the midst of a school of mullet, whereby a sufficient number were stunned and secured for the purpose. After the nearly naked Doctor had blistered sufficiently in the heat of the sun, he resumed his apparel and went to the extremity of a coral reef and indulged in casting, while the Scribe, from a headland, took an occasional shot at sharks, porpoises and pelicans. In the enjoyment of the sport, the M. D. was oblivious to the fact that the rising tide was cutting off his return dry shod to the beach; and was only brought to a realizing sense thereof by a shout from the Scribe, who had returned and observed that the Doctor was then on an island instead of a continuity of reef. The M. D. met the emergency by taking off his clothes and wading to *terra firma*.

[TO BE CONCLUDED NEXT WEEK.]

Natural History.

OUT-OF-DOOR PAPERS.

IV.—A QUESTION OF TASTE.

FOR many months in the year the two mountain ash or "roundwood" trees under my windows are a favorite place of resort for birds of all kinds; but of the many interesting observations which these trees have offered me, the most interesting relates to a question of taste, raised by the birds. A fool may ask questions, they say, but it takes a wise man to answer them; and the birds, though no fools, have not usurped the wise man's province, so that at best the question must wait for its answer.

In brief, there is a difference between these trees. They are both large for their kind, of equal age, similarly situated, to all appearances precisely alike, except that the one on the right sheds its leaves before the other, and is an inch or two less in girth. There seems nothing to choose between them, yet the birds know a difference, which I, not having a nice taste in roundwood berries, could never detect. That *connoisseur* of small fruits, the robin, will sit all day on one of them and eat roundwood berries till you wonder how his tonnage is rated, with what

"Particular addition from the bill
Which writes them all alike."

But not a berry of the other tree will he touch. As the robin's taste always agrees exactly with mine in the selection of strawberries, cherries and currants, he invariably securing the ones I intended to have—(It is a mistake to say that the early bird gets the worm; he leaves that for you)—I would unhesitatingly assert that if there is anything good in the line of roundwood berries he knows it and has his share of it. In the winter the pine grosbeaks visit these trees in large flocks, and although they eat the seed only, rejecting the pulp, they confirm the robins' decision that the tree on the left is a superior article. In the spring, if the yield has been abundant and the grosbeaks few, the purple finches finish the work of stripping the trees, and by these also the tree on the left is preferred; while there is a single berry on it the birds flock to it to the neglect of the other, which may be hanging with almost unbroken clusters; yet when there is nothing more left on the favorite tree, they resort to the other and find food, if not epicurean satisfaction, in its full bunches of berries. For twenty years the same preference has been remarked, and the same agreement among all species of birds. *De gustibus non disputandum*, There's no accounting for tastes, says the proverb, with a strong hint as to the reason; but in such a case as this, where the agreement cannot be doubted, while we may throw a sop to the proverb by allowing that a taste for roundwood berries is unaccountable on any grounds known to us, we must admit that this unanimity of opinion among the birds argues the existence of substantial grounds.

Granting this, what is the cause? Whence has the fruit its flavor?

The birds asked the question and they must help answer it. "Let the sapsucker be called as the principal witness."

"May it please the Court, the sapsucker has a doubtful reputation. He is accused of irregular proceedings, and he bears a bad name. It is our point to show that he deserves his name. Until that is done his testimony will be worth little."

At the present day there is so little doubt of the yellow-bellied woodpecker's object in tapping trees, that even the naturalists have agreed, for the time being, to call him "the sapsucker." There are still some of those good people who, out of pure benevolence, would tell white lies to screen the devil, who aver that the yellow-bellied woodpecker eats nothing but worms; but if he should get a little sap now and then we ought not to grudge him that little. This is not the question whether the sapsucker is injurious or not. For my part, if he is content to draw a few ounces of sap from my trees while I drain them of gallons, he is welcome to all he gets, and to more, too. We do not wish to rob him of his good name as an eater of grubs and insects; we forbear to accuse him of any evil intent in tapping our trees; we wish to learn simply this—whether he gets anything besides worms (and bark, perhaps) out of those little holes which he places with such regularity around the branches of our fruit trees. Appearances are against him. For a bird that is ostensibly vermivorous, the sapsucker looks for his worms in such unsuitable places that he lays himself open to the same suspicion which attached to Sam Weller on that occasion in the court room, when the judge bade him report if he saw his father, and he, gazing steadfastly at the skylight, was able to answer in the negative with a good conscience. I myself have watched the sapsucker frequently at his work. He comes with a headlong flight, alights with a sudden flap of his wings, as if he had been brought up unexpectedly by the tree when he thought he was steering past it; looks quickly around, like a person who has fallen on the ice, to see whether any one saw his mishap, and soon addresses himself to his work. First he taps the tree, sinking three or four rows of holes on the same or on different branches, and then he tends out on them, watching as lazily as a Mexican to see the sap flow into the holes, drinking out of each as it overflows, and sits thus half a day at a time, without moving three feet, enjoying the double satisfaction of anticipation and participation. If this is not proof enough, we have Mr. Maurice Thompson's statement that the sapsucker has been seen in the act of drinking sap from the farmers' sugar troughs.

It is not an assumption to claim that he loves sap "for sap's sake." Does he show any decided taste in sap, as the robin does in cherries, as the red-headed woodpecker does in pears?

We know that the sapsucker prefers some species of trees to others, and some individual trees to others of the same species; and from the character of his holes we can judge very nearly whether he was after grubs or sap. If grubs were his principal object, of course he would not care what kind of sap the trees yielded; but if sap was what he wanted, may we not infer that his choice of trees would depend more or less on the taste of the sap?

Just here an obstacle confronts us. Tastes differ. In this region the sapsucker works chiefly on fruit trees, birches, swamp-maple shoots and young softwood trees—hemlock, firs and spruces—these, perhaps, for their soft inner bark. We favor the rock maple, which he seems not to affect. If we are judges of sweet sap only and he of other kinds, how can we reach an agreement? We know that there is a difference in the sap of the maple trees; some is better flavored, some renders a greater proportion of sugar; but where is the judge of apple sap? Then again, our observations are insufficient. While it is well known that in an orchard some trees are much frequented by sapsuckers and others are left almost unscarred by them, I have never seen it anywhere stated that the sapsucker preferred either sour or sweet apple trees, or that they selected those which bear well-flavored fruit and rejected the crabbed; that is, that there is any sensible connection between the taste of the sap and the taste of the fruit.

It is still a question of taste, but how complicated. From the sapsucker's preference we infer a difference in flavor as the cause; but few of us know experimentally whether there is such a difference; most of us would be at a loss to detect it if we made the trial; we are unable to prove that it is the taste and not some other quality of sap which attracts him; lastly, we are met with the general question whether the taste of the sap is any index of the quality of the fruit or not.

Let us interview the mountain ash trees again and learn what they have to say about the sapsucker.

There can be no doubt that he has been here. One tree is tattooed like the wild man from Borneo, from one end to the other, with little round holes set in horizontal lines, extending partly or wholly around the trunk and the branches. This is unmistakably "His Mark." Ten years will not suffice to outgrow this writing; twenty years is scarcely too long to do it in the mountain ash bark. Here stands the punctured record of many individuals and many years. Let us read it. One tree, we said, was covered with marks; the other is but little scarred. Twenty to one, at the lowest estimate, in favor of the tree on the left. You see the sapsuckers agree with the robins and other birds.

Here at last we get a little light on our questions. The sapsucker certainly does have a taste in sap. He has tried both trees; he chooses one. That he did not do it for anything but sap, or a little bark, repeated observations within 20ft. have demonstrated. We accepted without hesitation the robin's verdict on the berries of these trees. We know by experiment that his palate has the same gust as ours in all the articles of diet which we enjoy in common; and here we believed that our judgment would agree with his decision. Shall we refuse to believe what the sapsucker tells us, that there is a difference in sap, and that he prefers one tree to the other solely on that account? Preference is a more limited term than judgment. We prefer maple sap to the neglect of all other kinds; but in giving our deliberate judgment on the respective products of these two roundwood trees, can there be much doubt that we should corroborate the decision of the sapsuckers and the robins?

One more query was raised, which we cannot undertake to answer, whether the taste of the sap sensibly conditions the taste of the fruit. The case of these mountain ash trees is remarkable enough to draw out the question, and their conditions are so exactly alike as far as can be determined, that it seems as if by the method of exclusion the taste of the sap would be the only element left to account for the flavor of the fruit—as if one must be the cause of the other. But we cannot be too careful in determining causes. Extended experiment only can settle such a question, though a bird might raise it.

The roundwood trees have but one thing more to add, and this has been said before often enough, that the prickings of the sapsuckers do not appear to be injurious. You may see for yourself that the trees he works on are apt to be the healthiest. As well say they are so because of as in spite of his interference; the professor would tell you that either way it is a *post hoc ergo propter hoc*, which is only another warning to be careful about assigning causes.

FANNIE PEARSON HARDY.

CAPTIVE GIRAFFES.

EARLY in the present month there was born at the Zoölogical Gardens of Cincinnati, Ohio, a young giraffe, said to have been the first ever bred in this country. At birth it stood about 5ft. high, and did not differ markedly in color from its parents. The mother would not permit it to nurse, and efforts were made to rear it on the bottle. It did not do well, however, and died five days after its birth. The parents of this young giraffe were obtained for the Cincinnati Gardens by Mr. Frank J. Thompson, whose appended notes on captive giraffes will be read with interest.

The recent notice of the birth and death of a young giraffe in the Zoölogical Garden at Cincinnati, serves to recall some of my experiences, not only with the parents of the above-mentioned young one, but with other specimens which have fallen under my notice. I had not yet entered my teens, when, on returning from school one afternoon, I found the agent of a wandering show engaged in tacking up the bills for his exhibition on the front of the tavern situated just opposite my father's house. Among them were two which immediately attracted my attention. On one of them was delineated an enormous wagon, drawn by an indefinite number of horses, from the top of which projected the neck and head of a giraffe, and the other represented a pair of the same animals feeding on the topmost fronds of a mighty palm tree. I am sure that from that memorable afternoon until the day on which I enjoyed the felicity of seeing my first giraffe, my school duties did not receive the attention that my teacher expected. My attention was principally directed to my library, which consisted solely of an illustrated popular 8vo. edition of Buffon, and the chapter devoted to the giraffe was committed to memory.

On the morning of the expected arrival of the show I started for school, but varied my usual route by finding my way out for some miles on the road by which the concern was expected, and when that wonderful wagon arrived I accompanied it into the village, and did not lose sight of it until it was driven into the tents. When the doors were opened I was one of the first to enter, and soon found my way to a fine female giraffe, nibbling hay from a basket which had been suspended some distance up the center pole. When the lecturer came around and talked so glibly about the animal, how I envied him, and wondered if I should ever know one tithe of what he did about natural history. There was another animal haltered to the foot of the pole, about which the lecturer said nothing, but contented himself by giving it a savage cut with a whip when it attempted to prod him with its long, sharp horns. Little did I imagine that the time would come when I would see both animals in their native state, and that the one treated so brutally was the gemsbok (*Oryx capensis*), the first and only living one that has ever been exhibited in the United States, and I don't think that there has ever been a specimen in the Zoölogical Gardens, London.

The above happened in about '36 or '37, and in '51 I became acquainted with Gen. Rufus Welch, who then owned the circus performing at the corner of Chestnut and Ninth streets, Philadelphia, where the Continental Hotel now stands. From him I learned that he was the party who had brought the giraffe to this country from South Africa. He had sailed from Boston, and on his arrival at Cape Town had fitted out an expedition and traveled with it into what is now known as Namaqua Land, where he captured two giraffes, a young hippopotamus, a gemsbok, and several other antelopes. He succeeded in landing both of the giraffes and the gemsbok alive in this country, the young hippo having been killed by the upsetting of the wagon in which it was transported while descending the mountains, a short distance back of Cape Town. Gen. Welch was gifted with wonderful descriptive powers, and in '66, while ascending Mitchell's Pass from the Worcester Valley, on my way to Ceres, on the High Karroo, I easily recognized the place where the accident occurred, and verified my recognition by the recollections of several of the older inhabitants of Ceres. But for this unlucky affair the United States would have had a living hippo long before the famous one which was presented to the Zoölogical Society, London, by the Khedive of Egypt in 1850. At any rate, the first giraffe arrived in this country about the same time that the first four from Kordofan arrived in London, and was the only specimen ever on exhibition which came from south of the equator. The London ones were captured by M. Thibaut in '34 and '35, and brought to Malta in November, '35, where they remained until the following spring, when they were safely reshipped to the Gardens of the Zoölogical Society. From that date until 1867, no females were purchased, and seventeen young ones were bred. From '67 to '79 seven were purchased and none bred. Other gardens in Europe have bred them; for instance, at Antwerp and Hamburg, and if I am not mistaken, one has been reared in Hamburg within a few years.

About '60 a party by the name of Cazanova worked his way in from Suakim, a port on the Red Sea, to Cassala, Nubia, where he made his headquarters, collecting not only numbers of giraffes, but hippos, rhinoceroses, elephants, etc., which he brought to Europe via Alexandria and Trieste, from thence distributing them to the various gardens throughout the continent. Other parties soon followed in his tracks, which not only greatly reduced the prices but over-stocked the market, and the surplusage found its way into this country, where high prices were realized on the first arrivals, particularly to showmen, who were not long in finding out that giraffes were not only costly, but also very risky stock for hauling about the country. Consequently the trade began to languish, and then suddenly experienced a sudden complete stop on account of the Mahdist troubles preventing collectors from going into Nubia. In August, 1878, I was sent by the Zoölogical Society of Cincinnati, to New York, where I found four giraffes in the hands of a dealer, who was very anxious to get rid of a portion or all of them, as he did not fancy the attempt of carrying them through the winter. I immediately telegraphed my Board of Directors that I thought a pair could be bought at a low figure, and received an answer, "Exercise your own discretion." A bargain was soon made by which I purchased a pair for $1,500, and immediate arrangements were made for shipment. As they were too large to box, the forward half of an express car was hired, after finding by measurement that the door was just six inches higher than the male's withers. A large low truck was prepared by building up high temporary sides, the animals led up into it and I took my seat alongside the driver, holding the halter-stems with some misgivings as to the success of my undertaking. The motion of the truck did not seem to frighten them, but I soon found out that the male had a will of his own, and if allowed to have his own way, preferred walking to riding. A store of sliced apples carried in my coat pockets served to keep his attention attracted until the ferry was crossed and the railway station was reached, when the truck was backed up the platform and they were led across into the car and securely fastened. When the switching engine backed down preparatory to hooking on and placing the car in the train on the main track, I felt a twinge and rode out on it for fear of an accident, but was much relieved to find that my charges took everything quietly, although they were forced to stand with their heads projected on a line with their bodies on account of the low roof of the car. Feeling no fear of harm, I bedded them down for the night and adjourned to the smoking car to blow a cloud of peace.

The next morning at Elmira, on going into the car, I found the male showing signs of temper; but on giving him his breakfast he became quiet, and I passed out, fastened the door and was standing on the platform some little distance away, when there was a crash of glass and the male's head was thrust through the end door of the car. Springing on to the front platform of the car, I pressed him back and yelled for help, which soon arrived in the shape of the conductor, who hurried off and brought a carpenter with some boards, which were passed up between my back and the broken sash, firmly nailed in place, and the delayed train started with the accompaniment of sundry growls from the disgruntled passengers. Fortunately the force of the blow had driven all the glass in the sash outward, and I had no further trouble with my passengers on the trip. On arrival in Cincinnati the car was taken back up the track some two miles, where the animals were unloaded at a cattle shute and then led through the leafy avenues of Clifton, that beautiful suburb of Cincinnati, until the Zoölogical Garden was reached. For some time the male behaved decently, but after a while he began swinging his head and battering the female, when a partition was built between them to stop his brutality. Thus they have remained in perfect health and condition for over eleven years before breeding.

FRANK J. THOMPSON.

WOODCOCK IN TOWN.

BROOKLYN, N.Y., Nov. 9.—*Editor Forest and Stream:* The note of "S. E." in your issue of this week, relating the capturing of a woodcock on the stoop of his Brooklyn residence, prompts me to send you these notes. One Sunday morning in December, 1885, I was awakened by my twelve-year-old brother, who asked me with considerable excitement for the name of a bird which his older brother (fourteen years old) had caught the day before in the street a short distance from the house. "Kind of a round plump bird, brown, with short tail, awful long bill, and big round eyes." I at once thought it was a woodcock. On going down-stairs, sure enough there they had, in an old squirrel cage, as fine a big woodcock as I ever saw and in splendid feather, the darker blotches of feathers showing clear and distinct from the lighter color. My brother gave an account of the capture as follows: "I was playing in the street yesterday afternoon with some other boys, when I saw a large bird fly across the street and light in the gutter. I thought it was a quail and ran over toward it, when it flew again about half a block, and again lit in the gutter. When it flew the second time I ran after it, for I thought it acted queer, and when it lit I was close to it and caught it just as a lady was also stooping to catch it; and I brought it home and put it in the cage."

This woodcock had one of its legs injured (I think by a shot) at the joint of leg and thigh. It looked as though a cord had been cut and the bone partly splintered, and a warty or semi-bone growth of say ¾in. or 1in. in circumference had formed at the fracture. When picked up in the street the bird had a drop of blood in the end of its bill; but my brother thinks this was caused by hitting its bill against the cobbles in the street, as he says he noticed each time the bird lit it "pitched forward." The injured leg itself was not drawn up much, but the toes of that foot were doubled under, and of course the bird hobbled when it moved about. It was very fearless and did not seem to mind being taken in our hands, and only struggled when we examined its injured leg. As it was late in the season and the swamps and feeding grounds were frozen up, we did not think it possible for the bird to live, and apparently it was not strong enough to fly, so we killed it and sent it to a sick relative.

About seven years ago I was standing on the extreme forward deck of a Fulton ferry boat in Brooklyn at about 7:30 A. M., when I was surprised to see a woodcock come diagonally across the Brooklyn Bridge yard, fly over the end of the boat (which was crowded and just about to start for New York), and about 60 or 75yds. out over the river turn and return over almost exactly the same course, passing not more than 10ft. above my head and disappearing.

A young friend of mine lived five years ago in a small frame house on a corner lot of about 100×100, the house being in the corner of the lot furthest from the streets; and in the front yard there were two cherry trees, some gooseberry bushes, flowers, etc. On one street a line of horse cars runs about once in five minutes. Early one morning my friend and his father were much surprised to see a large woodcock stalking around as if feeling perfectly at home. My friend rushed into the house for his gun, but when he came out the woodcock had flown.

The first and third of these incidents happened in different parts of the most built up and populous part of the Twenty-third Ward in this city.

How shall we account for the presence of so shy a bird as a woodcock in the streets and private yards of the third city of the United States—a city of say 600,000 people? DUPLEX.

Editor Forest and Stream:

On the 6th inst., while several members of the Brooklyn Athletic Association were playing lawn tennis on their grounds, corner of DeKalb and Classon avenues, their attention was attracted by the movements of a cat to (what was to them) a strange bird. It could fly but a short distance, and was secured by Mr. Walter Brown with his tennis racket. It proved to be a fine female specimen of woodcock. This is probably a first on record for the racket as a weapon for killing woodcock. It had doubtless injured itself in its flight against the wire netting that surrounds the grounds. H. J. G.

BROOKLYN, N. Y., Nov. 9.

AMERICAN ORNITHOLOGISTS' UNION.

THE Union began its annual session in this city at the American Museum of Natural History Tuesday. The active members in attendance were: Prof. J. A. Allen, of the American Museum of Natural History, President, and one of the most distinguished ornithologist in the country; Dr. Elliott Coues and Robert Ridgway, both of the Smithsonian Institution, Washington, Vice-Presidents; Dr. C. Hart Merriam, Chief of the Division of Ornithology and Mammalogy in the Department of Agriculture, Secretary; Wm. Dutcher, of this city, Treasurer; Wm. Brewster, of Cambridge, Mass., Charles B. Cory, of Boston, Mass., Daniel G. Elliott, of New York, Members of the Council; Charles F. Batchelder, of Cambridge, Mass., Frank M. Chapman, of New York. Jonathan Dwight, Jr., of New York, Col. N. S. Goss, of Topeka, Kan., State Ornithologists; Dr. Edgar A. Mearns, United States Army, of Fort Snelling, Minnesota; John H. Sage, of Portland, Conn.; Geo. B. Sennett, of the American Museum of Natural History; Dr. Robert Shufeldt, United States Army, of Fort Wingate, New Mexico, and Gurdon Trumbull, of Hartford, Conn. Among the associate members present were Leverett M. Loomis, of Chester, S. C.; S. Lowell Elliott, of Brooklyn, and L. H. West, of Roslyn.

The following officers were elected: Pres., J. A. Allen, of New York; Vice-Pres., Elliott Coues and Robert Ridgway, of Washington; Sec., John H. Sage, of Portland, Conn.; Treas., William Dutcher, of New York; Members of the Council, William Brewster, Charles B. Cory, Daniel G. Elliott, Henry W. Henshaw, George N. Lawrence, C. Hart Merriam and Leonhard Stejneger. A number of interesting papers were read yesterday. A report of the meeting will be given next week.

THE CHOCOLATE-COLORED SKUNK.—We had not fully understood Mr. True's description of the color of the skunk, noticed in our columns Nov. 7. The white ares are present as in the normal state of coloration; it was only the black that was replaced by chocolate in the Morantown specimen; the white tip and lateral stripes remain unchanged.

Game Bag and Gun.

CANVASBACK DUCKS.

MUCH has been written of recent dates to your valuable paper about the canvasback duck of Havre de Grace, and the canvasback of Currituck and other waters. I have just read a long and interesting article in the *New York Herald*, by Mr. John Chamberlain, the great Washington epicure. Mr. Chamberlain knows what to do with a duck, when he gets him by the neck. I have no doubt—in fact I feel confident—that a good fat canvasback, served according to directions, would not be bad to take, if there was not over one at each time, but when Mr. Chamberlain and all the other writers we have read recently on this subject tell us that the canvasback duck from Havre de Grace is superior to the canvasback of Currituck and Back Bay, he and they are mistaken, and very much mistaken too. I give the following facts as a foundation for my assertion:

First—The duck is one and the same in every particular. The best gunner in the United States, with the finest microscope, could not detect any difference in color, shape or size.

Second—The waters at Havre de Grace, Currituck Sound and Back Bay are exactly of the same flavor, a little too brackish to be palatable.

Third—Wild celery is what a canvasback lives on, if it is to be had; but if not he will eat any kind of duck food or even mussels, small oysters or minnows. They do not, as Mr. Chamberlain writes, pine away and die of starvation if they happen by mistake or over-hunger to drop into a stream where there is no celery, which gives them the delicious flavor, of course; when a canvasback is shot in salt water, he is no better than a white-winged coot, except not quite so tough; and as there is just as much or more celery at Currituck and Back Bay, I claim that the ducks are just as good.

Canvasback ducks and redheads are perhaps the greatest birds for migrating in America. One day they are at Havre de Grace, the next at Currituck, and in two days back to Havre de Grace. It is an understood fact that these birds go or come a distance of 200 or 300 miles in a night's time; and often it has been my experience and every other duck hunter's, too, that to-day there will be thousands and thousands of canvasbacks and redheads in the Bay or Sound in which we are shooting, and to-morrow hardly a bird is to be seen; they are all gone. Perhaps they will return the next day, but they generally stay two to four days, when they are as plenty as ever. We often see them just as the sun sets in the fall, when they have been shot at hard all day, arrive in large flocks and start north. They go direct to Havre de Grace; perhaps a few will drop in the James River; and they go back and forth all winter or until it gets too cold at Havre de Grace. Still we are told that they are not the same ducks, and that there is no comparison.

It was my happy fortune, a few days ago, to sail up to Baltimore on the good ship Carolina with two of Havre de Grace's famous shots, who spent several winters at Currituck and in Back Bay some years ago; in fact, Jake Poplar and his brother John are considered at Havre de Grace two of the finest shots in America. Jake has killed in Back Bay 325 canvasbacks in one day's shooting. They say the only difference between Havre de Grace and Back Bay ducks is that at Havre de Grace they don't kill so many birds, and so have more time to sponge them off and keep them looking nice and clean. This, my reader, is the only diffrence between a Havre de Grace, Md , canvasback and a canvasback from Currituck Sound, North Carolina.

But to prove my sincerity in the matter I will wager $100 that I can take twenty canvasbacks from each place, mix them up together, mark them so that a referee may know, to decide the matter, and I will bet there is not a man in the United States who can tell the difference.

To prove what I say about a canvasback preferring mussels, small oysters and minnows to starvation, I will relate some little incidents as they recur to my memory. Two winters ago I bought quite a lot of ducks at Morehead City, N. C., and on one occasion when the weather was very cold and all the waters at Currituck were frozen up solid, I received from my agent a fine lot of canvasbacks. I think they were decidedly the largest and fattest I have ever seen. The next day some of my friends from Long Island, N. Y., sat down to my table to help me destroy these delicious birds. But alas! my carver had hardly broken the skin, when the scent of mussels filled the room. Fortunately my cook had a good roast ready or we should have had no dinner that day, for we could not eat the ducks. There is no celery at Morehead, for the water is very salt.

Capt. Eugene Ballence, who formerly ran the steamers Cygnet and Bonito to Currituck Sound, well known by all sportsmen who ever visited those waters to be a man of sound sense and veracity, had the same experience in the Albemarle Sound, at the south end of Roanoke Island. He awoke one very cold morning and found what he had never seen there before, thousands and thousands of canvasbacks swimming around the shore. They seemed happy, and were feeding from the bottom at a lively rate. He took out his gun, and in a short time there were several in the hands of the cook. Although the Captain says he had eaten nothing but salt fish and griddle cakes for a month, he could not go the canvasbacks. He examined their crops and found them full of mussels and minnows.

While in Baltimore a few days since I was told by Baltimore's greatest epicure, Mr. Robt. Rennert, that one of the finest pairs of canvasbacks he ever saw came from Currituck Sound last winter. Mr. James Jones, of Norfolk, gave them to him; and I sold Mr. Jones the ducks.

I was born on the banks of the river at Currituck about thirty years ago; and I think it was next day—as well as I remember—that they put a gun in my hands; and I have been shooting ever since. I have shot all kinds of ducks in this country, and a great many of them. I am very fond of all kinds of game, and have eaten them in every style—except as the English prefer them, rotten. And I must say with all candor that I can cook a canvasback, redhead, and a widgeon or baldpate, and have them carved and set before the greatest epicure in the world, and I don't believe he can tell one from the other. I have seen Messrs. James Gordon Bennett, George Penneman and several of their friends try it at my table, and they were completely at sea. Wild celery gives them the flavor, and it does not matter whether they come from Havre de Grace, Currituck, Back Bay, Ohio, Texas, or anywhere on the Pacific coast; if only you get them in a stream where there is plenty of wild celery they are all right; otherwise they are no better than other ducks.

Game of all kinds is very plentiful at Currituck. I think there are more ducks than we have had for ten years. I attribute it to the passage of that new act of the Legislature making it a penalty of $50 to shoot a duck over decoys until Nov. 10 and after March 10. The penalty for firing a rifle in Currituck Sound is $50, and $50 fine for shooting ducks for market before Nov. 10.

J. B. WHITE.

MY FIRST CANVASBACK.

A REMINISCENCE OF SHELL POINT.

DURING the winter of 188– Boreas in our Northern clime had lowered the column of mercury in the Fahrenheit tubes to 10, 12 and 16 degrees below zero for days and weeks together, when into our sanctum walked W. R. A. with a challenge to seek a temporary abode in a land of more etherial mildness, where we might snap our fingers at his frigid majesty and warm our guns upon the larger-winged game. Having enjoyed many rare days' sport with him upon the high-flying upland plover, the swift-flying quail, the devious-flying snipe, the erratic-flying woodcock and the lordly ruffed grouse, it had long been my ambition, as it had many times been his privilege, to try conclusions with the seafowl of the coast. The talk resulted in the almost immediate purchase of tickets for the sunny South.

Arriving in Norfolk before noon, we take the Virginia Beach Railroad to the Princess Anne, in time for dinner; thence along the beach toward North Carolina by such a combination of quadrupeds, wheels, boards, chains and ropes for power and vehicle, and with such a Jehu for driver as wildest imagination never pictured.

The dozen or fifteen miles from the hotel to our destination is a barren coast, evincing no sign of civilization or life except about the stations of the U. S. Coast Guard, which are some four or five miles apart. Hulks of old wrecks and drift, an occasional fisherman's hut deserted, now and then a disused windmill in the distance, its idle arms outstretched as if in mute appeal from bygone times to the present; eagles soaring in the air or perched upon the telegraph poles of the life-saving service, are the only companions of the trip, save the ceaseless roar and murmur of ocean's billows as they sing their mournful dirge as a fitting requiem over the graves of the many castaways whose bones lie bleaching beneath the sands of the shore, with only a broken spar to mark their last resting places.

Arrived at Little Island, Capt. Andrew's voice rings out a cheery welcome to my friend, whose advent, though unexpected, was none the less welcome, and whose gun in these parts had many times previously rung out the death knell of many a noble bird. We turn in early and are soon lost in pleasant dreams. We seem hardly to have been asleep at all when aroused from our slumbers by the ringing voice of the Captain, "All hands, ahoy! rousing nor'easter."

"Aye, aye, sir," was the nautical answer of his land lubber guests.

A hasty toilet and breakfast, and soon the gunner, well bundled in the bow and boatman at the oars, were quietly making their way to Shell Point long before the faintest glimmer of daybreak appeared on the eastern horizon. Point reached, decoys put out, boat beached among the cane, gunner and boatman in readiness in an exceedingly comfortable blind, anxiously await in silence the advent of the first callers. The dark rolling clouds had scarcely begun to lift, giving evidence of daybreak, when the keen and practical eye of Eb. discovered in the distance a pair of ducks coming up wind.

"Pair canvas, down, sir—mark south—don't shoot till I tell you." Then began Eb.'s wonderful talk in purest duck language. Down crouching, electric currents making quick circuit of the system, realizing that the long wished for moment of years was at hand, breathlessly awaited their oncoming. Eb.'s whispered, "mark east" indicates their location, and peering between the cane reeds of the blind we see them swiftly flying into the teeth of the wind and well out, as if to pass our decoys in disgust, and my heart sinks as I see them pass us by, but no! Eb.'s trained voice is too seductive for wisest duck to resist.

They wheel, and with a whispered "Mark north, get ready," he continues to call more impassioned and earnest, and in less time than it takes to write it around they sweep in a rectilinear line to our decoys, and with an audible "Mark east, shoot," the gunner is on his feet and the old reliable 10-bore Scott rings out the death-knell of my first canvasback. He was coming with such velocity that he fell stone dead in the water within two feet of our blind, although shot at a distance of forty to fifty yards. Duck number two wheeled about and stood not upon the order of his going in a line directly away from us, and swinging around upon him I failed to stop the gun when it covered him, and so shooting to the right scored a clean miss.

"Well done, sir, well done; no gun could reach the last one," were Eb.'s words of congratulation and flattery.

Ah! clever soul, well knew I that I should have killed the second, but his kindly genial way lessened my chagrin and his words of flattery were as balm in the moment of disappointment. Thus was ushered in our ducking experience, and many were the pleasant and successful days put in with Eb. since—the memories of which in the mellow light of receding months and years form mental pictures surpassing those of the artist's most skillful limning.

Eb. V. Roe is now in the employ of the Currituck Club, and the writer fully believes that every member will testify that taken all in all, few equal if any excel Eb. in all that goes to make up the art of duck shooting, and the writer indulges the hope that it may be the pleasant lot of the reader to fall in with as good a man and have as good a time as he did on Shell Point, where he killed his first canvasback.

The territory referred to joins on the north the territory of the Ragged Island Club and comprises Little Island, Shell Island, Beech Island, Long Island, etc., a territory of several thousand acres, and is owned by the heirs of Capt. Travis, in his lifetime of New York. The property has been held under lease for some years past by John L. Roper, of Norfolk, Va., and is still in charge

of Capt. Travis's man, Capt. Andrews, and it is open to all gunners by paying $3 per day per gun for shooting privilege, board and lodging $2 per day, boatman and decoys $2 per day.

On our last trip, in March, 1880, we learned that some gentlemen of Hartford, Conn., were negotiating for the lease with a view of organizing a club, but it is our impression that for years to come gunners will be received on the conditions named.

It is certainly a great fowl country, and for snipe it is the writer's opinion that a better does not exist in America if in the world.

Even should the Travis estate fall into the hands of a club, who would allow none but members gunning privileges, there is as much fairly good shooting in adjacent waters as would satisfy (or should satisfy) any reasonable gunner who is not a member of the pot-hunting fraternity.

WORCESTER, Mass. GEO. MCALEER.

THE DARLING CASE.

CALAIS, Me., Nov. 9.—*Editor Forest and Stream:* The notice in your last issue from the Boston *Herald* is not quite correct. The inclosed slip from the *Times*, of this city, is more nearly correct. To Warden French and Detective McNamara all the credit is due. DIRIGO.

The *Times* report and comments are as follows:

"Darling's camp on Nicatous Lake is very difficult to reach, and is a sort of stronghold for poachers. It is 50 miles from any railroad station, and to reach it one must travel over a rough road. McNamara, accompanied by Swanton, of Milbridge, made their way to the camp with much difficulty and engaged quarters with Darling. They hired his guides and dogs to hunt deer with, paying well for them. They remained five days. When McNamara and Swanton had obtained all the evidence they wanted, enough they thought to convict Darling on some twenty or thirty cases, they left the camp. As the offense was committed in Hancock county they were obliged to go into that county to swear out warrants against Darling and his guides. Accordingly they went to Bucksport, where the warrants were obtained. Constable George Davis and Sheriff James Swanton, with a formidable party, set out for Nicatous Lake. On their way to Darling's camp they met Darling in the town of Lowell and immediately arrested him.

"Darling was arraigned at Bucksport, Monday, before a trial justice. The justice found Mr. Darling guilty and fined him $40 for the deer which it was charged he killed and $40 for each of the deer which the other parties admitted that they killed. He was also fined $50 a day for keeping dogs to hunt deer two days, the whole making $260. On the question of costs there was some argument. Mr. Voss suggested that the case of bringing seven men from Milbridge to Nicatous Lake to arrest Jock Darling be charged to the prisoner, to which Col. Hutchinson objected, and said that any one officer could have arrested Mr. Darling without a bit of difficulty. The cost question finally went over for the counsel to talk over and see if they couldn't decide upon something satisfactory. The case was appealed and will come before the Supreme Court at Ellsworth on the 8th of April next. Other cases stand against Darling. The officers who went to Nicatous to arrest the guides found that they had taken the alarm and fled. They will be captured later."

"Game Warden French, of this city, never lets up when he has once started out to make a case. He has been after the notorious Jock Darling for three years, and two years ago nearly captured him, when he made that famous raid at Nicatous Lake. At that time Jock escaped, but French brought to grief a lot of sportsmen who were found at Darling's camp, and mulcted them heavily in Hancock county. French went to Nicatous after Jock again last year, but the foxy poacher had been warned in advance, and, although the warden lay in the rain three days and nights without shelter, he was unable to secure his man. He could not enter the camp as a detective, because his exploit in 1887 had made him known to Darling and his guides. But French would not be beaten, and schemed to accomplish his determined purpose. W. N. McNamara, a Boston detective, whom the papers of the State have been applauding, was employed in a Milbridge case which came before the October term of the S. J. Court for this county. French met him at Machias on Oct. 6, and, after a cautious interview, revealed his scheme, and obtained McNamara's consent to take a hand. French thoroughly posted the detective, who was ignorant of woodcraft, and marked out in every detail the plan of movement which has so successfully resulted. French then sent McNamara to Bangor to confer with State Game Commissioner Hon. E. M. Stilwell, who had been anxious so long to bring Darling to justice. French also wrote the Commissioner, and received letters in reply that were favorable to the project and highly commendatory of the warden, with instructions to go ahead. Promises of reward were also made if the scheme should prove successful.

"McNamara went to Nicatous. The papers of the State have recorded his signal success. A brief account of his brilliant work, the arrest of Darling and the penalty he received in court is published on the next page. Yet not a word of praise for French has yet been published so far as we have read. At the time arrangements were being made all the letters that Mr. Stilwell wrote to French were read in this city by a party who says that, while the Commissioner merits chief credit for apprehending the notorious poacher, he cannot fail to grant due credit and reward to his efficient subordinate. French has scored great achievements every year, and it would not perhaps be detracting from his record to say that his studied efforts for three seasons to capture Jock Darling should be counted as his best work."

Editor Forest and Stream:

The story of the arrest of Jonathan Darling has created a profound sensation among the dog hunters, even in this State. There are a number of Boston sportsmen who have shot deer that Darling's dogs have driven to water. Or at least they admit as much. But the feeling is one of relief that such hunting is likely to be stopped. Even the very hunters who have done the shooting say that they want no more of it. The dogs, let loose in the vicinity of one of those mountain lakes soon drive the deer to water, and by time a man of any soul in him is paddled up to the frightened creature, struggling for his life, he is thoroughly sick of the business, and would thank the guide if he would make some mistake that might allow the deer to escape. It is a fact that the day of dogging deer is about done, and the Maine commissioners are to be thanked for the reform, though rather slow it has been. Darling's arrest may not prove to be the last chapter in that disagreeable history, for he is determined; he has money, and he will carry his cases to the full decisions of the law. Indeed, if beaten at last, he may try the same business again, for he believes, or appears to believe, that he has an inalienable right to hunt deer, just the same as he had before the framing of the statutes for deer protection. He declares that the game laws are unconstitutional, and that he can convince the courts that such is the case. The results will be watched with a great deal of interest. SPECIAL.

BOSTON, Mass., Nov. 11.

Editor Forest and Stream:

The sage said, "Let me make the songs of a people and I care not who makes their laws." If we are to judge nations and individuals by the songs they sing, the poems they write and the doggerel they perpetrate, why is not this "rhyming jingle" pat just now? It was copied by me last month from the original, which was tacked up in Jock Darling's camp on Nicatous Lake. I am sure I don't know whether Darling evolved it or whether it was the work of some guest; but it is at all events a genuine specimen wild flower of poesy indigenous to Nicatous soil; and it strikes me that it is quite as characteristic in its way as were the rhymes of Robin Hood. It runs thus:

NICATOUS LAKE.

Around this lake the deer abound,
And trout in all the streams are found.
Come on, ye hunters, from afar.
Neal Dow, if here, could find a "bar,"
Though long in Portland he has sought,
And yet he seeks, but finds them not;
While hunters with but little skill
Find many a "bar" in Portland still.
And sailors wild, with faces brown,
Still "rush the growler" through the town.
Here Darling built his cabin stout,
And always leaves the latch string out,
Excepting when the wardens come
To guard the deer by swilling rum.
Whene'er he spies these sons of sin,
Bold Darling draws his latch string in.
Here, where the air is sweet and pure,
All pain and sickness find a cure;
Consumption dread is turned away,
Where grows the fir it cannot stay;
Hay fever here no wind has blown,
Nor was the asthma ever known.
Old Brown-Sequard's elixir queer
Will never find a patient here.
And if at last you wish to die,
The promised joys of heaven to try,
You must employ a knife or rope—
Self-murder is your only hope.
For here no mortal dies, they say;
They just dry up and blow away.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 1.—The season just passing has been unique in this locality, in that there has been more upland shooting done around and about Chicago than has been known for years. The opening of the prairie chicken season has doubtless had most to do with this, for many who went out after that bird found others of our almost forgotten upland birds creeping back to their old haunts. Not many of our shooters here know or care much about plover shooting; yet a good number of golden and upland plover have been bagged during the fall. Of jacksnipe we have not had so many for years, and although these can hardly be called an upland bird, they have been abundant on every damp upland as well as on the marsh. The snipe have gone on south now for the most part. They and the unusually large numbers of woodcock have given the shooters of our city an exceptional fall; for they got in this year about six weeks ahead of time.

There seems to be an unusual abundance of quail all over the country this fall. Central and southern Illinois has been full of them. From Missouri we have had constant reports of plenty, and in Kansas I have had personal proof of large numbers, even so far west as the edge of the high plains, where the crops failed this year. In Indiana quail are fairly swarming in some localities; yet friends who have correct advices say that there are a few select spots in Ohio where the shooting at them is even better still.

Nov. 5.—Mr. Fred Donald has started with Mr. Eustis and Dr. Williams, of the C. B. & Q. road, and Mr. Griffith, of Omaha, on a four weeks trip into the newly-opened and wonderful game country lying near the young town of Alliance, in northwestern Nebraska. These gentlemen go in a private "Q." car, admirably equipped. They will shoot wildfowl, grouse and quail, and perhaps get some antelope. The country they visit is probably the best game district now in the West. The chain of lakes there is the only resting place for the wildfowl flight in a tremendous distance either north or south, and the flight there is said to be enormous. It is to be hoped that the gentlemen will not reach their point too late in the fall for the best sport.

On a hunt lately we fell to talking about the duck supply. It was the opinion of my friends, all of whom had hunted largely in Dakota and the Northwest, that our scarcity of ducks here is mainly due to the fact that the flight has moved further west. Mr. Donald had traveled much in Manitoba, and was acquainted with the great swamp in lower Manitoba, which stretches along the Canadian Pacific for a hundred miles, nearly impenetrable to footman or boatman. He said that no one could form any idea of the countless thousands of ducks' nests that great breeding ground held, and he thought they could never be exterminated. I asked him about the story of the Indians gathering and shipping the wild ducks' eggs to the markets by the boatload.

"That's all nonsense," said he, "I never heard of any such thing till I saw it in the papers, and when I did I laughed at it. You may call it substantially untrue. You want to remember that they have game laws up in Manitoba, and they enforce them, too, far better than we do ours. There is a license on every alien gun, and they watch white man and Indian both much more closely than we dream of doing. The egg gathering you describe would be impossible and it does not exist, at least in any of the territory tributary to Winnipeg."

Mr. W. W. McFarland is just back from a trip to Northern Dakota and the edge of Manitoba, and reports a pleasant time at ducks, quail, grouse, partridge, jackrabbits, foxes and what not. On this trip McFarland found himself on the edge of a vast tamarack swamp into which he could see going countless numbers of ducks. The Indians told him there were "heap ducks" in there, but that no one could get into the swamp. It must have been a pretty tough swamp, or "Mc" would have got a boat in somehow. This doubtless was one of the great northern breeding grounds also, although I did not know the wildfowl chose the tamarack country for such a ground.

Mr. Lee Hamline has gone to Council Grove, Kas., after quail. It is very probable that he will have good success. There in no more deadly way of shooting quail than along the Kansas hedges. Every quail flies straight down the hedge, and can be walked up without even marking it down. It is the easiest quail shooting there is.

Mr. Joseph Card has gone to Toledo, O., for a few days' sport at the ducks on the great marsh near that place. Mr. Card shoots with a club whose privileges are held in such esteem that a membership is valued at $2,000.

Nov. 7.—In a talk with Mr. Bogardus, of Garden City, Kan., the latter informs me that hard times and light crops have made trouble among the new settlers on the high tablelands of southwestern Kansas, and very many of the new homesteads taken in 1886 and after have been abandoned. In consequence, the game has drifted back again over much of that territory. Antelope have again become abundant much further to the north of the Neutral Strip than has been the case for years, and some are seen not far from Garden City, near the Arkansas River.

Mr. C. J. Jones lately received a check for $20,000, one-third of the payment of $60,000 for an undivided one-half interest in his herd of buffalo. The news comes to me that the herd is to be moved to Ogden, Utah, by a boom syndicate, and will be kept there for advertising purposes only. It will not be divided or decreased, and Mr. Jones will supervise it. Buffalo Jones has so far shown that he knows what he is about, and it is hoped that in this case there is to be no exception.

Mr. E. C. Cook is just back from the club house on the De Golyer marsh, with a good string of mallards. Nick Sammons, the club keeper, declares that he has got all the water and all the birds in that whole end of the Kankakee country, which fact he attributes to a judicious system of ditching. There are also a good many quail on the club grounds this fall, and prairie chickens have increased to noticeable numbers. These upland birds are not molested.

I don't know why it is that when one mentions Mr. Cook's name, it seems natural also to mention that of Mr. Ward, who is a member of the same club and a great friend of the former gentleman. Mr. Ward has just gone down to the club house. He was afraid to go when Mr. Cook was there. Mr. Ward has had great trouble in getting a retriever of just the size and shape he wanted, and has made a great many experiments. On this occasion Mr. Ward walked all the way down to the club house, about forty miles, and led a cow, which he desired to add to the family there. The party at the club house discovered the procession winding down the lane, Mr. Ward walking backward in a persuasive attitude most of the time, and some one was heard to exclaim in tones of high disgust, "Well, there comes Ward again, and I'll be blamed if he ain't got another kind of retriever along. Say, he makes me laugh!" It is perhaps best to add, however, that this is Mr. Cook's version of the story.

Mr. Jenney, of the Jenney & Graham Gun Co., is back from his sojourn in Canada, looking much better.

Numbers of the boys are up to Fox Lake this week, and there has been a desultory exodus for the lower marshes, but for some reason the duck hunters are not so eager this fall as usual. It is probably due to the good chance they have had at the snipe and to the better sport of upland shooting which has been mentioned earlier.

E. HOUGH.

WILD TURKEYS IN NEW ENGLAND.

Editor Forest and Stream:

Not a number of your good journal but stirs me with the desire to make comment on some statement or ask questions of some member of the craft; but somehow I cannot get time to act upon my impulse. Let me free my mind now of a number of things which the last few numbers of FOREST AND STREAM have suggested.

The Eastern limit of the wild turkey in former times has been discussed a good deal of late. In my boyhood I used to hear much of their former abundance in Massachusetts, in the Connecticut Valley, about Mt. Holyoke and Mt. Tom and on Mt. Toby; and I dimly remember a story of the killing of the last gobbler that remained in that region. Within a few years I have seen the statement that a small flock of wild turkeys was thought to exist in a wooded and thinly settled part of Connecticut. I have either personally talked with or read the statement of an old man who in his boyhood killed turkeys on Mt. Toby. There cannot be the slightest doubt that this noble game bird was once plentiful in that region, and it would be strange, it seems to me, if it had not ranged far to the east of there. I have read of turkey shooting in Canada, but in just what part I cannot say.

Was it not "Nessmuk" who described in FOREST AND STREAM that wonderful sight of myriads of wild turkeys feeding through the woods in Michigan once upon a time? The fascinating picture has remained in my mind, but I am not sure that it was "Nessmuk" who painted it.

To change the subject, I want to ask if any one knows how far the smoke of forest fires will drift. During the recent great forest fires in the far West, eastern Massachusetts was swathed in a very hazy and smoky atmosphere. I thought, and still think, that this appearance was due to the fires in Washington Territory and Montana. If reports from persons at intermediate stations could be had, and dates could be compared, the results would be of much interest. C. H. AMES.

WORCESTER, Mass., Nov. 9.—The first flock of woodcock is nearly over, but the seekers for this kind of game are still in the field. The reports of captures this week include the following: On Wednesday, H. L. Hall and J. L. Waters came in with a bag of 19 birds, and about half were woodcock, and on Friday Mr. Hall came in with 2 quail, 2 rabbits, 1 partridge and a mink; the latter is the first this season.—E.

A BUNCH OF BEAR STORIES.

I.

AN adventure which my friend, Col. T. B. Hooker, once had with a bear, I think deserves a place in the FOREST AND STREAM. Col. Hooker, who is at once a very hospitable cotton planter, a genial gentleman, and one who has been a keen sportsman in his younger days, relates the following:

In the neighborhood of his plantation in the Mississippi bottoms there was an abundance of game, such as bear, deer, turkeys, etc., but a dense canebrake interposed between his house and the best hunting grounds, which necessitated a long detour to get around it. To obviate this he determined to cut a "hack" (in the vernacular) through the brake, which was about half a mile wide. He sent a man one morning to the opposite side of the brake to cut through the cane toward the house, while he himself, with caneknife in hand, proceeded from his side to meet him. After penetrating the brake quite a distance the Colonel's attention was attracted by the outcry of some of his dogs which had gone out with them. It soon proved that they were in chase of a bear, and were making directly toward the Colonel, who had not encumbered himself with a gun, and therefore stood weaponless, excepting the caneknife, and awaited developments. The bear showed up pretty soon, making excellent time through the cane, but he was quite a small specimen, and was overhauled by the foremost dogs when very near the Colonel's position. That gentleman suddenly conceived the idea of capturing the bear alive, and with that view rushed into the melee, kicked the dogs aside, and laid hold of the bear's neck with both hands. The bear struggled hard to get away and the Colonel strained every nerve to hold him, all the time yelling with all the breath he could spare for his assistant to come to his help. The other man, who was several hundred yards away, made all the haste he could to reach the scene of excitement, his interest greatly heightened by the combined baying of the dogs, yelling of the Colonel, and squalling of the bear. But the cane being very thick his progress was much impeded, and the Colonel, nearly exhausted by the tremendous strain on his muscular and nervous systems, was on the point of giving up the contest and getting clear of the bear's claws and teeth, when his companion came in calling distance and shouted an inquiry as to what the trouble was. The Colonel shouted back: "Come quick! I've got a bear! He's about to get away! Run and help me hold him!" The man came up with all speed to relieve the Colonel from his perilous and awkward position, and at once laid hold of the bear with both hands. Col. Hooker then released his grasp, and discovered that the poor little bear was stone dead—he had choked it to death. COAHOMA.

MISSISSIPPI.

II.

Thanks to "Larry Yatt" for his bull and bear story, over which I laughed heartily. When that bear leaped the fence and struck on the other side "like a ton of mud," I recalled the description which T. W. Billings, of Brownville, Me.—best of guides—once gave me of the antics of a two-year-old bear which he caught in a trap, and which managed to get loose from the clog at the first jump. Dragging the trap, he frantically climbed into a young spruce, and seeming in his crazy flight to think that that tree led up indefinitely to some safe region above, kept on till his paws clutched the smallest twigs at the top, and he fell over and came "slithering" down through the branches, striking on his hams with the traditional "dull thud," making a tremendous dent, visible two years afterward, in the swampy ground and eliciting a grunt, at the recollection of which Billings always had to roar again with laughter.

Of all comical creatures, give me for amusement a tame and frisky bear; but the caution is in order to first "be sure your bear is tame." I once barely missed having my shoulder torn off by the wicked, lightning-like stroke of the paw of a caged cinnamon bear, who stood sleepily swinging himself back and forth from one foot to the other, and looking almost too lazy to wink. I strolled incautiously almost within reach, when between the bars of the cage came that paw, the claws just grazing my shoulder, with a quickness of stroke that then and there taught me something new about bears.

By the way, where is the fine grizzly named Tom, which used to be kept in one of the bear dens at Union Park, on the West Side, in Chicago? Now I think of it, it was fifteen or eighteen years ago, or possibly even more, that I saw him. Can he be the one mentioned by Mr. Hough as having been killed in a "battle royal" with other bears in Chicago some years ago? The bear I refer to was young—two or three years old, perhaps—when I saw him, and was said to have been brought up from a cub by a hunter who had killed its mother. It was said to have followed him like a dog and to have been perfectly tame, and that its owner only parted with him to the park when called to Europe on business. C. H. AMES.

III.

The "Immortal Bard of Avon," in one of his aphorisms tells us that "Fortune brings in boats that are not steered." An illustration of the same may be found in the following:

A friend of mine hailing from the Emerald Isle, a forest trotter of the most approved species, and a devoted disciple of Epicurus, whose palate had for some days been hankering after the flavor of wood grouse, sallied forth in search of that wily biped. The fresh morning air, deliciously tempered by the rays of an October sun, infused the elasticity of youth into his fifty-year-old limbs, as with light and airy steps of a Thisbe out for a morning walk, he "o'er tripped the dew" to the "Fording," a noted deer stand hereabouts on the Cowpasture. Irresolute he stood contemplating the cold flood ablaze with the smiles of Phœbus Apollo. Visions of rheumatism, neuralgia, catarrh flitted through his mind.

"Thrice looked he at the river,
Thrice looked he, so 'tis said,
And then pulled down his beaver,
And then turned back in dread—"

When a pheasant drumming up a hollow on the other side decided him, and he resolutely faced the chilling waters, which eddied around his knees gracefully, but with the effect of having his legs in an ice-cream freezer. Arriving on the opposite side he struck up a deep hollow, through which a little prattling stream, "making music on the enameled stones," leaped and gamboled. Pursuing his way and meeting with no success, footsore and weary, he reclined against a tree absorbed in trying to frame a Johnsonian ode on the vanity of human wishes.

Suddenly a noise proceeded from a small hollow a little to his left. "A deer," thought he, "and dear me! I have only pheasant shot in my shells; however, I will let him have it." But soon emerged from some underbrush a black bear, making a beeline toward him. It, however, turned up a ravine he was ascending; but Bruin changing his mind and wheeling sharply around came down the hollow at right angles to my friend. When within fifteen paces the sportsman blazed away at the "bar's" head and rolled him over. But the shot only obfusticated Bruin's intellect; and with a growl and a mighty shake of his shaggy hide, he rose and was making off. Another shot pounding away at his head made him "heave to," describing a circle as if revolving on a pivot. A third shot laid him out, to the great delectation of his slayer, whose name would henceforth rank high on the roll of Nimrod Hall sportsmen. The shot used was English chilled No. 6. Weight of bear about 200lbs.

Departing from the subject of bears, I might say a few words in the way of bulling the place at which I am staying. It is an excellent locality for sportsmen, especially those who are fond of mountain shooting and fishing. Bass fishing in the Cowpasture is capital, the fish rising well to a fly, as it is very little fished. There are also several mountain trout streams within easy distance. No less than twelve bears have been killed up to the present time this year. Also a large number of deer, of which the mountains have been unusually full. Accommodation excellent, and any one would be well taken care of from a gastronomic point of view.

NIMROD HALL, Bath County, Va. H. E. W. R.

IV.

Editor Forest and Stream:

I send you a letter received last December from my brother in Oxford county, Maine, relating his experience with a bear. The dog Prince mentioned in this letter is a cross-bred bear dog, part hound and part mastiff—the combination recommended to me by one of your California correspondents some time ago. It should be said, too, that the dog had only just that week been sent from Boston to my brother, and this hunt was his first opportunity to show his mettle. BRUIN.

The letter: ROXBURY, Maine, Dec. 20.—*Dear Brother:* We went down to Houghton's Monday morning and started, four of us. Addison thought best to go up the Lake road; and if we found that the bear had crossed it, that would save much travel. You may be sure it was hard up those hills, with from 8 to 12in. of snow. We went to within a half mile of the place where you turned off to go to the ponds, and there came on his track and took it. The bear went to the west and northwest, of course doubling and tacking as they always do. It was a cold day and much wind; the meat froze in my knapsack. We were glad of the wind, for it kept up a noise. We took dinner at noon, and went on and on.

Finally we saw proof of his wanting to den up. We saw several of such places, and were soon completely thrown off, for there were tracks all about. As we were cautiously walking about, Addison's hound gave tongue. I turned and he was looking under a rock, but turned about with the hair up on his back. There was a low bluff close by: Add made for that so as to be able to see the bear if he started. His dog was there as soon as he was, and rushed in front to the mouth of the den and gave tongue. The bear's head came out and Add gave him a big bullet from his breechloader. I sent one of the terrible bullets from the little rifle into the fire and smoke. Then Add sent in his other bullet. The other men were over the other side. I set away the rifle and went down into the den. Add's hound had his teeth already in the bear. Prince was looking in; I set him on as well as I could, and he soon took hold, and I took a leg, and we all began to pull and pulled him out. Prince did not let go but held like at trap. We let him work for a good while, and finally had to cuff him off; but he would set to barking and clinch hold, and for a long time after we began to drag the bear he would grab and hold back and jump right on to the bear, and wanted to be right up with his nose at the bear all the way.

You may be sure we had a hard job to get the bear out. After a long pull we reached the Bradeen branch of our river; then went down on the ice, which was covered with some 6in. of snow. The ice was very poor and kept breaking. It took two of us to drag the bear and one as beater ahead to see if the ice was safe, and the other as rear guard loaded down with guns, etc., and to keep Prince off. It seemed that we never should get out. We started with the bear at 3 P. M., and at half-past nine that night four Arctic travelers, covered with snow and ice, could have been seen wending their way in the darkness up to Houghton's door—four tired, but happy hunters.

Prince's feet were badly used up; but he was ready to pitch into Houghton's dog and defend the bear, Houghton's dog (part bull) was very much afraid of the bear. When the bear was getting out, Add's dog had faced him like a rock; you see a hound can be a bear dog, but not such hounds as you have. All were pleased with Prince. Add said before we started that he was worth more than all the dogs you had sent. At any rate, he is not afraid of a dead bear, as Mage No. 2 was. The bear is a nice one, some five years old and very fat.

From some indications we thought this bear was not the one that we saw the tracks of Saturday, so we started yesterday morning and went far to the northeast and took that track and followed around to the lake road, but it was the same bear.

The only drawback to our grand hunt was that you were not in it. Your tired brother, S.

V.

A year ago last November the writer and a schoolboy, Grant, went out on the mountains west of Ralston to hunt deer, enjoy the scenery and breathe the pure air of a higher altitude. Years ago this region was chopped over for burning charcoal, and it has grown up with second growth, which makes a good cover for deer and other game. There was here also a small mining town, which has long since fallen into decay; here and there a foundation is all that remains. There are three old clearings, all connected by a road which runs nearly east and west. I watched on a runway between two of these clearings, while Grant made a drive south of me, but he failed to scare anything out.

After he came back, I told him to wait where he was twenty minutes till I went out this old road to the third clearing, and thence to what is known as the South Fork of Red Run. Then he should beat the bush again. This far we had seen nothing but a black squirrel, which I shot through the head with my repeater.

In going to my new stand, I had to pass through the middle clearing, which contains about two acres and where there were some wild apple trees besides some underbrush. As I walked rapidly into the clearing, something black shot out from under an apple tree, and loped toward the woods. Bear, thought I, as up went my .38-56 again; a sharp report rang out, and bruin turned a complete somersault in the dead grass. In a moment he struggled and rose upon his forefeet; the deadly rifle spoke again, and he rolled over dead, the second shot breaking his neck. About this time a boy came up the road at a rate that would make a Dakota blizzard green with envy.

Grant was surprised when he saw what I had and a happier boy never carried a shotgun. It proved to be a cub of 90 or 100lbs. weight and very fat. It had been eating apples under the tree; the remains of nibbled apples were proof that he was having a sumptuous repast when disturbed. We strung him on a pole and marched into town. REDUX.

LANGDON, Pa.

HOW A "TARHEEL" KILLS DUCKS.

EVERY rural community where there is game to be found, has its share of sporting curiosities. This community is no exception to that rule, and I believe has more than its fair share of that particular species of the *genus homo*. The mode of hunting ducks by John Shearin, one of these curiosities, a mild-eyed, innocent looking native, with remarkably tough legs (which he uses to good advantage), in a tract of land near the Roanoke River, commonly known as the "marsh" or "Sedge Pond," may not be without interest to some of the many readers of FOREST AND STREAM.

The tract of land aforesaid is about two miles long by a half-mile in width, entirely covered with tall sedge grass growing on tussocks, separated by shallow water and mud in abundance. This tract of land has long been used as pasturage for large herds of cattle owned by the neighbors. Each herd has the "old bell cow," well known to the rest of the herd and the small urchin sent to drive them home at nightfall. Now, when Shearin, erstwhile was an urchin, it was a part of his daily duty, Melibœus or Corydon-like (I have forgotten which), to drive up his father's flock when longer shadows fell from the tall sycamore, and the festive mosquito, of large parts and deep penetration, winged his eager flight to the adjacent farmhouses in quest of more delicate morsels than tough cowhide.

Now, young Shearin noticed that Sedge Pond was frequently full of wild ducks, and to his surprise they did not fly from the very near approach of cattle—in fact were not at all afraid of them. It seemed to him, as he stood with covetous eyes, that they rather liked the old bell-cow and the "jangling of the bells sadly out of tune." When he grew up large enough to shoot and became the happy owner of an old, long, single-barrel gun, with a silver spider sight, he cast longing eyes on the ducks feeding on the marsh with the cattle. Now and then, by the exercise of quiet patience, and the still more painful exercise of crawling through mud and water, always keeping a cow, generally the old bell cow, between him and a selected duck, he would bring one to bag.

But this process had two serious drawbacks; its execution was not only slow but too uncertain for him, and he began to call on (to quote the words of the physiologists) his "frontal cerebral convolutions" for a plan which would satisfy his keen desire for baked duck. No one having any degree of knowledge of phrenological science would suspect Shearin of great creative genius. He hath not its massive forehead nor flashing eye. His imaginative powers have never been stimulated by the delightful tales of Defoe or Robinson. But, nevertheless, one day, while "chewing the cud of sweet and bitter fancy" along with an enormous roll of old field tobacco reared on his own hillside, it occurred to him that if he could successfully personate a cow, his success in killing ducks was assured. There was the old bell cow leisurely cropping the tender herbage 'neath the tall brown grass of the marsh. It was only the work of a moment to detach the bell from her neck and securely fasten it to his own coat tail. With this appendage, born of inspiration, he boldly took up his line of march to a little pool of water behind some tall marsh grass where he had just seen a flock of ducks alight. They paid no attention to the bell with the sound of which they were familiar. Hidden now by the tall sedge he selected a thick cluster of ducks and fired. He was amply rewarded. The old gun had felled many an antlered monarch and turkeys out of mind. Shearin got a bag full the first crack, and ran home in great haste to relate his good luck and exhibit his pretty green-headed trophies.

Since that time down to the present, any autumn day John Shearin may be seen wading down in the marsh with the old cow bell jangling along. John has, from long practice, become a fair wing shot, and the ducks rising from right under his feet, he plugs them in the back. Formerly he took to the mud and water as kindly as the ducks themselves, but of late years he has grown luxurious and indulges in a pair of rubber hip-boots which protect him entirely.

John has another plan of shooting ducks, which requires no expenditure of muscular force, to which he is somewhat averse. He finds a deep piece of water in the Roanoke River or mill pond, where ducks frequently alight, and baits the place by sinking to the bottom bundles of oats and corn. When he finds that they are feeding on his bait, he builds a natural-looking hiding place on the bank at the right distance for a certain shot—say 25yds. The ducks dive down to feed on the oats, and when they are all under water but one, he shoots that one, and then one by one as they arise to the top of the water. The ducks under the water do not hear the report of the gun, and only come to the surface for air, as they ordinarily do. John has had as many as seven dead ducks at one time floating on the water. This, I think is almost as clever a trick as the Indian Sepoys practice in floating down stream to flocks of ducks with their heads encased in large gourds, with eye-holes cut for air and observation. L. J. PICÔT.

LITTLETON, N. C.

CHICKENS IN ILLINOIS CORN FIELDS.

Editor Forest and Stream:

Mr. Hough, whose delightfully told experiences charm us all, wrote this week of a prairie chicken's mounting skyward in its death flight and dropping suddenly lifeless. I witnessed the duplicate of this performance a few days ago. It was on my last chicken hunt of the season. We found the birds in the corn, clean fields invariably being chosen by these magnificent game birds as their feeding ground. They were lying about in twos and threes, and we had some good shooting. We had just entered a bit of a field where the stalks were not tall, when suddenly, "boom, boom, boom," the birds began to spring above the stalks and dart away to the north. Before the twenty-five or thirty which composed the flock got away I managed to stop four of them in four shots—as good as I ever did on the splendid and not too easily killed birds. The nearest of the four I could see about forty yards away, and I hurried forward, after slipping shells in my gun, to secure him. I was just reaching for his head, which was swaying from side to side, showing, as I thought, that he was struck in the brain, when, with a mighty effort, he bounded into the air and went climbing skyward on wings less steady than those of the jack snipe when he first leaps up from his moist pasture. I was rattled too badly to hit him, although I tried it, shooting wild and wide of the mark. On, up he went in the mellow autumn sunshine, when all at once his wings ceased to move, and he fell like a lump of lead. One thing I learned was not to count your chickens until they are in the pocket of your shooting coat, for although we marked the spot where this plucky bird fell, and were sure that life was extinct, we failed to retrieve him.

I think the best chicken shooting we have here is in October among the corn. The birds in August and September, while yet in the stubble, are too easily bowled over. The man who cannot make a good bag in August, where the game is fairly plentiful, could hardly hit a shock of corn fodder. But bagging the same game in October, especially if it be a little late in the month, is quite another thing. There is no time to waste after the strong wings have lifted the big gray body above the stalks, and have started away with it. This, to me, seems the perfection of shooting, and there has been plenty of it this year in Illinois. The three years close season did all that it was expected to do in restocking the fields with the almost vanished birds. It is well known that our Secretary of State, in engrossing the law, put the opening of the season this fall on the 15th instead of the 1st of September, the latter being the date fixed by the Legislature's action. The Attorney General decided that the law must stand as recorded, although every one knew it to be a blunder. Some of us growled, but the result is a happy one. Many birds which would have been easily killed in the first half of September, by the last half were able to fly out of harm's way, and have escaped to give a brood of birds for the gunner's entertainment next season. The opening of the season will be late again next year as our Legislature does not meet this coming winter. When the game law is again considered it is to be hoped the date will not be made earlier. I believe if the laws were observed and shooting of chickens allowed only between Sept. 15 and Nov. 1, there would always be plenty of game. There are plenty left now to fill the fields next year.

The worst enemy the grouse have is the farmer. I talked with one farmer this summer, who said: "I plowed around their nests last spring and the young brood have fattened on my grain, and it seems to me those birds are mine and I have a right to go out and kill them when I please." And this man was no lawbreaker in other things. But I am sure that he and others like him get what shooting they want before the open season begins. They watch the hunters from the towns and villages. The latter, aware that the farmers have an eye on them and that their exploits will be talked over in the town also, are chary about shooting the birds out of season. But the farmer can go out on his own land and do about as he pleases. Few care to dispute his right to do so, and evidence against him would be hard to get. Yet I am sure, from rumors that float about in many neighborhoods, and from some knowledge of the farmers' feelings, that many a grouse goes into the pot or the frying pan before the open season begins, brought down by the farmer's old fuzee. RICHARD GEAR HOBBS.

PAXTON, Illinois.

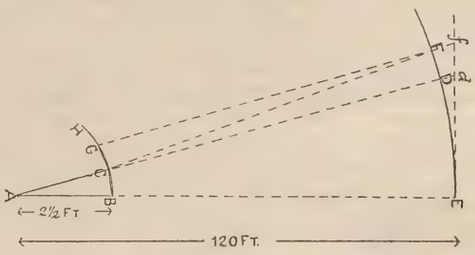
AN AMERICAN GAME UTOPIA.

THE discussion of some plan to secure a great game preserve in Illinois enlists all my interest and sympathy. When it is forever too late, I suppose an American Congress may become civilized enough to appropriate enough money for such a thing, but where then will be the prairie chickens, antelope, wild geese, etc., wherewith to stock it? To the real sportsman the thought of this hideous slaughter which is exterminating our noble game is almost unbearable. While we wrangle over our "rights" in the matter all our questions are being rapidly and permanently settled by "elimination." There will right speedily be no game to scramble for. How one longs for the power of a Vanderbilt or Gould that he might himself make possible such a game preserve. I suppose, however, that when one gets to be a Vanderbilt or Gould he has other things to think of, but what a benediction from real sportsmen and naturalists the world over would fall on the head of any one who should establish such a preserve!

Col. T. W. Higginson once said it was well worth the annual fee of membership to the Boston Appalachian Club just to know that such a club existed and that so many good people were enjoying its field excursions at low rates. What I would give most to see would be a game preserve of grand proportions and superbly stocked with all kinds of game which could flourish together, and wherein not a mortal should ever be allowed to shoot, but where the naturalist could study to his heart's content and the dead shot and the man accustomed to make a tremendous bag could learn the higher pleasure of stalking game without destroying it, and where the only hunter who carried any trophies away should be he whose weapon was the camera.

I have been very sad indeed at the thought of the rapid extermination of the prairie chicken from the Illinois prairies, where I hunted when a boy; and the plan of the preserve at Rising Sun Farm and the statement of Mr. Hough that the birds are actually there, within eighty miles of Chicago and in the oldtime marshes, are enough to make me wish that every sportsman would interest himself in the matter if a plan at all practicable can be proposed. I would like to get in a few rights and lefts at prairie chickens again before I die; but I would give even more to see once more the wonderful tournament of the mating birds in spring and to hear their curious booming call, which used to excite my curiosity, till by dint of careful creeping and stealthy approach I could see the birds in the act of making it.

If any one wants sport that is rare in quality and carries with it no manner of regret whatever, let him creep upon and watch a lot of prairie chickens at such a time, and my word for it he would not exchange the experience for even the exhilaration of a day's hunt and a big bag of birds in autumn. I have felt the rage for killing as keenly as any man, and I have by no means given up my gun, but I am in position to say that the cultivation of the gentler and less destructive delights of the chase are equally profitable to the soul. Mr. Hornaday tells me that on his last expedition for buffalo for the Smithsonian his cowboy assistants wanted at first to shoot every living thing that came within range, and hardly knew what he meant when he tried to inspire them with the idea of preserving all game not strictly needed, instead of slaughtering it. When once, however, they caught the idea, a great change came over them, and they were willing to think of the future as well as the present moment.



Sometime I want to apply this idea to fishing and to tell you of the champion bass hog whom I once found in Florida and who has remained an unpleasant figure in my memory ever since. C. H. AMES.

AIMING AHEAD.

Editor Forest and Stream:

I read with a good deal of interest, some time ago, the views of "Ancient" upon cross shooting, but have not seen the articles of others upon the subject. If you will kindly afford space, I will give my opinion and the reason for it.

In the diagram let *AB* represent the position of the gun at the time of pulling the trigger, and *E* the position of the bird at the same moment moving toward *D*. Now, if the muzzle of the gun be in motion toward *H*, it will reach some point at the left of *B*, as point *C*, by the time the shot can reach the muzzle. For it must take some time for the hammer to fall, the powder to burn and the shot to start from rest and with an accelerated motion reach that point (*B*). If the shot should continue in the direction they are moving at the moment they leave the muzzle, they would not follow the line *CD*, for they have two motions, one due to the swing of the muzzle and the other a projectile motion toward *D*. The resultant of these motions is the direction *CF*.

If the velocity of the bird is such that it will go from *E* to *F* or *f* (which is nearly accurate) while the shot are passing the distances *AC* + *CF*, the shot would intercept the line of the bird at the point *F*. If the bird be a swift flyer, or the swing of the muzzle less rapid, or the powder slow burning, the shot in either case would fall behind.

This computation is upon the supposition that the shooter swings the gun more rapidly than the flight of the bird, and discharges at the moment the line of sight reaches the bird; that is, he swings upon the object and fires without stopping the motion. My own rule is to swing in line of flight and pull when the bird is visible behind the muzzle. I consider this a good rule for swift birds.

If the shooter should follow the flight and fire while holding on, he would fall behind a distance, a trifle less than the bird would fly while the shot are going from *B* to *E*, or from *C* to *D*. The shot would have a lateral motion and would follow the line of a diagonal of a parallelogram as *CF* in *CDFG*. This of course would lessen the distance the shot would fall behind.

If, on the other hand, the shooter should hold on the bird without swinging, and shoot while holding on, the shot would fall behind a distance equal to the flight of the bird during the time from the moment of pull till the shot reach the point *E*.

Let us try approximately to compute these distances. Suppose a 30-inch gun to be swung on a bird with a muzzle velocity of 4 feet a second; that it take, for the hammer to fall, the powder to burn, and the shot to traverse the barrel, $\frac{1}{4}$ of a second; then the lateral motion of the muzzle would be from the time of the pull till the shot reach the muzzle $\frac{1}{4}$ of 48 inches or 2 inches. Then we have $BC = 2$ inches. As the triangles *ABC* and *ADF* are similar,

$AB : AE = CB : DE$, or $2\frac{1}{2} : 120 = \frac{1}{2} : DE$. $DE = 8$ft.

To compute *FD*, we have $CD = 120$ft.—$2\frac{1}{2}$ft., or in round numbers, 120ft. If we suppose the velocity of shot to be 960ft. a second, they would traverse the distance *CD* or (120ft.) in $\frac{120}{960}$ seconds, or $\frac{1}{8}$ of a second. If the muzzle velocity is still 4ft. a second, we have for the distance *CG* or *DF* $4\frac{8}{8}$in., or 6in. This added to 8ft. gives $8\frac{1}{2}$ft. for *EF*. Now the problem would not be essentially different if we take the tangential line *Edf*, which would be a more natural flight.

Now let us see what would result if a bird were flying a mile a minute. The question is how far a bird with the above velocity would move during the time from the pull of the trigger until the shot reach the distance 120ft. Time of shot in reaching muzzle, $\frac{1}{16}$ of a second; time of *CD* or $117\frac{1}{2}$ft., $\frac{1}{8}$sec. $\frac{1}{16}+\frac{1}{8}=\frac{3}{16}=\frac{1}{5}$sec., 1 mile = 5,280ft. $\frac{5}{8}\frac{2}{8}\frac{8}{0}$—88ft. a second, velocity of bird. Then in $\frac{1}{5}$sec. the bird would go from *E* toward *f* $14\frac{3}{8}$ft. As the shot in the above case would strike $8\frac{1}{2}$ft. to the left of *E*, we have $14\frac{3}{8}$—$8\frac{1}{2}$ or $6\frac{1}{8}$ft., the distance the shot would fall behind the bird. In such a case a swifter motion of the gun would be necessary, or as is the case, I think, with most duck shooters, the gun could be carried somewhat ahead of the bird.

If a bird were flying $\frac{1}{4}$ mile a minute, the bird would move $7\frac{1}{2}$ft. in $\frac{1}{8}$sec., and the shot would be something more than a foot ahead of the bird. W.

MELROSE, Mass.

CONNECTICUT GAME MARKET.

Editor Forest and Stream:

In your issue of the 31st ult. I was glad to notice an extract from the Hartford *Post* stating that some parties had been arrested in the attempt to ship game from the State of Connecticut in violation of the law. You may remember that last fall through your columns I called the attention of the Connecticut Game Protective Association of Hartford to this subject, and now that energetic measures have been begun I earnestly hope they will be persisted in until the traffic is stopped. There is much game taken to New Haven from the adjoining towns, especially those along the line of the Shore Line Railroad; it may be all used there, but I am afraid not. One party whom I saw on the cars last fall, then on his way to New Haven with game, told me that he had taken 2,500 game birds that season to the New Haven market. This week, in passing over the line from Saybrook Junction to New Haven, I saw the same party and two others on the train with four baskets of game, I should judge numbering 150 pieces, which were taken off at New Haven.

An outside market makes a demand for market-hunters, and two or three such men can wipe the game from a town in a few weeks. They are usually good shots; are tough, wiry fellows, who can rustle through the brush and thickets where a sensitive dog would unwillingly enter; they know every foot of the ground thoroughly, and the haunts of partridge, quail and woodcock; and by putting in the time from daylight till dark during the first two weeks of the open season, have not only destroyed any hope of pleasure for others in a day's shooting, but have wiped the ground so effectually that but very few birds remain to replenish the stock for another year.

There are undoubtedly many birds snared and trapped in Connecticut now; but in the sections I have visited this fall the practice is much less than in former years; in my few days' tramp I saw but one fence built for ensnaring partridge, and that one I am quite sure will do no more harm. It is the market-hunters that are destroying the pleasures of shooting, and that, too, for a very slight profit to themselves, and even this could not be sustained but for the market found outside the State by illegal shipments of game. So, Mr. Editor, please encourage the game wardens and all game protective associations in rigidly enforcing the law, and Connecticut will afford as good a natural field for a day's shooting as a sportsman could desire. A.

NOV. 6.

ONTARIO INCIDENTS.

BELLEVILLE, Ont., Nov, 5.—Your correspondent had the good fortune to be presented, on Saturday last, by Mr. Wm. Clarke, of Sydney township, with an albino black squirrel, which he shot the preceding day about twelve miles from this city. This "freak" is of the ordinary size of a black squirrel, but is of a yellowish cream color. Its fur is very thick and silky, and its brush is rather smaller than that of its black brethren. Another, somewhat more yellow in color, has been seen in the same vicinity. My specimen, which is regarded as a curiosity here, is in the hands of Mr. Colet taxidermist.

Parties who went to the northern townships to hunt deer have had much less success than usual. One party who went from Belleville, and which included Judge Hoyt and Mr. Loos, of Syracuse, N. Y., did not get a single deer in their two weeks' hunt, although they wounded two. Another party of two got 1 deer in a week, while a party of six got 6 deer in two weeks. A party from Stirling got 5, and a party from Marmora secured 8, one of which weighed 272lbs. A reliable correspondent from North Hastings states that deer have been scarcer than in previous years, and that dogs, which are running everywhere, have in different localities driven several deer into the clearances, where they have been shot by the settlers; in fact, most of them seem to have been got in this way.

The same correspondent narrates the following remarkable series of events which happened at Maynooth, one of the most northerly villages in this county: "Last week a deer was seen to enter a small lake on the west road; a man headed it and kept it in the water while Mr. Green ran home for a gun. The only 'shooting iron' he could procure had the stock broken off short, close to the lock, and with this extraordinary weapon he succeeded in shooting the deer; and last Thursday a deer entered the village and rambled playfully along the sidewalk. It was soon discovered, and Messrs. J. B. Cleak, S. Ross, G. Green and others chased it through the village, the priest adding to the excitement by sending a couple of shots 'promiscuously' after the deer. A house was burnt there some time since, and a large cellar now yawns where it stood; into this the deer jumped, closely followed by S. Ross, who seized it by the hindlegs while G. Green hammered it with a club till life was extinct. On the Friday previous to this a large bear was seen around the cheese factory. Mr. S. Rouse armed himself with a rifle and sought some time for it in vain, but at length looking over into the vat he discovered it there drinking the whey, and quickly gave it a quietus in the shape of a bullet—and only a short time previous to this another bear was killed at the same factory." While deer have been scarce, ruffed grouse have been plentiful. Some of the parties killed about a hundred of these usually wary birds. R. S. B.

QUAIL ON LONG ISLAND are said this year to be rather scarce. A report from Southampton says that there are but few birds, and that such as there are are great wanderers and scarcely ever found twice on the same ground. A gentleman familiar with the grounds about Sayville says that there are fewer birds than usual there. This scarcity is attributed to the wet weather of the summer which drowned the young ones.

BOSTON SHOOTERS.

BOSTON, Nov. 11.—The shooting season is proving to be a pleasant one to the Boston sportsmen, though the flight of salt-water birds has not been as heavy as usual. Some of the market-gunners have brought in heavy strings of coot and black duck. When they have been questioned as to where the birds were found, they have given evasive replies. It is evident that some netting, or at least unfair shooting, has been practiced, for the gunners in the ordinary way have not yet had their usual success. Grouse shooting in this State is about over for the season. The trees are stripped of leaves, and the birds that are left are very wild. Quail shooting has not yet shown up even fairly well. Boston sportsmen have visited the Cape, even where they were assured that special bevies had been left untouched for their shooting, but they have returned without a bird. E. M. Gillam, of the staff of the Boston *Advertiser*, is a great lover of field sports with dog and gun. He has just returned from his annual vacation of two weeks at home in New Jersey. His brother, of the staff of the Philadelphia *Ledger*, usually accompanies him. This time Mr. Gillam's score is 51 quail, 23 rabbits. Mr. Gillam has a setter bitch, of his own training, that is proving to be a wonderful field dog. He rather surprised the natives with his score of birds, mainly due to the good work of the dog. Partridges he reports very scarce in the section of the State where he hunted. Not a solitary one was seen. He says that the close time of three years on deer is being observed in that State.

Good partridge scores continue to be reported from Maine. Some of them too good for the perpetuation of game in that State. One Boston merchant, hunting in the vicinity of Upton, made a score of 79. Deer are plenty. The hunters are waiting for the first snows, which still persist in turning to rain in the New England States. Two or three Boston hunters will start on a deer hunt in Maine, as soon as there is a prospect of snow that will stick. SPECIAL.

WADDING CARTRIDGES.

Editor Forest and Stream:

Thanks to "Nick" for his synopsis of the shotgun tests. It reminds me of a curious experience I had in the way of experiments in wadding, some years ago. During the winter I got a new auxiliary barrel, about 5in. long, using a .32 long shell, and immediately set to work with thin card wads only, to decide on the best charge for the little barrel. With the shell half full of powder and half of shot I penetrated a certain number of sheets, and obtained a sufficiently close, though somewhat "patchy" pattern. Altering the loads, I found that with the shell one-third full of powder and one-half full of shot, I obtained equal penetration and better pattern. Experimenting with this charge, I found that one wad on the powder gave a wide and irregular pattern; two wads, a close but still wide pattern, and three wads gave a perfect pattern, both as to evenness and closeness, while the penetration was equal to any loading of the larger charge of powder.

These experiments were all conducted with one wad on the powder, any addition making the pattern irregular and scattered.

The curious part of the experiments lay in the practical use of the approved charge. With it I could kill absolutely nothing, and after two or three trials on different mornings I returned to my old half-and-half charge, which gave no better penetration and not nearly so good a pattern, but killed the birds every time unless by my fault. That there is an explanation of the trouble I do not doubt, but to this day I have not the slightest idea what it is. The charges were approximately ¼dr. and ¼oz.

W. E. S.

LONDON, Ontario.

MOOSE IN QUEBEC.

MONTREAL, Nov. 1.—*Editor Forest and Stream:* The laws of the Province of Quebec, passed at the last session of Parliament, are now printed, and I inclose according to promise copies of those relating to fish and game, chapters 18 and 19. You will notice that the latter permits the shooting of moose after Sept. 1, 1889, which was previously prohibited until September, 1890. This change is a mortifying surprise to those interested in the preservation of moose in the Province. No allusion was made to it in the official statement of open seasons sent out by the Government at the beginning of the year, which is the usual responsible authority for sportsmen. It is said the new law was really passed *sub-rosa* at the request of one of the ministers; certainly none who were interested in opposing it knew anything about it until the printed statutes appeared. THOS. C. BRAINERD.

The law reads: Chap. XIX. An act to amend the game laws. [Assessed to 21st March, 1889.] Whereas it is necessary to amend the game laws; Therefore, Her Majesty, by and with the advice and consent of the Legislature of Quebec, enacts as follows: 1. Paragraphs 1 and 2 of article 1396 of the Revised Statutes of the Province of Quebec are replaced by the following: "1. Deer, between the first day of January and the first day of October in each year. 2. Moose and caribou, between the first day of February and the first of September in each year."

THAT MASSACHUSETTS BEAR.—Taunton, Mass., Nov. 11.—We are having a little diversion in the hunting line. All hands have turned to and gone bear hunting. Poor Bruin! He started from up near Dedham about a week ago, and has caused consternation all the way from there to here. In Bridgewater he captured some juicy pork, and his life has been a weary one every since. I have not as yet been able to find out where he came from, but think probably he broke loose from some traveling show. He has a weakness for young pork, and when last seen was chasing a fine young porker in a farmyard at East Taunton. After scaring the woman folk nearly wild he started toward the Cape. When I left home a big hunt was being organized under the leadership of Leader Spary of the cadet band. I have not heard the returns yet, but if he gets through this crowd he deserves his freedom.—COHANNET.

OHIO.—Ironton, Nov. 5.—There is a great abundance of game, and out on Tygart wild turkeys are quite plenty. R. S. Dupuy and George Howland start to-morrow on their hunting trip south.—J. D.

A CAMP PARLOR.—There are private collections of one sort and another in Brooklyn—books, paintings, statuary, faience pottery, coins, stamps, rugs, violins and bric-a-brac of various kinds, but it remained for Dr. R. B. Cantrell, of Brooklyn, to start one that is probably unique in its way. The doctor is an enthusiastic sportsman with rod and gun, and for the last five years has been the leader of a troop of annual summer pilgrims to the wildest wild woods of Maine. The entire company are generally designated "maniacs" by their friends of the "can't-get-away" club, and always come home raving about the sport in Maine. The doctor's madness, however, has developed a method by which he has converted his parlors into a suggestive sort of epitome of the wild-woods and their fascinations. A model log-house, canoes, paddles, snow-shoes, rods and rifles adorn the walls, but the pride of Dr. Cantrell is in his collection of heads of wild animals and various specimens of the taxidermist's art. Upon his walls are splendid specimens of the heads of the moose, elk, caribou, buffalo, Rocky Mountain antelope, the black-tailed deer, and at appropriate points in the parlors a black bear opens his jaws for your benefit, and the bald eagle of America all but soars and screams for your edification. Other birds and beasts too numerous to mention figure in the scene, which is a somewhat startling one to a stranger as he first pops his head into the parlor. How many of these specimens from the wilderness, are, strictly speaking, trophies of Dr. Cantrell's skill in the chase is not positively known, and he is modestly reticent on that point. But he has them—there is no doubt of that—and in them probably the only collection of the sort in New York or Brooklyn.—*New York World.*

MEMPHIS, Tenn., Nov. 5.—I have been for several years a constant reader of your most interesting journal, and have spent many hours in the perusal of its entertaining columns. I am often surprised at the scarcity of news items from our southern country, as we have as good and true sportsmen as can be found anywhere, and as fine a territory for field sports as the most fastidious could wish. Most any of our railways within from one to three hours' run can land one among numbers of wild turkeys, ducks and quail, to say nothing of larger game such as deer, bear, etc. Bob White is unusually plentiful this season, and the devotees are enjoying rare sport with dog and gun. I expect to take a week's outing about Dec. 1; and perhaps you may hear something of me later on. Have just received a fine-looking young English setter from a Philadelphia kennel (which, by the way, was obtained through the medium of the FOREST AND STREAM), and I hope to report great things of him within the near future. Long may you prosper.—F. W. S.

LYKENS, Pa., Nov. 11.—Having enjoyed the contents of your paper for some time, and not seeing any communications from our "neck o' woods," I take this opportunity of informing your readers of the condition of our quail and pheasant shooting. Quail we have in abundance, more so by far than heretofore. You may judge how plentiful they are when I tell you that since the opening of the season, Nov. 1, I killed 100 over a pointer but 15 months old. I bought him of the Quaker City Kennels in October. I killed 25 birds over him the third day he was ever in the field. Pheasant shooting is not as good this year. The birds are very scarce. I suppose so much rain during the breeding season is the cause of it. Rabbits are numerous both in the surrounding mountains and fields. There are still a few deer in our county (Dauphin) and should we have a close season of at least five years they would be plenty.—W. V. B.

OTSEGO, CHENANGO AND MADISON COUNTIES, N. Y.—Having hunted in each of these counties this fall, and inquired of a large number of sportsmen, I give the result of my observation and inquiry. We had an unprecedented wet spring and summer, and large numbers of nests must have been submerged or the birds died from the gapes, because birds are very scarce. There is about one bird where there were a dozen last year. One of our best shots with his fine red setter has averaged about one bird a day. His largest bag is four. August woodcock shooting was next to impossible, as the boring ground was submerged and the birds were scattered on high ground and difficult to find. On Sept. 1 we raised three birds (and killed them) on a piece where we killed sixteen last year on the same day. I think this section contains just about enough birds to keep the race from becoming extinct.—WING.

THE BOOK of "Pawnee Hero Stories and Folk-Tales," by George Bird Grinnell ("Yo"), is now ready for delivery, and will be sent postpaid on receipt of price, $2, by the Forest and Stream Pub. Co. Mr. Grinnell has just returned from an absence of several months in the Northwest.

LIVE MEXICAN QUAIL.—San Luis Potosi, Mexico., Oct. 30.—If any of your friends want live Mexican quail I can furnish them. They are nearly twice the size of the American bird, have white topknot and are very pretty, hardy and prolific.—E. A. V.

BEARS are reported to be a nuisance in the neighborhood of the Overlook Mountain House in the Catskill Mountains. The route from New York is via Kingston, and Samual Thompson, watchman at the Overlook, can post visiting hunters.

GEORGE PIANO, for thirty years a member of the West Point Band, and famous as a hunter and fisherman, who has guided scores of army officers in Orange county outings, died at his home in Highland Falls, N. Y., last Monday.

VIRGINIA GAME.—A well known gentleman who has just returned from Virginia reports quail, rabbits and squirrels very abundant at Amelia Court House.

GIVE YOUR FRIENDS THE BENEFIT.—If you know a good thing, tell it and let your friends have the benefit. Being of this opinion we quote the following from one of our exchanges: "Lynch, Noble & Co., of the Freight & Baggage Transfer, of Cedar Rapids, Ia., in a press letter write: 'We have used Humphreys' Veterinary Specifics two years, and we cannot speak too highly of them. In our judgment, none that we have ever used can compare with them. One of our best horses was attacked with what the veterinary surgeons termed inflammation of the brain, and was given up to die, when these Specifics cured him.' Editorially we cheerfully give the above statement to our readers, in view of the fact that it is in harmony with what is appearing in every part of the country respecting these wonderful remedies."—*Baltimore (Md.) Farmer.*

Sea and River Fishing.

ANGLING NOTES.

WITH the arrival of the melancholy days of November, the angler, in this part of the country at least, finds his occupation gone. It is true that a few pickerel still take hold, and here and there a striped bass pays for his curiosity with his life, but with the exception of the small boy with the little tomcod the season is practically over. The wise fisherman will before putting away his tackle for the winter, see that everything is in order for the coming spring. Rods should be looked to, and if needed, sent to the tackle maker for a thorough overhauling and varnishing. Anglers are too apt to leave this important matter until a day or two before starting on a fishing trip. This is a great mistake, for then the varnish does not get a chance to harden, to say nothing of the damage done to a fine rod by leaving it crooked and in bad shape all winter. Reels should be cleaned and oiled and flies and leaders put in a cool, dry place. Rods should not be kept where there is much furnace heat, but should be laid on the floor in some cool room if possible, and not where they will be stepped upon.

If the angler is so fortunate as to be able to visit the home of the channel bass and royal tarpon, he will now begin his preparations, for though the tarpon is rarely taken during the winter, yet the redfish or channel bass, spotted weakfish, sheepshead and many other varieties will afford plenty of sport.

Mr. Ed. Prime's magnificent catch of tarpon last May will encourage many anglers to stay later next spring, for usually they have left Florida too early to enjoy that sport to perfection. Already a number of tarpon rods have been ordered and the tackle dealers are preparing for a busy season in this line of goods.

Heavy rains and high water this past summer made the fishing very uncertain, but many big fish have been taken by those who were lucky enough to be on hand at the right time. It is very fortunate that people no longer brag of the number killed, but strive to break the record as to weight. It cannot but follow that if we kill the little ones, we must do without the big ones.

Even within a few weeks some of the persevering fishermen have been unusually successful with the striped bass.

The black bass waters were all too high during the last few days of the month of the season, but that will probably be all the better for the coming one. The black bass fishing in Raquette and Blue Mountain Lakes, in the Adirondacks, has been unusually good this fall; so also was the fly-fishing there in June. There is no reason why this chain of lakes should not furnish the best black bass fishing in the State.

The members of the South Side Sportsmen's Club, of Long Island, were agreeably surprised this summer by taking quite a number of large rainbow salmon on the fly. They were in fine condition and afforded great sport when hooked. It is a pity that the black-spotted salmon (*Salmo purpuratus*) could not be introduced into these streams on our coast that empty into the salt water. They take the fly better, fight harder and are more delicate on the table than the rainbow. As they spawn in the spring they afford fine sport when our trout are out of season. Anglers who have been so fortunate as to have fished in the Columbia River and its tributaries, or in beautiful Pend d'Oreille and Kamiska Lakes in Idaho, will indorse this statement. The reader may form some idea of their fighting qualities when it is stated by a well-known New York angler that during a month's fishing in the waters named, he did not remember ever being able to save both fish, though he often hooked a brace. While landing one the other would always tear loose and make his escape.

Those anglers who went to Maine and the Adirondacks for the September fly-fishing, which is usually so good at that time, were sadly disappointed. The weather was as warm as at any time during the summer, and the trout remained in deep water. It is rarely in those regions that the first of September passes without frost, but this year it was well on to the first of October before the thermometer dropped low enough. To make up for that misfortune, the deer were unusually plenty, more so than in many years, so at least those who visited the North Woods were repaid for their journey.

FISHING CLUBS IN CANADA.

NEW YORK, Nov. 7.—*Editor Forest and Stream:* I see, on reading the FOREST AND STREAM of this date, that a gentleman writing over the signature of "R. O. S." sails into me in a querulous mood for my article of October in defense of fishing leases of Canadian waters to clubs. He does me great honor in accusing me of being a selfish capitalist reveling in gold dust galore, seeking to deprive the dear people of the privilege of roaming over the country at their own sweet wills, fishing and shooting without restrictions; and he claims as evidence of the views of the people of New Brunswick that 3,000 signatures were obtained to a protest against granting leases to clubs. It is the easiest thing in the world to obtain signatures to almost anything. I could obtain a thousand signatures in this city in a day advocating the speedy execution of the Mayor and entire corporation. People sign petitions without reading them or caring what they are.

There is nothing selfish on the part of our friend, of course, in proposing to exclude clubs from New Brunswick, and wishing to hog it all to himself and friends; but such are not the sentiments of the Crown Lands Department of Canada, inasmuch as a revenue is derived from leases to clubs, most of which are made up of citizens of the Dominion, and the Government does not believe in allowing its waters to be depleted by the irresponsible pot-fishermen, who would be governed by no restrictions and consider it their right to slaughter *ad libitum*. There is no free fishing in Canadian inland waters, except on Lake St. John; its own citizens must obtain leases, and Americans are placed on the same footing. They are granted no privileges not accorded to

its own people; and fishing clubs are not an exclusive American institution in Canada. The Canadian Government is composed of sound, sensible thinking men, governed by a wise policy; and they have made laws that seem wise and for the best interest of the country, and I doubt if the views of "R. O. S." will affect the question beyond his own immediate circle. If New Brunswick does not want us, we are not going to weep over the fact; there is plenty of good fishing nearer home.

One of the grievances of the gentleman, and perhaps the tenderest point, is that American club men do not risk the quality of New Brunswick "supplies," but bring their own with them. If he alludes to beverages, it is not strange that they do, for no one who has ever once indulged in New Brunswick stimulants would ever care to risk his life a second time. PODGERS.

HER ACCOUNT OF SEA FISHING.

SACRAMENTO, Cal. — *Editor Forest and Stream:* Although a woman I am a constant reader of FOREST AND STREAM, and as such I trust you will permit me to tell my "fish story." My husband is quite a sportsman, and I, a very apt pupil, am fast becoming one myself, and in no way do I take so much real genuine pleasure as in hunting and fishing with my husband. We often drive to the country early in the morning and spend the day very pleasantly either dove shooting or fishing, and never return without plenty of game, and frequently we supply our neighbors as well as ourselves.

While spending the month of August at Santa Cruz, Cal., we thought it would be a novelty to try our luck at salt-water fishing for the first time in our lives. (But we sincerely hope it will not be the last.) We were informed that few tourists dared to venture on account of seasickness; but this only made us the more determined to go. My husband felt quite certain that I would be sick, and equally sure that he would not be; while I was secretly praying that he might be the unfortunate one, that I might laugh at him.

We secured the services of an old Spaniard, who promised to take us out four or five miles to sea, for one dollar a piece, with no extra charge in case of sickness, and the next morning at 7 o'clock we were at the wharf. Finding the little boat waiting for us we were soon snugly stowed on board and moving out to sea. The fisherman occupied a seat near the bow, where he could manage the oars. I was assigned to the stern, while my lord and master was situated directly in front of me with his back toward me. This, I think, was a scheme on his part that I might be convenient to hold his head in case of sickness. Our genial landlady had kindly provided us a basket of lunch, consisting of pie, cake and ham sandwiches, and I had supplied grapes, plums and peaches, so we were not afraid of going hungry. Our fisherman had provided a can of mussel worms for catching smelts, which we were obliged to have for bait before we ventured outside the bay; and we rowed to the smelt grounds first. This is an immense field of seaweed situated about one mile from the wharf and within the bay of Monterey.

We were not long in getting our tackle in shape, and were soon trolling for the little shiners. Of course I had to call upon my husband to bait my hook, as it was entirely out of the question for me to take one of those wriggling little worms in my fingers; and of course he growled (as husbands always do but lovers never) all the time while doing it, but he looked sorry when I carried off all the honors by landing four beautiful little fish, while he never had a bite, and as our fisherman assured us that these would be sufficient for our day's fishing, we took in our lines and started seaward.

The water within the bay was as smooth as a woodland lake, and a heavy fog prevailed, so that our range of vision was decidedly limited, and had the peculiar effect of making a small fisherman's boat containing a solitary fisherman appear almost as large as an ocean steamer. Our basket of lunch was now brought into requisition, and we enjoyed a sumptuous repast, which we thought might be a fortification against the sickness of the sea.

Two miles from the wharf we passed the fog horn, which was somewhat of a curiosity to us, as we had never seen one of the kind before. It is of boiler iron and funnel-shaped, with the small end upward and the large end resting upon the water, being so arrangad that the action of the waves forces a current of air upward through it, and blows the immense whistle which is secured at the top. The anchor which holds it in place is said to weigh 4,000lbs. The mournful moan of the whistle had a melancholy sound, which made us almost feel that it was a lonely living thing grieving, like many a human being, for a companionship never to be found. Alone it stands two miles from the wharf, and performs its noble duty of guiding vessels as they come and go. I may be foolish, but I never can recall our visit to the old fog horn without a feeling of sadness; for in comparison with human life, it seems to me if all were to give vent to their feelings when buffeted by the cruel waves of life, we would not be compelled to go out to sea to find fog horns, but we would find them standing as lonely sentinels all over our land.

As we proceded the waves grew larger, and our little boat rose and fell with all the ease and grace of a little bird. This was my first trip in a small boat, and I was perfectly delighted; the sensation was grand, and it seemed to me I could sit there and rock forever. But ere long we reached rock bottom and our boat was anchored and we went to work. This time I was independent, for our smelts were dressed and cut into convenient pieces for bait and I could feed my own hooks. Our lines were 100ft. long and had three large hooks. We dropped them 90ft. down, when the sinkers told us we had reached bottom, and we had but a short time to wait, for a decidedly jerky message from below proclaimed "a bite." We hauled up our lines simultaneously and landed a couple of beautiful red rock-cod in the boat. Then we had a lively time for a few hours, our fish weighing from 2lbs. to 5lbs. Fishing at a depth of 90ft. is not all play, for when hauling up a fish of even 3lbs. or 4lbs. one is sure he has a whale on his hook. We frequently found fish on two of our hooks when we pulled them up. It was such hard work for me to pull them through 90ft. of water that I concluded to hold my hooks about 40ft. down and see what the result would be, and I was dumb with astonishment when I captured an immense bluefish. After that I caught nearly all blues. When they quit biting fast enough for us in one place we would row to another and try it again; and while the Spaniard was hauling in his anchor, rowing to another field and anchoring again, we were busy with our lunch, so as to lose no time.

We had the finest fishing day we ever had in our lives, until at 12 o'clock the sea began to roll, the wind to rise and the white caps to snap around us. Then our fisherman declared his immediate intention of hoisting sail and skipping out for shore. My heart sank within me, and I begged him to wait until I caught just one more; but, man-like, he insisted upon leaving at once, and my line had to be wound up; nevertheless it was the last one pulled in. My hands were swollen and red from the salt water and the sharp lines, but I had not noticed them before. We were so intent on fishing that neither of us were a particle seasick, and we finished up our lunch, fruit and all, on our homeward voyage. We marched up to our hotel feeling so proud with all the beautiful fish we both could carry in a handle basket between us. But, O! the cruelty of the guests. They one and all shouted: "Where'd you buy 'em."

During our stay at Santa Cruz we made four more voyages and had a delightful time and no seasickness, but after the first trip we were always at the wharf at five o'clock instead of at seven, as the little boats are compelled to return on account of the roughness of the sea at twelve o'clock, and often much earlier. One day a large sea lion swam near us for a long time and every few moments he would thrust his head up out of the water and blow. We supposed he was out on a fishing trip too, and came to the surface for the purpose of getting air. Sometimes he would throw his body broadside on top of the water, but he took great care to maintain a respectful distance from our boat.

One morning upon our arrival at the wharf a stranger approached us and introduced himself as Mr. H. from S. C.; and at the same time he informed us that he had obtained permission from our boatman to become one of our party for the day, and with our consent he would be pleased to accompany us. My husband, who by the way is of an extremely sociable disposition, without hesitancy told the gentleman that we would certainly be delighted to have his company; but fearing that he might get seasick and therefore spoil our fishing by compelling us to return, requested him to pledge his word and honor that he would not be sick. To this he graciously consented and smilingly informed me that my fears were groundless, as he "never was sick." He also stated that on the day previous he had ventured out to sea in company with three ladies, and unfortunately they became so sick he was obliged to return without his fish, and his reasons for wishing to accompany us were, that he had ascertained from the boatman that we were never sick and that we always returned with a beautiful lot of fish.

He was a fine-looking man, strong and robust in appearance and his portly figure was charmingly set off by a genial smiling countenance, and his conversational qualities were simply enchanting. We were forthwith enraptured with his interesting discourse and silently congratulated ourselves upon our good fortune in the acquisition of so charming a companion. He was assigned a seat in the bow of the boat, directly facing the rest of us, and we were soon skimming over the placid waters of the Bay of Monterey and laughing at the witty sayings of our entertaining friend.

As usual, we rowed directly to the smelt grounds, where we soon captured a beautiful basket of the pretty little fish, our Mr. H. proving himself to be a capital angler; and I trembled in anticipation of his carrying off the honors of the day's sport. Upon our departure for the ocean our lunch basket was produced, and everybody partook heartily of sandwiches, cold coffee and fruit, except Mr. H., who daintly minced one luscious little peach, and could not be prevailed upon to indulge in more substantial viands. We were soon rocking beautifully upon the heaving bosom of the grand old ocean, when suddenly all was still within our little boat; the melodious tones of our entertaining friend had ceased, and only the splash of the oars in the hands of our boatman broke the painful stillness.

Evidently there was something wrong in the bow.

Taking a hasty look in that direction I was somewhat surprised to see that the ruddy countenance of Mr. H. had assumed a vivid whiteness, his lips were closely compressed and his eyes were religiously intent upon some imaginary object of the most profound interest, which was evidently supposed to be located in the extreme bottom of the boat and in close proximity to his toes. My suspicions were slightly aroused, and I could not resist the temptation to give my husband a vigorous pinch and nod my head toward the disconsolate-looking figure forward. In reply he gave me a knowing smile; and we at once engaged in a lively conversation upon the beauty and grandeur of the sea, dwelling at length upon the delightful sensation of the motion of our boat as it danced over the waves, one minute resting upon the brow of a mountain, the next plunging into the valley below. In vain we expatiated upon the pleasures of salt-water fishing, in vain attempted to engage our once social friend in conversation; but alas! no response from the bow! Presently a happy thought possessed me, and reaching the basket of fruit I passed it forward, saying, "Mr. H., will you have a peach?" A mournful shake of the head and a faintly-murmured "Thanks" were my only reward; but some mirthful glances were exchanged between the boatman and ourselves as we quietly watched the development of proceedings forward.

Presently rousing himself from his meditations, and giving me a beseeching glance, he exclaimed, "Mrs. ——, what are you going to do with me if I get seasick?"

"Throw you overboard, of course," I replied, "for breaking your promise. We came out here to fish, and we must have them at whatever cost."

Before I ceased speaking there was a hasty movement forward, a hat was precipitated into the bottom of the boat, the portly form of Mr. H. lay at full length across the bow, and his head was dangling overboard. This was proof positive; there could be no mistake this time. I did not smile, but laughed outright in malicious delight at the thought that this was one instance in which a lord of creation was getting his pay as he went along for breaking his promise to a woman, and I mentally prayed that there might more cases develop. The peach, we supposed, went overboard, but Mr. H., after a severe spell of coughing and strangling, once more bore himself erect, and wiping the briny surf from his eyes exclaimed, "Hang that peach. Mrs. ——, that was your fault." I took no affront at this, but, on the contrary, felt thankful that the "woman in the case" was at hand to bear the blame for the suffering lord.

Well, we reached the fishing grounds at last, and all went bravely to work. Even Mr. H., who declared himself "all right" after the delivering up of the peach, succeeded in pulling in two or three beautiful rock cod, when all at once he was prostrated again with his head overboard. We went on with our fishing, thinking his case was not serious, but that he had probably concluded to go down after the lost peach. We caught all the fish we could carry home, had a fine time, and I laughed myself nearly sick at the persistence of Mr. H. in his periodical endeavors to recover the poor little peach. Just as we were thinking of going home the sea became rough and the whitecaps commenced snapping about us, even dashing into the boat; yet I begged to be allowed time to catch just one more "blue." Mr. H. gave me a withering look and began winding in his line, saying, "Well, I am not going to fish any more; but if *you* want to take a boat ride, Madam, go ahead. *I* prefer to enjoy the scenery." But the tears trickled down my nose with laughter when I saw him take one hasty survey of the "scenery," then, with more haste than grace, throw himself full length across the bow again. With a great deal of laughing and joking at the expense of Mr. H. we reached the wharf safely about noon, a much jollier as well as wetter party than when we set out in the morning. When we landed my husband engaged the services of our fisherman for the following day, and of course we gave Mr. H. a pressing invitation to accompany us, I holding out as a special inducement a promise to bring more peaches. But we could not prevail upon him to go. He said he didn't believe he liked to fish as well as he used to.

One little incident which amused me very much while out at sea, and also reminded me of the saying that "human nature is pretty much the same the world over," was the way in which we signalled a passing fisherman. Some one had broken a hook, and we wanted to get one if we could, as we had no more in our boat. The fisherman was a Spaniard and could only speak in broken English. Our boatman, being of the same nationality, attempted to attract his attention by calling to him; but it could not be done. He was utterly oblivious of the presence of any human being save himself. Finding his lungs of no avail, our man took from his pocket a suspicious looking flat bottle and commenced moving it above his head. Seeing what he was about, we all concluded to lend him our assistance; and Mr. H. grasped the water bottle, I my bottle of cold coffee, and my husband produced one which I had not seen before, and which, I presume, contained lemon juice as a remedy for seasickness. Imitating the boatman, we waved them in the air. It is wonderful how soon that Spaniard's attention was secured. His little boat shot toward us with the rapidity of a bird. He seemed very thirsty, and we secured the coveted hook.

We met Mr. H. again before we left Santa Cruz, and he promised to meet us there next year, Providence permitting, and also declared his intention of taking his wife with him next time to hold his head. MARION.

NOTES ON MASSACHUSETTS FISHES.

Editor Forest and Stream:

You ask if I have caught any rare fishes this season. I have taken four, which I think are new to the coast of Massachusetts. One is the *Nomeus gronovii*. I took a single individual while seining at Gay Head, July 6, and secured five others during the month at the surface under the Portuguese men-o'-war in Vineyard Sound. I believe I saw fully 100 at different times this season under similar circumstances. The Portuguese man-o'-war was very abundant; some days there were as many as 100 in sight at one time in the Sound. The shores were lined with them about the first of July.

The second fish is the *Larimus fasciatus*, caught Aug. 13.

The third is the *Seriola carolinensis*, of which I obtained an example 2ft. long at Wood's Holl, Aug. 16.

The fourth addition is the thin silver gar (*Tylosurus hians*), seined at Quisset Harbor, Aug. 22.

Young sea bass have been very scarce this season, only sixteen specimens having been taken outside of the eel pond. In the pond they are plentiful because I stocked it with one jar of young fry hatched at the U. S. Fish Commission station last spring. Young scup and tautog were as abundant as in other years. Young bluefish were scarce everywhere but in Quisset Harbor, where they were plentiful.

We have not caught a young pompano anywhere during the season; this is the first time they have missed coming in eighteen years. Not more than ten young sea robins were seined, while in other years hundreds were taken. The same is true about the sea bass; we were accustomed to get from twenty to one hundred and fifty at one draw of the seine. Only about twenty young menhaden were caught; in some seasons I have seined twenty barrels of them. Not a school of menhaden has been seen this fall anywhere on the south side of Cape Cod. I never knew anything of the kind before; they are always plentiful here in the fall.

One-year-old cod were caught in all the fish pounds along the Vineyard shore last spring. This is a new thing; the fish pound men told me it was the first time they ever caught any small cod. From this it appears that the young cod liberated here by the U. S. Fish Commission are coming back toward home. Some of the tautog fishermen have caught cod this fall weighing about ¼lb. each. One was caught in the hole the other day, the first one ever taken there.

Do you say that the silver-bellied eel is the same species as our common yellow and white-bellied eel? We have both kinds in the aquaria, and they seem to differ greatly. The fin of the silver belly looks much deeper, the tail more nearly square and the lateral line shows much more distinctly. These all have nearly ripe eggs, while the others have the ovaries scarcely enlarged.

VINAL N. EDWARDS.

WOOD'S HOLL, Mass., Oct. 28.

[The query of Mr. Edwards as to the silver eel is answered in another column.]

MR. WM. C. HARRIS was last week charged with having appropriated our review of the New York Fish Commission report. We are advised on excellent authority that Mr. Harris was not responsible for the omission of credit.

MALE SILVER EEL. (By Courtesy of the U. S. Commissioner of Fish and Fisheries.)

THE SILVER EEL.

THE question of our correspondent, Mr. Edwards, as to the relation between the common yellow-bellied eel of the markets and the silver eel of New York and New England fishermen, recalls to mind an experience in Great South Bay in the fall of 1884. Prof. Baird had sent the writer and some of his assistants to Patchogue to study the fishes of the bay and make collections upon which to base a report. Among the many interesting species taken during our stay was a remarkable eel, the relations of which have proved not a little puzzling. At my request, Prof. John A. Ryder studied the examples distinguished by the short snout, large eye, and sharp contrast of dorsal and ventral coloration, and pronounced them to be males, but did not venture an opinion as to what species they represent. We were both in doubt as to whether or not we had found simply the male of the common eel; and it may as well be admitted that neither of us has had opportunity since to resolve the doubt. I have long suspected that we have two species of eel (*Anguilla*) on our coast, and I hope that the keen observation of Mr. Edwards will soon enable us to prove the right or wrong of this position. For his investigations Prof. Ryder had also several specimens caught at Wood's Holl, in November, 1881. Concerning the Great South Bay individuals, he said (Bull. U. S. F. C., 1885, page 1): "In all four I found the lobulated organs, first described by Syrski, in a condition of development which leaves no doubt whatever that they are truly the male generative glands of the animal. * * * The whole character of the organs, both macroscopially and microscopically, is so entirely different from that of the ovaries found in the female, that there is no possibility of confounding them." The Syrskian lobules of the male are figured, enlarged to 35 times and 200 times their diameter. The "series of specimens from Wood's Holl * * * show the Syrskian organs slightly larger than in the Fire Island specimens, indicating possibly that functional maturity of the male organs is not attained till midwinter. This is rendered all the more probable from the fact that the young eels, about 2in. long, which constitute the swarms which come into fresh water in the spring, must have had three or four months during which to grow in order to reach the dimensions which they attain, which would render it probable that actual oviposition occurred sometime during the months of December or January." Prof. Ryder "takes pleasure in announcing that the male eel has been positively identified from at least two points along our Eastern coast, the animals in both instances showing the male reproductive elements so far advanced in development that there can be but little doubt if the animals had been taken a few weeks later ripe spermatozoa would have been found in the *vasa deferentia* of the testes."

Mr. Edwards has found the female silver eel with the ovaries approaching maturity, and at about the same time of the year males have been taken at Wood's Holl and Great South Bay far enough advanced sexually to be distinguished from the female. It remains to be determined whether the eel shown in the accompanying figure is the male of the common species of the markets or of another and distinct species. It will be noticed that the eye of this eel is very large, the snout short, the pectoral fin long and the coloration peculiar, as indicated in the name "silver eel" applied to it by fishermen. The belly of the male is milk white, contrasting sharply with the dark slate blue of the upper parts. The individuals collected near Patchogue were all taken from salt or brackish water.

De Kay and Storer were disposed to consider the silver eel as a variety of the common eel and not entitled to a specific name. The former wrote concerning it as follows:

"We have examined the silver eel of the fishermen, and are disposed to consider it only as a variety of the above [the common New York eel]. It is silvery gray above, with a clear satiny white abdomen, separated from the color above by the lateral line." (De Kay, New York Fauna, Fish, page 311). The *Anguilla argentea* of Lesueur is mentioned on a subsequent page among the extralimital species occurring further north. The diagnosis of color corresponds very closely with De Kay's observations quoted above.

Storer had specimens from a locality near Mr. Edwards's present post of observation, and he has the following remarks about them in "History of Massachusetts Fishes," 1867, page 215:

"In my report [on the fishes of Massachusetts] I included a species which I supposed to be the *argentea* of Lesueur. This was also contained in my 'Synopsis of the Fishes of North America.' In October, 1845, my friend, the late Dr. Yale, sent me a living specimen of this fish from Holmes's Hole, where it is called the Neshaw eel. I carefully compared this specimen with the *A. bostoniensis*, and could not perceive characteristics sufficiently well marked to make them distinct species. The color of the Neshaw eel is rather more of a brown than greenish, and the abdomen is destitute of the yellowish tinge possessed in the common specimens in the market; but these differences may be dependent upon its locality." Dr. Yale writes: "The Neshaw eel is taken in all the ponds and lagoons connected with the sea on the Vineyard, and in October and November in pots while making its way from the ponds to the sea. It is said that when the openings from the ponds are closed they pass over the sand in the night." The common eel is figured on Plate XXXIII. of this work, and this is one of the few good illustrations of the species. If our readers will compare the figure given in this article with figures of the common eel in the works of DeKay and Storer, and in the "Fishery Industry of the United States," or the Standard Natural History, they will at once see my reasons for doubting the pertinence of this male to the common form and for suspecting that the silver eel of Lesueur is something more than a myth. T. H. Bean.

MAINE TROUT SHARKS.

IT is a matter of regret that the trout family ascends the smaller streams and brooks to spawn, and that when the breeding furore is on the fish, both male and female, is reduced to a state of stupor that it is easy for man and beast to make it a prey, either to the desire to kill or to use as food. It is true that nature has made the fish unfit for human food at this time, though rendering it helpless so far as its enemies are concerned. Even the birds become an enemy of no mean order at this period of the trout's existence. Just here comes in an idea that may be new to some of the readers of the Forest and Stream. Report is making the great blue heron one of the whost enemies of the trout, unless it is possibly the demoralized guide, who hunts and traps in the autumn, and the spawning trout in the small streams easily falls to his thirst to destroy. Last September the trout in some of the Maine streams leading into the best trout lakes and ponds in that State were found to be far advanced toward spawning. In fact, the season was uncommonly early in this direction. In many streams enormous trout were seen, that would take neither hook with bait nor fly, but alas for human nature! they were taken some way. When taken they were found to be far advanced toward breeding, and evidently that was the reason for their presence in waters so shallow. The fishermen who took these trout and brought them to a certain camp were taken to task for catching such fish, with the reason explained, and to their credit be it said, they agreed it was no sport and that henceforth they should let spawning trout alone. But a day or two after word came by way of the guides that several more of these trout had disappeared from the same stream—from the same spawning beds.

Matters were looking rather meanly for somebody when a few days later several fine trout were washed ashore just below the spawning bed. In their backs there was a hole nearly as large as a man's finger, which looked as though made with some sort of a rude instrument. Trout spearing on the spawning beds was suspected. Who could it be? The dead trout were examined more thoroughly. The wounds were ragged and peculiar. If made with a spear, it must have been a very crude one, and with a single tine. At last one of the guides found a solution to the mystery. He twice observed a great blue heron intently watching the close vicinity of the spawning bed, and though the bird was too shy to approach near enough to be sure of its movements, yet the guide was convinced that the heron was the trout spearer. The matter was referred to his uncle that evening, an older guide, and the uncle agreed that it is the habit of the blue heron to strike at fish or frog in shallow water, and that it is capable of driving its sharp beak through the body of its prey. Hence the spike or spear holes in the trout found. Now I do not desire to lay all the destruction of trout on the spawning beds to the blue heron, but I give the circumstances just as they happened and the theory. Indeed this bird is already harassed to the extent by hunters that it is fast becoming extinct, and it would not be best to add the crime of trout stealing to its death sentence, but it is possible that it is guilty of destroying more trout than has been supposed heretofore.

But the human destroyers of breeding trout are not yet all dead or convinced of the meanness of their crimes. Indeed they go into the woods in October, in the States where the laws are framed to protect the trout in that month. They are there for hunting, but the temptation to add fishing to their pastime is very strong. They have but one vacation in a year, and when fishing is legal, then the game is in close time. Hence, under the plea of getting a few trout to eat, they arm themselves with rod and line. Their success is not great, but frequently they electrify the whole camp with the size of a trout they take. Indeed they are surprised themselves at the monster trout they find, often in water quite shallow, in the same streams. He will neither take a bait nor rise to a fly. Patience is exhausted, and the fish is an easy prey to the pronged jig or grapnel. A party of hunters lately returned to Boston took "what trout they wanted to eat." But somehow "they did not taste as good as expected." Sure enough. A trout in the breeding season is about as nice to eat as a farmer's cow just before or after calving. One of the party took a big trout, it weighed 6lbs. and measured 24in. in length. This is the account the hunter gave of it, though honestly he did not understand that a trout of that length should have weighed at least 8lbs., and that 8½lbs. would not have been in the least unusual. When questioned closely, he confessed that the fish was "the meanest slab-sided specimen" that he had ever seen, and he did not understand it. "It probably was starved nearly to death in the little stream." To any one familiar with the habits of this fish the case was plain enough. Though it was a male trout, it was a spent one. The cavities of its body had been emptied of a pound or two of milt, if the truth must be told in plain words. I explained the slab-sided condition of the trout to the sportsman, who had honestly confessed the breach of the fish law to me, and he owned that he had never thought of the matter in that light. He also declared that he wanted no more breeding trout. Hence it is often the case that ignorance of the habits of fish and game is one reason that poaching is indulged in, and often when the matter is brought before the hunter in its true light, he resolves that he wants no more illegal fish or game, and that if the open season on deer and grouse falls on the close season for trout, it is the fault of nature and not the game protective laws.

Special.

MOONEYE OR GOLDEYE.

Editor Forest and Stream:

I wish some one at Neenah, Wis., or some other point on Lake Winnebago, would write fully about the so-called "mooneye," "mooneye shad" or "fresh-water shad," which at a certain period each summer frequents the river at the upper end of that lake in great schools. The fish seems to resemble the cisco in its habits, for it comes at periodical times and then disappears for the remainder of the year. It attains a weight of 3 or 4lbs., bites a fly ravenously and affords very good sport, being a strong and gamy fighter. I never saw one of the fish, and don't know much about them. Mr. Chas. E. Burton, of the Kankakee line, tells me of them, and says he has been on the river when the fish were in, and the sport was great. August is usually the season, I understand. I notice that the restaurants here in Chicago are now offering "mooneye shad" on their bills of fare.

I should like to ask how far West any reader of Forest and Stream has taken the landlocked salmon. I am told there are plenty of landlocked salmon in Burnside Lake, near Eli, not very far distant above Duluth, and near a short iron mine railway which runs north from Duluth. The lake is near the boundary line between the United States and the British possessions. I was told of this by the cook on a railway boarding car at Kirton, Wis., and the story was confirmed by the foreman of the gang. Both of these men had lived in that country, engaged in railroading on the construction department, and the latter had been there within two years. The cook told me he used to buy a 4 or 5-pound fish of the Indians for a small piece of pork. The Indians brought down any quantity of them to the railway, but the cook didn't know what the fish were until a party of anglers, including an ex-mayor of Minneapolis, came along and told him the name of the fish. These anglers, the cook told me, were very much excited over the discovery. I have never heard directly from this lake, and of course have no means of knowing positively that the fish in question was really the landlocked salmon; but there has been a rumor current in the West for a long time to the effect that the landlocked salmon was found somewhere in the country about Duluth. I wish some Duluth correspondent would go into this.

E. Hough.

[The mooneye is referred to in books under the names *Hyodon tergisus, alosoides* and *selenops*, the first being found in Canada, the Great Lake region, and throughout the Mississippi Valley. *Hyodon alosoides* occurs in the Ohio Valley and northwestward to the Saskatchewan. The mooneye is a near relative of the shad and alewife, but its bones are larger and less numerous. Richardson, in "Franklin's Journal," described the northern species and gave some account of its habits. Again, in 1836, he redescribed the fish and states that "it bites eagerly at artificial fly or worm. * * * Its flesh is white, resembling that of the perch in flavor, and excelling it in richness." He associates with it the names of "goldeye" and "Naccaysh." "The Naccaysh is taken during the summer months only, and in small numbers, in the gill nets set for other fish." The 54th parallel of latitude appears to be the northern limit of this species. *Hyodon tergisus*, which is probably the one above mentioned, is sometimes called "toothed herring" and "silver bass." It inhabits large rivers and lakes and is supposed to retire to deep water in winter. Its vigor, game qualities and good flavor were known to Dr. Estes who considered it one of the smartest of fishes and one of the most difficult for the fishermen to hook. The third species of mooneye belongs to the southern rivers and is probably inferior to the others in size and flavor.]

AN INCREDULOUS RHYMSTER.

Editor Forest and Stream:

To the uncertainty of the biting of fish all anglers can testify. When one is himself alone disappointed the trial is enough to bear, but when he feels the disappointment of others, too, it is very annoying. It fell to my lot to endure such torture this summer.

Having been for several seasons to Philipsburg, Province of Quebec, and having always met with reasonable success with bass, I took it upon myself this summer to write several friends to accompany me, holding out as an inducement the almost sure capture of plenty of bass. We went. The weather was superb, but the week passed and six of us caught altogether perhaps about ten bass.

Four of the party left in disgust. My companion and myself having been in the place and being possessed of the true piscatorial spirit of patience, waited and fished. From the day the skeptics left the bass began to bite. We took a goodly number each day, one day bagging seventeen nice ones, and among others taking two which weighed over 4lbs.

To show the boys what they had missed I disinterestedly wrote them an account of my luck after they left, and among other scurrilous epistles received the following "epic" from one of them, which you may think it worth while to publish:

ANANIAS THE FISHER.

There once were six fishermen who
With the wind into Philipsburg blew.
For bass they were laying,
And for good weather praying,
For each day would be spoiled by a "too."

The first day was "too hot and still,"
The second "too rough and too chill,"
And somehow a leak
In each day of the week
Would prevent it from filling the bill.

There was "too much north wind" did they troll,
Or "too little" to fish with a pole:
So the bass wouldn't strike,
And the largest-sized pike
A wizard alone could cajole.

Then some went a-frogging with joy,
Some went courting the milkmaidens coy:
Some lay in the grass,
And fished for the bass,
Which to catch you a corkscrew employ.

And after a week, three or four
Of the fishermen skipped from that shore.
Of the two left behind
One grew low in his mind,
Tho' often he had been there before.

At his hair and his whiskers he tore,
And 'tis said that he cursed and he swore,
And in language unclean
Said "He hoped he'd be seen
In Halifax if he fished more."

But after the tempest was o'er,
He permitted his fancy to soar;
So large bass he did take
('Twas a hypnotic fake),
At least seventeen or a score.

For he fell into a mesmeric trance,
And about him saw 10-pounders dance,
And real bass he thought 'em,
And believed that he caught 'em
Without wetting the plinth of his pants.

Now, no one has ever told why
It is that a man who won't lie,
Will, by a simple fish tale,
Make a tombstone turn pale,
And then he will only half try.

For when he awoke from his dream,
This man's eye showed a treacherous gleam,
Which revealed without doubt
That Jekyll was out,
And that Hyde was the boss of the scheme.

For with limitless "voltage of gall,"
And a nerve that would make Keeley crawl,
He wrote down on a card,
By no scruples debarred,
What I hope he will quickly recall.

"The name of the bass it is Mud
(Cold as ice, as he wrote, was his blood),
For this day, old boy,
I caught to my joy,
More bass than have lived since the flood.

Then humming the bar of a song,
He mailed it to one of the throng
Who had just gone away
On the previous day,
But who had never done him a wrong.

But success he will never attain,
And he'll fish for the suckers in vain,
If with such rotten yarns
He mends and he darns
All those very large holes in his seine. H.

Why must we "truthful" fishermen bear the opprobrium of the "liars" of the guild? A CONSTANT READER.

A TROUT PAINTING.—Anglers, as well as connoisseurs in this vicinity, will be greatly interested in a painting of a large brook trout now on exhibition in the windows of Messrs. Tilden, Thurber & Co., jewelers, Providence. The study is from the easel of Mr. T. Sedgwick Steele, son-in-law of Hon. Darius Goff, and represents a 5½lb. trout suspended by silver scales, the weight of the fish being indicated on the scales. The fish was captured in the Rangeleys, Maine, and painted to order for a gentleman at Mr. Steele's home in Hartford, Conn. Trout of this size are not common, and one seldom sees them so exquisitly painted with all the rainbow colors.—*Providence Times.*

SCARCITY OF WHALES.—The whaling season just closed in the North Pacific has been remarkable for fine weather, but the catch of whales was smaller than ever before. The San Francisco fleet is reported to have taken only 45, while the Okhotsk fleet captured 60. It is said that at least two vessels besides the schooner Nicoline have gone to winter at Herschell Island near the Mackenzie River. The breeding grounds of the bowhead are reported in that vicinity.

ABUNDANCE OF SHARKS.—Net fishermen along the New England shores complain greatly of the annoyance caused by sharks. Sometimes several are entangled in a single net, and the damage is considerable. It is astonishing what an amount of rolling and twisting a five-foot shark can do before he is drowned in the net. The mackerel shark is one of the commoner species in this unpleasant muddle.

ANGLERS' ASSOCIATION OF EASTERN PENNSYLVANIA.—At the annual meeting of this association, held in Philadelphia, Nov. 9, a proposition to change the name of the organization to one more indicative of its work and objects, was announced for consideration. It has long been recognized as a fact that the association is a powerful factor in the protection and increase of food and game fishes, and especially active in originating and enforcing legislation having for its object the improvement of the waters of the Commonwealth. We shall, therefore, welcome it under its new name and cherish the memory of its achievements under the old.

BLOOMING GROVE FLY-CASTING. — Blooming Grove Park Association fall tournament, Nov. 4 (see report on page 335). Distance fly-casting, two classes, for gold and silver badges. First class, those who cast in matches—A. J. Post, 53ft.; D. Willis James, Jr., 60ft.; Nat. T. Smith (handicapped) 74ft. Smith gives James 10ft. and Post 5ft. Post gives James 5ft. Smith wins gold medal. Second class, all others who had not cast—D. Bacon, 56ft.; B. E. J. Eils, 57ft.; C. T. Wills, 45ft.; E. M. Youmans, 50ft. Non-members casting for private prize—John Firth, 50ft.; S. H. Bacon, 45ft. Silver badge won by Eils.

W. S. BARRETT, widely known as "Bill" Barrett, the mountaineer, died at Camden, Me., last Monday night, of paralysis, aged seventy-six years. He cultivated a three-hundred-acre farm near Lake Megunticook, and his place was a favorite resort for tourists.

A BIG EEL.—A fisherman recently caught an eel in Wenham Lake, Mass., thirty inches long and weighing nearly 4lbs.

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st. Boston, or 199 Fulton st., N. Y.—*Adv.*

Fishculture.

STOCKING THE YELLOWSTONE PARK.

WE have referred in these columns of Sept. 19 and Oct. 3 to the planting of brook, California and Loch Leven trout in streams of the Yellowstone Park. Nearly 7,000 yearlings of these species were distributed during the month of September. In October the work of stocking was continued, as shown in the following statement of the collection and distribution of whitefish and black spotted trout in Yellowstone Park during October, 1889:

2,000 whitefish collected at Horse Thief Spring, tributary of North Fork of Madison River, Montana, and planted in Twin Lakes, near Norris Basin.

1,000 whitefish collected at Horse Thief Spring, and planted in the Yellowstone River, above the falls.

1,000 black spotted trout collected at Howard's Creek, tributary of Snake River, Idaho, and planted in the East Fork, Gardiner River, above the falls.

The Commissioner has directed Mr. Clark at Northville, Michigan, to set aside, to be forwarded next spring, the following members of the Salmonidæ:

For Lakes Shoshone and Lewis: 30,000 landlocked salmon, 25,000 Loch Leven trout, 100,000 Mackinaw trout (*namaycush.*)

For the Nez Percez and the Madison: 25,000 Von Behr's trout (*fario.*)

For the Gardiner: 25,000 brook trout (*fontinalis.*)

Col. McDonald will keep a party at work for two months next summer collecting grayling, whitefish and black spotted (or red throat) trout and transferring them to streams within the limits of the Park. He expects to see in this reservation the finest assemblage of trout and salmon waters in the world, and we heartily wish him abundant success in his efforts to accomplish this purpose.

COLLECTING EGGS AT U. S. FISH COMMISSION STATIONS.—At Great Brook station, Ellsworth, Maine, 140,000 eggs of the landlocked salmon have been taken up to date. The species was not known to occur here in large numbers, and the take of eggs is a complete though agreeable surprise. The effort to gather eggs here was merely an experiment, but it will be a very profitable one. 15,000 yearling landlocked salmon, reared at Craig's Point, were planted in Green Lake. At Sandusky 21,000,000 whitefish eggs have already been secured. If this rate continues the stations will all be stocked soon. The present capacity of the stations is about 300,000,000 eggs. At Gloucester 12,000,000 eggs of the pollock have been placed in the hatching house.

CARP SENT TO TEXAS.—For the additional imformation of our correspondent in Guanajuato, Mexico, whose queries were answered in FOREST AND STREAM of Oct. 24, we have from Mr. Geo. H. Moore, Superintendent of Distribution in the U. S. Fish Commission, the following names of persons in Texas who have received carp from the U. S. Commission: Ed. Stevens, Adolph Schuring and M. S. Carty, San Antonia, Bexar county; Chas. Neber, Ysleta, El Paso county. Mrs. E. Cartey, 606 S. Laredo street, San Antonio, Texas, received 16 small carp eight years ago. They have now increased to many thousands and no doubt the fortunate owner will be glad to furnish materials for stocking waters within reach.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 5 to 7.—First Dog Show of the Continental Kennel Club at Denver, Col. A. L. Weston, Secretary.

Jan. 6 to 11, 1890.—Annual Dog Show of the Michigan State Poultry and Pet Stock Association, at Bay City, Mich. W. F. Brace, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Nov. 22.—Eighth Annual Field Trials of the Robins Island Club, for members only. Walter L. Wellington, Secretary, Brooklyn, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

THE A. K. R. TRANSFER.

Editor Forest and Stream:

In your last issue I find the following item: "About the *American Kennel Register*.—In Mr. Peshall's letter last week was a statement which it was our intention to correct by a note in that issue. Mr. Peshall said, 'Through my many interviews and efforts made with Mr. Grinnell, of the Forest and Stream Publishing Co., Mr. Grinnell, through Dr. Perry, offered the *A. K. R.* to the A. K. C. for the sum of $500, which offer was shortly after accepted by the A. K. C., and the rival register ceased to exist.' In this Mr. Peshall is mistaken. The sale of the *A. K. R.* was not effected through his influence, nor was it ever offered through Dr. Perry to the A. K. C. It was sold to Dr. Perry, and his subsequent disposal of it to the A.K.C. was entirely his own concern."

In reply, permit me to say that I had so many interviews with the FOREST AND STREAM officials in regard to the sale of the *A. K. R.* that I had the right to assume that I influenced the sale.

If your editor had taken the trouble to refer to the proceedings of the A. K. C. of Feb. 21 last, as published in your issue of Feb. 28, your correction in last week's paper, I am sure, would not have appeared; so you will now please do me the favor to publish this extract from your published report of said meeting:

THE CHAIRMAN—It is proper for me to state here that in connection with this, I had to do that on my own responsibility, and I think I must report it to you, although the contracts are not signed. I took it upon myself to make arrangements to buy the *American Kennel Register*, because it was naturally a [rival] publication of the *Gazette*, and you appointed Mr. Peshall a committee six months ago, I believe, to wait upon the FOREST AND STREAM and see whether the purchase could be made. When I found that the National Dog Club would come in, and that it would be a very desirable thing at the same time to suppress the *Register*—that in fact the suggestion came from Dr. Perry himself, and he said he would buy the *Register* from the FOREST AND STREAM, and that the *Register* then would be handed over to us and suppressed. The contract has been drawn up, and I believe the purchase price has been paid by Dr. Perry, and in connection with their coming in they hand that over to us. Now, if you want to act upon the price, or if you want to ratify it, it is in order, or if you want to leave the matter in the hands of your officers, so that it shan't become public, which, perhaps might be the wisest plan—but having taken that step I thought it necessary to report it to you and leave it to you to do whatever is best.

MR. ANTHONY—I think it is a delicate matter. It is one of those diplomatic things that ought to be left to the officers to close. It is virtually closed now, but, at the same time, it might be wise not to give too many of the details for publication. I move that the matter be left with the president of the club.

MR. PESHALL—I think the matter is well known. I heard it on the streets. I think it is best to ratify it.

THE CHAIRMAN—If it is well known perhaps it is as well to ratify it.

MR. PESHALL—The sum is $500.

MR. ANTHONY—I move that the arrangement made by Mr. Belmont in regard to the purchase of the *American Kennel Register* be ratified, and that the officers be empowered and instructed to carry out the same.

THE CHAIRMAN—I wish to say to you this, that in the contract there are restrictions with regard to selling the *Register* to any competitor, and in publishing the *Gazette* we are a competitor of the FOREST AND STREAM. Consequently the American Kennel Club cannot purchase the *Register* directly. That would be in violation of the contract, and, personally, my relations with the FOREST AND STREAM are not such as would lead me to make any personal contract with them. That is why it was done through Dr. Perry, and if you will, perhaps, put the motion this way, that the club appropriate a sum to be left to the discretion of the officers for the purchase of the *American Kennel Register*, the contract can be carried out with some individual and the same object will be attained, and the money can be appropriated and we do not really become the direct purchasers, but there is the money to pay for it.

MR. ANTHONY—I will modify my resolution in accordance with the suggestions of the president.

MR. PESHALL—Mr. President, I move an amendment to it, that the parties who are managing it be allowed to remain in their management until the matter is closed. Motion carried.

Your Mr. Reynolds was present at this meeting and heard the statements made, which clearly show that Dr. Perry was acting as the agent for both parties, and these proceedings were published in your paper some time before the transfer of the *A. K. R.* was made.

As the A. K. C. is now the owner of the *A. K. R.*, the rules should be amended to include all dogs registered in the *A. K. R.* as officially registered. PESHALL.

[We simply repeat what we said last week: "The sale of the *A. K. R.* was not effected through his influence, nor was it ever offered through Dr. Perry to the A. K. C. It was sold to Dr. Perry, and his subsequent disposal of it to the A. K. C. was entirely his own concern."]

CENTRAL FIELD TRIALS.

NEW YORK, Nov. 9.—*Editor Forest and Stream:* The Board of Management of the Central Field Trial Club would consider it a very great favor if all spectators and handlers who intend being present at the trials will send their names to C. H. Odell, secretary, March House, Lexington, N. C., not later than Saturday, Nov. 23, and state whether they will require a saddle horse or a team of horses and wagon, or both.

CENTRAL FIELD TRIAL CLUB, E. R. Coleman, Pres.

Following are the entries for Free-for-All Stake:

POINTERS.

SALL BRASS II. (Graphic—Meally), Chas. Heath.
LEBANON (Tim—Peg), Lebanon Kennels.
ROGER WILLIAMS (Bang Bang—Lalla Rookh), C. H. Odell.
DOLGOROUKI (Bang Bang—Lalla Rookh), C. H. Odell.
CONSOLATION (Bang Bang—Grace III.), C. H. Odell.

SETTERS.

NORA (Count Noble—Lit), J. Norris Cochran.
LITTLE GIFT (Roderigo—Queen Bess), Bert Crane.
COUNT ERIE (Count Noble—Fannie W.), Dr. W. H. Daly.
ROI D'OR (Roderigo—Bo Peep), O. W. Donner.
ROGER (Count Noble—Queen Meg), L. Gardner.
BETTYE S. (Roderigo—Bo Peep), Memphis & Avent Kennels.
CHANCE (Roderigo—Bo Peep), Memphis & Avent Kennels.
ANTONIO (Roderigo—Bo Peep), Memphis & Avent Kennels.
ROWDY ROD (Roderigo—Juno A.), Memphis & Avent Kennels.

SALE OF DOC.—Philadelphia, Nov. 9.—*Editor Forest and Stream:* I have sold the well-known cocker spaniel champion Doc (A.K.C.S.B. 8511) to Mr. A. C. Wilmerding, No. 152 Broadway, New York. It comes very hard for me to part with the little fellow, as I am greatly attached to him, but he is deserving of better care than I could give him, and as a stock dog he merits more use than he would ever get in this vicinity.—WILLIAM WEST (American Cocker Kennels.)

"PODGERS" TALKS DOG.—III.

ONE of the penalties of writing (scribbling, I might say in my own case) for newspapers is that one is bound to put his foot in it and touch some one on the raw. As, for instance, the result of my talking dog, and disparaging black and tan terriers. It seems impossible to draw invidious distinctions without stepping on some dog's tail; and in this case I trod on little Mr. Black and Tan's; hence its owner's indignant protest.

Now a man's dog is like one of his children; and the owner is sensitive on the subject of that dog. It doesn't matter what kind of a dog either. He may be the veriest ornary little cuss, worthless and unattractive to others, but he has a merit in his owner's eyes that others may not see.

It may be the family dog, endeared by appreciation of the children; a pet, for there's no accounting for taste. I have seen repulsive little alligators as household pets, and after that one can hardly object to the most wretched little cur that ever wore hair. Now I admire and respect the spirit which prompts my Buffalo friend to stand up for his dog. It betrays a commendable phase of character; and I concede that he may have a nice little pet in his black and tan; but I cannot help thinking that it is an exceptional dog of the breed. If he will acquire another one, and it pans out as creditably as this one, I will throw up the sponge and acknowledge myself mistaken.

He says he would like to ask me "if I ever owned and became acquainted with a black and tan terrier." Well, I should smile. That is just how I got my experience in the breed, and is authority for the prejudice. I had a run on black and tans for two years. I invested shekels in them. I had the best breeds. They were well treated, had the freedom of the house, occupied the softest chairs in the parlor, took possession of the softest bed. And they caused a deal of trouble in the household, for although my folks were all lovers of dogs, there was a point when good nature and forbearance ceased to be a virtue, and that was when, after the capture of a rat or mouse they chose the housewife's best bedspread with dirty feet, to maul and worry with the dead carcass. They were simply irrepressible, never still, ever restless and on the move, into everything, on to everything, especially the piano, and yet after all this unlimited freedom, whenever the gate was left open they would "scoot," and never an appearance did they put in until an advertisement and a reward produced them; and then the little scamps would exhibit the utmost delight and joy at getting home. They were blasted little hypocrites. The money that those dogs cost me would make a hole in the national debt. Do I know 'em? Am I acquainted with them? I wish you could see my old check book and the "lost dog" account in my household expense ledger—and then wonder why I don't like black and tans.

A most fortunate intervention of Divine Providence occurred. A friend living in Australia saw them at my house (this was in San Francisco), and went wild over them. There were three or four of them. He wanted to know where he could get such, and when he could find none, one day offered me untold wealth for a pair. It was a glorious opportunity to be magnanimous. I said, "Mine friend, I cannot take your money. I don't sell dogs. Take them all; and bless you my children." He sailed for home with the dogs; paid a fabulous price for passage for them. My conscience smote me. But on the return steamer came a pair of Australian kangaroo dogs, magnificent animals. I know they cost him a pot of money, for such were, and still are, worth £60 each. And thereby hangs a tail, two tails, in fact; but this screed is quite long enough as it is, and although the Dog Editor may be a patient man, I know he don't want such a long "pointer" or a pointer with such a long tale. Some other day will do.

I trust my Buffalo friend's little black and tan will accept my apologies for having trod on *his* tail, and shake.

PODGERS.

INDIANA TRIALS.

THE full report of these trials will be given next week. In the setter Derby, first series, Hope's Roy beat Sam C., Nannie B. beat Simonides, Lilly Burgess beat Tempie Cambridge, Daisy Girl beat Frankie Folsom. Second series, Nannie B. beat Hope's Roy, Lilly Burgess beat Daisy Girl. Third series, Lilly Burgess beat Nannie B. and won first; Nannie B. second, Hope's Roy third.

In the pointer Derby, first series, Pearl's Dot beat Fancy Free, Thomastone beat Devonshire Jilt. Second series, Pearl's Dot beat Thomastone and won first. Third series, Fancy Free beat Devonshire Jilt, then was beaten by Thomastone for second. Fancy Free third.

WHOSE DOG IS THIS?—Canterbury, Conn., Nov. 8.—*Editor Forest and Stream:* While hunting in this vicinity I have several times seen a dog running about the fields and woods in a wild state. He is very much emaciated, and has very little hair left on his body, and is so shy that no one can get near enough to him to read the inscription on the collar which he wears. He was first noticed by Mr. George T. Sanger, of this place, early last spring. At that time he had a coat of hair though, and seemed to be of the Gordon setter breed. It is my opinion that the dog has been lost by some one shooting in these parts, and with this view in mind I write this notice, in hope for the dog's sake that you will give it prominence in your columns, and thus perhaps bring the poor animal and his owner once more together. I could not get near enough to it to discern whether it was male or female. But as it creeps under an outshed every night to sleep I may be able to capture him and learn whom he belongs to.—C. W. LIPPITT.

CHAMPION HESPER COMING OVER.—Mr. E. B. Sears (Wyoming Kennels, Wyoming, Mass.) has purchased through Mr. A. R. Crowell, acting as agent for H. B. Evans, Ipswich, England, the well-known English champion rough-coated St. Bernard Hesper. Champion Hesper has won twenty-four firsts and specials, beating the champions Duke of Marlborough, Augelo, Grace and Prince Battenberg, who has beaten Plinlimmon. Champion Hesper (20,819) is by Sailor (14,081) ex Bellona (14,276), his color is a rich deep orange tawny with faultless markings and shadings. His height, called 35in., is about 33½in. standard, his weight 206lbs. in condition, his skull measures 28in., muzzle 18½in.. girth of chest 42in., total length 85in. He is the sire of many winners, and will be on the bench the coming spring. He is acknowledged in England to be the most typical-headed St. Bernard living. He will leave England Nov. 16, by Leland Line, Liverpool to Boston.

THE CROSS-BRED.—The articles by "Novice" and "Cross-Bred" with regard to the "all round" dog have been of interest to me, as I have a dog that has many of the qualities and would have had all of them if he had had sufficient training. This dog is a cross between a pure Irish water spaniel and a field spaniel. I have hunted quail, jacksnipe, rabbits and squirrels with him with good success, while as a retriever on land or water I have never seen his superior. He has retrieved many a redhead in fine style. A cross between a beagle and a spaniel ought to make the dog that is wanted. Should be pleased to hear from others.—C. T. P.

ALPINE KENNELS.—Fairfield, Ct.—*Editor Forest and Stream:* I claim the sole right to the name Alpine Kennels, the Messrs. Mack being no longer interested.—CHARLES D. BERNHEIMER.

WESTERN MASSACHUSETTS FOX CLUB.—A few of the sportsmen here are looking forward to a grand time next week, when they will attend the annual meet at Chester of the Western Massachusetts Fox Club. The party from this city will include the following: A. B. F. Kinney, Elisha Knowles, W. R. Dean, Nathan Harrington, John R. Thayer, Jerome Marble, A. D. Warren, Webster Thayer, Col. James M. Drennon and Capt. David Earle, and John White, of Millbury. Kenney and White will take five hounds, Mr. Dean three and John R. Thayer two. Some of the others will also have one or more dogs. The party intend to have some twelve or fifteen hounds, and expect to leave here Tuesday afternoon and return some time Thursday.—E.

A LARGE ST. BERNARD PUPPY.—Melrose, Mass., Nov. 10.—*Editor Forest and Stream:* I have a rough-coated St. Bernard dog puppy, by Ben Lomond out of Recluse, that at five months old weighed 100½lbs., stood 27in. at shoulder, standard measure, girth of skull 22in., muzzle 15in., chest 32in., arm 10½in.—E. H. MOORE.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Rena Bondhu. By Rural Kennels, Wakefield, Mass., for blue belton English setter bitch, whelped April 20, 1889, by Gus Bondhu (Dashing Bondhu—Novel) out of Rural Neva (Pride of Dixie—Fairy Belle).

Carl Belton. By Rural Kennels, Wakefield, Mass., for black, white and ticked English setter dog, whelped Feb. 14, 1889, by Leicester Belton (Yale Belton—Princess Lily) out of Rural May (imported Belthus—Daisy).

Klip Glenrock. By Dr. L. M. Thompson, Mahanoy City, Pa., for blue belton and tan English setter bitch, whelped Aug. 15, 1889, by Warwick Belton (Belton High—Magnolia) out of Garda (Glenrock—Armida).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Flora—Bradford Ruby II. W. B. Gale's (Cincinnati, O.) pug bitch Flora to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Oct. 23.

Duchess of Heathfield—Ben Lomond. C. H. Spring's (Newton Lower Falls, Mass.) St. Bernard bitch Duchess of Heathfield (Rip Van Winkle—Recluse) to E. H. Moore's Ben Lomond, Nov. 1.

Lady Don—Wayne Buckellew. Anthracite Kennels' (Mahanoy City, Pa.) English setter bitch Lady Don (Donald C.—Fredona) to their Wayne Buckellew (Buckellew—Minnetonka), Nov. 5.

Toody—Bradford Harry. G. W. Dixon's (Worcester, Mass.) Yorkshire terrier bitch Toody to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady), Oct. 23.

SALES.

☞ **Notes mustbe sent on the Prepared Blanks.**

Ashmont Cleopatra. Fawn mastiff bitch, whelped July 16, 1886 (A.K.R. 5893), by Lewis A. Berger, Langhorne, Pa., to W. H. Stone, Sandusky, O.

Clermont—Ashmont Cleopatra whelp. Fawn mastiff dog, whelped Sept. 10, by Lewis A. Berger, Langhorne, Pa., to W. B. Angstadt, Reading, Pa.

Lulu Lee. Silver fawn pug bitch, whelped Sept. 1, 1889, by Joe H. out of East Lake Virgie, by Eberhart Pug Kennels, Cincinnati, O., to Capt. D. A. Marr, same place.

Buttercup. Lemon and white English setter bitch, whelped April 20, 1889, by Gus Bondhu out of Rural Neva, by Rural Kennels, Wakefield, Mass., to Wm. E. Hobby, Holley, N. Y.

Rural Dot. Black, white and fawn beagle bitch, whelped September, 1885, by Flute M. out of Belle, by Rural Kennels, Wakefield, Mass., to A. E. Aldrich, Gardner, Mass.

Rural Ludu. Lemon and white English setter bitch, whelped April 20, 1889, by Gus Bondhu out of Rural Neva, by Rural Kennels, Wakefield, Mass., to E. J. Hulton, South Bay City, Mich.

Roy Bondhu. Blue belton English setter dog, whelped April 20, 1889, by Gus Bondhu out of Rural Neva, by Rural Kennels, Wakefield, Mass., to Frank E. Brown, Hudson, Mass.

Gus Bondhu, Jr. Black, white and ticked English setter dog, whelped April 20, 1889, by Gus Bondhu out of Rural Neva, by Rural Kennels, Wakefield, Mass., to Meade & Connell, Malden, Mass.

Hunter's Pet. Black, white and fawn beagle bitch, whelped March 3, 1888, by Little Duke, Jr., out of Rural Dot, by Rural Kennels, Wakefield, Mass., to Horace H. Beer, Charlottetown, Prince Edward Island.

Contralto. Black, white and tan beagle bitch, whelped March 3, 1889, by Little Duke, Jr., out of Rural Dot, by Rural Kennels, Wakefield, Mass., to Thos. Callahan, Stoughton, Mass.

DEATHS.

Lily of the Valley. White English setter bitch, whelped July, 1885, by Blue Dick out of Bella Gladstone, owned by Rural Kennels, Wakefield, Mass.; poisoned.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. H., Erie, Pa.—Please tell me what makes a dog slobber (mucus) at the mouth, and how to stop it. My dog's coat is rough and coarse. What will make it smooth and glossy? Ans. Give ½gr. of extract of belladonna three times a day in pill form. Give 5 drops of Fowler's solution of arsenic in the food night and morning.

J. M., Savannah.—I have a St. Bernard pup, 8 months old, weighing 86lbs. Three months ago she got caught in passing through a fence and sprained her right fore shoulder. When excited by playing with other dogs she uses this lame leg, but at other times goes on three legs, and the injured member is smaller than the others. I have tried blistering and various liniments without effecting any improvement. Can you tell me what to do to cure her? Ans. Absolute rest of the part and continue to blister.

POINTER, Fitchburg.—I have a pointer 4 years old and out of condition from lack of exercise and overfeeding. His eyes discharge matter in the morning and are inflamed at times, especially the eyelids. Between his hindlegs he has an eruption which is very red. I call it red mange. What shall I do for him? I feed him table scraps and give him plenty of exercise. Ans. The symptoms are all due to obesity. Get the dog thin and he will get well. To do this, keep the bowels open with compound cathartic pills, three at a dose; limit the food, giving little or no meat. Exercise regularly. Give 5 drops of Fowler's solution night and morning. It is not clear from your account whether you exercise him or not.

I. T. C., Simcoe, Ont.—My spaniel bitch, 3 years old, has been troubled with some internal disorder for six weeks past. She makes a rasping noise in the throat at intervals as a person would who was trying to get rid of phlegm or a fish bone, and occasionally ending with an effort as if to vomit, rarely ejecting anything. Once or twice she vomited about a teaspoonful of frothy, tough mucus. I hunt her once a week, her nose is keen, keeps moist and is generally cool. Appetite good, though not quite so active as usual. She is occasionally inclined to be listless, but not particularly so. Gets regular exercise, and plays as usual daily. Can you tell me what ails her and advise treatment? Ans. Probably due to some stomach trouble, gastric catarrh. Give 2grs. of quinine in a pill three times daily. Also put 5 drops of Fowler's solution of arsenic in the food.

J. L. B., Elberon, N. J.—A friend sends me his setter bitch puppy with the request that I give her a trial over quail, and after I have hunted her a month to let him know what I think of her. The bitch is, to all appearances, from a good stock, and finely bred, a nervous high-strung creature, who, previous to a week ago, had never been outside the city, and to whom everything in the country, from a cow to a tree, is a never-failing source of wonder and alarm. Her owner intimated when he sent her that once in a while she had fits, a statement she at once proceeded to substantiate by falling down in one the moment a bird was killed before her. Since then every time I have had her out she has tumbled over in one of these charming diversions, until I have begun to think they are her sole object in life. When she arrived here she was decidedly thin, having been kept too fine, and I to counteract what I judged to be a mistake, and with the object of strengthening her, commenced feeding two meals a day of corn meal mush, boiled together with a small quantity of meat, the idea being to build up a depleted system, and by increasing strength and tone overcome the fits, which I suppose came to a certain extent from want of strength. But I am compelled to confess that though the plan may be perfect as far as theory goes, it does not seem to work in reality. What would you advise? Will she ever outgrow the trouble? Is she worth breaking under the circumstances? Ans. She may outgrow the trouble but it is doubtful. We should advise you to give up her training. She is not likely ever to be worth the trouble of training.

Rifle and Trap Shooting.

SMOKELESS POWDER.

IN a recent utterance on the subject of so-called smokeless powders, Gen. Benet, Chief of Ordnance, U. S. A., said:

"We are experimenting with smokeless powder, and I believe that in a short time we shall obtain some practical and satisfactory results."

From present appearances the war of the future is destined to be an approximately smokeless one, and hence more bloody. Instead of huge clouds of smoke rolling between the two armies, and hiding the combatants from sight, instead of skillful maneuvers being made under its protecting shelter, the men will be in plain view of each other, and numbers and marksmanship will count for more in deciding battles than skill and generalship.

This is due, in a great measure, to the recent inventions of what is known as smokeless powder. Every European nation is experimenting with it, and the United States does not propose to be far behind other countries.

As yet the discovery has not been adopted by any of the great armies, for the reason that there are a number of disadvantages connected with its use, but these are being overcome gradually, and it is probable that in a short time the great armies of the world will be supplied with it.

Strange to say, the United States was the first country to which this great destructive invention was offered, and stranger still, it is almost the last among great military nations to take steps looking toward its adoption. Some twelve years ago a gentleman called at the department and obtained an interview with one of the officials. He stated that he was the inventor of a powder which would not produce smoke, and wanted to know if the officials would investigate it, and, in case it was found to do what he claimed it would, if the government would buy the invention and adopt it. He was told that it would undoubtedly buy such an invention. He left, promising to return again. He was not seen again, however.

The idea of such an invention was believed to be the delusion of a crazy man, and the matter dropped out of sight until the news came that France and Germany were experimenting with the smokeless powder. Then the strange visitor of years before was thought of and efforts made to find him, but without avail. No reason is given for his failure to return, but it is probable that the man may have been piqued at his treatment, and did not care to again have his claim so incredulously received. Thus it was that the United States missed the opportunity of securing one of the greatest inventions of modern times.

The discovery is said to have been made by a man named Maxin. Some, however, credit Vielle, a Frenchman, with it. The latter's powder has been the most extensively used, however, and the results obtained have also been the best. There are a number of other inventors. Germany, France, Austria, England, Italy, Spain and Belgium, use different powders in their experiments, and the one which the United States will use will be different from any of the others, and in all likelihood will be the invention of an American.

Each country which is experimenting with the powder believes, or rather says, it has the best; but as brag plays an important part in European military methods, their assertions have to be taken with a great deal of allowance. The composition of the powder has been kept secret as far as possible. Four or five kinds have been tried in France, and the experiments have been conducted with so much secrecy that it is not known whether a powder has been secured which can be used with good results or not.

Smokeless powder consists essentially of nitro-cotton or some other kind of nitro-cellulose, specially treated with a view to producing a slow-burning substance, or of nitro-glycerine and nitro-cotton, together with a suitable solvent, in some cases ammonia and ether.

In its manufacture a paste is first prepared by dissolving gun cotton in a solvent, which is usually a solution of ammonia and ether. From the paste thus produced a sheet is made, and equalized by being passed through two metal rollers. The sheet is first made three times the thickness it eventually is, in order to allow for the shrinkage on drying.

The sheet is next freed from the solvent by drying in the open air or in a specially prepared oven, which permits of the condensation and recovery of some of the solvent. When nearly dry the sheets are subjected to heavy pressure to reduce them to the required thickness. The pressure is assisted by softening the sheets with ether.

The sheets are then cut into strips and the strips then cut crosswise, making cubes very small in size. In color the powder—which is in reality no powder at all—is light brown, and transparent. A good simile is a sheet of sticking plaster cut into almost infinitesimal squares.

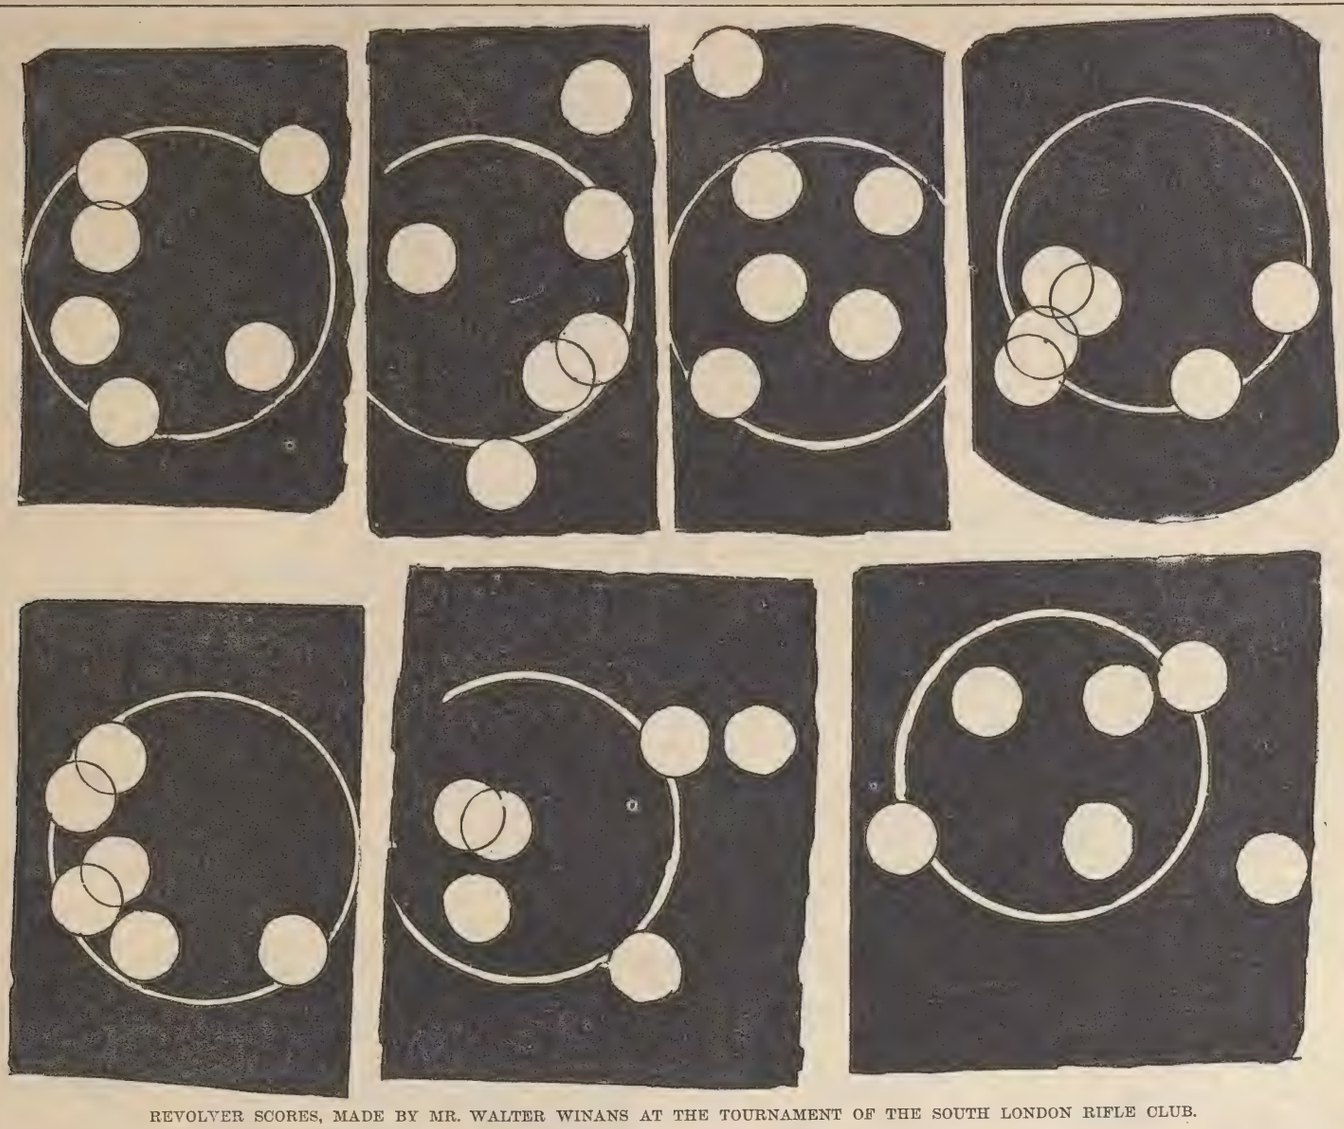
Different solvents are used, and the process of manufacture is different in different countries. In Belgium it is called paper powder, and in Switzerland it is called "Walsroder."

For the use of small arms the cubes or grains are made much smaller, for the reason that the pressure exerted by the powder is tremendous.

With ordinary powder it would be impossible to fire large guns at the maximum rate of some ten rounds per minute on account of the hanging smoke from the discharge, which renders aiming impossible, while with the so-called smokeless powder the same hindrance is not experienced. The smokeless powder is not, as a matter of fact, entirely smokeless, but at a distance of 1,000yds. is not noticeable, and what little smoke is created dissipates very quickly.

Another great advantage of smokeless powder is the increased velocity it gives the bullet. Vicille's powder, which is used in the French Lebel rifle, carries a bullet of 231grs. at a speed of 1,968ft. per second. With a larger bullet the speed was increased to nearly 2,590ft.

For another thing, smokeless powder does not weigh as much as gunpowder. Therefore, for small firearms the cartridges are made much smaller. The same results can be obtained with 30grs. of smokeless powder as with 70grs. of the ordinary black powder. The difference not only in size but weight would allow a man to carry a great many more rounds of ammunition, and its adoption, when proved practicable, will permit the adoption of small-caliber magazine guns, although, with the reductions of the caliber, there would not be the corresponding reduction in the effectiveness of the shot.



Like everything else, it has its disadvantages. The German smokeless powder produces disagreeable and overpowering odors from the noxious gases which it forms. The quality deteriorates also in time, and it is a serious question whether it may not absorb moisture. The English have had trouble with smokeless powder because it makes the barrel of the gun too dry and produces more friction on the bullet. The explosion is also too violent, and frequently destroys the bullet. To prevent this hardened bullets have been tried, but the pressure was too great, and simply resulted in injury to the gun barrels.

The German powder is not noiseless, and in fact is said at times to give a louder report than the ordinary powder. It also shows at times a vivid flash, which, when the field is not obscured by smoke, would be the means of attracting attention and make the battery's or men's whereabouts known if they were out of sight.

The smokeless powder gives increased velocity, especially in rapid-firing guns, which is an important consideration. In the large guns it is used in strips, although the French believe it accomplishes better results by cutting it up.

The actual experiments of it first began in 1884, when it was used by the French army. Since 1886 it has been developed considerably, and since that time has been used in the artillery and in the field maneuvers of the French army. It was also used in the maneuvers of the Austrian and German armies this fall.

Its general adoption would modify the conditions of battle very materially. If an army were fired on they would not know where the firing troops were, as the sound is very deceptive, and there would be no smoke by which they could be located. There would be no smoke under which deploying could be successfully accomplished. It is said the men feel protected by the smoke to some extent, but with this powder in use they would have no advantage in this respect. It would be an immense advantage to sharpshooters, and in every way would increase the casualties of war.

REVOLVER SCORES, MADE BY MR. WALTER WINANS AT THE TOURNAMENT OF THE SOUTH LONDON RIFLE CLUB.

RANGE AND GALLERY.

CAPITAL REVOLVER WORK.

THE capital scores of Mr. Walter Winans, an American shot, at the English ranges where revolver matches are open is already familiar to our readers. At the recent tournament of the South London Rifle Club, for the revolver shooting championship for 1889, W. Winans for the third time led the list. The conditions require a total of 7 selected scores made on separate days, at 20yds., with a 4lb. trigger pull revolver, using regulation ammunition. Mr. Winans used a Colt .45cal. and his score stands:

First	7	7	7	7	7	7	7—42
Second	7	7	6	7	7	7	7—41
Third	6	7	7	7	7	7	7—41
Fourth	7	7	7	7	7	7	7—42
Fifth	7	7	7	7	7	7	7—42
Sixth	7	6	7	7	7	7	7—41
Seventh	7	7	7	6	7	7	7—41—290

The cuts annexed show the diagrams of the shots full size. The bullseye is 3in. in diameter, counting 6, with a carton 2in. in diameter counting 7 points.

PHILADELPHIA, Nov. 5.—The regular weekly contest for gold and silver badges of the Gaiety Rifle and Pistol Club was held at the club's headquarters, 818 South street, this evening. Mr. A. Simon with a large allowance was the winner of the gold badge, while Mr. T. F. Shonert, having no strong competitors to compete against, was the winner of the silver badge. Standard American target reduced to 30yds., off-hand, plain open sight, 10 shots per official score as follows:

J J Mountjoy	8	7	7	10	8	10	10	10	10	9—89
A F Simpson	6	10	8	8	10	10	10	8	8	8—86
E Travis	7	10	9	10	5	8	7	10	10	7—83
T F Shonert	8	9	10	9	9	8	10	5	6	9—83
R Roletta	6	9	10	8	10	6	9	7	9	7—81
J A Rollock	4	10	9	6	9	6	10	8	7	9—78

SMALL BORE.

NEWARK, N. J., Nov. 6.—The second match of the series between the Miller Rifle Club, of Hoboken, and the Our Own Rifle Club, of this city, shot on the Our Own range to-night, drew an immense crowd of riflemen to the range. The match opened at 8 o'clock, John Coppersmith leading with 235 for the Newarkers against D. Miller's 234 for the Hobokenites. The next two men tied, while on the third round the Millers gained a lead of five points. On the fifth round, however, the Our Owns gained a lead of fourteen points, and from that on kept the lead, finishing with twenty-five points to the good. This ends the series, and the Our Owns, having won two matches, not only win the championship of New Jersey, but also become possessors of a beautiful silver water set. The scores were all poor with the exception of Krauss's 243, all the shooters seemingly being out of form. The Millers shot three substitutes on their team. The scores were as follows, each man firing 10 shots on the 25-ring target:

Our Own.		Millers.	
J Coppersmith	235	D Miller	234
J Bauder	237	G Plaisted	237
F P Laute	229	L Vogel	233
W H Watts	234	G Schlicht	233
F A Freiensehner	233	J Meyer	224
O Krauss	243	A Meyns	234
G Widman	234	A Wagner	222
P Bell	234	F W Hofele	239
F Schmidt	234	F Brandt	234
M Dorrler	235—2,348	E Fiescher	231—2,333

THE NEWARK TOURNAMENT.—The following were the scores made at the regular Association matches during the past week:

Monday, Nov. 4.

Annie Oakley.		North Ward.	
J B McCallum	110	E Lewis	102
G Oberst	108	C English	108
J Thompson	84	H Leonard	100
F Heyl	100	F Philips	10-
A Rothaker	98	A Vreeland	100
J H O'Neil	105	W E Sherk	102
S Gries	97	O Willett	10-
F Scheel	85	R Voget	93
G Hunkle	88	B Stitts	8-
C Schumacher	85— 961	F Hortman	10-—1004
Excelsiors.		Monroes.	
C Mayer	88	B A Rist	53
C Mink, Jr	104	G A Bridan	107
O Krauss	109	J Minion	108
C Gotthard	102	A Coorns	100
E P Flocke	102	J Coleman	106
F Wurtzback	109	J Reich	102
J Burger	106	G Hedding	88
J Bauer	106	G Koker	81
F Schmidt	104	G Widman	110
H Buob	109—1039	D Erskine	102— 927

The match between the Essex and Lakeside clubs was postponed.

Friday, Nov. 8.

J Flannery	78— 923	McLarin	76— 931

ST. LOUIS, Mo., Nov. 9.—The last shoot of the St. Louis Pistol Club had but seven members present. The scores made were poor, and the blame is placed to the very poor condition of the cartridges. The scores made at a 20yds. standard American target are as follows:

G W Alender	9	10	8	7	7	8	7	8	9	8—82
M Summerfield	6	7	8	10	8	10	7	8	9	7—80
E C Mohrstadt	10	8	8	6	8	7	6	9	5	9—79
W Bauer	10	7	10	8	7	10	5	7	9	5—78
W H Hettel	7	7	8	8	7	8	8	7	8	9—78
W C Mackwitz	6	7	8	7	10	7	7	6	5	9—73
A E Bengel	5	6	7	6	7	7	9	10	8	0—65

UNSER FRITZ.

NEWARK, N. J.—The 100-shot match on the Our Own range will be opened on the 18th inst. The entries thus far comprise M. Dorrler, J. A. Bovken, John Coppersmith, O. Krauss, F. Schmidt, J. Bauder, J. Phillips, F. Keller and G. Widman.

SCRANTON, Pa., Nov. 8.—The annual report of Lieut. H. Ostham, Inspector of Rifle Practice of Thirteenth Regiment, N. G. P., shows for the second time that this regiment has qualified every man with the following table:

	Sharpshooters.	Marksmen.	Total.
Field and Staff	9	6	15
Company A	31	28	59
Company B	4	54	58
Company C	21	43	54
Company D	16	43	59
Company E	8	46	54
Company G	24	39	63
Company H	15	38	53
Company I	16	46	62
	144	343	487

This regiment having qualified every member, a showing which no other regiment has ever, so far as heard, attained in this country. Two full scores having been made by Rees Watkins, Principal Musician, and Capt. E. C. Smith, of G, both having made 25 points at 200 and 500yds., each total of 50. SPRINGFIELD.

BOSTON, Nov. 9.—The regular shoot of the Massachusetts Rifle Association was held to-day at Walnut Hill range. The attendance was good. The day being dark and smoky, sighting was quite difficult at times, and the matches closed early. Mr. Lee won the champion gold medal, and Mr. Francis the gold medal in the 20-shot rest match. The scores:

20-Shot Rest Match.

S Francis	107, 107	J N Frye 95, 113 N James 94, 78
J B Munroe	104, 109	W Pomeroy 96, 97

Champion Medal Match.

H L Lee	79	S C Sydney (mil.)	69 J Pullman (mil.) 53
C C Clarke	75		

Victory Medal Match.

A McBean	77	A S Hunt	70

Military Medal Match.

G W Hussey	48, 46	J Marston	43, 42	W M Foster	40, 40
J A Frye	43, 43	O E Pitman	42, 41	F Lowell	49, 39
F J Lounsbury	43, 43	A S Field	41, 41	B D Hart	38, 38
F Carter	43, 42				

All-comers' Rest Match.

J Francis	114	A Ballard	101	A S Hunt	96
J R Munroe	111	W Pomeroy	100	C F Binney	89
F C Towne	101	B A Black	97		

All-comers' Off-hand Match.

J B Fellows	82	A Sharp (mil.)	74	B L Comey	69
H L Lee	82	F W Chester	71	F Lowell (mil)	69
Hussey (mil.)	77, 79	A S File (mil)	71, 71		

Military Practice Match.

J E Kelley	46	F J Lounsbury	44

WILMINGTON, Del., Nov. 9.—The Wilmington Pistol Club met for regular weekly practice at their gallery, and the shooting was the best ever done by the club, that of E. J. Darlington being particularly fine. His consecutive runs of ninety and over, including two clean scores of bullseyes and a top score of 95, complete a feat in marksmanship seldom equaled anywhere. A 50-shot match in the gallery between Darlington and Simpson one evening last week resulted in a well-earned victory for the former by 16 points. The scores are as follows, at 12½yds., standard American target, reduced from 50yds.:

E J Darlington	9	10	9	10	10	10	10	9	10	8—95
H Simpson	10	10	10	9	6	7	10	7	10	10—89
E Jackson	10	10	9	9	8	7	10	9	8	9—89
W H Johnson	10	10	6	8	10	7	7	9	9	9—85
J Evans	10	7	9	8	9	8	9	5	7	9—81
H Foster	8	6	9	10	10	9	8	6	8	7—81
W Floyd	6	8	7	7	6	8	8	5	9	9—72

Fifty-shot Match, 12½yds.

E J Darlington	10	9	10	9	10	10	9	9	7	10—93
	8	8	10	10	9	8	10	10	10	7—90
	9	8	7	8	10	7	8	10	9	9—85
	7	9	10	8	9	8	9	10	9	7—86
	10	7	9	9	9	7	9	8	10	8—86—440
H Simpson	6	8	9	10	8	8	7	8	7	8—79
	8	9	10	10	10	8	10	8	9	7—89
	9	9	9	7	9	10	10	9	10	7—89
	9	9	7	9	8	10	7	10	10	8—87
	9	9	7	9	9	7	6	7	10	7—80—424

WILMINGTON, Del., Nov. 4.—The delightful Indian summer, like weather made things lively at Healdmoor rifle range, Wilmington, Del., to-day. Some complaint was made that it was too nice, as the light was so dazzling as to be troublesome at times. However it was gratefully accepted as a relief from the wet spell of the last two or three weeks. The only event of the day was the remarkably long run by Darlington in the revolver match, which raised his record for that arm one point. Following are the scores in detail, Standard American target, off-hand:

Revolver Match, 50yds.

E J Darlington	10	9	10	7	9	10	10	10	8	10—93
E Jackson	10	10	5	10	7	8	6	8	10	10—84
H Simpson	7	9	10	7	9	10	5	7	10	6—80
J Evans	8	8	7	6	9	9	8	10	7	6—78
W H Johnson	8	8	9	6	7	10	7	4	8	6—73
H Philips	6	6	5	7	8	9	7	6	4	9—67
S Howard	10	7	8	5	7	6	5	5	6	5—64

Diamond State Match, 70 Class, 200yds.

H Simpson (mil.)	4	7	7	5	7	7	8	7	9	9—70
W H Johnson	4	5	8	4	5	7	5	9	8	8—63
H Philips (mil.)	4	6	6	6	9	3	8	6	6	7—61
S Howard	8	4	8	4	6	4	7	5	4	7—57
H Doan (mil.)	8	3	5	4	7	4	3	4	7	10—55

Military Match, Creedmoor Target, 200yds.

Sergt H Simpson	4	4	5	4	4	4	4	5	5	5—44
Corp H Doan	4	5	5	3	4	4	4	4	5	4—43
Pvt H Philips	4	4	5	4	4	4	5	4	5	4—43
Corp W Elliott	4	4	4	4	5	3	5	4	4	4—41
Sergt H Foster	5	3	4	4	4	4	3	4	4	5—40

Beginners' Match, 100yds.

P William	9	9	5	8	4	8	5	5	10	6—69
W Pierce	4	5	9	4	10	3	4	6	7	5—59
G Wilson	4	7	10	3	5	6	6	3	4	4—52
R Beaumont	8	5	5	3	4	6	5	5	4	3—48

ST. JOSEPH, Mo., Nov. 2.—The Buchanan Rifle Club met at their range to-day for their regular shoot. The days are shortened so now that the boys have to get in their work in a pretty lively manner, but the rush did not seem to affect their aim much, as the following will attest; 4 scores per man, possible 100 per score:

J W Batcheller	73 71 71 73—288	Ed Nash	50 59 62 50—221
M B Merriman	69 69 69 75—273	J Manstin	57 48 38 56—199
Roscoe Thomas	62 60 80 69—271	E M Judson	40 52 50 45—187
C F Smith	75 70 56 68—269	J G Drew	34 53 59 33—179
H C Nash	59 68 59 60—246	A V Banes	37 44 35 56—172
Geo C Rough	57 62 56 60—225		

PERFECT MILITARY SCORES.—Capt. Joseph B. Sanborn, Co. G, First Regiment Infantry, Illinois National Guard, after long practice this past summer, has succeeded in making a perfect score on all of the military ranges up to 1,000yds. His detailed score, therefore, reads as follows: A score of 25 in a possible 25 at 100, 200, 300, 400, 500, 600, 700, 800, 900 and 1,000yds., respectively, and 50 in a possible 50, skirmish line. Total 300. The skirmish line firing, of course, is at ranges from 500yds. down to 100. The positions are, of course, off-hand at 100 and 200yds., kneeling at 300 and lying down at ranges above 300. Has this score ever been duplicated with the military arm? The First Regiment is showing a very good grade of marksmanship this year. Following is a list of the different companies, showing the number of sharpshooters in each. The score of the ranked sharpshooter must be over 250 out of a possible 300. The list is given by Capt. Jos. H. Barnett, of D company, thus: Co. A 17, B 7, C 13, D 8, E 5, F 22, G 16, I 11. The field and staff, numbering 8 officers, have all passed the grade for sharpshooter's rank. The interest in the range firing has been well maintained.—E' HOUGH.

ARMY REVOLVER SHOTS.—General Order 78, just issued from regular army headquarters, gives the record of the rifle, carbine and revolver matches of the season. In revolver shooting, which was new this year, the best record, dismounted, is 87.2 per cent., made by the revolver team at Fort Leavenworth. The Fort Wingate team leads for the mounted firing with 64.5 per cent., and in the mean average with 75.8 per cent.

THE TRAP.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Nov. 28, 29.—Lincoln, Neb., Gun Club Tournament. Open to all. C. H. Clarke, Secretary.

WILLIAMSPORT (IND.) TOURNAMENT.

WILLIAMSPORT, Ind., Nov. 6.—Yesterday the Williamsport Gun Club gave their annual tournament on their club grounds at this city. It being cold and a brisk cross wind blowing, the crowd was not large, but a fair turnout of shooters was present and enjoyed the shoot. The shooting was only medium on account of the wind, as will be seen by the scores:

No. 1, at 6 single Peorias, Keystone rules, 50 cents entrance, three moneys:

Slauter	101111—5	Madarea	000001—1
Flinn	111011—5	Johnson	001011—3
Bartlett	000001—1	Moneys divided.	

No. 2, 6 single bluerocks, 50 cents entrance, one money:

Crook	010110—3	Epperson	011001—3

BLOOMING GROVE PARK.

Editor Forest and Stream:

The Blooming Grove Park Association held its annual tournament on the grounds of the club on Nov. 2 and 4. There were upward of thirty of the members present, some of them bringing their wives. A special car on Friday, Nov. 1, carried the members and their guests to Glen Eyre, where the club stages were met and the party were driven to the club house, where a hospitable reception awaited all. The house was illuminated from cellar to roof and the piazza hung with Chinese lanterns, making a most beautiful effect. And once inside, the roaring log fires in the spacious fireplaces for the outer man, and the table loaded down with all the good things for the inner being, at once converted the party into one huge family all bent on having a good time, yet insisting that there should be due decorum.

Saturday was cold and rainy, but the several matches arranged for that day were shot off, and, as is very often the case, the "unknown" won. In order to attract contestants, those who had had some experience in shooting at the traps freely granted the various handicaps which the committee arranged, and the result showed that the handicapping had been fair.

While the contests were going on others of the members were out with dog and gun after grouse or in the park with their rifles in the hopes of seeing and shooting a buck, or on the lake fishing. If all who had chances to shoot game that day could have availed themselves thereof half a dozen bucks and scores of grouse would have been hanging up that night in the chill room. But it is always luck when you miss, and there was much ill-luck. Yet on the table the next day we had spread before us fish and game, the results of the sportsmen's picasure of Saturday. On the 3d, those who cared to do so went fishing or hunting, or visited the hatchery and preserves to watch Otto, the head game keeper, take the trout spawn from our breeders, and see him feed the 25,000 trout of various ages in the preserves.

On the 5th, the other matches in rifle shooting and fly-casting were contested, and here again in the fly-casting the handicapping committee were very much relieved of their labors by the yielding of the more experienced contestants. After the various contests were decided there was no feeling but that the best man in each match fairly won by his excellenee, although some who had before done very well in these matches fell below their previous averages.

The evening was passed in whist, music and billiards, while others sitting around the open fireplace, each had his story and his eager listeners.

The tournament ended on the afternoon of the 4th, and the party returned to the city and their homes in small groups, but all with one mind, that if one wants thorough enjoyment, unhampered by dress and style so-called, but controlled by every sense of propriety, and offered an opportunity of not only hunting for but finding grouse and buck at which to get a shot, they should become members of this association, and then they will be able better to appreciate all the benefits of the club, which this little sketch but feebly outlines.—N. S. S.

The various scores are annexed. Match for gold and silver badges and sweepstakes, 25 clays, 18yds. rise, 3 traps, second barrel (figure 2) ½ bird:

Fred Engle, scratch	1111211011100101011012110—17
N S Smith, scratch	1111012112112011122121121—19½

LINCOLN, Ill., Nov. 7.—I send you herewith the score of the monthly badge shoot of the Lincoln Gun Club, held on Tuesday, Nov. 5, 1889. The weather was fair, with a stiff wind blowing across the traps. Shooting is done under American Association rules, at Peoria blackbirds, 15 singles and 5 pairs:

L C Schwerdtfeger	111111111111010	11 11 11 10 11—21	
Robt Schuster	111110111110101	11 11 11 10 10—20	
Harry Webber	111101111111111	10 10 11 10 10—20	
R M Wildman	011111110110111	10 10 00 10 10—15	
Jerry Parker	001100101111110	00 11 00 11 10—14	
Geo Atwell	011101011001101	10 10 10 00 10—13	

L. C. Schwerdtfeger takes the gold badge and Atwell sports the leather medal.—SACHEM.

NEWARK, N. J., Nov. 5.—A well contested shooting match took place to-day between William Bradbury and Stephen J. Hothersall against J. M. Kerr and Robert Bradbury, at 25 Keystone targets under American Association rules, resulting as follows:

T J Hothersall	21	J M Kerr	19
William Bradbury	18—39	Robert Bradbury	9—28

TORONTO, Nov. 7.—The blackbird shoot at McDowall's shooting grounds to-day drew out a large number of representatives of the different gun clubs of the city. The spectators were also down in good numbers, and apparently took as keen an interest in each event as the men at the score. The day's programme consisted of three open matches for valuable prizes, and a continuous merchandise shoot for 10 prizes. A gold medal presented by W. McDowall for the highest aggregate score for the day was a leading feature of the shoot. Messrs. F. Emond, Dr. Charles and P. Wakefield came in for the lion's share of the prizes. The first two gentlemen shot a hot race all day for the aggregate medal, and it was not until the last round was finished that the steady "Emo" defeated the lightning shot. The doctor, however, won some handsome prizes, among which was a Martini repeating rifle. He was also the only man to make a straight 9 in the merchandise. The weather was all that could be desired. Mr. C. G. Winchell gave satisfaction as referee and scorer, while Mr. Harrison did the same as referee for the merchandise match. Following are the scores:

First shoot, at 15 birds, $1 entrance:

Wakefield	110011100101111—10	Charles	0110101001 —5
Emond	100111101110101—10	McDowall	000000000010111—4
James	011011011111011100—10	Taylor	000000100010000—2
Mitchell	1100001111 —7		

Ties on 10 shot at 5 each and Wakefield won.

Second shoot, at 25 birds, 5 prizes, entrance $2:

Charles	1111111011011111111—18	Mitchell	1111111110001101111—16
Drasey	1111011011110111111—16	Wakefield	1010101011011111111101—14
Emond	0101011111111110111—16	McDowall	1010111110110101001011—13
Dick	1110111101111101011—16		

Harrison 12, Verity 12. Heatherington 11, T. Sawdon 11, James 8.

Third sweepstake, at 19 birds each, $1 entrance:

Wakefield	1011111101111101111—17	McDowall	1111001011 — 7
Charles	1011111111011111001—15	Emond	1100101111 — 7
James	0111111110101100 —10		

Fourth sweepstake, at 25 bluerocks, $3 entrance:

Emond	1001110011111111111101111—20		
Charles	0100101111011111110111011—19		
McDowall	0111101111011111001111001—18		
Dick	1101111011101111010111000—18		
Wakefield	1000111110101000011110011—15		

McDowall won third prize on the shoot-off.

Merchandise match, 10 prizes, 9 birds each, the prizes being won in the order named, Charles, Emond, Sawdon, Leroy, Jenning, Verity, White, McDowall, Wakefield, Mitchell. There were 75 entries in this match.

BERGEN POINT, N. J. Nov. 5.—The gunning contingent of the New Jersey Athletic Club had a bluerock clay-pigeon shoot on the club grounds to-day. The first of the three chief events was a match for a gold medal won last year and now held by Geo. S. Virden. There were 11 competitors, the conditions being 25 birds; contestants handicapped from 1 to 3 birds, according to excellence; medal to be held by the winner of the most of five matches each year, and to be won three times before becoming personal property. C. A. Pope (allowance two birds), won with a score of 18 breaks to 7 misses, by one bird over Richard Sundermann (allowance one bird). The scores follow:

Sundermann	16	J D Berdan	10 Bigoney 7
Vredenburgh	12	D W Berdan	2 Taylor 15
Cook	7	Smith	2 Kissam 14
Bray	11	Pope	18

The second match was for shooting outfits. Fifteen shooters competed and each shot at 10 hurtling targets. Edward L. Vredenburgh won first prize by breaking 10 straight. Richard Sundermann and Messrs. Taylor and Smith tied at eight breaks each. In shooting off Sundermann captured second prize and Major Taylor third. The scores are annexed:

Pope	5	J D Berdan	5 Wilmerding 5
Sundermann	8	Gray	7 Taylor 8
Schuyler	5	Smith	8 Cook 4
Vredenburgh	10	Davis	3 Anderson 2
Popham	3	D W Berdan	1 Parker 1

The third match was the first of a series for a Martin repeating rifle of .38cal. These events will occur every fortnight. In each those who make the second and third best scores will receive good prizes. Entries are handicapped according to ability as marksmen. Major J. M. Taylor (scratch) won the first honor for the trophy. Of the other 11 competitors Messrs. Kissam, Wilmerding, and Pope did the better work. Here are the scores, each having 25 birds thrown:

Schuyler	11	Smith	13 Popham 8
G D Berdan	10	Kissam	16 Wilmerding 19
D W Berdan	6	Gray	11 Sundermann 16
Pope	15	Taylor	17 Bigorney 7

CINCINNATI, Nov. 10.—The Forrester Gun Club held its second regular weekly winter shoot on the grounds of the Price's Hill Gun Club this afternoon, it being a dark, gloomy and dismal chilly day threatening snow. A large number of spectators were present. The pigeons were furnished by Mr. Al Bandle, and though not so good as those shot by the club some few days ago, averaged well, very few duffers being the rule. "Bohemian" (Mr. Chas. J. Kauffman), a shooter of the '89 crop, did especially good work. All shooting was from five ground scoop traps, 28yds. rise for 12 and 30yds. rise for 10-gauge guns, use of both barrels allowed, 80yds boundary. Mr. W. E. Limberg, sporting editor of the *Commercial Gazette*, satisfactorily officiated as referee.

Ten live birds, entrance $3, two moneys, 60 and 40 per cent.:

"Guy"	0100111010—5	T Honing	2012121201—8
"Bohemian"	0021112101—7	A Bandle	2111011111—9
B Condell	0202011001—5	S Harris	1211100201—7
"Ranger"	2111110211—9	Oscar	2021100220—6

Ranger and Bandle first money; Honing second.

Seven live birds, entrance $3, two moneys, 60 and 40 per cent.:

Guy	1121101—6	Honing	1120121—6
Bohemian	2110111—6	Baudle	1111111—7
Condell	1122121—7	Oscar	0111110—5
Ranger	2111110—6		

Condell and Bandle first money; ties on 6 divided.

Ten live birds, entrance $5, three moneys, 50, 30, 20 per cent.:

Guy	1121101110 — 8	Honing	1120121210— 8
Bohemian	2110111111— 9	Bandle	1111111111—10
Condell	1122121111—10	Oscar	0111110011— 7

Condell and Bandle first money; Bohemian second; Honing and Guy third.

Five live birds, entrance $3, one money:

Guy	01100—2	Honing	11111—5
Bohemian	11111—5	Bandle	11111—5
Condell	01111—4	Oscar	10111—4

Bohemian, Honing and Bandle divided the money. Referee and official scorer, W. E. Limberg.—C. G. NEWSBOY.

NEWARK, N. J., Oct. 5.—To-day was a great day at John Erb's, over a dozen expert trap shooters being at work from 11 A. M. until it grew so dark that they were unable to distinguish a dark bird from a trap. The birds were the hardest lot of drivers and twisters ever seen in this part of the country, and a 90-per-cent. man would have had a lively time to hold his average. Twelve sweeps were shot under Hurlingham rules, 5 traps, 28 and 30yds. rise, 80yds. boundary. The winding-up shoot of the day was at 8 birds, $7 entry, four moneys, all the rest being at 4 birds, $3 entry. The scores were as follows:

	Shot at.	Killed.		Shot at.	Killed.
S Castle	52	44	W S Cannon	28	21
C M Hedden	52	38	E Geoffrey	12	9
J Erb	52	38	W Hollis	16	8
A B Hedden	40	33	W Hughes	16	9
P Daly, Jr	44	32	M F Lindsley	12	10
J E Wheaton	52	30			

W. S. Cannon was unfortunate in having the slide slip on his gun when he pulled his first barrel, thus being unable to pull his second. This happened twice and lost him two birds, as under Hurlingham rules a shooter is responsible for the condition of his gun and ammunition. Under the new American rules he would have been entitled to two more birds.

CINCINNATI, Nov. 4.—Several members of the Forrester Gun Club went down to-day to shoot at some three dozen old pigeons in coop. The shooting took place on the grounds of the Price's Hill Gun Club. The birds were all good flyers, averaging away above those generally used here. There were but five incomers in the number of birds sprung, the remainder being all straight-away right and left-quartering birds. Better tame birds I never witnessed sprung from traps. The shooting was under Hurlingham rules, both barrels allowed, 28 for 12 and 30yds. rise for 10-gauge guns. W. E. Limberg officiating as referee. Official scores:

Live Birds.

Ed Shott	111114c010—9	Roy	11ooo2101100—6
Guy	02100 01112 -7	Griffith	21101w. —4

American Clay Birds.

E Shott	1111111011111111111—19	Roy	1090101110100110000l— 9
Guy	1111001111101000111—14		

TACOMA, Wash., Oct. 25.—A live bird match, under the auspices of the Tacoma Rifle, Rod and Gun Club, will take place in this city on Nov. 28, 1889. Open to all *bona fide* residents of Montana, Idaho, Oregon, California and Washington. Entrance $100, at 50 live birds per man.—E. E. ELLIS, Secretary.

NEW BEDFORD, Nov. 5.—Sky and wind were favorable for the tournament of the New Bedford Gun Club, which took place on the club grounds to-day. The events follow: No 1, 6 clay-pigeons: L. A. Plummer, "Bishop" and Dr. Post first; J. T. Hall, of Raynham, second. No. 2, 6 bluerocks: "Bishop" first, Hall, Plummer and Post second. No. 3, 6 clays: Hall first, Post and Plummer second, "Bishop" third. No. 4, 10 rocks: Hall first, Post second, Plummer and "Bishop" third. No. 5, 10 clays: Hall and "Bishop" first. Post second, Plummer third. No. 6, 10 rocks: Plummer first, "Bishop" second, Hall third. No. 7, 10 clays: Plummer first, "Bishop" second, Post third. No. 8, 6 rocks. This was an excellent contest:

Plummer	111111—6	S Eggers, Jr	111111—6
Post	111111—6	Morgan	111111—6
Hall	111111—6	"Bishop"	110111—5

No. 9, 6 rocks: Plummer, Post and Hall first, Eggers and Morgan second, "Bishop" third. No. 10, 10 rocks: Plummer first, Post second, Hall third. No. 11, 6 rocks: Hall first, H. V. Davis and Plummer second. No. 12, 6 rocks: Hall first, Davis and Plummer second. No. 13, 6 rocks: Davis first, Hall and Post second, Plummer third. No. 14, 6 rocks: Post first, Davis, Plummer and Eggers second, Hall third. No. 15, 6 rocks: Hall, Davis, Plummer and Post first, Eggers second. No. 16, 6 clays: Hall and Plummer first, Post and Eggers second, Davis third. The best thing was in the next three events, each for 10 rocks. No. 17:

Hall	1111111111—10	Plummer	1111111111—10
Post	1111111111—10	Davis	1101111111— 9

No. 18:

Hall	1111111111—10	Plummer	1111111111—10
Post	1111111111—10	Davis	1110111111— 9

No. 19:

Post	1111111111—10	Hall	1101111111—9
Plummer	1111111111—10	Davis	1101111111—9

Nos. 18 and 19 were considered as shoot-off for No. 17, and Post and Plummer div. the first three moneys. No. 20, 6 clays: Hall and Post first, Eggers second, Plummer third. No. 21, 6 clays Davis first, Plummer and Post second, Hall and Eggers third.

MADISON COUNTY TROPHY.—Eaton, N. Y., Nov. 7.—The trophy shoot of Madison county was held at Canistota, Oct. 28. This cup has been twice won by the Eaton Club, and quite a friendly rivalry exists. The boys are trying hard to winter it in the northern part of the county. The Oneida boys were very tardy and the cup shoot was not called until about 2 o'clock, when it should have been the second shoot on the programme. The forenoon was occupied with the other events on the programme, the cream of which was taken by Curtis, Briggs, Short and Roberts. From 3 o'clock until dark the shooting was done in a driving rain and at the close it was found that Eaton's and Oneida's first teams tied on 81, while Eaton's second team was only one behind. The tie will be shot off in the near future. The following is the score, 15 singles and 6 pairs, 3 traps, Association rules:

Eaton, First Team.		Eaton, Second Team.	
Hall	20	Short	18
Peet	24	Briggs	23
Curtis	16	Tryer	18
Cole	21—81	Briggs	21—80
Oneida, First Team.		**Oneida, Second Team.**	
Markham	23	Bailey	15
Clark	19	Marble	15
Devreaux	20	Markham	14
Maxwell	19—81	Chase	11—55
Canastota, First Team.		**Canastota, Second Team.**	
Roberts	20	Bishop	8
Clow	19	Graham	9
Suits	14	Barrett	15
Ward	16—69	Salisbury	17—49

Canastota, second team, has 12 pairs yet to shoot. Stopped by darkness.—GEO. F. BELL.

POTSDAM, N. Y., Nov. 8.—The Potsdam Gun Club invited their friends to join in a team match at kingbirds, the losing side to pay for birds and supper. The following score shows how it was done. Match at 9 kingbirds, from 3 traps, 18yds. rise, National rules:

Heath, Capt	011111100—6	Holmes, Capt	111100110—6
F A Ward	000110011—4	Seete	101111011—7
Lewis	111111001—7	Witters	000100100—2
Watkins	110100111—6	W R Weed	111111010—7
McKay	110110101—6	Cox	101110011—6
Eastman	001101010—4	Swift	100011001—4
Bonney	110101001—5	Clark	111111011—8
Everett	001000000—1	Adams	100000000—1
Wegant	001110101—5	Cassety	001000100—2

Butler	011100101—5—66	E A Fay	000000100—1—67

TORONTO, Nov. 9.—The shooting match between Charles and Emoud, at 100 birds—50 bluerocks and 50 live pigeons—took place at McDowall's grounds this afternoon, and proved to be one of the most exciting and evenly-contested matches shot in Toronto for years. The score in the bluerock shoot was remarkable, the contestants killing 45 and 44, respectively. In the live-bird match it was see-saw from the start until the last bird was called "dead" by the referee, the total score then standing 82 to 81 in favor of Charles. Phil Wakefield was the referee. The following is the score:

Charles.

TROY, Ohio, Nov. 5.—The result of the match between a picked team of 5 shooters from Dayton and the same number from Troy, which occurred in Troy to-day, resulted in a handsome victory for the Daytonians. The Dayton team consisted of Messrs. Rolla O. Heikes, Capt. W. Scott McDonald, Wm. Pratchett, Ed. Rike and Walter Keenan. The Troy team of Messrs. Ed. Ruck, Capt. Senour. Sheets, Prill and Magle. The day was ugly for shooting, a stiff breeze blowing directly across the range, and the scores made indicate excellent shooting. Each man shot at 50 birds. Capt. Heikes led shooting with a 16-gauge gun, loaded with but ¾oz. of shot, while the other shooters had guns of large gauge heavily loaded. Heikes, handicapped thus, made a magnificent score. He started the ball rolling by killing his first three, quickly followed by Keenan, Pratchett, McDonald and Rike, all killing their first birds. In fact the first run of the team was 29, the 30th bird being missed.

Heikes.....1111111111111101111110111111011111111111101111101—45
Keenan.....1111111111111111111011111011111111111111111111111—48
Pratchett...1111111111111101111110121111111111111111111111111—48
McDonald...1111101111111101101011111111101111111111111111111—45
Rike.....1111111101111111101111101111111011111111111110—45—231

The Troy team given in totals is as follows: Senour 36, Sheets 30, Prill 43, Ruck 45, Magle 41; total 196. From the score of 231 out of a possible 250, to 196, it will be seen that the Dayton men had no difficulty in winning the match, it was theirs from the start. On the grounds they challenged the Troy Club to a team shoot of 10 men to come off in Dayton, giving them the privilege to pick their shooters from Troy, Tippecanoe and Piqua. The challenge was accepted, and the match will come off within two weeks, and will be under the same conditions as that of to-day. The Dayton shooters challenge any city in the United States to a team shoot of 10 men. The prospective team to back this challenge is as follows: Rolla Heikes, captain, Wm. Pratchett, Walter Keenan, W. Scott McDonald, Ed. Rike, Adolph Sander, Ed. King, Charles Tippy, Wes Troup and Mr. Knight.—C. G. N.

CINCINNATI, O., Nov. 11.—The shots here look upon the Dayton, O., challenge as a wild offer, and were it not that its captain and team were intoxicated at their victory over the Troy country team—a man of which has not shot at the traps for more than one year at most—shooters in this city, Cleveland, Toledo, Springfield and, aye, even the Canton, O., team might give the challenge some consideration; but as it is, the shooters here look upon the Dayton team's challenge as only talk. Mr. Rolla O. Heikes, captain of the Dayton Club, dare not make the challenge open to 5 men and the targets half and half—25 champion clay and 25 standard. If he will, Cincinnati may accommodate him with a team race inside of the next month, either at Dayton, O., or this city for, as the "constant challenger" puts it, "either glory or money."

AMERICAN SHOOTING ASSOCIATION.—Stewart Building, N. Y., Nov. 11.—*Editor Forest and Stream:* The American Shooting Association expects to make, if necessary, revision of their trap shooting rules about Dec. 15. With this view they ask that clubs and individuals throughout the country will give such expression as they may care to concerning them, or for any desired change either in the rules for target or live bird shooting.—THE AMERICAN SHOOTING ASSOCIATION, J. M. Taylor, Manager.

BROOKLYN, Nov. 6.—This afternoon, at Woodlawn Park, the members of this well-known shooting club of Long Island held their regular monthly contest. The Fountain Club's men have the reputation of scoring more victories as a club than any other in this vicinity. In the years gone by, after being victorious over all the neighboring clubs, they boldly chartered a train and attended the State Sportsmen's meeting, held at Seneca Falls. There the team of the club captured every prize worth the winning—the Dean Richmond cup, the diamond badge, and the largest cash prize in every contest for which the Fountains entered. Never was seen so sweeping a victory. This led to the formation of the Long Island Sportsmen's Association, this association taking to its bosom all the better known clubs of this part of the State. Then came the shooting meeting at Coney Island, when more fun and hurrah were had than in any shooting meeting before or since. Men came from all over the State to compete for the magnificent lot of prizes furnished for the occasion. In cash alone there was over $5,000 distributed to the winners in the different events. Then came a lull. The Fountain Club had reached the highest notch as a shooting club. Members died and no new ones took their places. It became a social club, and the shooting men were relegated to the background. Then came another time for an election. The old shooting element came to the front, the "socialists" stepped to the rear, and the men of the club are now once more putting their shoulders to the wheel, and hope to replace the club upon the plane it occupied a short time ago. Today ten men faced the traps and shot for the massive gold badge emblem of shooting supremacy to the one who wears it. The weather was pleasant for the season. The sun shone out brightly, but the wind was chill and penetrating, the stove in the club house being much sought after. It was a shot outside, then a shoot for the fire on the part of each contestant.

Regular club match, 7 birds each man, modified Hurlingham rules to govern; handicap prizes. Scores: Alfred Purdy, 30yds., 7 straight, the gold trophy; Thompson and B. Weld 6 each; Blattmacher, Allen, Blenksley, Shiels and C. Wingert 5; Orr 4 and Wheeler 3.

First Sweepstakes, 10 entries, 5 birds each, $5 entrance, three moneys, 50, 30, 20 per cent. respectively: Wild, Allen and Wingert 5; tie miss and out. Stuart missed his first pigeon, and then the other two men divided. Purdey took second money with 4. For third money Shiels, Wheeler, Blankley, Thompson, Blattmacher and Orr all tied with three each. On the shoot off Allen, Blankley and Orr went to the rear on the first shot, Blattmacher and Thompson on the second, Wheeler on the fifth, Shiels winning by a straight score of five kills.

Second sweepstakes, same conditions as the preceding one, but at 3 birds: Allen Wingert and Orr killed all, and shot the tie off miss and out. Allen dropped out on his second bird, Orr on his third. Wingert took first money. Second money was tied for by Shiels, Wild, Wheeler, Blankseley, Purdy and Blattmacher. It was altogether too small for a division, and so was shot for again miss and out. Shiels missed his third; also Wheeler, Blanksley missing their fourth, Wild his fifth. Purdy and Blattmacher as the birds gave out had to divide, much against their wishes.

The birds were only a fair lot. Some were extra good flyers, some were slow in getting off, but corkers when they did start. Others were poor, so that the effort to get them up was wearisome both to the shooters and the lookers on. This uneven character of the birds, however, tested the capacity of the members to the utmost, for when prepared for a hustler of a bird they would get a loafer and shoot ahead of him, and when getting a rasper shoot as far behind him as they did in front of the slow fellow.

SPRINGFIELD, N. J.—The Union Gun Club held a tournament at live pigeons on the 12th inst. The day was beautiful, with warm bright sunlight and balmy air, but despite such favorable conditions, few were on hand to participate in the sport. The first sweep started with four entries, and only one more man put in an appearance during the afternoon. The birds were of first quality, some of them "screamers" that with dodging and rapidity of flight combined, would have required a charge of electricity to stop them. Five sweeps were shot, and it is of note that not a single bird was dropped for a place, although several tempting chances offered. This is as it should be and it is hoped that at some future time the same may be said of all tournaments, both large and small.

Event No. 1, at 8 live birds, $4 entrance, two moneys:

M F Lindsley	21121222—8	B Freemen	11211112—8
E D Miller	21112111—8	J Riggotts	22111211—8

No. 2, same conditions: ties in No. 1 to be decided also:

Lindsley	12222212—8	Freeman	02002422—5
Miller	12121111—8	Riggotts	11211112—8

First in Nos. 1 and 2 div. by Lindsley, Miller and Riggotts, second in both won by Freeman.

No. 3, at 10 live birds, $5 entrance, two moneys:

Lindsley	2201221212—9	Riggotts	1111110110—8
Miller	1121121111—10	Cannon	0221102111—8
Freeman	2101o122001— 6		

No. 4 same as No. 3:

Lindsley	1211202200—7	Riggotts	2120221121—9
Miller	1111110121—9	Cannon	0212o02221—7
Freeman	2011211121—9		

No. 5, same conditions:

Lindsley	0012001120—5	Cannon	0111221211—9
Miller	2211111101—9		

Ties div.

Match between Miller and Cannon for $10 each:

Miller	1112211112—10	Lindsley	1121122221—10
Cannon	0212200112— 7		

Miller won.

Friendly match at 3 pairs live birds:

Miller	01 10 o1—3	Lindsley	10 10 11—4

WELLINGTON, Mass., Nov. 9.—In the silver pitcher match at the Wellington range to-day, Sanborn scooped in his second third of the trophy. The scores in this match of eight and over were: Bradstreet, 9; Warren, 9; Moore and Melcher, 10; Bradbury, Cady and Chase, 12; Cowee and Sanborn, 13. The winners of first moneys in the other events follow: Six blue rocks, Chase; five pigeons, Ingersoll and Chase; six blue rocks, Chase; five pigeons, Bradbury, Chase and Ingersoll; five blue rocks, Cowee and Chase; five pigeons, Ingersoll and Chase; six tin birds, Chase, Porter and Sanborn; six blue rocks, Schaefer, Cady and Ingersoll; five blue rocks, Cowee and Chase; 10 pigeons, Melcher and Bradbury; six blue rocks, Chese and Sanborn; five blue rocks, Chase and Cady; five pigeons, Chase; five tin birds, Chase; seven blue rocks, Sanborn; eight pigeons, Cowee and Bradbury; five pair blue rocks, Warren; six tin birds, Chase, Cowee and Sanborn; six blue rocks, Chase and Bradstreet; five pigeons, Porter, Warren and Sanborn; ten pigeons, Keystone target, Sanborn; six blue rocks, Warren and Sanborn; five pigeons, Schaefer and Sanborn.

CHICAGO, Ill., Nov. 8.—Mr. R. B. Organ, of this city, and the champion, Mr. C. W. Budd, will within the next thirty days shoot a match at Kansas City with Messrs. Jas. Riley and J. A. R. Elliott, and at Omaha will shoot a match with Messrs. Parmalee and Williams. This seems to be about the only outcome of the great talk of a 10-men match between Chicago and Kansas City, or Illinois and Missouri. It is the opinion here that the Kansas City folks didn't want to shoot. If they did or do want to shoot, why didn't they agree to some sort of a decent compromise about the handicap for 16-gauge guns, and come up to the score like little men? They seemed more anxious to issue challenges and to fight on paper than to have a shooting match. The Chicago boys thought they could win, but they also thought enough of the chances of their opponents not to wish to give them all there was in the match. Why not adjust the matter by a reference committee, make up the matter, go ahead, and have the shoot?—E. HOUGH.

LINCOLN, Neb.—The first annual shooting tournament of the Lincoln Gun Club will be held on the State fair grounds, Nov. 28 and 29, open to all comers. Ten dollars entrance fee entitles one to shoot in all prize matches, for which they receive a card not transferable. No combinations will be allowed. Prize and sweepstakes may be shot at the same time. Private or other matches can be arranged for on the grounds. All matches governed by American Shooting Association rules. G. A. Bush, Captain C. U. St. John, C. H. Clarke, Sec'y, Committee.

BALTIMORE.—The first tournament of the Standard Gun Club will be held Thanksgiving Day, Nov. 28, at Stowman's Park, Baltimore, commencing at 9 A. M., weather will not prevent. All shooting will be under the Keystone system and American Shooting Association rules. People's line of cars from City Hall via German street, twenty minutes to the grounds direct, foot of Ridgely street. For further information inquire of C. W. Gross, secretary, or Chase's, 2 Light street.

CLASS-DALY, JR. AGAINST KLEINTZ-IRWIN.—The team race between Frank Class and Phil Daly, Jr., against J. Frank Kleintz and Richard Irwin, has been postponed until Thursday, the 14th inst. at 1:30 P. M., at Erb's Park, Newark, N. J.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS. } Peterborough, Can.
Secretary-Treasurer: GEO. W. HATTON }

	Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	W. R. Huntington.	E. W. Masten	T. H. Stryker, Rome, N. Y.
Atlantic Div.	W. P. Stephens.	L. B. Palmer	W. R. Haviland, Yonkers, N. Y.
N'thern Div.	Robert Tyson.	S. S. Robinson	Colin Fraser, Toronto.
Eastern Div.	H. E. Rice, M. D.	Maxton Holmes	H. D Marsh, Springfield, Mass.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application on by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, 34 Montauk Block, Chicago, Ill

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

HIS KINDNESS "REWARDED."

HOW FARMER BROADCLOTH DID NOT GO TO CHURCH IN A CANOE.

A RATHER comical episode occurred on one of my canoe trips last summer over which my friend and I have had many a hearty laugh, it being so very ludicrous that at his request I write it out and send you.

We were running one of our northern rivers in an 18ft. birch canoe which I always use on our inland streams. We generally camp out at night, not under tents but rolled up in our blankets on a bed of pine boughs and with a lean-to to windward did we get that refreshing sleep one always has in the woods. On this particular morning, which, by the way, was Sunday, we had started down stream, having had no breakfast. We carried little provisions with us, depending entirely upon the farm houses we were sure to pass. This morning, however, we paddled on for several hours without seeing one, and were of course hungry. Finally seeing one, we pulled up, and the writer went ashore and asked the good housewife if she could accommodate us with some milk and bread.

While she was telling us how sorry she was that the milk had been collected by the creamery several hours before and that while she could give us some bread she hardly had milk enough for her own use, etc., her husband came in. Finding out what we wanted he informed me that he was going down to the village, two miles away, to church, soon, and if we would wait at the second bridge he would show us where the creamery was. Finding out that he was going down alone I asked him to get in and go down in the canoe. O, no, he was not going to get into any canoe. I finally persuaded him to come down and look at it, which he did. He finally changed his mind and concluded that if we would "just wait" I get on my black clo'es and black my boots," he would be with us.

While he was "getting on his black clo'es" we had our breakfast, which we were just finishing when he came down as slick as you please, plug hat and all. We paddled off, with Farmer Broadcloth sitting sprawled out in the center of the canoe. Now this river was full of small and shallow rapids so disagreeable to cruisers, and we had not been out five minutes before we struck one of the worst of the lot, but got through all right. The farmer's eyes began to open, and he had a grip on the gunwales as though life depended on it.

Shooting out of the rapids the current was swift, and dead ahead about 100yds. was a fence across the river, the first of the kind I had ever encountered. It was made of pickets strung on wire top and bottom, and was thrown across to keep the cattle from getting up stream and crossing at low water later in the summer. Knowing of course that we should be obliged to carry around, I headed the canoe for the bank, which the bow touched several feet from the fence. The canoe of course swung around broadside against the fence as I expected, and I was then going to throw the bow around and run up alongside of the bank. But this was not to be. Here was our friend Broadcloth's golden opportunity, and he improved it. He was pretty well frightened, and according to his idea that fence meant salvation, so he reached for it. Now, of course, being strung on wire, when he pulled the top down the bottom went up, Farmer Broadcloth, my friend and self over, and the canoe under. I remember just before going down seeing his legs waving frantically in the air, and nearly choked with water laughing.

When we came up we were all on the other side of that fence. I started for the canoe which, bottom side up, was floating down in company with the farmer's centennial hat. Pulling the canoe ashore and securing the hat I went back to the scene of our mishap. Broadcloth was mad as a hornet, and swore that we did it on purpose. My friend was explaining the accident to him with a straight face, but when I came up with that hat and clapped it on the back of his head it was too much, and we both laughed till the tears came. He finally concluded it was all straight and no conspiracy, and joined us; then, after thanking us for his morning's entertainment in a way which belied his words, he started for home. He did not go to church that day.

A. H. FORBUSH.

BROOKLYN C. C., NOV. 5.

THE hardy canoemen of the B. C. C. engaged in a series of races on Election day as follows:

Paddling race, decked sailing canoes:

Myth, H. C. Ward.....1
Queen Bess, R. J. Wilkin.....2
Brooklyn, C. P. Weekes.....3
Vagrant, H. H. Smythe.....4
Bunch, W. H. Cammeyer, Jr.....5
Niente, F. L. Dunnell.....6

Paddling race, open canoes, single blade:

Atla, R. J. Wilkin.....1
Mignon, M. V. Brokaw.....2
Wyandauch, C. P. Weeks.....3
Louise, F. L. Dunnell.....4

Sailing race:

	Start.	Finish.
Brooklyn, H. C. Ward, B. C. C.	4 27 00	4 51 00
Sylph, D. D. Gessler, K. C. C.	4 27 00	4 53 00

In the paddling race for decked canoes Mr. Ward had things all his own way, but there was a hard fight for second place, Mr. Wilkin winning by only about 2ft.

In the race for open canoes Mr. Wilkin took the lead at the start and won with ease.

It was late in the afternoon when the sailing race was started, with a strong N.W. wind blowing. The Brooklyn carried 70ft. and the Sylph somewhat more and a sliding seat. It was a close reach to the first mark, where Sylph almost caught Brooklyn, but met with an accident at the turn and was slow in getting around. On the run in Brooklyn widened the gap and won as above. A large crowd gathered at the club house and wound up the season in a very jolly manner.

ATLANTIC DIVISION.—Mr. Dunnell, Sec'y-Treas.-elect, has turned over the books of the Atlantic Division to the new purser, Mr. W. R. Haviland, of Yonkers, and all applications for membership and correspondence on division business should be addressed to the latter gentleman.

A. C. A. EXECUTIVE COMMITTEE.—Arrangements have been made for a dinner to the members of the Executive Committee at Clark's, 22 West Twenty-third street, on the evening of Nov. 23. The tickets for the dinner will be $5 each, and may be obtained from the committee, Messrs. Brown, Whitlock and Bailey, not later than Nov. 16.

ANOTHER DELUSION DISPELLED.

ONE by one they are taken from us, the dear old delusions of our childhood. The stern statisticians of the present age tell us we must give up our sentimental picture of William Tell, cleaving with whizzing shaft the apple off the head of his smiling son. They rob us even of George Washington and his hatchet, and will prove to you in the same breath that Aladdin could have had no lamp, for they then used candles, and Robin Hood never split the peeled osiers, for there were no willows in that country, and further, that 'twas not the season for them to peel, had there been any.

It is bad enough to have our idols of sentiment and belief shattered by the busy hammer of these ruthless iconoclasts, but to see them crumble before our own eyes is doubly bitter. What must then be our grief?

Such an experience I have to relate, and such a grief to assuage by sharing it with the sympathetic readers of the FOREST AND STREAM. Not the critical, quarter-inch fellows, who want recorded to the last tiny scale the number of scales on the lateral line of that big trout. For them I write not. But into whose ear hath entered the whispered voices of the woodland, and into the heart of whom stealeth the secret communion of Nature, for him is the tale I would relate, his the sympathy I seek.

In the blue-covered, well-thumbed reader, in whose pages I sought out the vexatious mystery of my mother tongue, was one page, a trifle more dog-eared and finger-worn if possible than its fellows. A picture on this page has always shone, from a highly-honored place, upon the walls of memory's picture gallery, with radiance undimmed, as my steps have receded from it along the long corridor of life. A picture faulty, I doubt not, in artistic merit, but in the lesson to be taught, faultless. A watery waste with an occasional fence stake projecting from the flood. A half-demolished cart wheel in the background represented, as you chose, either the rising or setting sun. Some of the minor details I may have forgotten; but the noble figure in the foreground, the keynote in the whole symphony, I certainly never can.

A mammoth squirrel, by comparison with its surroundings at least as large as a coon, sits in calm, unmoved complacency amid the raging flood. A huge tail, proving indisputably his claim to the original classic of his name "shady-tail," curls over his back, and, parted like a cockney's beard, serves as a sail, whereby the piece of drift upon which he sits is driven merrily onward toward the distant forest. There, I always imagined, the fearless navigator would find in abundance fat grasshoppers and "shag-barks" as big as pumpkins to reward his bold voyage.

How my boyish heart admired the sublime courage of this wonderful animal, sitting so smilingly upright, with not a hair wet or displaced, and faring so blithely onward over water enough to swamp a world. Here was your original canoeist; your primeval navigator; your fearless explorer, before whose exploits the feeble deeds of him who "died and was buried beneath the still waters of the Mississippi" were but child's play. It was the dream of my boyhood and the dearest hope of my youth that some day, as I wandered through the forest, I might encounter a fleet of these Corinthian sailors; or, at the very least, a select "club" of them cruising the billows.

Now behold the irony of fate. That twice in one short vacation I should have my hopes shattered and my dreams dispelled by an actual experience, which I proceed to narrate.

In the month of August of last year, while cruising with my friend the "Dr." on the Fulton Chain, we saw something swimming across the river ahead of us. Urging the boat swiftly along, we intercepted the swimmer, which proved to be a common red squirrel. In the water swimming! With tail afloat and haunches well up, an unmistakable red squirrel, swimming! Yes, actually swimming, like a water rat or any other ordinary plebian rodent. When an oar was thrust out he at first attempted to dive, and succeeded in getting a foot or eighteen inches beneath the surface. But his hair seemed to hold so much air that he looked like an animated silver image, and evidently found it difficult to overcome the buoyancy of his coat and tail, so returned at once to the surface. When a hand was extended to lift him into the boat, he laid back his ears with so manifest a disinclination to come aboard and so evident an intention of debating the question that he was allowed to continue his journey to the near shore.

The encounter took place where the stream was some twenty rods wide, and as there was no way for a squirrel, desirous of changing his habitation, to go around without a long journey, we did not so much blame this special individual for crossing. "Yet," we thought, "he might have used his canoe." We consoled ourselves, however, by thinking that probably some other fellow had borrowed it, or it might have been undergoing repairs, thus compelling its owner to resort to so unpoetic a mode of travel.

Though our preconceived ideas on squirrel navigation were rudely jarred, still we clung to them; and as human nature is wont, found any number of explanations to account for the unpleasant fact which we were loth to accept.

"It never rains but it pours!" Scarcely a week after this entrance of the edge of the wedge of disenchantment, it was driven home by a second, still more cruel, blow of fate!

While paddling in an open canoe, in company with my sister, upon one of the little lakes near "Fourth," we encountered a second swimming squirrel. As in the former instance, 'twas a "red brother," and as before he seemed perfectly at home in the water; swimming "dog-fashion" very rapidly and quietly.

When first seen he was about midway from shore to shore, and we lay in wait for and intercepted him. He was evidently "going somewhere," because he wanted to, and had no intention of being turned from his purpose a hair's breadth by such insignificant beings as ourselves. For, instead of turning back or changing his course, he came straight on in a beeline, passing within two or three inches of the cutwater of Budge without deigning to notice us, and "traversing the watery way till he gained the wished-for sands." In the open canoe, in company with one hundred rods in diameter, and of such shape that the distance, to one following the shore, from the point where the squirrel took to where he left the water, was but little, if any, more than the distance across.

Evidently this fellow swam because he chose to, not because he was obliged to. There being then, in this case, no extenuating circumstances as in the former, but on the contrary a wanton disregard on the part of Sciurus for our cherished notions of the fit and proper, we were moved to remonstrate with this young upstart on his falseness to the traditions of his race and disrespect to the memory of his fathers. By the time, however, that the vague intent in our mind had crystalized into a definite purpose, the object of our righteous wrath had reached the shore, flirted the water from himself with a disrespectful whisk of his tail, and from a stunted pine tree was calling in a voice hoarse with rage, "Where's the impudent fellow who invited me to come over and get tanned?"

Need I say that my cherished idol, shaken before, could not endure this fresh shock, but tottered and fell? Never shall I cease to regret that fiction, so pleasing, so long and carefully fostered. Nor can I hope to find a picture in all the galleries of the world to replace that of the squirrel of aldermanic proportions, with the self-satisfied smile, sailing away, away, with that impossible tail, into the glowing regions of the sunset. KORAX.

"COMPOUND CENTERBOARDS."

Editor Forest and Stream:

In your issue of Oct. 31 you publish a letter under the above caption, from Mr. T. R. Brough, in which he declares the centerboard used by Mr. Butler in his canoe Fly to be an infringement of his patent of Aug. 2, 1887, and states one of the claims of his said patent to be for "a lower hollow blade adapted to contain other blades." I have no interest in the matter save the general one inspired by a sense of justice, but that prompts me to say that Mr. Brough goes too far. His patent is for a folding centerboard of the well-known pivoted fan-blade type, and he obtained no claim of the character above indicated. He quotes but a portion of his fourth claim, which is as follows: "The combination, with a series of pivoted centerboard blades, of a hollow lower blade adapted to contain the upper blades, substantially as described." Nothing appears in your descriptions and illustrations of the Fly to warrant the conclusion that Mr. Butler used the parts of this combination, and hence there is not even a semblance of infringement. PATENT ATTORNEY.

WASHINGTON, D. C., Nov. 6.

THE A. C. A. TROPHY.—The citizens of Brockville have shown a most gratifying appreciation of Mr. Ford Jones's skill, and on Oct. 24 a public meeting was held, at which, after a very complimentary address by the mayor, a handsome gold medal was presented to Mr. Jones. The meeting also discussed the question of a yacht and canoe club for Brockville, and it is likely that Mr. Jones's victory will bear substantial results in the form of a new club on the St. Lawrence.

A. C. A. MEMBERSHIP.—Central Division: Everett Smith and W. H. Peckham, Schenectady, N. Y.

RED DRAGON C. C.—*Editor Forest and Stream:* The Red Dragons have, after a most successful season, mostly gone out of commission for the winter; and now we hear tales of the wondrous rigs, of area vast, to be swung next season, deck seats *en regle* upon which the rash racer will shoot to wonderful distances to windward, and, while we do not care to croak, we have our eye on several we may elect. The cruising season began with the early spring and has extended over some hundreds of miles of water, fresh and salt. Since its reorganization, the club has prospered wonderfully, and a limit to membership seems necessary before next season opens. Our new house has accommodations for thirty canoes, and could be enlarged should we find it to our advantage to do so. It is a great improvement upon our old quarters and better situated for launching and hauling out the boats. In future it will be necessary for all club members to become members of the A. C. A. We expect to be represented at the meet next season by the majority of the club. There is a rumor of a representation at Squaw Point, a movement which the elder cruising cranks are endeavoring to frown down. Several new boats are to be added to the fleet; the old craft are all being greatly improved with new rigs and fittings. Each owner is making an earnest effort for a better place in the club races. There is material in the fleet for some very interesting racing, the trophy cup being won by a different boat in each of the three races sailed for it, and should next season's weather prove propitious there will be some hotly contested events. Several of our paddlers have greatly improved in the last season, and if our genial vice-commodore wishes to keep the place which he has held in the past seasons, he will have to do some vigorous fanning with his 10-footer or else put a screw in the Valesca. Strenuous efforts are being made for a club Unk-ta-hee.—H. E. MCCORNICK.

ST. JOHNSBURY BOAT CLUB.—*Editor Forest and Stream:* The first annual meeting of the St. Johnsbury Boat Club, held Nov. 5, the following officers were elected: Captain, J. S. Sanborn; Mate, Wm. A. Smith; Purser, Dr. R. W. Warner; Sailing Master, I. H. Hayes. Executive Committee, J. S. Sanborn, E. O. Finel and F. A. Balch. The club numbers thirteen active members, has three steam launches, one catboat, five sailing canoes and numerous smaller fry, most of which are kept at our headquarters on Lake Memphremagog, 1½ hours from here. Visiting canoeists will be cordially welcomed. Any communication concerning these waters will be most cheerfully answered.—WM. A. SMITH.

THE A. C. A. PADDLING TROPHY SUBSCRIPTIONS.—New York, Nov. 11.—*Editor Forest and Stream:* The committee which undertook the collection of the above beg to report the receipt of $222, and to state that the order has been given to Mr. C. V. Schuyler, for the firm of Dominick & Haff, and the cup is nearly finished. It will be ready for presentation at the meeting of the executive committee.—R. W. GIBSON, WM. WHITLOCK.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 25 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

SEAWANHAKA C. Y. C.

REPORT OF THE MEASUREMENT COMMITTEE.

BEFORE proposing a change which, if adopted, must exert a very strong influence on the yachts of the club, it is but prudent to look to the history of previous changes, in order to profit by their results and perhaps to take warning by past errors of legislation.

It is now eight years since the Seawanhaka Corinthian Yacht Club took the first bold and decided step in the direction of a system of measurements which should include the area of sail as an important factor in connection with the length of hull. Though discussed for some time on both sides of the Atlantic, no club had yet ventured so far as to adopt a length and sail area rule, and the action of the Seawanhaka Corinthian Yacht Club was condemned by many as premature, if not radically wrong. In spite, however, of doubts and dismal forebodings, the pioneer work done by the club has received the strongest possible indorsement from the leading yacht clubs of the world in the adoption of the same principle of measurement by length and sail area. Not only is the present "Seawanhaka rule," as it is commonly called, in use by many American clubs, but in the great change of rule which has lately taken place in Great Britain, a change made only after the most searching investigation of the whole subject; the formula adopted, though different in detail, places very nearly the same value upon sail as compared with length as that established by this club four years before.

A brief trial of the formula first adopted, using a nominal sail tonnage as the basis of measurement, served to show that it could be materially improved, and in 1883 the present rule was adopted, other minor changes having since been made; but the results of all the changes of the past eight years have been such as to justify the recommendations of the respective committees, and the action of the club in indorsing them.

The reputation which the Seawanhaka Corinthian Y. C. has thus won in the past as a leader in the advancement of yachting is of too great value to be imperilled now by any hasty and ill-considered legislation; and in recommending the following changes we do so with a full sense of the trust reposed in us, and of the responsibility devolving on us personally, and on the club.

While it would be more satisfactory to lay directly before the club the full sources of information on which our conclusions have been based, the great bulk of the matter considered makes it impossible to do so within the limits of a report like this; and we have endeavored first of all to bring out the more prominent features, trusting that the club will deem them so important as to warrant a thorough discussion. In the six busy months that have elapsed since the committee was appointed we have been in communication, either by letter or in person, with the leading designers of America and Great Britain, and have had as a guide very complete records of races and of racing yachts built both here and abroad during the past two seasons; while in connection with the similar committee of the New York club we have been called on to answer objections and to discuss the question in its many varying phases.

The various subjects to be considered were briefly as follows:

First—The general system of classification and measurement, whether as at present with a series of fixed classes by waterline length, or by using the present basis of measurement, length and sail area, as the basis for classification also.

Second—The most desirable ratio between the two factors, length and sail, under the system selected.

Third—The limits of new classes if any be deemed desirable.

Fourth—The method of measuring sail for the rule.

Fifth—The possible improvements in the allowance tables.

In dealing with the first two heads the chief point to be considered is the great increase in sail in the newer yachts of all sizes; an increase which has excited very general comment and condemnation. That some restriction is needed which shall be even more binding than the present rule of this club, is so universally admitted as to require no proof, though plenty might be adduced were it necessary. Even though the owners of some of the most extreme vessels express themselves as satisfied with their craft, it is evident that the type of yacht now directly encouraged in all classes is by no means the best for the encouragement of yacht owning and yacht racing; while there is reason to fear that it will grow worse rather than better under the conditions now existing; and especially that the overgrown rigs in the small class, where though undesirable they may be safely carried, will exert a strong influence toward the expansion of sail plans in the larger classes, where a big rig is not only expensive and unhandy but positively dangerous.

If the only end in view was to restrict sail area on any given length there would be no difficulty in replacing the present formula of the club, $\frac{L+\sqrt{S.A.}}{2}$ by another in which the proportion of sail would be increased; but the fault of the present system seems to lie deeper than such a remedy would reach. With any given proportion of sail to length in the rule the designer is compelled to accept a fixed length, and consequently a certain amount of sail appropriate to that length under the existing rules; as the experience in nearly all cases is that it is more beneficial to give than to receive time. The liberty of the designer in the selection of the main elements of speed, in dimension and model, is reduced to a minimum, and he must look to an excess of ballast and sail to win. The alternative to this system, by which the class in which a yacht will race is governed not by one of the factors of measurement but by the *product* of the two factors, seems to offer both in theory and practice a very different result. The designer is left free to select his proportions of length and sail, and with them the beam and depth; being only limited by the rule in that the product of the two former shall not exceed a certain sum for any given class. With the two factors disposed of in this manner the actual tax on sail may be much lighter than under the present system of classification by waterline length without driving the designer to an excess of canvas; and, if the system be adopted, the present formula of the club, now familiar to all yachtsmen, could be retained with advantage. On this point Mr. Watson expressed himself this spring as follows in speaking of the English rule: "The only safe check on sail is to class by the ultimate rating and not by length of waterline; were our rule (the Y. R. A.) not a rating rule it would pay, and pay splendidly, to build a boat of the extreme length of the class, and then overspar her, allowing time for the extra sail."

While any increase of the direct tax on sail under the present system must result in a hardship to some of the new yachts, compelling them to cut down canvas perhaps to an extent incompatible with racing, the proposed system has the great advantage of leaving the existing fleet in precisely the same relation to each other as they now stand, its influence only extending to the new yachts to be built under it.

Before considering what these would be it is necessary to recall that corrected length was at one time used as a basis for classification in this club precisely as it is now proposed to do it. The rule adopted in 1883 was in this form, but in adopting it the comparatively novel feature of combining length and sail in the measurement engrossed the whole attention of its proposers, and the other important principle involved was not brought into the prominence which it deserved. The estimate at that time placed on the value of sail as compared to length was so high as to blind men to the possibilities of the rule, and not a yacht was built to take advantage of it while it was in force. In almost the first trial of the rule a slight difficulty was encountered in the method of its application; and after the season of 1884 a change was consequently made to waterline length as the basis for classification.

In practice the operation of the rule would be, taking the 40ft. class as an illustration, to allow an addition of about 110sq. ft. of sail for each reduction of a foot of length; and conversely, to take off about 110ft. of sail for each addition of a foot to the length. In the 70ft. class the equivalent of sail per foot of length would be about 150sq. ft. The result of such a classification would certainly be to introduce a class of slightly longer yachts with more moderate sail plans, but after very careful investigation of the yachts built abroad under a similar rule we can find nothing to warrant the inference that in America at least there would be any inducement to go to an extreme of narrow beam. The objection has been made that the rule would directly encourage the old tonnage cutters, but the incomplete figures given in support of this view are at variance with those collected from the most reliable sources, all of which show that British designers take to-day an amount of beam from 80 to 90 per cent. in excess of that of the old cutters; and that further, the wider of the new boats have proved the most successful.

The varying sizes of the larger yachts make a close comparison impossible; but in the 20 rating class, corresponding to the American forties, the widest boats win, beating the fastest of the old narrow boats, the latter carrying more sail; while in the 10 rating class, about 35ft. waterline, the conspicuous success of the year is the Decima, 35ft. 8in. waterline and 10ft. 6in. beam. Two exceptions are found to the rule that beam wins, the boats in each case being both longer and wider than their fellows, consequently larger and with less sail; apparently not enough to drive them. On the other hand, in all the racing abroad for two years there are no instances of the old narrow yachts winning from the new and wide in the classes where competition has been closest and all types have been interested.

Under the proposed rule the modern British 20-rater, 45ft. waterline by 13ft. beam, would race on even terms with a forty of Maraquita's measurement, giving time to Nymph and Babson; but when the very small sails of the foreign craft are taken into account, together with her draft of only 8ft. or 8ft. 6in., there seems little danger that she could race successfully in American waters, or that anything is to be feared from vessels of her proportionate length, but with very small sail plans. We would recommend, then, that Rule II. be changed by the substitution of the words "corrected length" for "waterline length" wherever the latter occurs; the present formula, as in Rule III., remaining unchanged.

In readjusting the classes to suit the proposed change the attempt has been made to preserve the same division of the yachts as has existed for some time, without perpetuating any faults that could be avoided in the new system. As the proposed classification, if adopted, is expected to stand for an indefinite period, it is very important that it should be as perfect as possible in itself; but at the same time it is desirable that no existing yacht should be robbed of its rights to race in the class which includes its former classmates.

The great irregularity existing in the schooner classes has made this a difficult matter, and several changes have been necessary, but the arrangement on the whole seems satisfactory so far as the future fleet is concerned without being unfair to existing craft. The proposed classes are: Over 100ft. corrected length, 90 to 100ft. corrected length, 80 to 90ft. corrected length, 70 to 80ft. corrected length, and under 70ft. corrected length. The yachts included in the various classes would be: Over 100ft., Constellation, Yampa and Palmer; 90 to 100ft., Fortuna, Sea Fox, Alert, Mayflower; 80 to 90ft., Elma, Grayling, Miranda, Iroquois.

In the sloop classes all of the larger yachts accommodate themselves to a division which brings the same yachts together in each case; but in the smaller classes an obstacle has been encountered in the heavily rigged boats of the present season, whose large sail plans would necessitate class limits which would clash with the moderate rigs in the classes immediately adjoining, disturbing a symmerical arrangement of all the larger classes as well. The limits of the classes which would accommodate the majority of the fleet would be as follows:

Present 30ft. waterline class to be 30ft. corrected length; 35ft. class, 42ft. corrected length; 40ft. class, 48ft. corrected length; 46ft. class, 54ft. corrected length; 53ft. class, 60ft. corrected length; 61ft. class, 68ft. corrected length; 70ft. class, 77ft. corrected length; 80ft. and class L, all over 77ft. corrected length.

Under this series of classes the yachts of the Seawanhaka Corinthian fleet as well as those of other clubs which race with them will be in the same classes and under the same allowance of time as at present; the only exceptions being in the 40ft. class, Liris, Tomahawk, Gorilla and Maraquita, and in the 30ft. class Kathleen. At least three of these boats could reduce to the limit of the class, 48ft., without serious detriment if not with advantage, but the other two exceed any limits that can be made without interfering with the entire series of classes. Rather than do this were commend that the final clause of Sec. I., Rule II., be changed to read as follows, "Any yacht in the 36 and 48ft. class on the roll of this club on Dec. 1, 1889, which shall exceed the higher limit in these classes by not over a fraction of a foot shall be included in that class."

The entire arrangement of classes seems such as will conduce to good sport and at the same time allow an ample number of sizes from which those about to build may select.

Looking now at the method of measuring sail and its possible evasions, there seems little occasion for change in the general form of measurement, but in the details we recommend the following minor changes:

First—That in order to secure greater accuracy where a long gaff and a short topmast are to be measured, the topmast shall be measured from the bands of lower mast to the lower side of the topsail halliard block or sheave, and that 30 per cent. of this length be subtracted from the gaff, the remainder being added to the baseline in place of 25 per cent. of the gaff, as now used. This method appears to give good results with any proportion of gaff and topmast, or even with no topmast at all, provided the throat halliard block be used as the highest point of the perpendicular.

Second—In the measurement of the baseline we recommend that the forward point of measurement on the bowsprit be extended to a distance half way between the present point of measurement, the jibstay, and the jibtopsail stay.

Third—In order to check the tendency to excessively long spars in a direction not otherwise included in the measurement, we recommend that any excess in the length of the spinnaker boom over the distance from the forward side of the foremast in schooners, or of the mainmast in singlestick vessels, to the forward point of baseline, shall be added to the baseline. The only effect of this rule will be to shorten the spinaker boom if longer than the designated distance, as no one would have his measurement increased for the sake of a little greater area of spinaker. In the case of new sail plans, the influence of the proviso will be to keep the mast aft rather than forward, as is desirable.

With the changes proposed above above there seems no necessity for any change in the present allowance tables, based on a percentage of .50 of the theoretic speed; but in order to facilitate the work of sailing committees we recommend that the extension of the present scale to intervals of one-tenth of a foot, as already provided for, be carried out at once, no smaller fraction than one-tenth being used in the calculation of measurement. By this means the operation will be greatly simplified for those who are not well accustomed to the calculation, while even in the case of

experts the saving in time and the lessened liability to error will be of material importance.

In closing this report we call attention to the fact that all of the recommendations contained herein are in exact accordance with the proposed legislation of the New York Y. C., and tend to that harmony of interests and of action which is so essential between the larger clubs whose fleets include so many vessels in common.

While the changes which we recommend may not be sufficient to cover all possible contingencies in the future, and to render unnecessary any further legislation as the progress of yachting reveals new facts and teaches fresh lessons; we are entirely satisfied that the direction of the present step is right, and that the recommendations, if carried out, will meet an urgent need of yachtsmen; will contribute in a marked degree to the further development and prosperity of yacht racing, and will constitute another of those many important measures of reform which have always found their most earnest advocate in the Seawanhaka Corinthian Y. C. (Signed) JOHN HYSLOP, Chairman.
A. CARY SMITH.
W. P. STEPHENS.

LAKE YACHT RACING ASSOCIATION.

THE annual meeting of the Lake Yacht Racing Association, of Lake Ontario, was held at Hamilton on Nov. 9. From the following detailed report, for which we are indebted to the Toronto *Globe*, it will be seen that the Lake yachtsmen have dealt very promptly and decisively with the issues before them. The change to corrected length as a basis for classification was carried unanimously after a careful discussion, the new rule to hold for at least 5 years. Two other very important changes were made, one in Rule XVII., making the starts from one gun; and one prohibiting professional helmsmen in the races of the Association. The changes made and recommended are all in the line of progress, and in accordance with the past work of the L. Y. R. A.

The meeting was held at the Royal Hotel. Commodore J. F. Monck, of the Hamilton Y. C., President of the Association, occupied the chair, and Mr. George E. Evans, R. C. Y. C., Secretary, sat on his left.

The following delegates were present: L. H. Robertson, N. Dick, G. Evans, Royal Canadian Y. C., Toronto; J. B. Carruthers, James Stewart (by proxy), Kingston; E. N. Wallbridge, Matt. Cartwright, — Leary (by proxy), Rochester; Elliott Mott, Allen Ames, Commodore McMurrich, Oswego; Æmilus Jarvis, Harry Lee, Hamilton. C. Chase and T. A. E. World were present, representing the Queen City Y. C., Toronto, but, their club not being enrolled in the Association, they were allowed to sit without voting powers.

President Monck, in opening the meeting, welcomed the delegates to Hamilton in hearty terms. Many important questions, he said, would come before them for settlement, and perhaps the most important would be the report of the special committee on the reclassification of yachts. If any change was made, he hoped that it would be made to last for some definite number of years, so as to govern members in building new boats. The president then referred to the various propositions that would be discussed. He felt that small yachts were somewhat discriminated against in the regattas. One member of the Association had told him that, in his opinion, prizes should be made of equal value in all classes; that those in the 20ft. class should be the same as those in the 50ft. class. The view, of course, was an extreme one, but he mentioned it to show the feeling upon the matter.

President Monck pointed out several instances of discrimination against small yachts which he had noticed in Rochester and Toronto.

Secretary Evans read a telegram from the Bay of Quinte Y. C., authorizing him to act as a proxy for the club. Some doubt was expressed on the question of voting.

Mr. Jarvis, as chairman of the committee appointed last May at Rochester to consider the question of classification and measurement of yachts, presented the following report:

Since our appointment at the Rochester meeting of the Lake Y. R. A. in May last, we have been watching the course of yacht racing and yacht building, both on our own lake and among the Atlantic yacht clubs, and we are of the opinion that the present system of classifying by length does not allow sufficient scope to the designers, and that it develops an arbitrary type or model, the leading features being

(1) A given length (the utmost limit of the class).

(2) Power which is obtained from beam, draft and low ballast, with sail piled on to an abnormal extent.

We believe that this type does not give the owner accommodation for cruising at all in proportion to the cost, and that, on account of their enormous power and sails, the yachts are much more expensive to race, and that their life must be necessarily shortened on account of the great strain they are subjected to.

Therefore we beg to recommend that this association does away with the present mode of classifying by load waterline, and substituting therefor a classification by corrected length, obtained as at present, viz., by adding to the length the square root of sail area and dividing by 2. Under this system both length and sail may not be considered constant, as in the present mode, but both are variable, increasing and decreasing in an inverse ratio. Thus, as length is increased sail is decreased, leaving the designer free to select his dimensions for any given class. For example we will take the various types that would be eligible for our proposed 46ft. corrected length class:

Length.	Sail Area.	
36ft.	3,136ft.	Equals 46ft. corrected length.
38ft.	2,916ft.	
40ft.	2,704ft.	
42ft.	2,500ft.	
44ft.	2,306ft.	
46ft.	2,116ft.	

In theory, these six examples would be the same size and would run on an equal footing, and a choice is given the owner of the short beam, heavily rigged and canvassed type, the moderate beam, draft and sail, or the narrow, deep sort with small sails.

The above system you will see gets over the sail area question, not by directly taxing sail to a greater extent, but by taking a part of the tax on length off, and in this way a change is wrought without altering our present formula in the slightest, and not interfering with vested interests, as the attached diagram will show. From it you will observe the bulk of our fleet are canvased within .2 of each other; and leaving out one boat (the Vendetta) our highest percentage of sail is .16 below the highest of the Atlantic fleet, viz., Kathleen and Liris.

We have communicated with the various designers on both sides of the Atlantic, asking for their opinions on the proposed change, and, out of some seven written to, only one, Mr. Burgess, has expressed himself adverse to the scheme. We are informed that the committees of the New York and S. C. Y. C. having this same subject on hand, have both prepared their report favoring a like change, only using their respective formulæ; and we are advised that the S. C. Y. C. will, in all likelihood, pass the scheme.

Therefore, this committee beg to recommend that the Association make the limits of the various classes at the following points: 25ft. corrected length, and under; 30ft. corrected length, and under; 35ft. corrected length, and under; 40ft. corrected length, and under; 46ft. corrected length, and under; and, for the present, all over 46ft.—this last to be sub-divided when the large yachts are sufficiently numerous to warrant.

A. AMES, Oswego Y. C.
E. N. WALLBRIDGE, Rochester Y. C.
N. B. DICK, Royal Canadian Y. C.
G. E. EVANS, Royal Canadian Y. C.
J. B. CARRUTHERS, Kingston Y. C.
W. H. BIGGAR, Bay of Quinte Y. C.
Æ. JARVIS (Chairman), Hamilton Y. C.

N. B.—There are other points this committee would like to bring before the notice of the Council, but, as they do not bear on the subject for which we were appointed a committee, they are not embodied in the report just read, so we take this means of bringing them to your notice. They are:

1st—That 50 per cent. of the allowance due to the rule, as accepted by naval architects, is given in the table of time allowance in place of 40 per cent. as used at present.

2d—That in calculating the allowance for parts of a foot, in place of tenths that hundredths be used.

3d—That in measuring sail areas the actual sail be measured, not an approximate area as our rule provides for.

Accompanying the report was an elaborate diagram, which Mr. Jarvis explained at some length.

Mr. Robertson, in seconding the report, said it was the duty of the Association to thank Mr. Jarvis for his carefully prepared report. He thought the committee had got over the difficulty of not putting a direct tax on sail area. The plan proposed would lead to a more economical class of yachts. If the report had this effect it would accomplish much good.

Some discussion arose on the effect the change would have upon certain yachts, notably the Cygnet. President Monck thought the question should be discussed for the general good of the sport, and not for any particular class of yacht. In his case, the new plan would take the Cyprus from the top of one class to the bottom of another, yet he would vote for the resolution with both hands.

There was little said after this candid statement, and report was unanimously adopted.

The following amendments to the constitution were then brought forward by the Toronto delegation:

1. Any club becoming a member of the Association under Article III. shall be entitled to representation at the annual and other general meetings, according to its membership, on the following scale: Clubs with less than 200 members, two delegates; clubs with 200 members or more, three delegates. For every additional 200 members after the first 200, one more delegate. Delegates may be represented and vote by proxy, duly authorized in writing.

2. Rule XVII. to be cancelled by striking out from the word "after," when it occurs on the fourteenth line of said rule, to the word "line" on the twenty-third line of same, and by inserting in place of the words so struck out, "No time shall be allowed in which to cross the line."

3. That the following rule be inserted: "None but Corinthian yachtsmen shall steer a yacht during any race."

Mr. Dick moved and Mr. Robertson seconded their adoption, and the clauses were taken up separately.

After some discussion of the first clause Mr. Evans stated that if any one of the delegates objected to the proposition of the R. C. Y. C. they would be only too willing to withdraw it, and the members not showing any anxiety to adopt the clause, it was accordingly withdrawn.

The second clause was then taken up, the Toronto delegation speaking strongly in its favor.

Mr. Jarvis said he was glad the matter had been brought forward. It was a pet hobby of his. Last year when he brought forward the matter he was badly sat on. He was heartily in favor of it.

The clause was agreed to unanimously and the five minutes' time-allowance became a thing of the past.

The third clause came in for a great amount of discussion. There was a very strong feeling expressed that professional sailors should not be allowed to sail yachts. Some of the American delegates did not appear to favor the change. The term "Corinthian" rather bothered the delegates. The definition of a Corinthian seemed to be somewhat hazy in their minds. As the meeting was in favor of barring out professional sailors, the difficulty was got over by making the rule read as follows, which was agreed to by the delegates: "That no one be allowed to sail a yacht in any race of the association unless he be a member of a club in the association." Mr. Evans was the mover and Mr. Irving seconder of the amended rule.

The association next took up the application of the Queen City Y. C. for admittance into the association. The application file I with the secretary stated that the club had a membership of fifty-two and sixteen yachts. After some discussion, during which Messrs. Chase and World retired, the following resolution, moved by Mr. Robertson, seconded by Mr. Jarvis, was passed: "That the application of the Queen City Y. C. be referred to Messrs. Mott and Robertson to decide whether the club has five yachts, and that, if so, their qualification be passed and the decision of the executive committee admitting them be acted on."

On the heels of this resolution came the question: What is a yacht? Mr. Robertson declined to act unless he had definite instructions as to what constituted a yacht. The executive accordingly put their heads together and drew up data for the instruction of the committee.

Mr. Ames moved, seconded by Mr. Jarvis, That it be recommended that the classification of yachts at present adopted be kept in force for five years, save as to the classes above 46ft., which may be made. The motion was agreed to.

Mr. Jarvis gave notice that he would bring the three propositions attached to the re-classification report, given above, before next year's meeting for consideration.

The circuit of regattas for next year was decided upon as follows: Hamilton, Aug. 13; R. C., Toronto, Aug. 15; Queen City, Toronto, Aug. 16; Kingston, Aug. 20; Oswego, Aug. 23; Rochester, Aug. 27. This, it will be seen, reverses the order taken last year. If Cobourg desires a regatta it can be held at the close of the circuit series.

The election of officers was next taken up, with the following result: President, Commodore Boswell, Royal Canadian, Toronto; Vice-President, J. B. Carruthers, Kingston; Secretary-Treasurer, Geo. E. Evans (re-elected). Executive—Æ. Jarvis, Hamilton; Vice-Commodore Cartwright, Rochester; Allen Ames, Oswego; W. H. Biggar, Belleville; Y. A. E. World, Queen City, Toronto; — Rodwell, Kingston.

President Monck then departed from the paths of business, and, after making a neat, eulogistic speech respecting Secretary Evans's capabilities, presented him with a costly diamond pin, on behalf of the Association, for his valuable and untiring services.

Mr. Evans was much surprised at this mark of approval, but succeeded in uttering a few words of thanks to the members for their valuable present.

Before closing the business of the meeting, Secretary Evans stated that at the opening of the year there was a balance to the credit of the Association of $78.32. The present year closed with a balance of $98.82, which was considered highly satisfactory.

Hearty votes of thanks were accorded to the retiring president and Mr. Jarvis, and, after these gentlemen had suitably responded, the meeting, which had been a most harmonious one, came to an end.

The delegates were banqueted in the evening by the Hamilton Y. C. at the Royal Hotel.

A JANUARY CRUISE ON THE PACIFIC COAST.

ON Jan. 4 of the present year we left British Columbia, a party of six, in the sloop Canuck, a keel boat of 25ft. long, 8ft. beam, and 4ft. draft, originally built for a smuggler. The wind was light and the day so warm that all wore summer clothing. With a strong tide we made fair headway until the breeze freshened so that we bowled along merrily, and anchored at Departure Bay in good season, camping on shore. When we turned out next morning one of the anchors was missing, though what had befallen it none could surmise. The wind blew half a gale as we stood across for San Juan Island, keeping a bright lookout for the dangerous tide rips that are found off the island. These tide rips make sailing very exciting, as, if a yacht of our size was caught in one of them, it would take her down like a nutshell. The only ones on deck were the skipper and Bobagie, and we had a most glorious run to within a mile of San Juan, when we squared away for Sydney Island. Finding no place there to camp we stood on, it still blowing hard, made Shoal Harbor at 6:30 P. M., making the last 15 miles in an hour and a half, pretty fair running for a cruiser. Spent a very pleasant evening ashore.

On the morning of Jan. 6 sailed over to an island and found a splendid camp ground; put up our tent and fitted our folding stove, designed by the Skipper and Bobagie and which worked like a charm. It being Sunday, we only did what work was necessary, but had a most *recherché* dinner, and in the evening several young men of the settlement came over to attend the "Even Song" of the Bobagie and Cornetist, and all went home about 11 P. M. seemingly highly edified. On the morning of the 7th a grand duck hunt was organized, all but two went out, accompanied by several gentlemen living in the vicinity. A heavy fusilade, which the echoes trebled, led us to suppose that the slaughter would be immense; but judge of the Bobagie's disappointment when they brought home only three canvasbacks. The Pilot and Count Chamad, ignoring the abilities of the cookery department, undertook to roast a duck *à la* Siwash. After scorching themselves until the skin peeled off, they triumphantly took out their duck, and after breaking the baked mud off found, to their intense disgust and the ill-concealed joy of the Bobagie, that it wasn't warm through; so that finished them.

On the 8th all started out again, but had no better luck, only bagging 13 mallards. Being very tired we turned in early, about midnight, but were awakened by an awful yell by the cornetist, who swore that there was a bear going for him. The skipper rushed out, but could see or hear nothing. On the morning of the 6th got all our things aboard and started at 10 A. M. for home, the breeze being light but fair, the clouds giving promise of plenty of wind later on, which it did with a vengeance, and by 12 noon was blowing heavily, knocking up quite a sea. The wind continued to increase till it blew a gale, and the sea was running very heavy, but the Canuck behaved splendidly. Being undercanvassed, we carried all sail, dropping the peak when an extra heavy puff came. The sea was now running fully ten-foot waves, and we were all pretty wet, but did not mind that, as it was not cold. Passing the Trial Island channel we met the tide coming up; it runs through here at about eight miles an hour, the waves standing up clear five feet against the wind, got safely through, and bore away for Victoria Harbor, the wind blowing almost a hurricane. Not another boat, sail or steamer, dare put out, and as we sailed on everybody was surprised that we had come safely through, but the Canuck proved herself a staunch, weatherly, stiff and fairly fast boat, and we left her with feelings of regret that our pleasant cruise was soon ended. BOBAGIE.

THE MARITIME EXHIBITION.

ON Nov. 4 the finest maritime exhibition ever held in the United States was successfully opened at Boston. The large building known as Mechanics' Hall, covering seven acres of ground, is completely filled with exhibits representing everything connected with the sea, from models of the largest war ships and ocean steamers down to fishing boats and implements. The chief feature of the exhibition is the big tank, 500ft. long, in which float boats and models of all kinds. In the main hall is built a model of the deck and upper works, including all spars and rigging, of the Burgess schooner Quickstep, the work being done by Lawley & Son. On the deck a band plays during the day and evening. Yachting is represented by the little 16ft. Composite, lately described in our columns, which floats in the tank with a cruising cat yawl designed by Borden and built by W. K. Pryor & Co., as well as by many excellent models. The Dorchester and South Boston Yacht Clubs also have each an exhibit of models and yachting appliances. The art department contains a number of fine marine paintings. The exhibition will be open until after the holidays.

NEW YACHTS.—The list of new yachts up to date are as follows: Mr. Burgess is credited with orders for a large schooner, a smaller schooner similar to Quickstep, a 60ft. keel cutter, a 45ft. keel cutter, a 40 and a 30, as well as a design of a 30 for Canada. Mr. Gardner's 30, to be built by Smith, of City Point, will be 42ft. 6in. over all, 29ft. 9in. l.w.l., 10ft. 4in. beam, and 6ft. draft. Her owner, Mr. L. H. Phillips, of Swampscott, has also designed a 30, and will have the two built by Smith after McIntyre's composite method. At Bath, Me., Messrs. Perkins & Blaisdell are building a 60ft. steam yacht, and at Essex, Mass., C. O. Story is building a 60ft. schooner for Mr. W. S. Freeman, of Duxbury. Lawley & Son will build an 81ft. steam yacht from a design by Mr. George Lawley. At Bay Ridge Mr. Wintringham is busy with two compromise boats. Cutter Marguerite, lately purchased in Boston by Mr. F. L. St. John, has been out for additional bolts in keel. Kathleen is hauled up for the winter on Wintringham's ways. Lawley has sold the 45ft. centerboard begun for Mr. Owens to Mr. A. Turner.

SEAWANHAKA CORINTHIAN Y. C.—The November meeting of the Seawanhaka Corinthian Y. C. was held on Nov. 9, with Com. Canfield in the chair. In addition to the regular routine business the report of the committee, appointed last April to consider the need of any changes in the measurement rules, was read. The report, which appears in another column, was adopted, and will be printed and sent to each member. It will come up for final action at a special meeting. Ten members were announced as elected by the trustees since the last meeting. The prizes presented by Mrs. Canfield for the Marblehead races during the squadron cruise were on exhibition. The schooner prize, won by Quickstep, is a large and handsome lamp. The large singlestick prize, won by Clara, is a large circular platter, and the smaller, won by Minerva, is a smoking set of four pieces. All the prizes are of solid silver and very elegant in design, being made by the Whiting Mfg. Co. After the meeting adjourned the new Leland cup was filled with champagne and then carefully examined by all present.

NEW YORK Y. R. A.—At the recent meeting of the Executive Committee of the New York Yacht Racing Association, the Bayswater Y. C., of Far Rockaway, L. I., was duly elected to membership in the Association. The application of the club showed a membership of 100 and a fleet of 25 yachts. Com. Geo. A. Barker, Vice-Com. A. H. Mott and Secretary B. J. Dankletsen were elected as delegates to the Association. The Association now has 16 clubs on the roll and is in a most prosperous condition. It is expected that many more clubs will join it during the winter.

CHART CORRECTIONS, NEW YORK HARBOR.—The Quickstep bell buoy in the Lower Bay has been changed to a double bell. The bell buoy indicating the entrance to Fire Island Inlet has been changed in color from white and black perpendicular stripes to red. A new H. S. spar buoy has been placed to mark the wreck of a sunken coal barge off the west end of Kelsey's Pier, No. 3, foot of Harrison street, Brooklyn.

A CRUISING STEAM LAUNCH.—*Editor Forest and Stream* I was very much interested in "Wave Crest's" description of his ingenious outfit for a cruising steam launch. Will "Wave Crest" add to the obligation, which many readers must feel, by telling us where his launch was built, what it cost, what kind of engine—oil or coal burning—and its horse power?—CRUISER.

INTERNATIONAL MARINE CONFERENCE.—This body is now busy with the discussion of a wide range of subjects relating to safety at sea, and it is probable that much good will result. The two important subjects of light and sound signals are receiving special attention.

LIRIS.—On Nov. 3 at 1:30 P. M. Liris sailed from New York for Norfolk, making the run in 39 hours under her small cruising rig. The weather was pleasant and the wind light during the run. She will spend the winter in the Chesapeake.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

G. R. J., Hamilton, Ont.—Both drawings are correct and suitable for building from, but they are not equal to the latest models, and could be considerably improved.

M. H. B., Harrisburg, Pa.—How can I load my gun so as to make her scatter the shot for brush shooting, etc.? Ans. Separate your shot into two or three portions with card wads.

C. B. S., Geneva.—Mast 11ft. deck to hounds, boom 13ft., gaff 6ft., bowsprit 5ft. beyond stem, mast 8in. in diameter, centerboard 2ft. 6in. long. You cannot carry a very long boom on the rowboat, 12ft. boom, 6ft. gaff and 10ft. hoist will be enough. See "Canoe and Boat Building."

O. P. H., Winfield, N. Y.—Is it an uncommon occurrence to find white squirrels? We have one, captured a few weeks since, which is the size of a gray, pure white with pink eyes. Ans. Albino squirrels, as albino specimens of other species, are rare; we have noticed several occurrences in the past few months.

W. L. F., New York.—I have an Irish setter dog who is gun shy. Will you please inform me if there is any way of curing it? Ans. It may be done by gradually accustoming him to the gun, by snapping the primers of unloaded shells and then using very light charges, gradually increasing them as he becomes used to the sound. Or follow the instructions given by Hammond in his "Training vs. Breaking."

W. E. H., Rochester, N. Y.—I have a valuable Irish terrier puppy, four months old, and am undecided whether to have his ears cut or not. Should I lose points in a bench show if I wished to exhibit him at any time after the ears had been cut? He carries them well now, but I have an idea it may improve his appearance if his ears are well trimmed. Ans. The dog will not lose points if shown with his ears trimmed, but we hope that for the sake of good taste and as an example to other exhibitors you will leave the dog's ears as nature made them.

G. H. K.—I own a Great Dane pup 10 months old, a little over 28 inches at shoulder. May I ask you whether or not he may be expected to grow, and if so, for how long a time, and how many inches? His sire is over 33 inches, his dam about 32 inches. Some people have told me that after 10 months of age all hope for further growth was vain; this would be a great disappointment to me if true. Ans. Dogs of large breeds like the Great Danes should increase in size until they are two years old, under normal conditions. Unless your puppy is stunted by lack of food or by some other cause, he will attain a greater size than the present.

C. G., Newcastle, Pa.—In a private pigeon match, where each party furnishes half the birds, can one party mutilate the birds to suit their man, or in other words, trim the tails of the birds in different styles? The party on the other side furnishing birds in their natural state and demanded the same from the other side, which they refused to furnish, so the match did not start in consequence. Who is right, and who gets the forfeit? Ans. The birds should all be put in a crate together and fed to the trap without mutilation; any infraction of this gives a valid claim of foul.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

LOG CABINS;
How to Build and Furnish Them.
By WILLIAM S. WICKS.

The book is thoroughly practical. Every step in the process of construction is explained. The author is an architect who has himself built log cabins, and very handsome ones, too, as shown in the plates. The designs are numerous and varied. Plans are given for cabins, large and small, with details of exterior and interior finish; and there are also some very useful directions for constructing temporary shelters—the Indian camp, brush house and bark camp. The furnishing consists of tables, chairs, bedsteads and other articles, all made of the material at hand, and all in keeping with the style of the house. The illustrations are numerous and helpful. Price $1.50.

WEST INDIA HURRICANES,

And the Great March Blizzard, 1888.

BY EVERETT HAYDEN, Marine Meteorologist, U. S. Hydrographic Office, Washington.

ILLUSTRATED BY 23 PLATES. PRICE ONE DOLLAR.

Beginning with a description of the great Bay of North America, Mr. Hayden first describes in detail the formation of the ordinary tropical cyclone, and then proceeds to trace the origin of the great blizzard, following it day by day by means of colored charts, and bringing into relief every interesting feature of this memorable storm. Valuable as this record is to the navigator who may be exposed at any time to similar dangers, it is no less interesting to the casual reader, as the mechanism of these powerful forces of nature is laid before him. Even the landsman, who looks upon the wind as blowing from one direction or the other, according to chance, and independent of any control or direction, cannot fail to be interested in the manner in which the track of a cyclone is marked out and its probable direction foretold, while to the mariner the same problem has a far more vital significance. In addition to much that will interest the non-technical reader or the scientist, the book contains a great deal of clear practical information relating to the handling of a vessel in a cyclone, the use of oil at sea, and similar important matters.

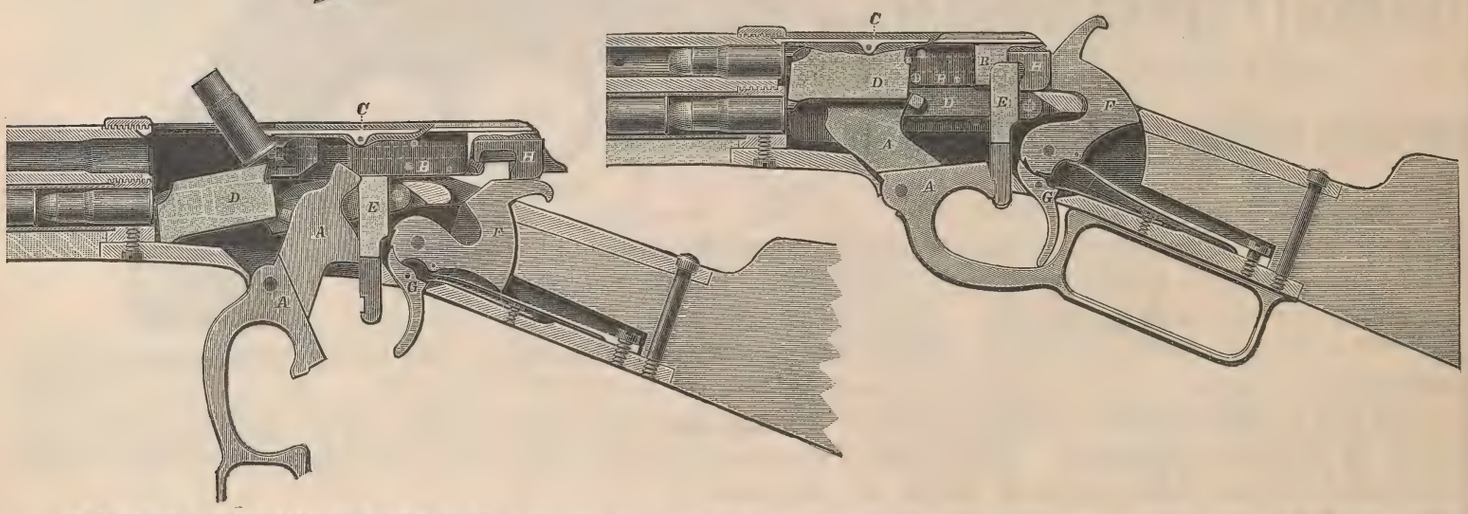
Canoe and Camp Cookery.

BY "SENECA."

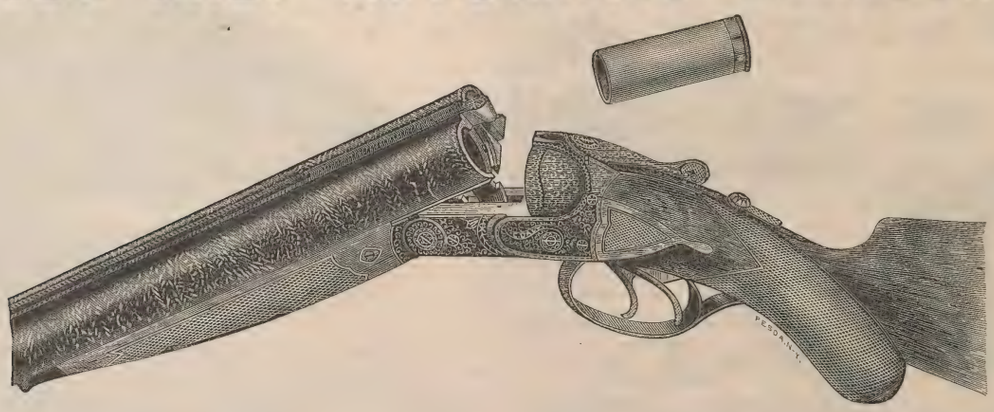


A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

MARLIN MODEL 1888

PRICES REDUCED.



You will notice the breech block is on the old reliable Sharp principle, and has a solid backing against the frame. **You will notice** if you TRY THE ARM that it works WONDERFULLY SMOOTH AND SLICK, that it is finished superior to any other magazine arm, and **you will notice** if you SHOOT IT that the accuracy exceeds all other repeating rifles. Weight 6¾lbs. Same retail list, same dealer's discount as the Winchester. Sizes made: 24, 26, 28in. barrel. Calibers made: .32 .38 and .44, using Winchester cartridges. Ask your dealer to show it.

ANSWERS TO CORRESPONDENTS.

THE BEAR HUNTING OF TO-DAY.

THIS is an age of progress and of ease and luxury. And the bear hunter is keeping up with the procession, falling not a bit behind. The old fogies who used to pose as bear hunters, what a laborious and fussy and clumsy thing they made of it! First there was the muzzleloader; and then the bullet pouch, and the powder horn, and the wadding, and the ramrod and the cap—they thought it was a tremendous step ahead when they discarded the flint and invented the percussion cap. But to load up with all these was not the whole of it, nor a half of it; for when armed and equipped, they must go out into the woods and hunt for the bear. Terribly slow that was; and downright hard work, too. Then, when they had found the bear, and one shot did not do for him, came the process of reloading; first the powder, then the wadding, then the bullet, then more wadding; and all driven home and thumped down with a ramrod. And after all, the bear might get away, if indeed it might not set to and do for the hunter himself.

This has changed, the bear hunter is up with the times. For the muzzleloader there is the breechloader, for the bullet pouch and powder horn and wadding and ramrod, we have the machine-loaded cartridges, which can be pumped out faster than Bruin can wink. And as for hunting for your bear, taking the chances of finding him, or of being found by him, a New York genius has changed that.

Bear hunting is to-day an exact science; its pursuit is unattended by hazard or hardship or possibility of failure. The metropolitan "Nimrod" has shown how to do it. He is the pioneer in the art of bear hunting as it is hunted. He went up to Union Society, a Catskill Mountain summer boarder resort, where they had a young pet bear chained up in the yard, doing time in amusing the guests and serving as a stool-pigeon or decoy for other boarders with sporting proclivities. This was the bear the New Yorker had been looking for. He bought and paid for it on the spot, fifty dollars—a bear on the chain is worth two in the woods. Then the gallant sportsman, after schooling his nerves to stand the shock of the exploding rifle, bravely did the brute to death; paid the cook to skin the carcass and bore home in triumph the skin as a trophy of his prowess. To-day it adorns his residence; and he is rapidly coming by frequent repetition to tell to admiring guests his thrilling "bear yarn" by rote.

This style of bear killing is certainly progressive; it is in fact decidedly in advance of the spirit of the times; and the great body of sportsmen, with their old-fashioned notions and prejudices and sentiment, may be depended on to write down the New Yorker as a bloodthirsty noodle. His exploit of shooting a bear on chain is not likely to be emulated.

THE NATIONAL PARK IN 1889.

THE year 1889 has been in many ways an eventful one for the National Park. In the spring of the year it was rumored that a change was to be made in the Superintendent, and for a time those especially interested in the Park felt great anxiety lest some officer might be ordered to this duty who would prove inefficient or without interest in the National Reservation. Early in the season Captain Harris, who for three years had so acceptably filled the difficult position of Superintendent, was ordered to Fort Custer, and Captain F. A. Boutelle, of the First Cavalry, was ordered to take his place. Captain Boutelle is a man of intelligence, of strong will and great energy. In addition to this he is a keen sportsman and an ardent lover of nature. He appreciates as well as any one can the importance of preserving the Park as a whole; its forests, its natural wonders and its game. His share in the good work being carried on in the Reservation by the U. S. Fish Commission has already been alluded to. He will strive with all his might to protect it from enemies without and from enemies within its borders. He is making an excellent Superintendent.

Mr. Craighill, the new engineer officer in charge of the roads, has spent a great deal of time in the Park and has accomplished much good work. He has been cramped this year, as his predecessors have been, by the picayune policy of Congress, which refuses to make adequate appropriations for the care of the Park, just as it refuses to legislate for it in other ways.

We have recently alluded to the great work in fish-culture already inaugurated in the Park through the wise appreciation of Col. Marshall McDonald, U. S. Fish Commissioner. Last summer Capt. Boutelle, himself a veteran angler, seeing the possibilities of these waters for fishculture, invited Col. McDonald to visit the Park and look at its streams and lakes with this point in mind. Col. McDonald came, and his experienced eye at once took in the situation. He grasped the opportunity. What he has done and what he intends to do was told in these columns last week.

The work of the U. S. Geological Survey in the Park has been very interessing. Their investigations have been carried on mainly in the Absaroka Range of mountains on the east side of the Park, and they have explored these rugged peaks from Cook City south, penetrating the mountains to the very head of the Stinking Water. Among the interesting papers published by members of this survey party are Mr. Hague's paper on the "Geological History of the Park," Mr. Iddings's on the "Obsidian Cliffs," and three by Mr. Weed on the "Diatom Marshes and Diatom Beds of the Yellowstone National Park," on the "Formation of Siliceous Sinter by the Vegetation of Thermal Springs," and on "A Deadly Gas Spring in the Yellowstone National Park."

Travel in the National Park this year has been large, and this travel had its interesting features. "Campers" were present in larger numbers than ever, and they brought with them, as usual, their wives and their babies, their horses and their dogs. Living in the open air and traveling from place to place, as free as that air, they made the Park seem more than ever what it is and ought to be—a pleasuring ground for the whole people. The regular tourists were not less interesting. It was delightful to see their enjoyment of every thing and to observe the pride that they took in the Park. A member of the staff of FOREST AND STREAM who spent some time in the Park talked with many of them, and found the universal sentiment one of wonder and satisfaction that the United States had within its borders so lovely a region which belonged equally to every one of our people. Many of these tourists were aware of the project to enlarge the Park, and all were loudly in favor of it. If there was any complaint at all it was that the Government did not have more soldiers and scouts to police and protect it, and did not spend more money in building roads and bridges. Many of these tourists expressed an ardent desire to get away from the traveled roads and into out of the way spots in the mountains of which they had heard.

The Park this year has suffered some misfortunes. A season of drouth, unparalleled in the annals of Montana and Wyoming, prepared the forests for fires. Many of these were started, some perhaps from neglected camp fires, others no one knows how; but one, a most serious one, through the carelessness, as it is believed, of the Syndicate's saw-camp. The men had had a roaring camp fire, which was supposed to have gone out. It burned for two days under ground, and during this time the men were twice warned that it was alive. At last one windy day it burst into flame, spread into the forest swept down the lake shore, jumped the Yellowstone River and burned far over toward Sulphur Mountain, destroying a vast quantity of green timber. Capt. Boutelle's men worked like heroes fighting fire, and put out a great many.

The Yellowstone Park Association—the Syndicate, as it is locally called—has completed its new hotel at the Falls. It has also put up at the Lake, on a site which, we believe, has not been even submitted to the Secretary of the Interior, much less approved by him, a building which they call one of the wings of the hotel there, but which contains a hundred rooms. We do not clearly understand how they could have obtained permission to erect this before the locality for the hotel had been approved at Washington.

Another matter in this connection needs looking after. We have reason to believe that although once put down, the liquor traffic in the Park is again assuming alarming proportions. This traffic is carried on at the hotels of the Association, and liquor is openly sold to mechanics, laborers, freighters, and even to the soldiers. We have heard of more than one drunken man in the Park during the past season, and it is reported that the manager of one of the hotels boasted of the heavy receipts of his bar just after pay-day. This is a serious matter, and will demand careful attention by the proper authorities next season.

On the whole, the year has been one of prosperity for the National Park. We may hope that the next one will be even better, and that before 1890 has gone Congress may enlarge the National Park and provide a government for it.

SNAP SHOTS.

THERE are large numbers of well-meaning but morbid-minded individuals, male and female, who by constantly exercising their imagination and feeding on fanciful portraits, have persuaded themselves that the average sportsman is a Raw-Head and Bloody-Bones, up to divers sorts of red-handed cruelty, and delighting in the torture of all animate beings, from a chippy bird to an elephant. It is useless and purposeless to reason with such people or to attempt to show them the foolishness of their prejudices and misconceptions. There are some things that are just as well not attempted; it is of no use to descant to a blind man of the beauties of the sunset, to look for emotion in a deaf and dumb person at a symphony concert, or to expect a sentimental, bigoted and misinformed person to appreciate what field sports and woods-life mean to those who find pleasure in them.

If some of the great Atlantic steamships, the ocean greyhounds, which are competing for the time record between this country and Europe, were owned in America and carried the Stars and Stripes, what an interest would be taken in the competition. We should have in effect an international yacht race every week in the year; and there would be abundant occasion for the booming of cannon and the burning of bonfires to celebrate American victories on the wave.

The time for lawful sale of venison in New York State expired last Friday.

The Sportsman Tourist.

A WINTER IN FLORIDA.

[Concluded from Page 322.]

LEAVING St. Lucie, we proceeded through the sound down to the charming home and hotel of Capt. Richards, whose attractive buildings, high on the bank, and extensive pineapple and banana plantation comprise what is known as Eden. Here we found a pleasant company and a delightful resting place. The Captain is a fine conversationalist and a person of large experience, and very entertaining. His table was supplied with all that a connoisseur could wish, including his renowned specialty, turtle soup of rare excellence. The steamers stop here, and the view obtained on this elevated plateau between the waters of the sound and those of the fresh water of St. Lucie River, is quite attractive, while a ramble through the acres of pineapple plants, banana fields and orange groves amply repays. The sportsman or tourist who takes a run through these waters should make it a part of his programme to stop over for greater or less time with mine host Richards at the Garden of Eden.

Our next halt was at the domain of "Portuguese Joe," a queer and eccentric character who holds possession of a rich tract on Hutchinson's Island, a few miles south of Eden but on the opposite side of the Sound. Here we found quite a number of bearing cocoanut trees, besides various tropical plants, etc., that we had not previously met with. Having a word of recommendation from Captain Richards—whom Joe almost worships—we were soon ingratiated into his confidence, and having smoked the pipe (or rather cigar) of peace with us, he entertained us as best he could, producing for that purpose a few bottles of rare old wine, some that had been buried by him after saving it from the wreck of a vessel which had pounded to pieces on the near beach; and after partaking with us he insisted upon adding some to our stores. His volubility, in broken English, was something wonderful. Having learned that our naturalist was a doctor of medicine, he could not refrain from expressing his belief, "Doctors no good, doctors d— fool humbug," giving at great length his many reasons, much to the embarrassment of our M.D. but affording fun for the Commodore, Captain and myself. In this vicinity we also met the brothers Gardner, who have started a fine plantation, and who rendered us some service.

Our next adventure was an exploration of the St. Lucie River, whose fresh waters find head in the Halpatiokee swamp westward from Ft. Pierce, just below St. Lucie, and eventually form a sluggish river of considerable breadth and depth as it nears a point westward from Eden, and thence some twenty miles to its outlet. At the junction of this river with the St. Lucie Sound (or rather the Jupiter River, as the arm is called from this point to Jupiter Inlet) is quite high bluff land, remarkable in contrast with the general flatness of the country, and overlooking the island to the sea. This is one of the most desirable of all the unoccupied localities that we saw, for a sightly hotel where sightseers would obtain a view afforded by no other hotel site on the east coast, and would attract winter tourists by its sightliness. As we steamed up the St. Lucie an occasional shot was had at ducks and alligators. Night overtook us as we approached the more narrow portion of the river, and we camped on board the launch. The mosquitoes came out in full force and greatly vexed the Doctor and Commodore, but the Captain and Scribe, having in a moment of prudent forethought provided themselves with patent head nets, were not molested; and would have obtained a good night's rest had it not been for the desperate efforts to destroy, and desperate expressions used to intimidate, that the Doctor and Commodore tried upon their foes. Water moccasins could be seen swimming about the saw grass near which we were anchored, and the bellowing of alligators afforded diversity to the evening's entertainment.

On the advent of morning, breakfast was taken while steam was being raised; and at an early hour we pushed our way up the stream, and until the banks would scarcely permit a passage through wonderfully fine foliage and hanging moss effects. In some localities the live oaks were thickly covered with specimens of the beautiful air plant, many in bloom, and giving them a beautiful appearance. Our naturalist shot a number of handsome birds, which he skinned and preserved for mounting. We saw a number of the Seminole Indians poling their dugout canoes loaded with small deer, for which they sought a market at Ft. Pierce and St. Lucie. They handled their long, narrow, burned-out logs with much dexterity. The Scribe remarked that more respect to the center of gravity was essential thereto than requisite in the famous Adirondack boats, in which both guide and sportsman virtually have to part their hair in the middle.

Having ascended as far as was deemed prudent—unless running very slowly to prevent snagging—we found a place convenient for turning about and steamed back until we reached the junction of the Halpatiokee River, up which we took a short run and then returned to near its mouth, and stopped at a plantation that presented an inviting appearance. Here we found two brothers—names not recalled—graduates from Oberlin, O., keeping bachelor's hall, and surrounded with evidences of taste and culture. The FOREST AND STREAM, *Century*, *Harper's Magazine* and *Scientific American* were periodicals regularly received by them. In addition to growing oranges, pineapples and bananas, one of them was an expert builder of sailboats, and had orders enough to occupy all leisure time. We were most cordially received and shared their generous hospitality, and enjoyed to the fullest extent our sojourn with these worthy gentlemen. While in these waters we caught a few of the bream and other fresh-water fish, but they were not as palatable as those taken from the salt water.

We then pursued our way back to and down the Jupiter, the scenery improving as we drew near to the inlet. At Jupiter Inlet we found a few houses, principally that of the keeper of the lighthouse. The only hotel accommodations were such as could be obtained on an old boat anchored at a favorable spot, and kept as a hotel by the owner of the stage route, extending through the canal from this place to Lake Worth. While the staterooms were rather small and close (for we had to hide from the mosquitoes), the berths were comfortable, and the table well supplied with substantial and well cooked food. After visiting the lighthouse, from which a fine view was afforded, we prepared for a day's fishing about the inlet, and were rewarded with a fine catch of channel bass, bluefish and cavalli, the largest of the cavalli turning the scales at 20lbs. We here met the genial Dr. Kenworthy, of Jacksonville, the "Al Fresco" of the FOREST AND STREAM, whose facile pen has contributed much to the enjoyment of the hosts of readers. He had just returned from a hurried trip to Lake Worth, but could not withstand the temptation and opportunity of casting a line and picking up a string of fish to be cooked in camp style, on the way back in his sailboat, with the accommodating Captain Richards at the helm.

The next day was spent in an exploration of the navigable portions of North Creek and the Lagoohoochee River (the latter, a fresh-water stream, incorrectly noted on most maps as the Jupiter River). Afterward we had a grand fishing and hunting expedition up North Creek to a point where we could look over into the noted Lake Worth. The waters of this creek are deep and navigable for a long distance, and with but little dredging at some of the bars, and a short canal cut through but little over a quarter of a mile into Lake Worth, would make a complete inside channel route from Lake Worth to Tomoka, on the Halifax above Daytona. We understood that a company had this project in contemplation, intending, also, to place a line of light draft steamers on this route. If carried out they will reap a reward. At the southern terminus of our trip up North Creek, we were due east twenty-five miles from the southern extremity of that great inland lake Okeechobee.

It was our intent to take the outside run and visit the enterprising settlement and well-known winter resort on Lake Worth, but the roughness of the sea as well as the limited time of the Doctor, conspired to prevent. We then headed our craft for the return trip. At a convenient bay we anchored and crossed the narrow Jupiter Island, rambled for hours along the seashore and gathered shells in abundance to enrich our cabinets. We again stopped at Portuguese Joe's, and stopped over night with Captain Richards at Eden. The next day we reached St. Lucie and indulged in some piscatorial sport, as well as securing some fine specimens of the white and brown pelicans for our naturalist. The succeeding evening found us at Sebastian. The next morning the Doctor, with fowling piece in hand, wandered back westwardly toward the "big swamp," and ere his return secured some fine birds for his collection.

Leaving Sebastian we proceeded toward Melbourne, and at high twelve the Captain found a fine oyster bar, and doffing his nether garments and pulling off those above, soon gathered a fine lot of the juicy bivalves, and we then ran as near as possible to an inviting beach. For a few moments it seemed that it would be necessary to wade in order to get to shore, but the Captain discovered a punt half full of water, and having emptied it pushed it out to where our launch was anchored, and having loaded in passengers and provisions drew them ashore in canal boat style. He felt, or looked somewhat embarrassed, when, as he was gathering wood in his undress uniform, he was suddenly surprised by a female coming down the beach, and beat a hasty retreat into the palmetto brush until she had passed. When our oysters were duly roasted and the other edibles laid out, we had a dinner fit for the gods and relished it to the utmost. The Doctor, intent upon adding to his collection, started out on a hunt, and ere his return a sudden storm rapidly approached. By the time that we reached our vessel the wind was blowing hard and the waves rolling considerably. The fires were relighted and we were impatiently waiting for the requisite steam, when the Scribe made the appalling discovery that his wood case containing his favorite 7oz. and 10oz. split-bamboo rods had, by the motion of the vessel, been thrown from the top of the canvas deck covering into the briny deep at some time previous, unknown to the deponent. One was a $25 rod of his own investment, and the other a gift from a little coterie of angling friends and highly prized. The lamentations of Job were nought in comparison. All hands were called to the rescue, and every foot of visible water was eagerly searched to discover the "whither are we drifting" rods. As the waves were rolling quartering toward the shore, the Captain suggested that the beach one-half a mile above would be the most likely spot, and volunteered to take the punt and go on a searching expedition. The Scribe offered quite a bonus should he succeed in finding "that which was lost." Away went the Captain, but ere going 40 rods his punt filled and sank under him, and he was obliged to wade and swim alternately until reaching a sand bar, he descried the rod case and securing it held it aloft in triumph, and motioned us to come on with the launch. It was easy enough to motion, but not so easy to pole that craft without the assistance of the wheel, with the waves and wind quartering against it. We, however, "worked our passage," and after a time the Captain was taken on board, and having dressed himself, set about getting up steam in good earnest; and we were soon out in the deeper water and making fair progress, when a tornado broke over and nearly capsized us, and blew out our fires; and we were drifting before the wind, kept somewhat in position by rudder and the dexterous use of our poles, while the Captain in vain tried to relight the lamps, as the force of the wind put out matches before fairly ignited, and those that were unused were by this time too wet to burn, as the rain poured down in torrents. Here was a state of things! We had just determined to run ashore and beach our vessel, and take our chances on her being pounded to pieces, when we discovered the regular steamer coming *en route* for Melbourne. We signalled; the pilot ran close to us, and our Captain threw the painter, which was caught and made fast, and we arranged for towage to Melbourne, where we shortly arrived safe and sound but decidedly wet.

We remained over night and then ran up to Rockbridge, where we dismissed our genial Captain, the party deciding to remain at this point for a few days to witnesss the annual Indian River sail regatta, which was quite an interesting event and drew crowds from up and down the coast for fully one hundred miles each way. The honors were won by boats from the Halifax River. After the regatta the Scribe bade farewell to his companions the Doctor and the Commodore, and took passage on the steamer Clara—a Halifax River boat, bearing a broom triumphantly at the top of her flagstaff—up through the Indian and Hillsborough waters to his old stamping ground at Ponce Park on the Halifax. After indulging in a few day's sport in this vicinity, he proceeded to Daytona, Palatka, St. Augustine and Jacksonville, departing thence toward the middle of May for his northern home, well pleased with his experience of a winter along the east coast of Florida.

E. S. W.

RUNNING THE BRULE.—II.

IN the FOREST AND STREAM of July 19, 1888, was published an account of the running of the Brule from its source near St. Croix Lake, in the State of Wisconsin, to the North Pacific bridge; this is what is now generally known as the Upper Brule to distinguish it from the Lower, or that part between the bridge and Lake Superior.

The writer promised himself at that time, that this trip should be continued at some convenient future day, and also, that the lovers of forest and stream should have the benefit of his experience. As the first part of this promise has been redeemed, he hastens to place the other at the disposal of the editor, thinking there may be some who remember the experiences of last year on the Upper Brule kindly enough to wish to share them on the Lower Brule also.

In one respect the trips of last summer and this were similar, in the length of river traversed. In either case I should say about 50 or 60 miles, with this difference, however, that while the Upper Brule is only about one-fourth rapids, the Lower Brule is at least three-fourths, and is in this respect much more savage, in fact, in several cases the rapids partake of the nature of falls a dozen feet or so in height, which even the most imprudent would hesitate to jump.

The Brule—Bois Brule (Burnt Wood) River is historically, at least, almost as old as Lake Superior itself. Captain John Du Luth found it the most convenient route by which to reach the Mississippi from Fond-du lac, *via* lake and river St. Croix, about 200 years ago, since which time it has been ascended and descended to and from Lake Superior numberless times, more, however, for business than for pleasure.

In our time, I think it was in 1844, our W. W. Spalding took a stock of goods from somewhere in the Mississippi Valley into Lake Superior, up the St. Croix, and down this river, and thereby greatly astonished some Indians and *coureurs de bois* who had declared the route impracticable.

Our party was made up of six persons in three boats, flat-bottomed skiffs made for the purpose: of these Captain Patterson and the writer were the only ones that had any experience to speak of in rapids running, hence the party was divided up in such a way as to make the most of what little we had. Captain Patterson took charge of a young Washington patent attorney in his boat which was to go first, generally speaking, a couple of grain merchants with lots of "sand" paired off in No. 2, while I was to bring up the rear with the Artist. At any rate, this was the order in which we left the Northern Pacific bridge, on as fine a July morning as any one could well wish.

On the first ten miles of river, or from the bridge to what is known as the dam, there is comparatively slack water, that is, there is a very lively current most of the way, but there are no rapids to speak of, hence we anticipated no difficulty on this part of the route. Had I, for my part, anticipated more, I should probably have fared better. As it was, we looked more for fish than for danger of any kind, for here is where some large trout might possibly be encountered, so we proceeded to slide down leisurely, tying up to brush or snag whenever appearances looked likely. For some reason, however, best known to the trout themselves, we were not very successful, a few fish only returning our salutations, and no important strikes were telephoned. So we gradually quickened our motions, letting the fish go by, and—the first thing I knew I was in the water up to my waist. It happened just as suddenly as it has been written, and I could hardly account for it until I was there. It was, however, easily accounted for; our carelessness and not our want of experience was the cause, for the boat was allowed to swing with the current under a snag, and the stern in which I sat went too far under, and—there you are; only one of two things to do, upset the boat or go in yourself. That I did the latter was not the result of forethought but of necessity. I was there before I knew it, and the only thing that can be said in my favor to compensate in any way for my quick bungling in falling in is that I did not use up much more time in getting out again.

Now, if the reader will pardon me for a digression, I wish to enlarge a little upon a philosophical train of reflection that involuntarily passed through my "thinking apparatus" as I became again finally seated in the stern of the boat and felt the coolsome water running in rivulets down into my boots. "This is good," said I—inwardly of course—"I have been the first of the party to take a bath; now if any dependence is to be placed on human analogy, I shall probably not be the last." Old soldiers will tell you that bullets never strike the same spot twice; that one who is hit in the early part of the action is subject to congratulation, as this mark of distinction placed upon him by Providence is supposed to make him bullet proof during the rest of the day. A prudent-minded man-of-war's man once, during a naval engagement, proceeded to put this theory to actual proof by sticking his head into a hole just made in the ship's side by a cannon ball. Now, he evidently thought that the same spot would not be struck twice, just as I thought that an upset or a "plump in" would not happen twice to one party on the same trip, and I am afraid it would be hard to make the reader understand the actual amount of soothing consolation there was in this thought; for, as before mentioned, there was at least forty-five miles of rapids below us, and some of them were very bad. Somewhere below, in one of the many bewildering labyrinths of eddies, whirlpools and boulders, Captain McDougall himself, the very patron saint of this stream, had once with his party come to grief and lost a lot of valuable duffle, among the rest an 8-gauge duck cannon of special English manufacture, belonging to a certain Lord Petre, one of the party. How could we, then, all of us inexperienced as we were, expect to escape the inevitable; but, thank my lucky stars, I was hit early in action; for me there was now no greater grief in store than to be compelled to see some of my companions performing some sudden and unexpected evolution in this line; and while there was something sad in contemplating such contingencies, there was something soothing nevertheless in the fact that I would probably— While thus thinking, a peculiar set of circumstances again shaped

hemselves in the immediate future, and as if to set all human theories at defiance, and to put all rational calculations of immunity from mishap at a discount, under very much the same circumstances as before, I was in the river again, and this time up to my very neck. Well! what was to be done? Stay there? No, a thousand times no! Even then, although my buoyant theories had been subjected, as it were, to a very dampening reproof, which served to dim somewhat the vista of glorious experiences ahead of me, I still, be it said to my credit, retained presence of mind sufficient to wish myself out again; and the Artist helped me out in a quiet and unobtrusive way which was quite touching. It was over my head here, and he had to row me over to the other bank before I could overcome the action of gravity and stand under my freshly-soaked and now leaden-weighted habiliments. My set of theories had been drowned—mercilessly, hopelessly drowned—yet there is this to be said about it, that there is no misfortune but is relieved by some compensating feature. The particular bright spot in this instance was, that neither of my mishaps had been observed by either of the other boat's crews. Of course it leaked out, it could not well do otherwise, through the dampened state of my attire; but this was gradually, as it were, and not near so hard to bear as if my dexterity had been observed and the humorous aspect of my gymnastic performance commented on. The kind remarks that were afterward made, to the effect that I "might as well take my clothes off while I was about it," "Swim the rest of the way for safety's sake," "Lay down in the bottom of the boat," etc., etc., although well meant, no doubt, were received by me, if not with scorn, at least with comparative lack of appreciation. The historiographer takes peculiar satisfaction in being able to state that the dam was reached about noon this day without further accident. .

Here the fishing was supposed to commence, and as our heavy boats would have to be portaged some little way over the dam, and as it looked like rain, and as I felt a natural desire to "dry up," it was decided to camp here for the night, although the day was but half gone. The promised thunder shower came along, after consulting our convenience sufficiently to enable us to raise tents for the protection of our traps. The rain was not very severe, but the thunder served to frighten the trout, for of these we caught only enough to make a good mess for supper. But while we ate the trout—some of us with a ravenous appetite—we were ourselves being eaten by flies, mosquitoes and midgets who had appetites as ravenous. Of all pests of the woods, I will put up the odds on the midgets for downright cruelty to man. The insect is so insignifiant as to size, as to be almost invisible, but then there are millions of them to the square inch, and when one passes through a swarm of them, it is as if passing through a flame of fire. By dint of much "dope" and great smudging we succeeded in making a tolerable night of it.

The next morning the real fun of rapids running began, for Captain Patterson now promised us a continual series of them to the lake. Now as my ardor had to some extent been dampened by the events of the day before, I did not look forward to this prospect with that degree of equanimity with which I am in the habit of viewing possible events in the immediate future: to a certain extent my star of fortune had paled in splendor; the gurgling of the Brule waters had an ominous sound; there arose before me visions of home and friends, such as are said to float in dreams about old soldiers on the eve of battle. In fact I had lost confidence in myself through the day before, but being blessed with a disposition to accept the inevitable with that philosophical complacency which has always distinguished me in the face of danger, and not only saved me at times from the imputation of extreme timidity, but has sometimes gained me an ill-deserved reputation for bravery, I started with the rest in the morning, with just as bold a front as if I had never been known to tremble in my boots for anything.

The first three miles of rapids were passed both successfully and rapidly, and even a gleam of happiness shot through my mind as I felt the consciousness of power to overcome natural difficulties. Then we hung up and spun around like a top for a while; getting off at length we clattered down another series, bumping here, scraping there, and sometimes, in our frantic efforts to pass some huge boulder, getting broadside on, but kept going just the same. Then we straddled, that is we stuck between two boulders, when the only thing to do was to get out and either pull the boat back against the current or shove her through by main strength. In this way we reached the wild and picturesque region of the copper range, where the old Bayfield road crosses the stream, and lunched.

This, so far, had been a glorious day, and on the whole we had all enjoyed it, and none more than the two grain merchants. These two happy "growlers" had prepared themselves for a rough sort of a time, with a possible upset or two, but seemed to fall into the way of the thing naturally, and were as well mated as a pair of turtle doves. The veteran Patterson and the "Kid" had had a tussle or two, and had become acclimated to one another. 'Tis true—this the Captain imparted to me in all confidence—that when he, according to the exigencies of the case, would sing out to the left or to the right of a boulder, as his judgment might dictate, the young attorney would possibly first have to brush from his nose a troublesome mosquito which peradventure had lit thereon, and then proceed leisurely to put on his "glasses," by which time said boulder might be half a mile behind. But after one experience or two, circumstances, combined with the Captain's teaching, made him understand that a little dilatoriness on his part might mean a bath, and so he was led to accelerate his movements, after which the two got along famously. The Artist and I would have made a splendid team if he had only sketched more of the scenery, and lectured less on "high art." He was abnormally afraid of getting wet. If the truth must be told he had been led into this excursion under the impression that it was to be a sort of a picnic—so it was to be sure, but not the kind of a picnic he anticipated. The fact was he had been, or was subject to rheumatism, and this was really a bad trip for one afflicted that way. Fortunately for my peace of mind, I have myself been afflicted that way, but have never found that a soaking in the open air, or sleeping on good spruce feathers in tents, even though wet to the skin, has ever had any injurious effect on me, so I felt no anxiety on his account, though I admit it was natural that he should have on his own.

Having lunched to our satisfaction, and fished a little with indifferent success, we proceeded again in much the same order as before, it being generally understood that the first boat to get over a difficult or dangerous place should tie up and fish until the others had got safely over, or through, as the case might be. In this way we had passed several rapids, and were gaining not only experience, but confidence, when the unforeseen again slipped in and made a sad mess of it all. There was a narrow and ticklish passage between two snags, made the more so by the congregation of boulders both above and below; we were approaching it in good shape to make a successful shoot, when the bow struck on a boulder, and the Artist, who, against orders, was standing up in the bow, took one of the most perfect headers I ever saw. I should probably have stopped to crack a smile at least, if not a joke, but I had time for neither, for the boat swung around with the current, and in spite of my best endeavors with the heavy cedar pole, would have waltzed me through the shoot into the labyrinth of rocks below, had not the submerged Artist recovered his equilibrium and presence of mind in time to grasp the bow and save me from going over. Now, being greatly afraid of a fresh attack of rheumatism, my friend, the Artist, felt as if he must take all the precautions possible, and insisted that he must wring out his clothes at least, and, sympathizing with his fears, if not fearing for him, I drew the boat ashore, and left him on the bank to make shift, as best he could, with all the available change I had in my pack, while I went to examine a little tributary stream that just here entered the Brule from the left bank.

The Captain, with the Kid, came dancing along in time to see the Artist under bare poles; he realized the situation at once and shouted, "Give him my spare pants," and then his solid form, erect in the stern of his boat, like a young giant, conscious and glorying in his power, shot by through the intricate channel of rocks and eddies, into the pool below. Here we found the rest of the boys calmly casting for trout when we arrived, but the jokes at our expense were not numerous, for we had many miles of rapids yet, and the natural question was, "Who next?"

Not far from here was the first fall of importance, over the principal shoot of which we had to lower the boats by hand, and below this fall there was an unusually savage array of boulders, with seething waters leaping, roaring and swishing about them in every conceivable shape. Now, after our experience, the Artist and I had boldly conceived the idea of being extremely cautious, so instead of shoving our boat into the middle of the current and taking haphazard chances among the rocks, I proceeded to take a cut off of my own, and so escape contact with the greatest obstructions. We never made a sadder mistake, for we were hardly under way when we hung up so badly that with our severest exertions we could not budge the boat an inch; in fact we were not only hung up but saddled and wedged in so completely that I had to get out in the water to try and move her, but as the Artist was not provided with rubber boots, and was in deadly fear of being wet, he of course could not get out, so the boat was still too heavy, and the result was I had to pull and haul and shove till "daylight" was nearly out of me: and oh, maddening sight! just as I was about spent with this severe labor, what should I behold but that infernal "Board of Trade," happy and unconcerned, leaping from one ridge of foam to another, turning sharply here or there on the very verge of some inevitable catastrophe, and without the least sign of a mishap reach still water below and calmly proceed to fish.

In my soul I felt a great and mighty wrath, as though dammed up with a sudden rush of waters, and in my exceeding anger there lit upon me great bodily strength, not so much like that of a patient ox, but rather like unto that of the bellowing bull; and with a mighty heave I tore the ship and all that therein was from her fastnesses, and lodged her in the deepest current of the rushing waters; then I swung myself quickly into the ship and smote upon the waters with my pole of cedar, and gave a mighty shout, and even as the current bore me along into the still waters and deep, my wrath assuaged, and I became gentle and laughed even as a little child. But after this it was not I that ever was so careful as to go outside of the swiftest water.

A few more swirls after this, but none more exciting, and we went into camp at the foot of a swift run over a pool that promised good fishing, and where we did hook a number of "speckled beauties." Here we calculated we had accomplished about half the distance to the lake.

The next day opened fair and continued beautiful. We started early, for this day we intended to run most, if not all, the way to the lake, and as we had by this time gathered not only confidence in our ability but experience, we felt equal to anything, and had, moreover, adopted a system which we found worked in most cases splendidly. This was that only the stern man in the boat should stand up, watch the heaviest current, and lay down the course in which he could generally keep and guide the boat with a retarding scrape or push, as the case might be, with his pole, and the bowman should always keep his seat and only shove to the right or left in obedience to orders. By observing this rule, partly laid down by the Captain and partly beaten into us by experience, we found but comparatively little difficulty and much less labor than might be believed in running safely the roughest rapids.

It were impossible to recount all the little incidents of this day, so interesting in themselves, but crowding so fast upon one another as to lose their identity in one continuous round of glorious excitement and pleasure. It was one of those days we so often experience in this climate during the summer months, in which it is a pleasure to live for the sake of mere existence. The foliage was now in its highest prime, so the scenery, though wild as the river itself, was always fine, and earth and air seemed permeated with a breath divine.

Sometimes we would meet an obstacle, such as a great tree fallen across and obstructing the entire width of the stream, where it would be necessary for all to wait and render mutual aid till all the boats were over.

Sometimes it would happen that our fleet were close together, and would be all shooting a rapid in close succession. This would invariably add interest and excitement to the passage, for there great care must be taken not to run into one another. The greatest danger here was that one or the other would hang up, and the next coming too close, would either run into it or not have room to pass, and so get into difficulty; but no serious complication of this kind happened, and after making several dangerous runs successfully, the Captain informed us that but one more fall, or heavy rapid, remained between us and the lake. This I was told was a fall of about ten feet with but one possible passage and that well to the left. The Artist and I were the first to run it, and were astonished to find how easily it was done. The "Board of Trade" came next, and would have taken the wrong side of the river but for our signals; the Captain then came down the slide as though he was ashamed it was not ten feet deeper, and then we all took a drink of—water.

The rest of the trip was simply one great and glorious toboggan slide of ten miles, more or less. Of course the course could not be so straight as a toboggan slide, nor so smooth, for rocks and boulders there were, and swirling eddies. The course of the heaviest current would have to be watched and followed from side to side; we would bump here or there, occasionally hang up on unforeseen obstacles, and would get into difficulties, but they were comparatively trifling, and glorious vistas of river would occasionally open to our view, on an incline so even and straight, that they could not but suggest to our minds, that though the toboggan simile was a happy one, it resembled more nearly perhaps, views adown one of the newly graded avenues in Duluth, from the hillside down to lake or bay, with this difference, however, that the still and sombre earth colors of city streets were here a running mass of living waters, reflecting from a thousand rippling billows the sky, sun and cloud, so that the river bed seemed at times a broadway of silver bedded between steep banks of the deepest green. Indeed the varied beauties of this part of the route were so grand and permeating to the deepest sense, that even the grain merchants, matter of fact and dry as they were naturally, could not repress a spontaneous exuberance of feeling now and then, such as "Now this is fine." In fact the latter part of our trip proved so thoroughly enjoyable in every respect that it completely obliterated from our minds any little difficulty or unpleasantness connected with the first part.

So we passed from the rapids, and slid into slack water, and camped a couple of miles from the lake, about three in the afternoon of the third day, tired and sore from our exertions, as though we had been pounded in a prize fight, but on the whole contented with ourselves and with not one of our individual experiences for sale.

Here ends my narrative of the running of the Brule, but not quite that of our adventures, for though the tug Camp, as per appointment, picked us up at the mouth of the river, we got aboard just in the nick of time, for a furious northeaster struck us immediately after, and kicked up such a sea, that had we been yet on shore such a thing as picking us up would have been entirely out of the question; as it was it began to look as though we might wish the tug had not been quite so prompt, for had the wind continued long, with the violence with which it commenced, it would have made our very safety a questionable matter. It was easy to be seen too, that neither captain nor crew liked the looks of it, for the weather was so changeable that they did not know what to expect next. The wind quieted down after a little, however, but it had set a most tremendous sea in motion, which seemed to increase in volume constantly. This experience, to those who were free from the nausea usually attending the uncertain evolutions of a vessel, made this not the least enjoyable portion of our trip. It was well toward midnight when the lights of Duluth heaved up above the horizon, and the good tug Camp slipped into the smooth waters of the harbor. BERLIN.

Natural History.

ANNUAL CONGRESS OF THE A. O. U.

THE ornithological event of the year was the seventh annual congress of the American Ornithologists' Union, New York city, last week. The place of meeting was the American Museum of Natural History, accommodation in which was through the courtesy of the management placed at the disposal of the Union. Here on the morning of Tuesday, Nov. 12, as appointed a year before, all the noted ornithologists of this country who could so arrange it were gathered together in pleasant conclave.

The president, Dr. J. A. Allen, called the meeting to order at 11 A. M., and routine business became the first order of the day.

The secretary, Dr. C. Hart Merriam, read his report, showing the rapid growth of the Union from its original membership of twenty odd members in 1883 to a membership of over 500 at the present time, together with various similar details, all going to show its great and growing prosperity.

The treasurer, Mr. Wm. Dutcher, followed with his report. It was characteristic of that gentleman in its clear, concise and businesslike handling, and was extremely satisfactory as a report, for it showed the Union to be now no longer struggling for bare life and supported only by voluntary contributions of the members, but out of debt and a flourishing self-supporting institution, with a handsome balance to its credit.

The council reported favorably in various proposed changes of the by-laws, after which the annual ceremony of re-electing the officers was carried out with uniform results, excepting in the case of the secretary, Dr. C. Hart Merriam, who, though unanimously re-elected, positively declined to resume the responsibilities of the office, and subsequently Mr. J. H. Sage was elected to reign in his stead.

In the elections to membership over eighty ornithologists were admitted to the outer court as associate members, and Mr. Arthur P. Chadbourne was elected to the higher honors of full active membership. Mr. Geo. B. Sennett signified his desire to become a life member, the final qualification for which is invested after a ceremony in which the treasurer is the officer chiefly concerned.

The Committee of Avian Anatomy, represented by Dr. Shufeldt, returned a long and interesting report reviewing the ornithological work of the world during the last two years. He especially praised the work being done in Europe by Fürbringer and other anatomists, and also referred to his own forthcoming work on the "Compara-

tive Anatomy of the Raven," that promises to be of great service to students.

Mr. Geo. B. Sennett, representing the Committee on Bird Protection, made a verbal report. He referred to the satisfactory results that had been obtained in Pennsylvania, where not only excellent laws had been passed to protect the birds, but where also public interest had been aroused to such an extent that the Legislature had made a grant of $19,000 to enable the State Ornithologist, Dr. B. Harry Warren, to prosecute and publish his researches on economic ornithology in the fullest manner.

The first paper was by Dr. Edgar A. Mearns, entited "Observations on the Avifauna of Arizona." The Doctor has just returned after a stay of some years in this most inviting field, and his paper was, as might have been expected, replete with good things, and throughout of unusual interest. It is satisfactory to know that we may look forward to the publication of this as well as of other zoölogical papers at greater length and in permanent form as soon as the necessary preparations can be made. Dr. C. Hart Merriam followed with "Remarks on San Francisco Mountain and Vicinity (Arizona) from the Faunal Standpoint." Dr. Merriam has just returned from a three months' sojourn in this region also. He has made a special study of its fauna, and many of his conclusions, as he bluntly announced, are diametrically opposed to those of the previous speaker. The Doctor's remarks were illustrated by charts and are understood to be a prodrome of a work on the subject, the appearance of which will be awaited with great expectations.

Mr. Frank M. Chapman then came forward with a paper, "The Winter Destruction of the Bobolink (*Dolichonyx oryzivorus*) with Remarks on its Routes of Migration." He showed three routes of migration across the West Indies to South America, and also that of the three the least likely one, that in which was an open sea 400 miles across, was the course pursued by the main body.

His second paper, on "The Changes of Plumage in the Bobolink," was equally original. He showed that the bobolink moults twice in the year, that its nuptial dress acquired in early spring at first shows each black feather with a broad margin of brown, which subsequently is worn and broken off so as to leave the bird in complete black plumage. He illustrated this point with numerous specimens.

Mr. Jonathan Dwight, Jr., read a most interesting not to say humorous paper on "Birds that have Struck the Statue of Liberty, Bedloe's Island, New York Harbor." He enumerated the species killed, and remarked on the great proportion of Maryland yellowthroats, which constituted fully half of the victims. The paper, though replete with facts and figures, was often in a very light vein, and in some parts even descended to the comic. It was, however, well received by all but a reporter present, whose paper became the object of some of the speaker's satirical remarks.

Mr. Dutcher read a paper from the pen of Professor R. W. Whitfield, on "Abundance of the Wild Pigeon in Central and Eastern New York in 1835." The Professor had described the great extent of the flock and the ruthless degree of the slaughter that prevailed in this region. The Hon. C. N. Merriam, who was present, also offered some remarks on the same subject and to the same effect, and was subsequently invited to put them on paper for publication in the *Auk*.

Dr. Merriam referred to the great change of nesting habits that has been adopted by this bird within the last half century. Formerly all nesting was done at great "rookeries," where many thousand built nests without attempting to conceal them. Now the bird was not known to nest excepting in isolated pairs, and this change the speaker believed would save the birds from extinction.

On the third day after the inevitable routine business, Dr. Geo. B. Grinnell, as chairman of the Audubon Monument Committee, was called on for a report. He made a verbal report of progress, asking that the committee be continued till certain proposed schemes for the prosecution of the matter should be developed.

Resolutions were then passed of thanks to the President and Board of the American Museum for courteously placing the rooms at the disposal of the A. O. U.; to Dr. Merriam for six years of unflagging service as secretary; and to the Linnæan Society of New York, for the handsome lunch provided each day by them for the union and its guests.

A motion to limit the amount to be expended on lunches in the future was lost. Mr. Ernest E. Thompson proposed that at the next annual meeting all members interested in photography as an adjunct of ornithology and in all kinds of illustration be invited to bring specimens to form an exhibition and assist in ventilating the whole subject of cheap accurate illustration. Mr. Brewster proposed to call in the aid of a stereopticon and on motion of Dr. Mearns the matter was referred to the Council.

The first paper of the day was by Mr. Leverett M. Loomis, "Observations on some of the Summer Birds of the Alpine Portions of Pickens County, South Carolina." He exhibited a number of birds supposed to be exclusively western which he had taken in Carolina; among them were willow thrush, russet thrush, Grinnell's water thrush, Brewer's blackbird and Leconte's sparrow.

The next two papers were read by Col. N. S. Goss, the genial representative of Kansas ornithology. In the first he denied the validity of the frosted variety of the poor-will (*Phalænoptilus nuttalli nitidus*), in the second he mentions the occurrence of *Anas maculosa* (of Sennett) in Kansas, but disputed its claims to rank as a species. In his proposed reduction of the former to the rank of a subspecies it is believed that the Council will uphold Col. Goss.

Mr. Jonathan Dwight next read on "Some Michigan Birds Observed near the Straits of Mackinaw During 1888," a most interesting paper, well read and well written, with characteristic outcropping of the humorous. Though the expedition described was productive of good results, it failed in one of its main objects, viz., the discovery of the passenger pigeon on its nesting grounds. "On the Western Form of the Warbling Viero," was the title of the next on the list, the author Dr. Mearns.

The meeting then retired to the adjoining room, where Prof. Ridgway was ready with a vast a array of skins of shore larks to demonstrate and explain the remarkable extent to which subspecies have been recognized in the group, and in every case he came off with flying colors and compelled the doubters and scoffers to admit that after all the recognition of these numerous forms must be something more than a merely arbitrary hair-splitting.

The rest of the day was spent in discussing shore larks, and as there were yet many papers ahead, a motion was put and unanimously carried to prolong the session for a fourth day.

On the fourth morning (Nov. 14) Mr. Ridgway in the chair; Dr. J. A. Allen presented by title a paper on the Maximilian types in the American Museum. Another on the extensive variation to which certain South American flycatchers of the genus *Elaenea* are subject. The extremes in the same species being divergent enough to warrant generic separation but for the fact that the intergradation is so complete.

He then remarked at some length on a recently published Waterhouse's "Index Generum Avium." He expressed his regret that the 12th instead of the 10th edition of Linné had been selected as the starting point; he also criticised certain insular methods and pointed out a number of errors, omissions and inconsistencies, but he characterized the work as a whole as one of the highest value to the student of taxonomy.

"Remarks on Dr. Blanchard's Report to the Congrès Internationale de Zoölogie, on a Code of Nomenclature Presented at the Paris Session, 1889," was the next subject by the same able speaker. This code he referred to as even more radical than that adopted by the A. O. U. The starting point for binominalism in ornithology was fixed at 1700 instead of 1758, as with Americans. The law of priority is to be as rigidly enforced as with us, but the terms are to be euphoniously latinized, and in this Dr. Allen opined that Americans would yet concur.

Mr. Frank M. Chapman presented a paper on the forms of Maryland yellowthroat, describing a new form (*ignota*) from Florida.

The next paper was by Dr. Allen, on "To what Extent is it Profitable to Recognize Geographical Variation among North American Birds." After reviewing the attitudes of American ornithologists toward taxonomy, during the last quarter of a century, and describing the "oscillations" between the two extremes of "lumping" and "splitting" in matters of geographical variation, he proceeded to outline the present state of affairs and to utter words of caution to the advocates of fine subdivision. He was of the opinion that little was to be gained by naming forms which were indistinguishable excepting by an expert with an enormous series of skins at hand. Much exercise of discretion and common sense, he believed, would be necessary in such matters to avoid bringing "our beneficent system of trinomials into contempt."

In the discussion which followed Messrs. Allen, Goss and Brewster took part. Mr. Brewster expressed his belief that differences patent to the lay following rather than those perceptible to the expert only, should be deemed worthy of recognition.

Dr. Allen then addressed the meeting on the status and distribution of "The Forms of the *Thryothorus ludovicianus* Group of Wrens," illustrating his remarks with numerous specimens.

Mr. Frank M. Chapman presented a note on *Cyanocitta stelleri littoralis*, recently described by Maynard, from Vancouver's Island. Mr. Chapman emphatically rejects the new race, claiming it to be a merely individual phase. In this he was supported by Mr. Brewster.

Mr. Chapman's next paper, on "Peculiarities of Coloration in the Woodpeckers of the Genus *Dryobates* from the Northwest Coast," was presented by title only.

Mr. Sennett exhibited a number of unusually interesting birds, among them a young robin with a hawklike bill; some motmots with the tail entire, others with the shaft stripped in the well-known racket-shaped form; a sora from Erie, Pa., which, while not a melano, was remarkably dark in its general color and obscure in its markings, and a rose-breasted grosbeak with the whole throat rosy to the bill.

"Notes on Some of the Birds of Orange County, Florida," by D. Mortimer, was presented by title only. Mr. Brewster read a note on "The Occurrence of the Little Brown Crane in Rhode Island," and another on "The Western Form of the Purple Martin." He stated that while no expert can distinguish the male of the Eastern and Western forms, no tyro need confound the females; he also described the males as booming after the manner of the nighthawk, a habit never noticed in the Eastern martin. His record of the Canada jay in Massachusetts called forth remarks from Messrs. Goss and Thompson.

Mr. Ernest E. Thompson referred to the habit of erratic migration of the species, and mentioned the sudden appearance of a great number of Canada jays which is said to have occurred at Toronto in 1837, when the species became as common in the streets as house sparrows now are; although both before and since it was unknown. Mr. Brewster, in response, spoke of another great migration of these birds along the Gulf of St. Lawrence.

Late in the afternoon the meeting adjourned to meet again at Washington on the third Tuesday of November, 1890.

A TAMED RUFFED GROUSE.

BANGOR, Me., Nov. 12.—*Editor Forest and Stream:* I witnessed a strange, and to me an almost unprecedented sight this morning, viz.: a perfectly tame, full grown ruffed grouse. It is a fine large male bird. I at first, in passing the window on the street, thought it a skilled specimen of the taxidermist's art. I stopped, went into the store, and upon inquiring of the proprietor, learned its history. It was an acquisition of but a few days' possession. He found it in almost an expiring state from starvation, in an unoccupied house in the suburbs of our city. You know of the wild frenzied flight of these birds in autumn, frequently dashing themselves to death against houses or windows; several have been thus killed in our city this season. This one seems to have dashed through a window of a deserted house, and not being able to find its way out, was almost *in articulo mortis* when picked up. With much difficulty it was restored. A drop of water was inserted in its mouth, then a bit of grape pulp, and so little by little nourished, until the bird now feeds kindly and confidently from the hand. It is almost omnivorous in its tastes. Takes clover leaves, raw cabbage, grape, apple, parched corn, or what is known as "pop corn," corn, birch buds, bread, etc. Solitary, silent starvation, seems to have annihilated the wild unconquerable instinct.

The secret to a door seems here to have been opened to its possible domestication. Its kind-hearted possessor is already inquiring round among the boys for a partner and wife for his solitary pet. Some starving imprisoned bird may yet be found by the farmer boys, beneath the snow crust after some winter storm, and allow us to carry out this curious experiment to domesticate a hitherto deemed incorrigibly untameable bird. E. M. STILWELL.

PAWNEE HERO STORIES AND FOLK-TALES.*

THIS book is from a loving hand, and that being so, there is a deeper philosophy in it than any cold pedant could possibly give. Pedants, pseudo-philosophers, can fling names at you, long courses of facts which may ride you round and round in a circle without seeming ever to make you touch anything. They are not of much use. Give me the horse that is not fixed on a track like the wooden animal of the merry-go-round, but one with life, instinct, scent—that keen scent which scents the *real* in the air—his oats, if you please; that animal that has sense enough to go to his provender; the man who knows where the real food of humanity is, and who, when he says "Come here and feed," will give you something to eat worth your while.

"Pawnee Hero Stories and Folk-Tales" is such a pasture. The real life of the Indian is touched here. Here you find, not the noble creature to pose as your specimen, not the ganglion of nerves to furnish a name to the worldwide nomenclature of science—something to label and put in a cabinet; but here you find—your brother. Separated some removes from you, owing to a different mode of life, different habitat, different luck some time or other. But he is religious, like you: his first care, like yours, is to get something to eat—to which end he may migrate, maraud, fight and get into lasting enmities and revenge; he gets along well enough with his lodge neighbor; he has, in the main, much grander and more dignified thoughts and conceptions than such as are likely to fall to a man who, for instance, is always poring over books of account, or always writing letters, or always trying to get rich by trading with people—the Indian's life gives him some advantages that way. He traverses the prairie—the prairie is boundless; he sees the stars at night; he is swift, on foot or horseback; he is cold with the wind, warm with the sun; his eye is on the river bottoms, the rolling bluffs, the beautiful horizon; he is hand in hand with nature. Often he is tense—when he hunts, when he rides beside the buffalo; he is abandoned, at times, to his full strength, his full energy, his full wits; so he *lives;* and, *living*, he gets that much nearer to God, nearer than we do who trot over our pavements day after day, enter our stores, and do and think all things in our own miniature, unlasting world erected by our own hand to the exclusion of nature.

In this book of Mr. Grinnell's we get near to the Indian as he *is* (no, let us say, in shame, as he *was*). We get near his heart, his soul. Mr. Grinnell has sympathy; not the mock sentimental thing that makes you drivel—though a drivel may not necessarily be out of place—but that broader sympathy that puts him, and you, if you have it, on a plane with the Indian, because it reduces you all to your lowest terms, or, rather, one may say, your highest terms; it reduces you to your simplest terms, that is, to your highest terms; you on the earth, on the prairie, wherever you are; *Tirawa*, God, in heaven, *i. e.*, outside of you; there are the three things, the earth, the maker of the earth, and you on the earth; therefore, you can walk with the Indian, as you can, perhaps better than you can in many cases with the white man. That is the atmosphere you get from Mr. Grinnell's book. It is wholesome. You can sniff it in by the handfuls, and it is just as bracing to you as that exhilarating, actual air of the Plains is, where the Pawnees ranged and hunted and fought and felt.

This is not taking up your time with philosophizing; it is only giving you the quality of the air that sweeps through the "Pawnee Hero Stories and Folk-Tales." You can not give it by simply telling what words are in the book, what its Table of Contents is. You cannot give it, either, by saying merely some other things, which, however, must be said. For instance, it is a rare thing that a translator, an interpreter, can so sink his own individuality and ways of thought as to let a person speak through him as through a tube. Yet, in half of this book, which gives narratives by one Pawnee and another in their own words, the writer of this book, who brings these tales before us, has absolutely effaced himself. No matter how hard you try, that is hard to do. Here, the Indian speaks to us; we are in his lodge; our elbow is near his; the pipe is before us; we hear him speak. Here again sympathy is at work.

Perhaps Mr. Grinnell could not have made a fitter or greater present to the Indians for telling him these tales, than he has made, by thus just letting these stories stand as they came to him. For, it is certainly a wonderful thing, in what an artistic way those stories are told. Let any one reading the "Hero Stories," stop and think as he reads; let him observe how well-rounded those stories are, and yet how not a superfluous word is used; let him observe the exquisite proportion of the story, the fine balance between description and action, between the treatment of the subjective and the objective, between the thoughts in the man's mind and the mention of his motives on the one hand, and on the other hand the working out of those motives in the action—or rather, the action as being accounted for by those motives. Any one who has attempted to write a story will be well aware of this besetting difficulty, this art of putting the mind of man and his action both properly before you, so as to represent humanity as it is and make it all seem real. It would be hard to find more artistic stories than these natural ones of the Pawnees are.

Mr. Grinnell mentions their great gesticulatory vocabulary, their acting. It all leads one to think, to wonder, whether there has not been a greater mind in the Indian than most of us have given him credit for. Because he has what we call savage ways, that is to say, natural ways, we have despised him. He has seemed simple. Because he can not do calculus, we think him mindless. But what is the mark, really, of greatness of mind? a knowledge of calculus, being used to mathematics? or that simplicity that bares the human breast to *final*

* Pawnee Hero Stories and Folk-Tales. With Notes on the Origin, Customs and Character of the Pawnee People. By George Bird Grinnell. Cloth, 417 pages. Illustrated. Price, $2.00. New York: Forest and Stream Publishing Company, No. 318 Broadway.

things, to time, to space, sky and earth, to the last of human motives—the last in the crucible when all others are evaporated—the desire of life and companionship? The author is just, and a very good advocate, too, to put the Indian thus in the box and let him tell his own story for himself. We listen intently, almost reverently, to this strange voice, to this mind that seems great; we think of the speaker after he has stepped down and gone.

There are other points in the book that cannot be adverted to here—the more detailed matters of composing and executing it—the thrilling, engrossing character of the hunting and warpath stories when the author tells them himself; his simple, excellent English that puts you side by side with the man he is telling you about; his modesty, too, in declining some of the honor that would naturally come to him and shifting it off on to the shoulders of Mr. J. B. Dunbar, who seems to be a brother spirit with the author; and, last of all, the affection seen in every spot where he speaks of Major Frank North, and his brother, Captain Luther H. North, the famous scouts, and seen, perhaps most touchingly, where he dedicates this book, not to Major Frank North, *Pa'-ni Le shar*, but to His Memory.

Mr. Grinnell is not an enthusiast, nor a sentimentalist, over the Indians. There are bad Indians, he says, as well as good. From his nearly twenty years' acquaintance with the Pawnees, hunting with them and living with them, having their esteem, he has been enabled to get a good knowledge of them. Lo! he has found them human; he tells us so, and tells it fascinatingly. It is hard to say whether the book will be found more valuable for its entertainment or its truth; it is very unusual to find one and the same document embodying so much of both; and, most of all, so deep a philosophy and love.

JOHN ELLIOTT CURRAN.

"CAPTIVE GIRAFFES."—The types say that no female giraffes were added to the collection in the London Zoo from '36 to '67. They should read two females were purchased. The original four consisted of three males and one female, and it would have been hard lines for the single one to have produced seventeen youngsters; particularly as the period of gestation is sixteen months.—F. J. T.

Game Bag and Gun.

TRAPPERS OF THE RAPPAHANNOCK.

A COLD, sweeping, searching east wind lifted the tide of the Rappahannock higher and higher against its banks, which rise from the form of marsh and shallow sandbar to that of the precipitous cliff. Great masses of light but incessant rain pursue each other across the fields, and penetrate the skin of the dejected cattle, until they shiver disconsolately in the fence corners. It is the first approach of winter, and the contrast with the lovely October weather of yesterday is sharp and striking. Recent frosts have killed the densely matted crab grass which covers the cornfields, and in fertile bottoms the ragged forms of the lifeless prince's feathers bow and toss their mangled plumes, like war-stained veterans at the close of a long campaign. All the color has been obliterated for some weeks, and now the bright crimson of their heads and stems is changed to the dull and lifeless hue of dingy brown. Beneath their shelter the little brown-coated sparrow and ortolan, sleek and fat with the prosperity of the fall seed harvest, rustle among the mats of crab grass and scarcely rise in their low, brief flittings, even at the approach of the passer-by. High in the air long bands of wild geese hold their carefully selected course among the clouds, and prepare for their descent upon the rushing waves of the river, which the winds have capped with crests of foam.

Just on the bank of the river rises a peculiar structure. It is the home of the trapper for the furring season. Built like a wigwam in shape, it is formed by poles placed on the ground in a circle, and converging to a point at the top, which is left open to permit the passage of the smoke arising from the fire, when lighted in the center of the floor. The hut is covered first with rude and coarse grass, and then coated over with earth and mud to exclude the wintry winds, which are very penetrating on the bleak marshes. Between the fire in the middle of the floor and the shelving sides of the hut are placed the rude articles of furniture, usually consisting of a wooden chest, in which can be locked the very limited supply of cooking utensils when the householders are engaged with the traps, and the large sacks, which, when filled with straw, serve for beds.

Rarely does the number of trappers exceed three, and sometimes only one pursues this laborious occupation alone. If the marshes, which are rented for the trapping season, from November until April or May, are very large, the trappers use hundreds of steel traps, varying in size from the small muskrat single-spring trap to the heavy otter trap. These traps are placed in the "leads," which are water pathways intersecting each other, and extending over the whole surface of the marsh at intervals. Some of the larger animals are trapped by a group of traps, so placed as to catch more than one of the animal's feet. These traps require very close attention, as they must be frequently moved to new situations, and many of the trapper's victims make their escape by gnawing off their own feet if left more than twelve hours in the traps. The method of killing the animals is by a blow upon the head with a short club, which the trapper takes in his hand. The muskrat is the commonest animal found by the trappers, and his skin sometimes sells for 30 cents, but usually 12 to 15 cents is the amount of its value.

The mink furnishes fur in two colors, red and black, and these skins are worth about 40 cents. The raccoon has very handsome gray fur, and its ringed tail is a special ornament, as it is always left attached to the skin. Its value is about 75 cents. Frequently the red and gray foxes are trapped upon the marshes; but by far the rarest and most beautiful of the fur-bearing animals is the sleek and silky-coated otter. Its skin is worth from $6 to $10, and the capture of this powerful animal often requires more than one large trap. It is an interesting spectacle to see a family of otters playing on the ice when the river is frozen over. They are expert fishers and capture their prey through openings in the ice. Otter hunting with dogs, which is so much enjoyed in Europe, is never practiced upon the Rappahannock, and the trapper is the only human enemy which this wary denizen of the marsh has to fear. Upon the light soils bordering the river the persimmon abounds, and both the raccoon and the opossum are very fond of its fruit. One hunter, in a single month of autumn, captured over fifty opossums and quite a number of raccoons by following these animals to their nocturnal feeding grounds.

Through the marshes run many creeks and estuaries of the river, and as these are usually very circuitous in their courses, and bordered by a dense growth of tall grasses, they afford most excellent opportunities for the duck hunter. The elbows and bends of the creeks are rather wider than the very narrow courses of the streams, and it is in these wider spots that the ducks come to feed. Seated in a small skiff, the hunter silently propels his tiny craft through the shallow water; where a sudden bend in the creek reveals his presence to the ducks, when too late for them to escape his gun. But so excessively shy and vigilant are the birds, that it is necessary to select a peculiar state of the atmosphere and a particular direction of the wind to secure the successful approach of the hunter. Late in the winter flocks of swans appear on the Rappahannock. Their flight is often during the night, and the elevation of their course is almost beyond the range of vision. They are recognized by their peculiar note, which descends from the moon-lit clouds with a weird and almost supernatural effect. They alight on the waters of the river, but too far off to be reached by an ordinary shotgun. It is a very interesting sport to shoot these birds with some of the improved rifles of long range, as it is a most difficult and rare achievement.

Hawks in great variety abound on these riverlands, and a trapper once found a wild duck caught in one of his muskrat steel traps, and a hawk in another, just a few feet distant from the duck. Evidently the hawk had attacked the duck and been caught in a trap himself, although neither trap had been set with any view to catching either duck or hawk. The wild geese are sometimes caught in the steel traps, which are placed in the wheat fields, where they feed upon the young wheat, but it is believed that they rarely ever revisit the field where this result has been accomplished. During the winter vast armies of blackbirds move over miles of the river country, and sometimes they literally darken the sky as they pass over, startling the air with the rushing sound of their countless wings. Frequently the bluewing hawks hang upon the flanks of these sable hosts and cause great devastation in their ranks.

P. S. HUNTER.

THE GUN TESTS.

Editor Forest and Stream:

Your contributor "Nick" has thrown a flood of light on the gun tests. From his figures I draw some conclusions as to gauge. The 10-bores beat the 12s every way; for instance, at 40yds. the average for the fifteen 12-gauge pattern is 52.5; at the same distance the 10-bores average 54.6. At 60yds. the average for the 12 is 22.2, the 10-bore scores 26.0. In penetration the 10 is still ahead at all distances, and both barrels. At 40yds. the 12-bores, right barrel, for 14 guns, average 14 sheets, left barrels average 14. At 60yds. the right barrel 12s average 7, the left 6. Now, the 10-bores at 40yds., right 21, left 23; at 60, right 13, left 14. This is the average for 14 guns, leaving the Winchesters out. Like "Nick," I am surprised that the firms mentioned are not represented. These tests are very valuable to all classes of shooters, and tell a true tale of what guns will do when fairly tested. They prove the superiority of the 10 over the 12, and I think the good work should go on until the whole line of guns are tested, and then comes the loading in endless variety. I am anxious to see the Ithaca put through the test.

D.

IRONTON, Ohio, Nov. 5.

Editor Forest and Stream:

Your correspondent "Nick" has placed under obligations those who are interested in the reports of your trials of guns at target. His table of patterns, percentages and other details brings the otherwise somewhat-hard-to-grasp mass of statistics into manageable form and compass.

Referring to his comments accompanying the compiled table, I am unable to draw the same conclusions. His first is that "it pays to put plenty of charge in a gun." If he means powder, the proposition is not sustained by the performance of the first gun on the list, the Remington 16-gauge, which, with only 2¼drs. and 1oz. shot (according to the generally accepted theories one would say, too much shot for the powder charge), gives a penetration equal to any on the record and pattern among the best. Compare Remington 16-gauge, 2¼drs., 1oz., pattern 60 per cent., penetration 22 and 16, with Parker 12-gauge, 3¼drs., 1¼oz., pattern 67 per cent., penetration 14 and 16. The same Parker 12-gauge in the first trial, with powder and shot in the proportion of 1 to 5¼, gives better penetration than the above, where the powder charge is greater relatively—viz., 1 to 5¼.

As to whether it pays to buy a cheap gun depends on what is meant by cheap. The $80 Parker is a cheap gun compared with the $350 Greener, and its target compares favorably with that of the latter. There are now some very well built guns in the market at $25 and thereabout, which shoot well in the field, and it would not be surprising if some of them would show well at the target in competition with the most costly guns.

"Nick" says in regard to hard hitting, "It is hard to see what advantage a heavy 10-gauge gun has over a 12 or even a 16," and the targets show that it has none. In pattern the larger gauges should, and do, show an advantage, because the charge is larger, and the guns shooting equally well, the larger gauge gets more on the target.

I think these points are about the only ones on which the targets throw any light, viz., the advantages, if any, of large over small gauges, and the best relative proportions of powder and shot, and if my deductions are correct the answer to the first is, there is none in penetration and some in pattern. The second question I think the most important of all, and the showing in the trials is so contrary (as to penetration) to the generally received opinion that I think it should not be accepted as conclusive until confirmed by further experiment.

Now let us assume the purpose of the trials to be to ascertain first the best weight, length and proportions for guns of each gauge. Suppose we take a 12 like the Parker, already used as representing an excellent weapon of that size. Try it against others of greater and less weight and the same quality. Do the same with the other gauges, using of course the same charges for all of similar calibers. Take the gun that gives the best results, and with it try carefully various combinations of powder, wads, shot and modes of securing the charge, including the use of the brass star wad, which ought to be very good, although it has not been much used so far as I know.

This matter of fastening the shot wad is another very important one and worthy of patient experiment. In these days of machine made guns, it is fair to suppose that the load that does the best work in one good gun will do well in all; and as ammunition will be bought fixed hereafter, it is of the utmost consequence that the loading be as nearly perfect as possible. It is claimed that the combinations adopted by the various ammunition makers are correct and approved by experts, and perhaps they are all right; but a series of experiments under your system would be very satisfactory in corroborating this or otherwise. The same operation would, of course, be needed for each gauge and for each size of shot.

To recapitulate, ascertain the best weight, length, etc., for each gauge of gun; the best proportion of powder to shot with each size of shot; the mode of wadding on powder and the best way of securing wad over shot. This would give definite aim and purpose to the trials and the result would shed light on the most important questions involved in the use of the gun. Instead of this we have so far a miscellaneous collection of statistics showing how Mr. Brown's 10-gauge performs with one load, Mr. Jones's 12 with a second and Mr. Robinson's 16 with a third, all interesting but hardly furnishing data from which to draw conclusions of practical use to Smith when he wants to buy a gun or load or order cartridges. Pardon my presumption in offering these suggestions.

T.

AIMING AHEAD.

Editor Forest and Stream:

When a flying object is to be hit, a baseball club and a gun are one and the same thing. And it no more becomes a good marksman to take sight along his gun before shooting at a bird than it would a ball player to take sight along his bat before striking at a curving incomer of a ball.

The article by "W." in your last week's issue, on the subject of aiming ahead, is very instructive from a mathematical standpoint, and very interesting to those of us who profess to be wing-shots: but are you aware, Mr. Editor, that hundreds of anxious embryo wing-shots are poring over that article and thinking how nicely they will apply the principles when next they go into the field? My advice to any one who really wants to shoot birds upon the wing, is to defer the mathematics of the thing until after the art has been acquired. He who would become a wing-shot must look at the bird and not at the gun, just as he looks at the ball instead of looking at the bat; and then in the field he will soon learn to bat the birds with the shot. If you ask him how far ahead he aimed when a fine cross shot was made he will be unable to tell you. The estimation and relative placing of all of the factors in the problem, *i. e.*, the distance, the speed of the bird, the speed of the shot, the angles and curves of flight, will all be done intuitively. There are a certain number of men who learn to shoot accurately by taking sight along the gun, but if one of these men is placed in a thicket where ruffed grouse are abundant, the grouse will all come out, and so will the gunner, and all will be in good condition after they are out. That at least is the rule, as far as my observation goes. Brush shooting includes a factor that cannot be managed by the accurate "sighter," and that is the point of suppressing the image of the trees on the retina of the eye, when grouse is dashing through the branches. It is only the man who looks at the bird and not at the gun who can kill ruffed grouse well in thick brush, and the comical accident of firing the whole charge of shot into the trunk of a large tree while watching the bird and suppressing the images of all other surrounding objects often occurs to him. That reminds me that the gunner often has a practical demonstration of the fact that it takes an appreciable amount of time to think. When a bird is flying away from A. and B., the bird is killed stone dead by A. B. knows that the bird is dead, but he was so nearly ready to shoot that his brain does not have time to send word to the muscles to stop, and so they continue action and B. shoots at the bird which he knows to be already dead.

In conclusion let me again warn beginners against aiming ahead according to the mathematical lesson given by "W." in the last number of FOREST AND STREAM. If they do not learn to use the gun as they do the baseball bat, their ambition to become wing-shots in the brush will lead to disappointment.

I do not remember ever to have put my head anywhere near the gun when wing-shooting, but I have frequently killed more than half a dozen ruffed grouse in succession in thick brush. Perhaps I have as frequently missed half a dozen in succession, but that isn't such a pleasant thing to remember, and I'll be blessed if I'm going to try to think of anything of that sort.

ROBT. T. MORRIS.

NEW YORK.

THE QUESTION OF BORES.—*Editor Forest and Stream:* Being a reader and admirer of the FOREST AND STREAM, I take the liberty to ask a question of your readers, which, if answered, will settle a question which I have been trying to solve by experiments and observation for some years. Which do you consider the best "all-around" gun, a 10 or 12-gauge of equal grade? What I mean by "all-around" gun, is one for general shooting, such as grouse, quail, woodcock, wild duck, etc. I have owned several of each, and never have been able to note the difference. Of course, by using a 12-gauge we can use a lighter gun. A reply will be thankfully received.—W. S. K.

VIRGINIA "PARTRIDGES" AND "QUAIL."—A gentleman who returned Oct. 16 from Virginia, reports that quail are very abundant in the hills around Charlottesville, the county seat of Albemarle county. In that locality he says young quail are called "partridges" and old ones are always quail. Probably the old "quail" may really be ruffed grouse.

THE CONNECTICUT SNARERS.—Fredrick Chase, a Housatonic station agent, at Kent (Litchfield county), was arrested last week charged with selling ten ruffed grouse that had been snared. Chase will have his trial Nov. 25 before Justice of the Peace Perry Hefcut of Kent.—G.

THE CHESTER FOX HUNT.

THE second annual hunt of the Western Massachusetts Fox Club was held at Chester, among the Berkshire Hills, Wednesday and Thursday, Nov. 13 and 14. The events of the two days are thus reported by a special correspondent of the Springfield *Republican:*

About 75 hunters had assembled at the Chester House with 20 dogs at 5:30 Wednesday morning, and at 6 they started in four squads for the hills, James D. Smith, formerly of Chester, but now of Athol, acting as captain of the squad that went to Abbott Mountain, George Roraback of the squad to Gobble Mountain, Charles C. Clark, Cemetery Hill and E. A. Perkins to the Spelman farm. These squads again divided when they arrived at the hunting grounds, and were stationed by the captain so as to cover as many foxes as possible. About 6:30 the voices of the hounds rang out clear on the Eager lot near Mt. Gobble, and in a short time it was plain to be seen that a fox had been started from his hiding place and was encircling Gobble Mountain. Many hunters who had stayed in the village, not intending to join the hunt in the morning, then took their guns and started for the mountain. The fox passed around the west side of Gobble and over Rock Ridge before any of the hunters got there, and took down the Austin Brook run, where Dr. Burton of Pittsfield and Charles Clark were stationed. Dr. Burton fired both barrels at him, badly wounding the animal, which turned and ran toward Clark, who laid him out. So the honor of killing the first fox goes to Dr. Burton and Charles Clark. The squad that went to Cemetery Hill was not much behind, and succeeded in starting a fox on Cemetery Hill which passed over Capt. Parker's Hill and back across the Parson's run, where he was brought down by R. E. Brace of Lee. The squad that went to the Spelman farm succeeded in starting a fox which led them off the route near Becket Center, when L. Bill of Worcester was the lucky man to bring him down.

Smith's squad that went to Abbott Mountain had poor luck to begin with. They succeeded in starting three foxes soon after arriving there, but the animals kept the mountain, one going to North Chester and the other two to Middlefield, where they stayed the rest of the day. The one that went to North Chester started back in about four hours, and when he came around the point of Abbott Mountain, Alfred Wright, of Chesterfield, succeeded in bringing him down. By 10 o'clock it was raining so hard that most of the hunters returned.

The first of the invited guests to arrive was Benjamin Coit, of Holyoke, who was on hand Tuesday. Mr. Coit is the veteran fox hunter of Huntington Hill, and in his younger days was well acquainted with the Chester ground. He is 86 years old and is obliged to use crutches on account of lameness, yet the temptation was so great he says he was bound to go and hear the horn blow if nothing else. The Springfield party were together largely through the forenoon. The fog was so dense as early as 7 o'clock that the foxes had an easy time of it. About 11 o'clock the rain began to fall, driving in by 1 o'clock all but the bravest. Capt. Smith's party had three lively dogs. They were Major, owned by Capt. Smith, W. A. Gibson's Mike and John R. Thayer's Fleet. They went north to Abbott's Hill, Major striking the first scent. Although Major's fox was finally brought down, it is sad to relate that no Springfield man could claim his pelt. However, one of the party is said to have lost the chance of a life-time, and that man's name, they say, is Woodward. Having climbed one of Chester's loftiest peaks, the pause for breath lent to his ears the sound of dogs pursuing a fox near by. He took his position in an impregnable corner of a stone wall and called to his companion to retire to the next corner, saying that he would show him how to shoot a fox. The friend retired and waited. Half an hour passed quietly and not unpleasantly. Suddenly the companion saw the fox, his great, warm tail on a line with his sharp nose, coming straight for Woodward. Each moment he expected to hear the crack of Woodward's gun and see—a dead fox. But the animal unscathed passed the hunter in the corner. Investigation showed Brother Woodward to be fast asleep. And so he cannot be classed with the immortal four who brought in their trophies. If the rain continue to-morrow the run will be indefinitely postponed, and the indications are so unpleasant that hardly seventy-five will stay over to-night.

The social event of the meet was the dinner at the rink this evening. That structure was turned into a hustling lodge as well as a headquarters for all the guests. The walls were covered with branches of cedar and pine boughs and adorned with oriental lanterns and national colors. In the rink were four tables 100 feet long and accommodating about 250 men, many coming from Westfield and other towns on the 7 P. M. train. The old board of officers, including the executive committee, was unanimously re-elected, a vote of thanks was tendered the management, and then began the after-dinner speaking. The orators were E. H. Lathrop of your city, Messrs. Knowles, Thayer and Kinney of Worcester, Charles E. Hibbard of Pittsfield and Ledyard Bill of Worcester. Mr Kenney invited all to attend the hunt at Worcester, Wednesday, under the auspices of the Worcester Fur Company. A characteristic letter was read from that well-known hunter and trapper, George M. Stearns of Chicopee. Three cheers were given and then "good night."

About seventy-five out-of-town hunters left Chester for home on the midnight trains Wednesday evening, as the weather was so threatening it did not warrant them in staying over to renew the hunt yesterday. The morning's trains took away about forty more, leaving some thirty or forty to try their luck at reynard again. Three squads started out in the morning, one going to Abbott Mountain, one to Chapman's Four Corners and one to Stebbins' Hill. The squad that went to Abbott Mountain started a fox in the swamp on the north side of the mountain, Foster Beach's dog Billie, Henry Carter's dog Sam and Willis Hunt's dog Cuff striking reynard's track about the same time. They drove him through the swamp into Johnson's sugar orchard, where Foster Beach, of Worthington, fired both barrels at him, but did not succeed in stopping him. He turned to the left and passed north around Johnson Hill and back, when Beach fired two more barrels at him, turning him to the right in the direction of Abbott Mountain. Beach then started for the Ingell Run, and found Alfred Wright, of Chesterfield, and Henry Carter, Willis Hunt and Orain Beach, of Chester, there before him. Reynard soon came in sight, and all the hunters except one got one or more shots at him, but could not bring him down. Mr. Beach, who is one of Chester's veteran fox hunters, did not get a shot, but he started for the Strong lot, thinking the fox might cross there. He had barely got there when reynard mounted the wall in front of him. Beach quickly gave him a charge in the face, which brought him down. The other two squads did not have any luck. The Stebbins' Hill squad started a fox, and Homer Smith fired one shot, which hit, but did not cripple him. He then disappeared. The squad that went to Chapman's Four Corners started several foxes, but everything was so wet that the dogs could not follow their track, and the hunters finally gave it up and returned to Chester, taking the noon train for home. About twenty-five remained for the evening train. This ended the second annual fox hunt of the Western Massachusetts Fox Club, which, on account of the weather, has not proved as much of a success as was anticipated, yet appears to have been satisfactory to all.

WORCESTER, Mass., Nov. 15.—*Editor Forest and Stream:* The Worcester party went to the annual hunt of the Western Massachusetts Fox Club at Chester, with an even dozen of the finest foxhounds Worcester hunters own. The Berkshire men were not slow to accord them all a hearty hunters' welcome and paid many a glowing tribute to the fine appearance of our dogs. Well, we have got some good ones. I waited for a late train Tuesday night for a friend. I found two of them, and after getting their badges, etc., we were tendered a banquet by Mr. Harwood, of the Hampden Emery Co. Harwood! if the foxhunters were all like you, I don't know but I would quit bird hunting and join them just for the association. He is one of the salt of the earth, verily.

The hunter's horn sounded 5 A. M., and on looking out of our windows we imagined Linfield and Harry Smith must be up there coon hunting, as the whole place was lighted up in a halo of red fire. Our party were driven about four miles west under the leadership of Mr. Perkins, of Springfield; and letting loose the hounds we soon had three foxes started. The fog was so dense that we were unable to get the lay of the land, and were unable to locate the runways. Mr. Ledyard Bill was fortunate enough to intersect one of them, which he killed with the second barrel ahead of Webster Thayer's hound Tige, and slipping in a third shell he tumbled over a stone wall in his haste to get at the game, dislocating his gun, luckily without injury to himself. The other hounds were driving over beyond Cherry Hill and finally went out of hearing to the west, only one man getting a shot. By noon it commenced to rain and we started back. The chase, though short, had been a hot one, and a knowledge of the country would probably have enabled our party to get several chances to secure another brush. The afternoon quickly passed in giving and listening to reports of the different kills, and the banquet found a a large party ready to enjoy the most excellent dinner provided by the club.

The grand total was four foxes, and here comes the peculiar part of it. Ledyard Bill killed one sure, for we saw him when he was scarcely cold. Mr. Brace, of Lee, killed one, as witnesses testified. Another party reported by telephone that they had one, and as they were reliable parties no doubt was expressed but that they had. Dr. Burton, of Pittsfield, killed one, for "Lisha" says he saw the smoke from the Doctor's gun when he fired and saw the fox fall. So did Mr. Clark. Mr. Clark, of Chester, killed one, for Dr. Burton stood right there and saw him do it, and he is an honorable man. Mr. Knowles also witnessed it. Now the fox reported killed by telephone was, of course, not produced, so setting him aside there should have been four pelts, Mr. Bill's, Mr. Brace's, Dr. Burton's and Mr. Clark's, but strange to say only three were shown, and stranger, only three foxes were claimed to have been killed beside the one reported by telephone. Hence we ask, where is that other fox?

Oh! Berkshire, land of fogs and foxes galore. You entertained us royally; and feasted and toasted us like princes. Your hospitality was unbounded. Our respect for your people and your country is truly great. Our mountains are to your hills as toadstools. And our yarn spinners! We simply raise our hats to you. We are as nothing.

The Worcester party returned home during Thursday, all pleased with the trip. The weather was poor, but every one had a good time, and all the hounds but one were secured and brought back, which was better luck than could have been expected. Many pleasing acquaintances were formed which we hope to renew. We are satisfied with our showing. Worcester furnished at least half of the total number of hounds in the hunt. Mr. Bill, Mr. Clark, and Dr. Burton killed their foxes ahead of Worcester dogs, and Mr. Bill was himself one of us.

HAL.

WILD TURKEYS IN NEW ENGLAND.

Editor Forest and Stream:

In your issue of Nov. 14 I notice the communication of Mr. C. H. Ames referring to wild turkeys in New England. Thirty years ago wild turkeys were frequently reported to have been seen on Mount Tom, Mass. An old acquaintance of mine was, early one morning, driving along the road between Mount Tom and Mount Holyoke, when he heard the sharp *quit, quit, quit,* of a turkey high up the side of Mount Tom. Looking up he say a large wild turkey flying out from the treetops of Mount Tom. The length of its beard showed it to be an old gobbler. He flew high over the road and disappeared in the forests of Mount Holyoke.

Soon after the first battle of Fredericksburg, which must have been twenty-six years ago, I came up from our regiment in front of that place, for a brief visit to friends at Easthampton, at the foot of the western slope of Mount Tom. The day I was there a party from Easthampton went on to Mount Tom hunting for gray squirrels, and upon their return reported having flushed a large wild turkey, which flew away toward Mount Holyoke. This was the last occasion of a wild turkey having been seen that has come to my personal notice, but I should presume that parties living in the vicinity would be able to reliably locate them there at a later date.

There are numerous places in western Massachusetts where this finest feathered game of America once existed in large flocks, and if properly protected by law would still be found in reasonable numbers. They are still quite abundant in parts of Michigan and in West Virginia, and if Massachusetts and other New England States would pass laws preventing their being killed at all times except during the month of November, it would pay the game societies of those States to get live stock from Michigan or West Virginia and place in the northeast forests. None should be killed for the first three or five years, in which case, owing to their extreme shyness, it would be almost impossible to exterminate them during the open season of November alone. As they are readily trapped, all trapping should be prohibited.

Fifty years ago they were abundant in the large forests of southern New Jersey, as I have been informed by old residents there, but they were exterminated by trapping for the New York and Philadelphia markets. While residing in South Jersey, I tried repeatedly to induce the West Jersey Game Society to get some wild turkeys and place in the forests there, but no attention was paid to the request. Supposing the Society would do something, I asked the New Jersey Legislature to pass an act for the protection of the birds, which they promptly did. Finally, as the game society would take no steps toward procuring a stock of wild turkeys for the still immense forests of South Jersey, I decided to do so on my own account, although disabled physically so as to prevent hunting them myself. I advertised in Michigan and other newspapers, and soon found where over twenty fine wild turkeys could be had at reasonable prices, and more at unreasonable rates. About that time I decided to return to Ohio, and turned the turkey enterprise over to Mr. Lorillard, for his preserve on the Erie Railroad.

I never notice any reports of wild turkeys in the Adirondack region, but there is no valid reason why there should not be thousands of them there.

MILTON P. PEIRCE.

COLUMBUS, Ohio.

CHICAGO AND THE WEST.

I WAS sitting in the office, solving the question of game protection, with my feet on the table, when in came Mr. Fred Donald, wearing that peculiarly innocent smile which has always carried him to success in railroad work and poker. Mr. Donald, I need not repeat, is the general passenger agent of the Chicago and Atlantic Railway, president of the Gun Club of Chicago and president of the Illinois State Sportsmen's Association. He is a dead shot on a sliding tariff or a clay bird. I can say just what I please about him, for he is out of town now, anyhow.

"FOREST AND STREAM is interested in game protection, is it not?" said Mr. Donald.

"It are," I replied, with gravity.

"That's what I thought. Well, Charley Burton and Hank Smith and I thought may be you would like to run down into Indiana, a hundred miles or so over the road, and protect a few quail from the hard winter that is coming on. We'll go down in the car, you know, and there's a boy to cook for us, and we can live in the car. We have a couple of dogs, and I know there are quail where we are going. Besides, the last time we were down we killed three coons and cut a bee tree. The scenic attractions along the C. & A. ——"

"Don't say another word! This outfit knows a good thing when he sees it. 'Bout when do you want to start?" By this time I had gun, valise and shell box together, and was on the point of calling a cab. Delays are never desirable on such occasions.

We started that evening on the big C. & A. Eastern through train, of which we formed the last coach. "The car," to which Mr. Donald so modestly referred, proved to be the official car Fredonia, and I think it was built to order for this occasion. Provided with smoking-room, dining-room, sleeping apartments and kitchen, it came near being as pleasant a hunting-camp as anybody ever saw, and the fellow who would find fault with it would kick about the door-plate on his own coffin. And there was Scott, the colored cook, the most important personage on hand, after the dogs; and there was Dick Turtle's pointer, Lee, confiscated for this trip; and there was Frank Arrowsmith, the conductor who pulled us out—a great many in the East will remember him as a frequent winner in the fly-casting tournaments and a trout fisher from 'way back—and who seemed to drift from the front end of the train to the rear car after every station. Charley Burton I suppose everybody in this neck o' woods knows. He is a city passenger and ticket agent of the Kankakee line, and can tell a fish story with a tranquil eye. And everybody on Clarke street, at least, knows Hank Smith, just as everybody on the boulevards knows his brother, Ed Smith. He doesn't deal in dry goods, you know. Not long ago he was fishing, up in Wisconsin, and ran across a blanketed Indian to whom he offered a drink of Apollinaris out of his flask. The Indian remarked that this was "haep good." "Yes," said Mr. Smith," that's my special summer brand, copper-distilled, made before the war. Say—" And when the boys found him he had the Indian up a tree, and had nearly sold him six cases of the Tennessee brand. Mr. Smith now denies this story, but it is true, and is only one more instance of the commercial activity which has made this city what it is.

We made our run of nearly one hundred and fifty miles before midnight, and in the morning awoke to find the good ship Fredonia anchored on a side track in a little town whose only feature seemed a short and low-browed sawmill with a falsetto voice. Scott, arrayed in faultless linen and a gleaming smile, served us a breakfast which faded away even as the stars of the morning faded, and then we went out and found Mack Middleton, the young resident who had in charge Mr. Donald's setter Smike, who made the other dog in our battery. A few minutes later we started afield, numbering five guns with Mr. Middleton. The latter's father started out with us, but didn't count, for he shot a muzzleloader and unfortunately lost his shot pouch early in the day.

We found a bevy of quail within 500yds. of the car, and after that we found quail wherever we went; so many, indeed, that none of the party remembered ever to have seen a like number on the same amount of territory. The country seemed alive with them. A great many of the birds were not more than two-thirds grown, and as this was about the 20th of October, they were doubtless second-brood birds. It would be impossible to say how many birds we struck in all, for the birds were packed in large numbers. In one little swamp, which could not have covered over five or six acres, we put up at least 400 birds, and we could hardly drive them away from the place at all. And yet, although the thicket was

full of flying quail, the cover was so dense and difficult that we made but a very poor showing. The season was very dry, and the frost had not yet cut down the vegetation; therefore, though the dogs did their best, they rendered comparatively little assistance either by pointing or retrieving. We lost dozens of birds that fell in the tangled thickets, and, indeed, spent more time looking for dead birds than in hunting for live ones.

We had any amount of shooting, mostly snap-shooting in the hardest kind of cover. Shooting in all about two half days, we killed considerably over 100 birds, yet the number actually bagged averaged only about a dozen and a half to each gun. Mr. Donald's dog Smike, a promising young English setter, was sick and unfit to work, and the pointer Lee seemed actuated by some subtle sympathy with him, and also lagged close at heel. It was a case of every man his own retriever, and many was the jest or deep-mouthed exclamation which followed on this work. I never was on a hunt where so many birds were lost. Still, we had all the fun that anybody ever did have, and two pleasanter days must indeed have been rare ones for any shooter. We did not need to walk very far, but strolled and chatted leisurely through the tinted autumn woods, the sere and yellow corn or the many-handed thicket. It was a pleasant time, and one to make a shooter regret that such days of upland shooting are so rare.

I said we did not walk far. I wonder if any shooter has an idea how far he does walk in a day? Mr. Donald had a pocket pedometer with him, and at the end of the first day this machine showed that we had traveled seventeen miles and a half, though we had at no time been over four miles from the car. When Mr. Donald saw the record, he gasped, and declared he couldn't go on any coon hunt or bee-tree expedition that night. The rest of us, who didn't have any record, concluded to go out, Mack Middleton having produced in open court his celebrated coon dog, which being critically examined under the bench show standard for coon dogs, was given a vhc. on the spot. Scott, the colored cook, had never been on a coon hunt, and so we took him along. He carried the ax. Mr. Smith carried his gun. Mr. Middleton carried the lantern and Mr. Burton carried the pedometer, representing the scientific corps of the coon hunt, and resolved to establish reliable data bearing upon such expeditions.

The dog in hand was not an old dog, but he had that old look which all true coon dogs have, and proved himself possessed of a ripe experience in his specialty. He climbed up on stumps, sniffed about the trees, and even ran along the top of the rail fences for rods at a time —a thing none of us had ever seen any other coon dog do to a similar extent. He was, so to speak, a dandy, and the only trouble about him was that he gave the pedometer a hot box long before midnight. We treed in all three coons; one up a hollow tree, where we couldn't get him out, one in a big tree where we couldn't "shine his eyes," and one in a small tree where we did shine his eyes with the lantern and knock him out with the shot-gun, much to the delight of Scott and the dog, who both at once fell upon him.

This "shining" of a coon is something which takes considerable experience and skill. Mr. Middleton was an adept at it. He tells us that an old coon which has been hunted will shut its eyes, or only peep out of a corner of one eye at the light. When "shined," the eyes of a coon look like two little balls of green fire, distinctly resembling some phases of a fine opal.

We learned another thing about coon hunting, when we saw Mr. Middleton tying a band of paper and rags about the trunk of a tree where we had a coon treed, but could not see him. "A coon won't cross a line like that at night," said he, "but will stay up the tree till after daybreak. I have come back to a tree early in the morning that way many a time and got Mr. Coon. They come down a tree backward, and if they touch anything out of the common, it scares 'em."

At 1 o'clock in the morning we paused in our nocturnal wanderings, and lying down among the leaves fell to telling stories. "We might as well wait," said Mr. Middleton, "and let the dog work around till he strikes trail." So we waited, and told stories, and lay and lied by the light of the lantern for an hour or so.

"Seems to me like that dog is an awful long time striking a trail," said somebody; but still we had confidence in him, until at length a suppressed titter attracted our attention, and looking behind the log we found the dog lying on his back, convulsed with laughter at one of Charley Burton's stories. That dog was no fool. He wasn't going off in the woods by himself while Charley Burton was there telling stories.

We went home then, and when we reached the car it was nearly 3 o'clock in the morning. Mr. Burton looked at the pedometer, and nearly fainted when he saw that it registered 33 miles. That included the whole day and the night's walking. We started out again soon after breakfast, but Scott was not quite so early with his breakfast that morning as usual. On the evening of the same day the "Limited" through train pulled us off our siding and spun us back to the city, after a delightful little trip indeed. This is how four of us, at least, came to know there are quail in Indiana—and coons, too.

E. HOUGH.

WORCESTER, Mass., Nov. 16.—The Worcester Fur Company held a meeting this evening to arrange for their annual fox hunt on Wednesday next. It was reported that the score of the club this season is thirteen foxes. The arrangements completed this evening indicate one of the largest gatherings of the club since it was organized. It is now believed that Wednesday morning there will be one hundred men and at least fifty dogs at the start. No boys or rifles will be allowed, and all foxes shot must be brought in with their pelt on. In the evening the men will report at the Bay State House in this city, where a supper will be served at 7 o'clock. The interest shown in the meeting indicate that it will be the most enjoyable event of the season.—E.

LAKE ERIE GILL NETS.—Judge E. O. Potter, of the Ohio Fish Commission, recently commanded a secret expedition from Toledo, which captured over 150 gill nets illegally set in Lake Erie waters. Suits have been brought by some of the fishermen, who claim that the law prohibiting gill nets is "unconstitutional because it does not operate the same in all sections of the State."

LOOK AFTER THE CRIPPLES.

HAVING recently returned from my fall ducking trip, an evil that has long troubled me has more than ever impressed me, and is a cruel wrong that, I fear, is not duly considered by many, if not most, duckers; and certainly not by guides, as a rule, though even among guides there are exceptions. The wrong is by no means of recent date, though it has greatly increased since the advent of the much-prized breechloaders.

Most ducks are very tenacious of life, and although winged or otherwise severely wounded, will make persistent efforts to escape; and often, quite too often, succeed, only to die alone or become victims to minks or hawks.

When ducks are flying lively, and we are shooting right and left, it is to be expected that some will fall that the boatman cannot get without active work. So rather than take the necessary time to chase the cripples we are apt to say, "Never mind going after that bird; I can kill two others while you are chasing that one."

This is where the wrong and cruelty come in, and no effort or loss of needed time should be allowed to prevent a thorough endeavor to secure the fleeing cripple. Better lose three unharmed birds than fail to recover one that has been winged or otherwise seriously wounded.

I am particularly fond of wing-shooting while decoying, but I notice that in that way more cripples are made than when sitting in the water, or just before alighting to the decoys; hence, of late, I have generally adopted the latter practice. Of course, many good shots are thus lost, and fewer ducks are killed, but certainly it is more humane, and in the end more satisfactory to let birds pass unharmed than to wound them to a lingering death. I pity the man that can heartlessly recount the particulars of game that he has badly wounded and finally lost, whether it be feather, fur or fin.

Surely the pleasure of recalling our hunting experiences does not consist so much in the number of birds knocked down in any one day or one hunting trip, as in the neat and skillful manner in which they were killed.

I am glad that through the continued efforts of FOREST AND STREAM the bad practice of spring shooting is becoming more and more a thing of the past, and will, I trust, be entirely abolished by stringent laws if necessary.

J. H. D.

POUGHKEEPSIE, November, 1889.

THE SOUTH CAROLINA SEASON.

THE close season for game expired the last of October, and since then several parties have been out after Bob White, but no large bags are reported. Two sportsmen (?) from the city of Anderson went out one day last week, and came back highly elated over their success. One of them killed a screech owl and the other a single partridge. The boys tell it on the one that got the owl that he flushed a covy of birds and fired at them, and killed the owl sitting on a bush away to the other side of where the partridges were flying.

Small game, which is all the kind we have here, is fairly plentiful. Partridges, rabbits and squirrels are to be found in sufficient numbers to make hunting them interesting, but owing to an unusually heavy crop of grass and weeds, hunting partridges and rabbits is more difficult at present than it will be when vegetation dies down.

A few opossums are still left to entice the night hunter to forego the pleasures of sleep for the time and ramble around in search of them. It is wonderful how so sluggish an animal as a possum survives the nightly attacks made on them by the proverbial darky and his dog, assisted frequently by white men and boys.

J. S. McCully and W. T. McGregor are off on a fox hunt in Abbeville county. Foxes are reported to be so thick there that dogs find it difficult to run one fox for running another. Mr. McCully has a young foxhound bitch from best native stock that ran a race to the kill before she was six months old. She was "right there" when it was caught and took hold of it as if she would tear it to pieces. She is a beautiful white, black and tan, well grown, and combines some of the best foxhound blood in the South.

As fox hunting is such a grand sport, why do not some of FOREST AND STREAM'S numerous correspondents give us some of their experience in this line? It seems as if it would interest a great number of your readers.

BLUE RIDGE.

DENVER, South Carolina.

VERMONT DEER.—The deer put out in Vermont some years ago have multiplied, and the enterprising sportsmen concerned in the work of restoring the deer forests are sanguine of sport when the time shall finally come for hunting them. Two men were arrested the other day for having illegally killed a deer in Chittenden; one of them, Charles E. White, was fined $50 and costs, or $56.91 in all; the other was acquitted. Commenting on the case, the Rutland *Herald* reports, two sportsmen came to the conclusion that illegal deer killing was profitable business. "'I tell you there's a premium for killing deer, not a penalty,' said sportsman number one; 'and I will explain the process whereby the reward comes in. The plan requires two operatives, a hunter and an informer. Let the hunter shoot a deer and his friend then complain of him. The penalty for killing it is $50, while the reward to the complainant is $75. See? They divide $25 between them. But that isn't all of it; the deer belongs to the man who killed it, and the animal is worth $15, and more if as good as the one shot on Saturday. This brings the income up to $40—$20 apiece. There are the costs, to be sure, but they can be reduced to a small sum on a plea of guilty. It is safe to say that the two will make over $30 on a deal of this kind; but I don't believe it could be tried on many times by the same men.' Unfortunately the foregoing appears to be a truthful diagnosis of the situation. The State law imposes a penalty of $50 for killing a deer, while the Game Association offers a reward of $75 to one giving information leading to the arrest and conviction of the culprit. It is extremely doubtful, however, if the foregoing scheme could be carried into successful operation more that once or twice."

WILD CELERY.—We reprint for the benefit of an inquirer these notes sent us a few years ago by a correspondent who had successfully planted wild celery (*Vallisneria spiralis*) in Big Sandy Pond, Jefferson county, New York: "First and above all, this plant calls for wet ground—very wet ground—a pond of water, a real, genuine, old-fashioned slough, plenty of wet muck and loam with an abundance of water. If the water sets over all from one to ten feet all the better. You all know what kind of a pond or marsh is needed to make a first-class feeding ground for ducks. I should make my order for seed or bulbs for a couple of barrels or more. I would place some of the seed at most or all the good places in or about the marsh. I am satisfied this seed will grow in almost any fresh water marsh. What it would do in a salt water marsh I do not know. Whenever I come upon a desirable spot, I would sow a fair sprinkling of seed upon it broadcast, as farmers sow wheat. I would now and then plant a little of the seed, and occasionally a bulb. I would do this at all the desirable places found until my seed was exhausted. Everybody knows how to sow seed broadcast. No instructions are in order as to the matter of sowing. Do it in the usual way. As to planting. Have made a tin tube, the length depending upon the depth of the water it has to work in. Have a plunger made to work upon the inside of the tube. Form a wad of earth, and in the wad inclose a few pods containing celery seed. Place it in the bottom of the tube, inserting it fairly tight. Run the tube down to the bottom of the water, force it into the soil a trifle, and with the plunger force wad, seed and all, into the soil below. Then let the seed take care of itself. In this way I would continue my endeavors over all the likely places about the pond. I would plant the bulbs on the marshy ground where the water would stand, say about 1 or 2ft. deep. I would plant them the same way as seeds. Were I now to try again, having seen what I have, and knowing what I do about the raising of this plant, the above programme would be very close upon what I should try to do. I think that the seeds and bulbs can only be obtained in the fall, when the water is at its lowest."

NEW JERSEY FARMERS ORGANIZE.—The farmers along the Passaic River in Washington Valley have organized "The Farmers Game Protective Association" in self-defence against the hunters—who tear down stone walls to get hidden rabbits, drive quails into farmers' barnyards to shoot, and burn big forest trees to get a coon or possum. Smith Chittenden organized the society, which will be regularly incorporated. Sunday hunting has been indulged in by visiting gunners to an unusual extent this year, and the farmers complain bitterly of this. No strangers will be permitted to hunt on the lands of members of the Association without a written permit signed by a member and good for only one day. A State marshal will be in the employ of the farmers, and every offender caught will be prosecuted to the full extent of the law.—*Evening Post.*

ST. LOUIS, Mo., Nov. 16.—The fourth annual coon hunt of the King's Lake Club took place last Saturday night in Lincoln county, this State. The hunt, although netting but one coon, was thoroughly appreciated by all who took part in it. The participants were E. H. Cunningham, L. D. Dozler, Mark Taylor, C. H. Cunningham, Harry Caruth, R. U. Leonori, Jr., J. H. Hayward, E. C. Hayward, J. F. Perkins, Gus Shupleigh, E. W. Hayden, W. Hayden and Fred Fodde.—UNSER FRITZ.

THE RUTLAND, VT., FISH AND GAME CLUB held its annual supper at the Berwick, Rutland, last evening.

ON TAXING GUNS.

Editor Forest and Stream:

I see that my views on taxing of guns, or rather licensing the shooter, do not seem to please "Wacautah." I am sorry, very. Still my views remain unchanged, and are likely to remain so if the only opposition made to them is in the form of sarcasm and innuendoes. I do not wish to enter a controversy with any one, nor will I. I did not suppose my views would call forth an attack almost entirely personal. However, I would like to call attention to several statement made by "Wacautah" which will bear correction. He says, "It is of such a despotic, foreign nature." Does he mean the general principle of taxation, or only as it is applied to guns? Are we not taxed for everything worth having, including personal property? Also our live stock and fowls? Is it any more despotic or foreign to pay a tax on a gun than on a dog? If so how? I fail to see. Are not "Wacautah's" ideas a little "twisted?" If a dog is licensed in the interest of protection, and a gun is licensed in the same cause (both being alike the means of destroying the property of the common people), to protect, and make good to the people their loss, wherein does the principle of taxation as applied differ in the two cases? Perhaps he claims that the wild game and fowl are not the property of the people in the same sense as applied to the domestic birds. In this section one man (with the use of snares) can with impunity rob a score of gunners of a whole season of legitimate sport. We want protection. How can it be obtained except through taxation?

I am (like "Wacautah") a native of New England, but do not pretend, as does he, to represent that broad domain. I am not only a native, but come from the "old Plymouth stock," was born and educated here, and live here now. My views are thoroughly American. I only attempt to represent a very small portion of New England, to wit, Rhode Island and southern Massachusetts. Although I have traveled New England from end to end, and am well acquainted with sportsmen all through the length and breadth of it, I speak for my home locality only.

As to rifle shooting: Who art thou, "Wacautah"? And where, oh! where are the scores of riflemen of whom thou speakest? Who go out into the world and decapitate the lordly grouse and cunning quail? Have we a legion of Bogarduses or Carvers among us, or has the science of rifle shooting come to be mere play? Of what use are the fine-bred dogs, and the costly chokebore hammerless, when the rifle brings to bag the largest score? I should imagine from the tone of "Wacautah's" article that he was (as he says) "something of a gunner." Of the hundreds of sportsmen of my acquaintance, including some members of our justly celebrated Massachusetts Rifle Team, not one has the cheek to stand up and pretend that he can successfully hunt game birds with a rifle. If there are any among us, let them stand up and be counted. I for one want to make their acquaintance. Around here the rifle is used for targets, and occasionally squirrels.

As for the "outrage" committed by "Cohannet's" father, "Cohannet" is old enough to appreciate it, also the fact that (apparently) the majority of American fathers do outrageously use their children in a like manner.

If "Wacautah" is desirous of ascertaining the extent of the damage done my education in rifle shooting by lack of early practice, when he next visits New England let him bring his rifle, money and friends, and I will endeavor to accommodate all three, and will prove to him that, although not a professional rifle shot, still I am one of the people. I would be pleased to compare scores either at target or live birds. "Wacautah" will get my address from the editor of this paper. I am an enthusiast on the subject of rifle and shotgun shooting for men. As to the boys, I repeat, "The rifle is a dangerous weapon in the hands of a boy (except when said boy is under instruction), and were the fathers of these boys held responsible for the damage done by them, or subject to a tax of the small sum of $1, there would be few of them at large in the fields and woods." And I deny that a boy can get more sport from the rifle. Otherwise the grown up boy would not discard the rifle for the shotgun, as he now invariably does.

The statement made by "Wacautah" on accidents, is so ludicrously false, that (when we consider that among boys who own guns the rifle predominates in the ratio of ten to one, and according to his statement "the mass of accidents we read about are

with shotguns") it needs no second thought. It answers itself. Although the high school boy of to-day is older, and more careful than the boy we meet in the woods, and is supplied with rifle and uniform, and drilled according to the manual used by the state militia, yet he is not trusted with ammunition. Evidently "Wacautah" and the city boy are strangers. He professes a very sure and certain knowledge on all subjects. Particularly on the disposal of this question in the near future. I do not! I must leave it to the great body of our American sportsmen, only adding my opinion to that of others, who believe in "fair exchange" and "for value received." Had "Wacautah" been wise, he would not have put in his article the statement that he had "hunted weeks where 'Cohannet' had days," and later on expressed a horror of those "selfish professional gunners, pot-hunters and dudes." For every man who knows me and the extent of my hunting, will immediately place him as one of the first of the charming trio.

As to this prophesy, "And I repeat there will be no special taxation of guns; their use may be restricted, etc., and that would cause but little opposition," he may be right. But why not support this positive statement by enlightening us as to the means whereby this restriction without opposition is to be brought about. How except by taxation? Also, how shall we "tax the professional gunner" when he exists only in the imagination of would-be law revisers?

Let us have the rifle and shotgun, and let the boys have them too. But there is a place for everything, and the place for the boy and his rifle is not in the fields and woods, just outside city limits, here in southwest New England. As the cold days which "Wacautah" speaks of are coming soon, perhaps "the considerable number of riflemen" who will not "tamely submit to have a special taxation laid on their rifles" had better "take down" their self-appointed champion by speaking for themselves in contradiction to his views and statements.

Although "Wacauta's" convictions are very positive (and they may be right) I fail to be convinced of the fact, and with others here beg leave to differ.

COHANNET.

Camp-Fire Flickerings.

"That reminds me."

286.

WE were comfortably seated around the hearth at Porter Lake, in Pike county, Pa., and the spirit of story telling was strong upon us, because the fishing had been unusually good and the supper bounteous. The flash and sparkle of wit filled the upper air of the room as with a fine aurora, and a halo of calm bliss encircled the brow of each entranced listener. But first the drug and then the antidote. The benevolent Colonel drew us down gently from the giddy heights with a story of a coarse plebian, locally known as a catfish. Thus ran his tale: "A man and his dog went fishing in the Mississippi. In a short time the man felt a mighty pull on the line, and he knew that a catfish had taken hold. The giant came along peacefully enough until he happened to change his mind, and then he decided to double on his course and take the man along. The faithful dog, seeing his master's danger, rushed to the rescue bravely enough. The wily catfish, when he found the dog pursuing, turned upon him and terrified the dog, who incontinenty turned tail and swam vigorously toward the dry land, the catfish hotly following. Presently the dog gained the land and ran hastily, the catfish madly surging after him. The dog, sorely pressed and fearing a painful death, in his extremity climbed a tree, the catfish still pursuing."

"Hold on! hold on!" we cried in chorus; "dogs cannot climb trees."

"Can't climb a tree?" responded the Colonel. "But the catfish was close upon him, and this dog *had* to climb."

Sea and River Fishing.

ANGLING NOTES.

DOES the angler ever stop to think when looking over the pages of his fly-book, what a great variety of material is used in dressing flies, and from how many different parts of the world they are gathered? Take even the ordinary trout flies (and they are quite simple, as a rule, in their construction), and yet the variety of feathers used is quite extensive. When we come to the elegant salmon flies, every quarter of the globe has to be laid under contribution to supply the necessary assortment. Among our home birds which supply material are the wild and the domestic turkey, teal, widgeon, mallard, sheldrake, woodduck, blue heron, swan, and many others, including the much-used hackles. The scarlet ibis comes from South America, the bustard from Russia, the bluejay from England, the Indian crow from India, the argus pheasant and macaw from the far East, the ostrich from Africa, the grouse feathers from Scotland, etc. The golden pheasant, originally from China, is now raised in England in great numbers, and the famous crests so much used in salmon flies, are picked from the live birds, otherwise they do not have that metallic lustre so highly prized. These are but a few of the fly dresser's materials. There are very many more from other birds, like the woodcock, quail, English snipe, rail, robin and pigeon, besides fur from the seal, golden monkey, water rat, hare, squirrel, camel, etc., all of which must be kept in fly makers' establishments, and it is no small matter to keep up the assortment.

The snells are made from silkworm gut and not from catgut, as many still believe. Not long ago a gentleman inquired in one of our tackle shops for salmon gut, and he would not be imposed upon by silkworm gut; he insisted that he wanted gut made from the salmon, and that nothing else would answer.

That Metabetchouan score, recently referred to, is very encouraging, particularly as so many anglers who visited Lake St. John were rather discouraged this season. In fact, there was very little fishing to be had, unless the angler could get permission from the owners of the waters. The Hotel Roberval is some 15 or 20 miles from the nearest salmon pools, and the lake is so shallow that it is with difficulty that the little steamer can land its passengers anywhere near the fishing localities. The railroad people have promised to obtain more fishing rights the coming season, so that their guests will not be disappointed again. Those who visit these waters must make up their minds to rough it and put up with the plainest fare when off at the camps fishing.

Striped bass fishing in the Hackensack River, New Jersey, was very poor this season. Those who are in the habit of fishing there complain that the river is full of illegal nets, and that Fish Warden Ricado is not strict enough. The Hackensack used to be famous for its striped bass fishing; but, like the rail shooting, this is a thing of the past. Five years ago a bag of forty or fifty rail was not unusual, now half that number is a rare score. In fact, a rail hardly gets a chance to alight before half a dozen boats are after him. The majority of sportsmen in Bergen county aver that they would be glad to pay a reasonable tax on the gun if it would assure them a little sport.

Many anglers have no doubt had the good luck to come across a worn out stream, which, having been left to itself for several years and considered not worth fishing, has panned out wonderful results. Dr. Howard, of this city, showed us a photograph of six or seven noble brook trout taken in such a stream last summer. They were all killed in one evening; the seven weighed 9lbs. The stream was but a short distance from a very large and fashionable hotel in the western part of this State, and was supposed to contain only a few pickerel. A short time after that he devoted a whole day to the stream and killed thirty odd trout, none under half a pound.

One of the most killing flies, in fact, the most killing fly last season, for the landlocked salmon, was the Jock-Scott.

BEARS, BIRDS AND FISHES.

ABOUT the middle of last August a little party sent out by the United States Commissioner of Fisheries to get information about the salmon industry of Alaska found it necessary to go up to the source of the most famous stream in the Territory, the prolific Karluk, in the island of Kadiak. After we had seen the fishing gangs of the canneries landing their tens of thousands of red salmon almost daily, and one particularly favorable Sunday running the catch up to about 150,000, we were all the more anxious to see the spawning grounds of these struggling myriads. The river would be considered a rather small creek at home, yet it yielded as many red salmon this summer as all the other streams of Alaska combined. It was evident that some explanation of the annual occurrence of such immense shoals of fish would be found in the lake out of which the Karluk starts on its devious course, and we determined to reach Karluk Lake if possible. Several miles above the mouth of the river there is a series of rapids, over which we knew it would be impossible to float even a bidarka at the existing low stage of the water; so we took passage on the little steamer Ella Rohlffs, which carries salmon from Karluk to a cannery in Uyak Bay, and journeyed with our good friend Capt. Larsen to his headquarters in Port Larsen, an arm of the bay, from which Karluk River above the obstructions is reached by an easy portage. We were obliged to turn away from the fine trees, flowering plants and luxuriant ferns of the Uyak Bay shores and from the generous hospitality of our host, and push rapidly forward on our mission. Mr. Lewis and Mr. Stone, however, found time to row across the bay to see the wonderful mass of humpback salmon struggling up a little stream not deep enough to float them nor wide enough to hold the column of spawning fish. Mr. Lewis obtained some of the eggs and mixed them with the milt of the accompanying males. The eggs were found to be larger than those of the red salmon, but smaller than quinnat eggs, and not quite so bright red.

Seven natives of Karluk were employed to go with my party, and they took for our use two 3-hole or 3-hatch bidarkas. Mak Cem (sometimes called Maxim), because of his ability to talk indifferent English, was a sort of leader of these natives. He is a young man of bright and rather attractive countenance, about 5ft. 8in. tall, and weighs 160lbs. We carried a tent for the four white men, and intended that the natives should sleep in barabaras along our route. Provisions were taken from Karluk and Uyak bays, and we had everything necessary for a stay of a week or ten days. Canned meats, vegetables and fruits were furnished us by Mr. Hirsch and Capt. Larsen at San Francisco prices, which are very reasonable. We carried three repeating rifles and two shotguns as a precaution against bears, whose country we were about to invade, and we knew that the guns would bring us a supply of ducks, plover and other birds, to improve our bill of fare. Mr. Booth carried a theodolite, a steel tape measure and an aneroid barometer. I had a fine outfit for photography and a thermometer for water and air temperatures. Very early in the morning, August 16, we started from Port Larsen, conveying ourselves and the entire company and working outfit in a dory and the two bidarkas. Those of us who traveled for the first time in bidarkas furnished considerable amusement for the natives when we made our attempts to be seated without capsizing the unstable craft; but when we tried to get out at the end of our comfortable journey the fun grew intense. The hatch is so narrowly separated from the bottom of the canoe that a beginner is always caught at the knees and held fast until he learns the knack of twisting around sidewise and drawing up the knees before trying to arise. We reached the head of the arm of Uyak Bay in one hour and a half, after paddling five miles. The heavy dory was fully two hours in making the distance. Eagles, ducks, magpies and singing birds, including various sparrows, were common everywhere. Rapid little streams tumble into the bay in many places, and wherever a humpback salmon can force its way will be found a squirming mass of fish intent on wriggling to the highest possible point, to deposit their eggs and milt and then drift helplessly back, lacerated and dying, toward the sea from which they came, but which they never seem to regain alive.

It was about two o'clock in the afternoon when we reached the old barabara on the Karluk River, where we proposed to camp for the night. The portage is not difficult and may be crossed readily in an hour and a quarter with nothing to carry. From the bay the trail starts at one of the little salmon streams, passing through a narrow belt of timber consisting chiefly of cottonwood, alder and willows. There is a gradual ascent to a height of several hundred feet to a comparatively level and boggy plain. The natives carried our goods and the bidarkas, making two trips, and landing everything at the river by six in the evening.

A lean and apparently spent Dolly Varden trout was discovered in a little rill near our camp, and a few salmon were seen leaping in the river. Some ducks were shot, and we had a very good stew for supper. We were not long in pitching our tent, and the natives soon patched up the roof of their barabara with a little grass, which is abundant and cheap on Kadiak.

On the morning of the 17th we made an early start up the river; one-half of the party traveling in the bidarkas and the rest walking, sometimes along the shore and occasionally making cut-offs where the stream bends in its course. We expected to find a great many young ducks between the barabara and the lake, and we were not disappointed; ducks could be had by the boatload if we had felt inclined to slaughter them. In a very brief space of time one gun killed enough teal, butterballs and mallards to supply the entire company for two days. A young swan, also, came to bag. There was enough variety in the shots to suit the most fastidious taste, and yet a pot-hunter could have destroyed whole broods of birds with a single cartridge. The Karluk is decidedly a meandering river, and especially in its upper portion. It is a very little stream in a very big valley, and at the time of our reconnoissance the water was extremely low in many places, so that our loaded bidarkas, drawing less than one foot, were frequently aground. The broad and very low valley of the upper Karluk is a favorite breeding ground for ducks, and a few swans were observed there during the summer. The abundant tall grass affords shelter and concealment, and innumerable little streams of cold water fringed with seed-bearing plants must supply ample nourishment. The river is dotted here and there with water plants not unlike some that we have at home: one slender and graceful species bearing a small white flower being especially handsome. Wild celery and wild parsnips are common. The shores are brilliant with flowers of many hues, and yield several different kinds of berries; but for the purposes of walking they are simply distressing. The difficulty of walking in Alaska, however, is an old grievance with me, and had better be passed over as lightly as possible.

We reached the lake about 3 P. M., bringing it into view suddenly by an abrupt turn of the stream near its source. Low mountains surround it, bearing trees within certain limits of altitude, and capped here and there with patches of snow. We had little opportunity at this time to study scenery, for Jupiter Pluvius was abroad and our tent had to be pitched in a hurry. Near the river source is a low pebbly spit making off shoal into the lake. Here a colony of gulls of small size were discussing the bait question, and a little flock of bluewing teal circled around just in time to give me a quartering shot at twenty or twenty-five yards. We had broiled teal for breakfast. In spite of the rain Mr. Stone and I stalked a little bunch of lesser yellowlegs, which we marked down near the mouth of a rivulet adjacent to our tent, and we brought back all of them after a few pretty shots. The natives in the meantime paddled off in their bidarkas to a shoal not far away and killed some of the spawning red salmon by means of stones. They started a fire in the barabara and soon looked very comfortable notwithstanding the rain. It is astonishing to an American how little wood will serve to boil water and cook a meal for the natives. Wood is scarce at many points, and economy in its use is always necessary. It did not take us long to discover this fact, and we soon came to the further conclusion that a barabara is a far more comfortable summer dwelling than a tent.

[TO BE CONTINUED.]

BY WAY OF PROTEST.

Editor Forest and Stream:

Another batch of odds and ends, if you will take them. I promised to say something of the "bass hog." I met him in Florida two years and a half ago. It was on the shores of Lake Monroe, at Enterprise. His boat came to the shore late in the day, and I saw his tackle and catch. The latter was black bass of all sizes which nearly filled a huge oblong basket containing, I should think, two or more bushels. I asked what would be done with them, and learned that day after day this act was repeated—the man doing his best to deplete the stock of bass in the lake and always bringing in a boat load—the cook at the hotel using as many as he chose to, but the greater part going to the hogs, and this time I mean the swine. I learned that this man or another (I cannot in absence of my notes remember which, but the man who did it was a Brooklyn alderman), had had an ambition to beat all records in the world, and had in about eighty days of steady fishing taken with fly-rod over four tons of black bass, and there was no record nor mention of his ever having returned alive to the water a single fish. Now, what else can be said of such a man save that his pride of slaughter has excluded every gentler sentiment, and that in him the sportsman, if he ever existed, has been lost in the fish hog?

Compared with the trout, the black bass is no great friend of mine. He is only better than the pickerel, and one trout is worth a dozen of him for all purposes whatsoever; but still he is a genuine game fish, and in waters where he is the rightful king and not an interloper, he is to be respected and valued; and such waters are the inland lakes of Florida, which he inhabits in astonishing numbers. No waters, however, can be so well stocked as to defy forever such attack and waste, and it merits the sharpest rebuke. Moreover, the coarse and crude gratification at mere slaughter is not for a moment to be compared to the fine delight in sport which does not destroy the means of sport, and which rejoices in the thought that it may be perpetuated and that others may share it.

Let any one kill what he needs and can use and even what he can share with his friends, provided it is done lawfully and by fair and sportsmanlike devices, but let all that is beyond this be abandoned. Once let a man give up slaughter for sport, and, having in his creel enough for the pan, put back into the water every other fish, and, my word for it, he will never go back to the old and senseless practice. With the proper care that "particularly big one," caught after enough have been saved for use, can be weighed and measured and returned unharmed to his native wave; and the word of a man known to do a thing like that ought to be taken unsupported.

Let me here have a whack at the misguided man who, forsooth, because *he* has had plenty of trout all his life and thinks it would be fine to have pickerel and black bass "for a change," puts those coarse fish into trout waters and thereby ruins them forever. This mistake once made, is made for all time. Nothing can remedy it. Gradually this foolish man is getting in his work through southern New Hampshire and Maine, and gradually the trout waters are being ruined. Many and many a noble

lake do I know of which once teemed with trout and harbored no hostile fish, but where now the trout is only a tradition and the beastly black bass and the snake-eyed pickerel—the miserable fresh-water shark—lord it instead. We can get bass and pickerel almost anywhere, not so the trout.

Let sportsmen everywhere unite to prevent this wretched interference with natural trout waters and to teach the natives the mistake they will make in exchanging trout for any other fish that swims. There are two little lakes under the shadow of a Maine mountain which literally swarm with trout. It is a comfort to think of them, to remember my many visits to them and camps in the dense forest beside them, and to know that there they are in all their wildness and beauty and sure resources of game fish whenever I can get away to them again; but my delight in them is always tempered by the fear of the advent of the vandal with the black bass and pickerel. Not even an eel has profaned those waters yet, an 18ft. fall in their outlet stream effectually defending them from that loathsome marauder; but who shall insure them from the greater danger? C. H. AMES.

A LARGE NEW HAMPSHIRE BASS.

THIS record of a big bass, caught in Lake Massebesic, New Hampshire, last year, is a tardy chronicling; but the note should be put among the data which FOREST AND STREAM is every week and month and year compiling and perpetuating for its present and future angling readers. We are indebted to Mr. Walton C. Taft, of Boston, for the three documents which explain themselves.

BOSTON, Sept. 19.—*Dear Walton:* Geo. Riddle, our Fish Commissioner, says he saw the newspaper article stating that the bass weighed 7lbs. Unfortunately I cannot find copy of *Mirror*, but I take pleasure in handing you herewith sworn statement of the fishman who weighed the beauty the day after he was caught, he had been bled, etc., and then showed up 6½lbs. Trusting this will show that I did not intend to go on record as a fish story teller, I am yours. A. BUNTON.

STATE OF NEW HAMPSHIRE, State Fish and Game Commission, Manchester, N. H., Sept. 18, 1888.—*Andrew Bunton, Esq.*—DEAR SIR: I inclose you sworn statement of Mr. Allen. He says Lawrence caught the bass about dark. As soon as he was caught he bled him, and the next morning he brought him to Allen's market, where he was weighed, 6½lbs. Lawrence thinks if he had been weighed as soon as he was taken from the water he would have weighed 7lbs. This is no fish story, but a reality. Yours truly, GEORGE W. RIDDLE.

MANCHESTER, N. H., Sept. 18, 1888.—This certifies that Richard Lawrence, of Manchester, brought to my market, 1047 Elm street, a very large black bass, which he says was caught by him at Lake Massebesic. I weighed said fish correct, and the weight was 6½lbs.
CHAS. T. ALLEN.

STATE OF NEW HAMPSHIRE, Hillsborough, *ss.:* Personally appeared before me Chas. T. Allen, and made oath that the above statement signed by him is true. Sworn to before me Sept. 18, 1888, GEORGE W. RIDDLE, Justice of the Peace for New Hampshire.

CHICAGO AND THE WEST.

STATISTICIANS in the matter of large bass may be interested in a small-mouthed black bass which is on exhibition, mounted, in the window of the Jenney & Graham Gun Co. here. This is a genuine small-mouth, and its weight is hung up as 7lbs. It is a rough and ragged-looking old fish, and was caught in the Fox River at Algonquin by Mr. Alex. McKay.

Speaking of big bass, Mr. A. G. Spalding lately said to me, "I wish you could do something to stop this big fish business, and not to increase it. We are over-run with big fish. About eight years ago we offered a premium for a big bass—I forget what the weight was to be, but I believe the premium was a $50 outfit. The offer was only made for one year, but it got all over the country, and is going yet. We get fish in here from about every place where there is any water, and by the time they get here they don't always smell good. Every one of these fellows feels injured if he don't get a premium. Now, as we have got to make a living, I want to declare that premium business off. Nothing but the sea serpent goes now."

Fishing has quieted down for the season. It has been a remarkable fishing season about this city, both in the number and size of fish taken. There has been good fall mascallonge fishing on Vieux Desert and other waters of Wisconsin. The bass fishing I have tried to set forth slightly heretofore. It has been magnificent. The trout fishing to the north of us has also been good, and it seems that the grayling are not all gone. Mr. Britton, division superintendent of the B. & O. road, took grayling on the Manistee during the past season, and he says he knows where he can get a lot of them next spring.
E. HOUGH.

HOW TO TREAT THOSE FISH TRAPS.

PITTSBURG, Pa., Nov. 12.—*Editor Forest and Stream:* In your issue of Nov. 7, 1889, on page 312, you publish an article entitled "Fish Protection in Pennsylvania," in which it is stated that the Lancaster county authorities have made a proclamation to destroy the illegal appliances in their streams. Will you inform the public why that was done? And why they proceed under an old law when there is a better and new law for their action? If they are really interested in protecting their streams, why do they not put in force the law approved by the Governor of this State on May 22, 1889, and found on pages 261 to 271 in Laws of Pennsylvania, 1889? Take Sec. 9, page 266, which says:

"Any fish commissioner, fish warden, deputy warden, sheriff, deputy sheriff, constable, policeman, or any special officer of this Commonwealth, is hereby authorized to destroy any fish basket, *eel weir*, fyke net, pound net, shore net, drift net, dip net, wing wall, or wing walls, or any illegal devices named in any section of this act, and they are hereby authorized to arrest *forthwith* any person placing, erecting, using or fastening them. Any person or persons interfering with any of the above officers in the discharge of their duties or resisting arrest, shall pay a fine of $100, and be imprisoned three months in the county jail, or shall be subject to both penalties at the discretion of the magistrate or court before which he or they shall be convicted."

Do you think any proclamation is needed after reading that section? If there is a fish warden over there, why does he not attend to his duty? If he won't, why is he not removed? If there is not a fish warden there, why don't they get one?

Perhaps I am asking too many questions, but I like to see the fish and game both protected, and when we have the means at hand I cannot understand why they are not used. Under the old law that was the only way to proceed, but now the new law opens up a shorter, better and more effectual method of disposing of those illegal appliances as well as of the offenders themselves.

Last week our fish warden destroyed over $500 worth of illegal appliances, and he is now watching to take the bodies of the offenders.

With good, active wardens, the inland streams of Pennsylvania, as well as all other States, will teem with fish, and any person can get a mess of good fish by rod and line. But the wardens must be upheld and encouraged, and money enough must be raised to insure them against loss by attending to this work.
J. WILLIAMSON.

THE FLY-FISHERS' CLUB of London will hold its annual dinner Dec. 11. William Senior, so well known to anglers under his *nom de plume* of "Red Spinner," and as angling editor of the *Field*, will preside.

FLORIDA FISHING is so largely the theme of the "Winter in Florida" paper in the Sportsman Tourist, that our angling readers should not overlook it.

MESSRS. S. ALLCOCK & CO., of Redditch, Eng., were awarded a gold medal at the Paris Exposition for their display of fishing tackle.

Fishculture.

MISSOURI FISH COMMISSION.

THE Missouri State Fish Commission's breeding ponds in Forest Park are at present being drained for the purpose of separating the fish in them. This work is gone through with each fall. All the large or stock fish are placed in deep ponds for protection during the winter, and the small ones are placed in shallow ponds where they can be easily caught for distribution to persons who wish them for stocking private ponds. The Commission breeds croppie, bass and German carp. Your correspondent called upon the superintendent a few days ago, but as the work of draining the ponds was not completed the gentleman could not give any facts relative to the success of the past season. Next week the work will be finished and the fish counted and I will send a full report of the season's work.
UNSER FRITZ.

ST. LOUIS, Mo., Nov. 9.

OREGON FISHING AND FISHCULTURE.—We learn from Mr. Livingston Stone that thousands of anglers have visited the U. S. Fish Commission station on the Clackamas River, Oregon, since the hatchery was established. Recently none but trout fishermen have been there. All the large trout have been caught out, but small ones continue to be taken in some abundance. More than 4,000,000 eggs of the quinnat salmon have been obtained this season and they are still accumulating.

FIRST SHIPMENT OF CARP.—The first shipment of carp by the U. S. Fish Commission was sent from the Washington station Oct. 16. These will be distributed by one of the cars of the Commission to various points in Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Montana, Washington, Oregon, Idaho, Colorado, Utah, Nebraska, Kansas, Arkansas, Indian Territory and Missouri.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 5 to 7.—First Dog Show of the Continental Kennel Club at Denver, Col. A. L. Weston, Secretary.

Dec. 9 to 14.—Fourth annual show Northern Illinois Poultry and Pet Stock Association, Rockford, Ill. John Teague, Secretary.

Jan. 6 to 11, 1890.—Annual Dog Show of the Michigan State Poultry and Pet Stock Association, at Bay City, Mich. W. F. Brace, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 18 to 21, 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 22.—Eighth Annual Field Trials of the Robins Island Club, for members only. Walter L. Wellington, Secretary, Brooklyn, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mills Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

THE BRUNSWICK FUR CLUB TRIALS.

Editor Forest and Stream:

As published in your valuable paper, the field trials of the Brunswick Fur Club were run on the Albany Hills, Maine, from Nov. 11 to 15, and I am happy to state were a grand success. These were not only the initial field trials of the club, but the first foxhound field trials ever held in the New England States. Those who have never inaugurated and carried out such trials have no conception of the difficulties encountered at every turn, but the officers of the club being men of enthusiasm and determination, every difficulty vanished before their efforts, and the first annual field trials of the Brunswick Fur Club stand an unqualified achievement.

The members attended in goodly numbers and were all eager to do everything possible to make the trials what they should be, and when the finals came and the decisions were made they were accepted with a unanimous vote of thanks to the careful, diligent, and upright judges. The judges in the open foxhound and fox beagle classes were Mr. J. A. French, Andover; Mr. Samuel Knight, Brunswick; Mr. Henry Stetson, Brunswick, and Mr. Henry Gerry, South Paris; and in the puppy class Mr. R. D. Perry, Braintree, Mass., and Mr. Samuel Knight, Brunswick.

The weather was good and foxes proving plentiful, starts were easily made, and splendid runs obtained each day. It was decided that as the members could only spare a week from the business of life, it would be best to run all the dogs every day, the dogs having the highest averages in the various classes in which they were entered at the end of the trials being the winners. A purse was put up for each class, to be divided into first, second and third prizes. To give the dogs a good chase and the judges ample opportunity to mark them, it was decided that the fox should not be shot till six hours after the start in the puppy class.

There are about a hundred hounds in the club's kennels, but the severe tests imposed at the trials caused some owners to be shy, so that twenty-four cracks were entered to battle for the honors. I have hunted with the best packs in Virginia, Maryland, New Hampshire and Maine, and I can unqualifiedly state that I never saw a finer field of dogs, either in bench or working points; nor do I believe that any pack could be gotten together in any other part of the country to surpass them.

The strains represented were Byron, English, Cook, Buckfield, Natial, various crosses between these, and finally the beautiful little beagle pack of Mr. W. N. Walling. It is truly wonderful what diligent and untiring work these little hounds can do, and the plucky manner in which they stood up in such an unequal contest against the best hounds in the country won the admiration of all. The Albany Hills are precipitous and consist largely of ledges and boulders, so that no ground could have been selected better calculated to try the various points of a hound, and especially endurance, so fox hunters will appreciate it when I state that every dog ran to the end of every race, and that for four consecutive days, and were in excellent condition at the end of the trials.

As the shooting of foxes was prohibited till six hours after the start, only three foxes were killed, but had shooting been allowed at all times, many more would have fallen to the prowess of the members. On one day the dogs scattered into four packs, and four foxes were being driven at one time within seeing distance of the center of the hunt.

The prizes were awarded as follows:

OPEN DOG CLASS, FOXHOUNDS.

Hunting.

First, Mr. A. M. Gerry's black, white and tan dog Drive.
Second, Dr. A. C. Heffenger's black, white and tan dog Joe Forester.
Third, Mr. Richard Seely's black and tan dog Bugle.

Trailing.

First, Mr. R. D. Perry's brindle, white and tan dog Jack of Diamonds.
Second, Dr. F. H. Wilson's spotted and ticked dog Jeff.
Third, Dr. A. C. Heffenger's black, white and tan dog Drive III.

Speed.

First, Mr. A. M. Gerry's black and blue ticked dog Smut.
Second, Dr. F. H. Wilson's black, white and tan dog Jim.
Third, Gerry and Emmons's black, white and tan bitch Music.

Endurance.

First, Mr. L. O. Dennison's spotted and ticked dog Ben Butler.
Second, Mr. R. D. Perry's tan and ticked dog Major O'Rourke.
Third, Dr. A. C. Heffenger's black, white and tan dog Joe Forester.

Barking.

First, Mr. J. H. Baird's black and tan dog Bey.
Second, Mr. L. O. Dennison's spotted and ticked dog Ben Butler.
Third, Dr. F. H. Wilson's spotted and ticked dog Jeff.

PUPPY CLASS (LIMITED TO 18 MONTHS).

First, Mr. E. L. Toothaker's black and tan dog Bugle.
Second, Gerry and Emmons's black, white and tan dog Hunter.
Third, Mr. E. L. Toothaker's black, white and tan bitch Modest Girl.

FOX BEAGLE CLASS.

First, Mr. W. N. Walling's black, white and tan bitch Belle Diamond.
Second, Mr. W. N. Walling's black, white and tan bitch Lucille.
Third, Mr. W. N. Walling's black, white and tan dog Little Drive.

The club is desirous to have a series of friendly races between four or six hounds of its pack, and the same number from any other pack in the country, and with that end in view appointed Mr. R. D. Perry a special delegate to arrange the races with any one who may desire to negotiate.

It is hoped that another field trial may be held next autumn, when more time can be given and the hounds run in pairs or triplets, thus giving the best possible chance to further judge the qualities of its dogs.
A. C. HEFFENGER, Director of the Hunt.

PHILADELPHIA CLUB TRIALS.

THE sixth annual trials of the Philadelphia Kennel Club were run at Richland, Va., Nov. 11, 12, 13 and 14, Mr. L. E. Wills judging. The results are summarized as follows:

W. B. Smith's English setter Ben Hur Franklin (Ike—Leda) beat J. B. Ellison's pointer bitch Bryn Mawr Mona (Bang—Vandalia).

T. Harrison's Irish setter bitch Victoria (Berkeley—Nora) beat B. Ridgway's English setter bitch Sue (Count Noble—Carrie C.).

F. G. Taylor's English setter bitch Katie Noble (Count—Queen Meg) beat J. H. Winslow's pointer bitch Golden Rod (Beaufort—Zuba).

B. Ridgway's English setter dog Clipper W. (Dan—Countess Pansy) beat W. B. Smith's English setter dog Don Juan (Ike—Leda).

E. Comfort's English setter bitch Perseverance (Chalkley D.—Cassino G.) beat J. B. Ellison's pointer dog Victor the Blue Stocking (Beaufort—Zuba).

F. S. Brown's cross-bred setter dog Horace (Trover—Nellie) beat Stovell & Thompson's Irish setter bitch Nellie (Elcho—Rose).

Second Series.—Ben Hur Franklin beat Victoria. Clipper W. beat Katie Noble. Perseverance beat Horace.

Third Series.—Clipper W. beat Ben Hur Franklin. Perseverance a bye.

Final Heat.—Clipper W. beat Perseverance. Katie Noble beat Perseverance for second. Perseverance took third.

MERLIN HUSCROFT.—The English *Kennel Gazette* contributor "Merlin," who stole Dr. Perry's writings and palmed them off as his own, turns out to be Huscroft. This Huscroft is the fellow who started the lie about the Salisbury pedigree. "Our Special Commissioner" Huscroft stock has dropped several points in the American market.

CANADIAN KENNEL CLUB TRIALS.

CHATHAM, Ont., Nov. 14.—The first annual field trials of the Canadian Kennel Club closed to-day, and the meet has been a success. The highly flourishing condition of the club's affairs fully warranted its success in this undertaking, and there is every inducement to believe that these trials may grow into a prominent feature, with large and larger attendance as their character becomes better known. It is true that the largest stake showed only 16 starters, yet among these were several good ones and a smaller number of exceptionally fine ones. It will be noticed also that in some cases several dogs were entered by the same owner, but this paucity in the attendance of actual owners is part of the history of any association in its younger days, and was only to be expected here. There will be more next year, and those of this year were rare in quality. At least one member, Mr. Thomas Johnson, came all the way from Winnipeg, Manitoba, a total distance of nearly 1,500 miles. A worthy sportsman he is, and he brought the winner with him for each stake. Mr. Johnson's pointer bitch Ightfield Blithe, winner of the Derby, is fairly a phenomenal bitch, and has been the favorite of the field. She is imported, is of a family of winners, and in the field or on the bench is fit for any company. Mr. Johnson has said that he intends giving Blithe to his old friend Amory R. Starr (Jacobstaff), of Marshall, Texas. Should he do so, Mr. Starr may hold himself one of the earth's favorites, for it is within the power of but few to bestow any such gift. Blithe is one dog of a thousand, no matter what be the breeding or quality, and one might pass a lifetime and not get hold of such another, no matter how many he bought. Pitti Sing, winner of the All-Aged, is also imported, and is a setter bitch of great field qualities, though not exceptionally fine in looks. She also is right in a family of winners in Ireland and England, and is fit to give account of herself. It should be borne in mind that both of these dogs saw quail for the first time about a week and a half ago, and in view of this fact their performance is all the more remarkable. Mr. T. G. Davey, of Davey & Richards, London, Ont., had two good ones in Canadian Jester and Brighton Pride, but these dogs hardly did themselves justice, for their owner had hunted them in company with careless dogs the week before,and had,to put it plainly, handicapped their chances in this meet to increase his chances for a bag. Mr. W. B. Wells and also Dr. Kine, of this city, had good ones entered, and in fact there was hardly a dog down that did not show himself a practical field worker.

Mr. John Davidson, of Monroe, Mich., acted as judge, and his decisions, rendered with promptness, justice and absolute impartiality, were received with only about the average amount of kicking, which is, perhaps, all that any judge could ask. Mr. Davidson's brusque and autocratic ways, and his kind heart, are known in a wide portion of our sporting world. In one case a certain member of the club, who had accepted his defeats,with exceptionally bad grace all along, openly impugned the judge and made a deplorable scene upon the grounds. This was smoothed over later, and it may be best to say little about it. Such things are called "unfortunate." They are worse than that, and there is no excuse for them.

The birds were found at distances of four to fourteen miles from town. For the first day and a half they were so scarce that moves were made to more distant and better covers, it becoming apparent the trials would be of indefinite length otherwise. In the later runnings the birds were plentiful enough, and the country was elegant for the work, being made up of stubble, thicket, wood and standing corn in good alternation. The French Canadian farmers are not the neatest cultivators in the world, but their weedy little farms are good quail raisers.

Owing to the closely fenced nature of the country, it was impossible to use horses in following the dogs, and the judge, handlers and reporters had to walk all day.

Chatham is a quiet old town of about 15,000 inhabitants, lying on the river Thames. It has treated the club very nicely. Mr. Frank Bennett, of the Grand Central Hotel, has been especially clever with the boys.

Following are the officers of the Canadian Kennel Club: President, Mr. Richard Gibson, Delaware, Ont.; First Vice-President, Mr. J. Lorme Campbell, Simcoe, Ont.; other Vice-Presidents, Messrs. J. U. Gregory, Quebec, Thomas Johnson, Winnipeg, Samuel Coulson, Montreal, and Dr. J. W. Mills, Montreal; Secretary, Mr. C. A. Stone, London; Ont.; Treasurer, Mr. S. F. Glass, London; Executive Committee, Messrs. C. M. Nelles, Brantford; H. Bedlington, Hamilton; W. B. Wells, Chatham; H. Martin, Hamilton; Dr. J. S. Niven, London; J. L. Campbell, Simcoe; F. H. F. Mercer, Ottawa; T. G. Davey, London. The Field Trials Committee are Mr. W. B. Wells, of Chatham, Mr. J. L. Campbell, of Simcoe, Mr. T. G. Davey, of London, Mr. Thos. Johnson, of Winnipeg. Mr. C. A. Stone, of London, acts as secretary and treasurer in this work.

The dogs were drawn in the following order for the

ALL-AGED STAKES,

FOR SETTERS AND POINTERS.

First Series.

PARIS (G. E. A. Walker, London, Ont.), black and white setter dog, 3yrs. (London—Queen Bess),

against

CANADIAN JESTER (Davey and Richards, London, Ont.), blue belton setter dog, 2½yrs. (Knight of Snowden—Champion Liddesdale.

BREEZO (R. G. Henry, Brockville), liver pointer dog, 14mos. (pedigree not sent in),

against

BOB (T. H. Nelson, Chatham), chestnut and white setter dog, 8yrs. (pedigree unknown).

AMERICAN BECK (Davey and Richards, London, Ont.), liver and white pointer bitch, 4yrs. (pedigree not sent in),

against

GEORGE (J. B. Field, Detroit), black and white setter dog, 2¼yrs. (Mingo—Ban).

MAGGIE B. (J. Kime, Chatham), black, white and tan setter bitch, 3yrs. (Kink—Lucy B.),

against

DINAH C. (W. B. Wells, Chatham), black and white setter bitch, 5yrs. (Mingo—Fausta II.).

MINGO (W. B. Wells), black and white setter dog, 11yrs. (Druid—Star),

against

PITTI SING (Thos. Johnson, Winnipeg, Man.), liver and white setter bitch, 3½yrs. (Baron Doveridge—Norah).

IGHTFIELD BLITHE (Thos. Johnson, Winnipeg), pointer bitch, 20mos. (Dancer—Ightfield Bloom),

against

CAMBRIANA (W. B. Wells), black and white setter bitch, 4yrs. (Cambridge—Romp).

BRUSH K. (J. Kime), black and white setter dog, 2yrs. (Kink—Lady Thunder),

against

GAMBOL (Item Kennels, Bethany, Pa.), liver and white pointer dog, 3yrs (Gough—Larkspur).

DOVER (W. B. Wells), black and white setter dog, 5yrs. (Dashing Berwyn—Romp),

against

MANITOBA BELLE (Thos. Johnson), liver, ticked and white setter bitch, 4yrs. (Pride of Dundee—Jeannette).

There were withdrawn after entry in the stake four dogs, Mr. C. A. Stone's Forest Fern, Mr. Thos. Montgomery's Bruce M., Messrs. Davey and Richards's Locksley and Mr. Thos. Johnson's Dick Bondhu. Thus there were twenty original entries in the All-Aged Stakes, sixteen to start.

MONDAY, NOV. 11.

The weather was cloudy and damp-feeling, and it was not a bad scenting day. The grounds chosen were about four miles out from town, and in a country of cleared timber, slashings, thickets, stubbles and corn. The first pair ordered down were Paris and Canadian Jester. This was promptly at 8:30, yet both twenty minutes and forty-five minutes passed without the appearance of Paris. It was learned later that his owner had missed his train at a neighboring railway station. Action as to subsequent running of this heat was left to the committee, and at 9:35 the second brace were ordered down.

BREEZO AND BOB.

Breezo was handled by J. R. McGregor, and Bob by his owner, Mr. T. H. Nelson. This pair did not do much. Breezo ranged wider in better style, Bob keeping close to heel much of the time. Bob is eight years old, and appeared stiff and heavy. Bob made one false point, Breezo backing. The pair ran two hours even, over good country, but no birds were found. They were ordered up, to go down again later

AMERICAN BECK AND GEORGE.

American Beck was handled by Mr. Dacey and George by J. R. McGregor. They went down at 11:40. There was no great difference in the ranging qualities of these dogs, but George was the more obedient and easily handled. Mr. Davey had but recently purchased Beck, and her former owner, Mr. Wise, of Virginia, had not even informed him of the calls and signals used in her breaking. She had been hunted by Mr. Davey but a day or so, and had not yet grown into a perfect *rapport* with him, so to speak. One of the reporters put up a good bevy, which scattered on stubble. The two dogs worked this cover for ten or fifteen minutes, doing singularly poor work, and not finding all the birds seen to go down. Each dog scored a royal flush, and that was about all, although eight birds went off the stubble. Beck was unsteady once to wing, stopping to order. George was steady on his flush. Both dogs were steady on a third bird, flushed wild. Crossing into the woods, George was seen by the judge to point a single bird in a treetop. Beck chased a rabbit, giving tongue. Beck was brought up and backed George, who stood at an old footscent. Beck was a busy ranger. No birds found. Ordered up at 1:08. Shortly after this Beck caught a rabbit on the fly as it sprang out of a stump. Heat given to Georgo.

MAGGIE B. AND DINAH C.

Maggie B. was handled by Dr. Kime, Dinah C. by Mr. Wells. At first Dinah appeared a bit the better in speed and range, but at the close of the heat it would be hard to say this. Maggie was really the more stylish ranger, and carried a better head. It is said she outclassed herself in this heat. Dinah pointed a bevy at a brier fence; Maggie backed, sitting on her haunches. Mr. Wells flushed and killed to order, both dogs steady to wing and shot. Dinah retrieved, not any too well or gently. On a stubble field both dogs began some beautiful work, exchanging a half dozen cautious stops, and moving on in time to save themselves from false points, Maggie pointed and three birds were put up near her, Dinah not ordered up to back, but both dogs steady. Going at full speed over this stubble, Dinah wheeled to a beautiful point, Maggie backing nicely. Dr. Kime wounded the bird when put up. A moment later Maggie duplicated this point by one really more brilliant, wheeling to a point when on full gallop, and nearly falling to the ground as she tried to stop. Maggie dropped. Dinah did not back, but appeared to flush. At a thicket, Maggie roaded slightly and Dinah dropped to a point. Dinah left her point and came out of the thicket. Maggie, who had backed, remained pointing, sitting on her haunches. The bird was discovered sitting on a bush. Dinah swung back, and, according to the judge, pointed a bevy near by, which was flushed by handlers. On the stubble Maggie showed great caution, but did not false-point. Over the fence she pointed Dr. Kime's crippled bird. Dinah backed nicely at 20yds.. She being brought up, Maggie grew a bit jealous and moved forward a step, the bird taking wing. In the grass near a ditch Dinah made and held three minutes an unmistakable false point. The pair were ordered up at 2:11, and the heat was given to Dinah C., at which some little mild surprise was expressed. The judge said that, barring Dinah's false point, neither bitch had made an error, and that Dinah had five points to Maggie's three, and was a better ranger. At all events, this was a wonderfully showy heat, full of work, and the owners of this merry and clever pair were congratulated on having shown as good a heat as any two dogs could be asked to do.

MINGO AND PITTI SING.

Mr. Wells handled Mingo and Mr. Johnson Pitti Sing. The pair was put down at 2:45, directly after lunch. Pitti Sing showed fairly phenomenal ranging qualities, and was eager and stylish throughout the heat, which lasted two hours and a quarter. Both dogs roaded running birds in a thicket. Mingo pointed a single, Pitti backing. Mingo then flushed the bird; crowding in, Mingo pointed again, Pitti backing elegantly 15yds. distant. Both dogs were steady to Mr. Wells's shot, the bird going on wounded. On the stubble, Mingo flushed twice unmistakably. Pitti pointed on ahead in the wood, the bird flying on what was probably not her flush. Mingo flushed again in grass near a fence. Pitti pointed in briers, Mingo failing to back. Mingo made a good point on stubble, and Pitti made a grand back at fully 50yds. Mr. Wells passed her, forgetful altogether of field etiquette, and ran to Mingo; Pitti moved on a step or so, but Wells flushed and killed, the bird falling at 80yds., Mingo retrieving creditably; both dogs steady. After some roading on old trails, Pitti pointed at a fence in another field. Mingo seemed not to notice her well, but crowded ahead and pointed also. A bird went out, both dogs steady. Up at 4:59, and the heat given to Pitti Sing, rightly by every means. She showed exceptional quality. Mingo is 11 years old and deaf, but a remarkable performer for his age.

It was now nearly dark, and on calling for the dogs of the undecided heat, they were found absent. Ightfield Blithe and Cambriana were put down at 5:12, but beyond learning that this was a corking good pair of rangers, nothing was done in their fifteen minutes of daylight. The day closed with no great satisfaction, because the birds seemed so scarce that the work threatened to be greatly prolonged. They were not plentiful enough to warrant runnings on the ground covered to-day.

TUESDAY, NOV. 12.

The weather was clearer and warmer. The first brace were cast off at 8:30 sharp. The committee had concluded not to disqualify Paris for his absence yesterday, and accordingly the first pair down were

PARIS AND CANADIAN JESTER.

Paris was handled by his owner, Mr. Allen, and Jester by his owner, Mr. Davey. Paris at first showed a trifle better in range. He had a choppier gait, however, and later on Jester's steadier swing fully equalized the question of speed. After a birdless long walk, the dogs were called to a scattered bevy put up by an assistant. Near a ditch in the woods each dog got a probable flush on rather wild birds to no great discredit, Allen killing two birds and Paris retrieving nicely to order. Both dogs steady to shot. Paris backed Jester's roading stop, a bird flushing ahead. Paris false-pointed beautifully, and Allen struck him with his hand, driving him away, the judge not seeing this. Paris made a false point later on in another cover. Jester backed. Allan, ordered to flush, found nothing. An hour later Jester flushed a single in the woods, and on stubble roaded, flushed and broke in, stopping to order. The dogs were taken up at 12:30, the whole morning having been taken up with not enough actual work on birds to amount to anything. Heat undecided.

After lunch the party drove a mile and a half further out, hoping to find more birds. The undecided of yesterday came up,

BREEZO AND BOB.

A bevy was found in an old field near the road, Breeze flushing. Considerable prancing around and mighty little work was done in the woods and on the stubble where the birds scattered. Bob refused to work. Breezo won. Down at 1:17, up at 2:37.

This stubble was very poorly hunted, and a number of birds were left on it. The next pair went down at 2:46.

IGHTFIELD BLITHE AND CAMBRIANA.

Each dog was handled by its owner. This was a good pair, both obedient and good workers. Blithe showed altogether the better ranger, and was really an exceptional bitch, of great style, dash and staying qualities. After a long walk an assistant flushed a bevy, the dogs getting no work. On these scattered birds a little unsatisfactory work was done. Cambriana appeared to flush in a thicket; she did not drop to word. Blithe, going at pace, whirled suddenly, just as a bird rose, and dropped just as her handler called to her. She was credited with a point, and certainly earned no demerit. The judge also gave her a point on three birds in a treetop. This was not seen by the reporters. Blithe won, and this was all right in every way. She showed herself a good one. Up at 3:07. Not much work on birds.

BRUSH K. AND GAMBOL.

Brush K. was handled by Dr. Kime, Gambol by Mr. C. A. Stone. Gambol was a little better in range, though neither had much style, and both ran with low head. Both fairly obedient to ranging signals. Brush flushed a big bevy in a weedy cornfield, and later flushed a lingering single. Both dogs steady to wing. Brush made a bad false point in the woods. Gambol was brought up, backed, and then ran in ahead. Gambol later on flushed a bird, first pausing slightly, but was steady to wing. Gambol made a good, sharp point on a bevy in a weedy field; Brush backed. Stone missed, both dogs steady to wing and shot. Gambol did not drop to order; Brush only a little better. Brush pointed, none too steadily, in the woods. Kime flushed and did not shoot, both dogs steady to wing. Brush flushed at edge of thicket, Gambol close behind, both dogs steady. Gambol flushed a wild bird a little later. On a stubble Brush roaded, Gambol came up, took up trail better, went ahead and pointed elegantly, Brush backing. Kime killed to order, both dogs breaking in rather badly and not stopping so well. Down at 3:25; up at 4:37. Gambol won.

DOVER AND MANITOBA BELLE.

At 4:56 the two friends, Mr. Johnson, of Winnipeg, and Mr. Wells of Chatham, came against each other again, each again handling his own dog, the former Manitoba Belle and the latter Dover. So far the Winnipeg dog had come out ahead, much to Mr. Wells's expressed disgust. It became apparent that Manitoba Bell was also a hard one to beat, she having very good ranging qualities. A farmer called the party to a bevy he had seen, but by careful bad management these were not found. At dusk Dover pointed old footscent at a thicket, Belle backing. The birds had been seen to fly some moments before, and Dover went on none too soon, certainly. It grew dark, and at 5:30 the dogs were ordered up. The party was nearly ten miles from town and a mile and a half from the vehicles, after a steady day's walking. The management during the day has not been exceptionally efficient, but much of this is chargeable to the fact that this is the first field meet of the club. A better knowledge of the country and of the birds, and a smoother working of details, would have saved some time. Thus, at the end of the second day only six heats had been decided.

WEDNESDAY, NOV. 13.

The weather was cloudy, light rain falling nearly all day. The party was taken out to the Big Point Club preserve near the lake, where birds were far more plentiful. This was thirteen miles from Chatham, and it was 10:15 by the time the grounds were reached. The first pair were put down at 10:25, this being the undecided heat of the night before

DOVER AND MANITOBA BELLE.

Mr. Wells handled Dover, Mr. Johnson handled Belle. There was little difference in range at first, but for some reason Belle seemed not to be hunting as eagerly as on the previous evening. Dover roaded, pointed and retrieved the bird killed by Mr. Wells out of a bevy. Belle not called to back. Both made game, and Dover flushed a bevy in briers at a log pile. Dover now ranged the better. Dover pointed in brush, Mr. Wells missed; Belle dropped at order; both dogs steady. But little more actual work was done. Up at 11. Dover won. Mr. Wells, his handler, might take lessons in the theory and practice of field handling and field etiquette. In this he could find no better model than his opponent, who accepted his defeat good-humoredly. In handling, Mr. Johnson was never noisy or petulant, but quiet and courteous always, never passing in front of his opponent's dog when on game and never rushing up to his own dog when on a point.

Paris being absent, the undecided heat of the day before was given to Canadian Jester.

Second Series.

CANADIAN JESTER AND BREEZO.

Mr. Davey handled Jester, J. McGregor handled Breezo. Down at 11:05. Breezo was hard to handle, and could not well be got down to close work in heavy cover. Jester showed himself a handy one in close work, pointing, backing and retrieving, his chief fault being a disposition to break in and chase, he however dropping at command. Breezo failed to back once, and although a very likely one and ambitious, his work was not extra. Up at 11:50. Jester won.

GEORGE AND DINAH C.

J. McGregor handled George, Mr. Wells handled Dinah C. Down at 11:55. In range Dinah surpassed, but each dog seemed as cheerful and obedient as the other. Dinah appeared to flush near a brush pile. Several good covers were drawn blank. A bevy flushed wild in the woods. George pointed foot scent and Dinah backed. A hundred yards further on, Dinah pointed false at a fence and again at a brush pile, with ample time to discover. George failed to back in the latter case, and drew up and pointed also for a moment. Ordered up at 12:40 and the heat given to Dinah C., the reason for which, it must be confessed, was not very apparent. They needed more work. The decision, however, placed the dogs properly on merit.

PITTI SING AND GAMBOL.

Mr. Wells handled Pitti Sing for Mr. Johnson, Mr. Stone handled Gambol. Down at 12:45, and ordered up at 1:58, after lunch, and the heat given to Pitti Sing. In the walk no practical work was done, but Gambol did not range out, and failing to go out and hunt on a stubble where Pitti Sing was ranging beautifully, he lost his chance.

IGHTFIELD BLITHE AND DOVER.

Mr. Johnson handled Blithe, Mr. Wells handled Dover. Down at 2:10. In this heat it became apparent that in his pointer Blithe Mr. Johnson had not only the better dog of the pair, but the best dog in the stakes. Her work was simply admirable, and she showed herself perfectly broken, of excellent disposition and exceptional ranging qualities. She outclassed Dover, and beat him hands down, whereat Mr. Wells made his customary urgent objections, to which Mr. Johnson replied with his customary pleasant smile. No birds were found till late in the heat. Blithe pointed and roaded. A bevy went up wild. Dover false-pointed, which is his worst fault; Blithe dropped to order. Blithe pointed running birds in corn, Dover an indifferently good back. Up at 3:17. Blithe won.

Third Series.

CANADIAN JESTER AND PITTI SING.

This pair were drawn on a guard, Mr. Johnson's two dogs coming against each other otherwise. Mr. Davey handled Jester, Mr. Wells handled Pitti Sing for Mr. Johnson. Down at 3:35. Pitti had the better of it in range and style. She was a wide and easy-going ranger. The dogs made game in a cornfield. Jester pointed and Mr. Davey flushed, Jester breaking in but stopping to order. Pitti Sing also pointed, and dropped beautifully to wing before she was ordered to do so, as the birds flushed about her. Roading and pointing followed, Jester backing well once. A good bevy of scattered birds was left, by reason of some theory or another, and the dogs taken across a blank field. Near a house in corn Jester broke in after a bird that rose ahead of him. Thereupon the judge ordered the pair up and gave the heat to Pitti Sing. Down 30m.

DINAH C. AND IGHTFIELD BLITHE.

Mr. Wells and Mr. Johnson again entered the ring, each handling his own dog. It was well on toward dark, but Mr. Wells insisted on running, and the pair were cast off at 4:15. Dinah pointed at a fence in thicket, very possibly on footscent. Blithe, brought up to back, pointed a bird as she passed into the thicket. Mr. Wells thought his dog had been interfered with while on game. Such was not the case. Mr. Wells showed himself overbearing and discourteous, with which mild comment this matter is with difficulty allowed to pass. This gentleman has kept his friends busy apologizing for him for the past three days. There is a point where this becomes quite threadbare. That all necessity for it be obviated, let the gentleman in question take example, as before suggested, of his chief apologist and friend, Mr. Johnson, who is fairly a model of sportsmanlike courtesy and a perfect observer of the proper etiquette of the field. At the bottom of this little ripple there is nothing worse than mere thoughtlessness, for Mr. Wells is known for a hearty good fellow.

These dogs went on into a wood, drawing several covers blank. Blithe unfortunately ran into a bevy and flushed. At the end of the 45 minutes the judge gave the heat to Dinah, on technical reasons alone, admitting later that he thought Blithe the best dog in the stakes. A dark and muddy drive of 14 miles then followed, and it was late when town was reached.

THURSDAY, NOV. 14.

Rainy weather still continued, and the party faced an unpleasant task as they walked into the muddy fields. This was about six miles from town.

Final Heat.

PITTI SING AND DINAH C.

Down at 9:45. After casting along a creek bed some time Pitti Sing blundered over a single, not to much discredit. Pitti Sing pointed nicely on stubble, Dinah backing off for an instant, but then drawing down close and again backing. Dinah false-pointed at the fence. Pitti Sing was the better in ranging qualities, although Dinah is herself an excellent ranger and a good field dog of four or five years' experience on quail. Pitti Sing, as earlier stated, is new on quail. Up at 10:25. Pitti Sing won.

By agreement of the night before it had been arranged that the second dog should not run the last dog beaten by the winner, to determine place, but that second and third should be decided by the judge on previous work. The judge now announced Pitti Sing as winner of the All-Aged, Dinah C. second, Ightfield Blithe third.

Pitti Sing, the winner (Baron Doveridge—Norah), is a 40lbs. white setter bitch, with liver markings on head and ears. She was in bad condition, but at her best is not perhaps a show dog. Her ears might be carried a bit lower, and her ribs spring better, and her coupling stronger. She is, however, tidy but rangy, and by her work has shown her quality. She wins the custody of the American Field cup, which she must win next year to hold, also $75 cash, also 25lbs. of powder, the latter offered by the Hamilton Powder Co. A donation of 1,000 shells is to be divided, on just what basis is not known at this writing.

Dinah C., second (Mingo—Fausta II.), is a compact and fair-proportioned setter bitch, white and black, about 43lbs. weight. In coat and quarters she is not perfect. In head she is good, and she is well ribbed and of good loin; in all a very useful bitch. She wins $35 cash.

Ightfield Blithe (Dancer—Ightfield Bloom), third, is well nigh a perfect pointer bitch. She is about 36lbs. weight, liver and white in color. She has perfect legs, feet, back, ribs and loin. Her muzzle is not too long, but her head is symmetrical and good. If she has fault, it lies in a tail just a shade coarse, but it is a question if she could be thought much below par on that point. This cheerful and merry little one wins $15 cash, also the special pointer prize of $10. She is a better dog than either of those above her.

SUMMARY:

First Series.

Canadian Jester beat Paris.
Breezo beat Bob.
George beat American Beck.
Dinah C. beat Maggie B.
Pitti Sing beat Mingo.
Ightfield Blithe beat Cambriana.
Gambol beat Brush K.
Dover beat Manitoba Belle.

Second Series.

Canadian Jester beat Breezo.
Dinah C. beat George.
Pitti Sing beat Gambol.
Ightfield Blithe beat Dover.

Third Series.

Pitti Sing beat Canadian Jester.
Dinah C. beat Ightfield Blithe.

Final.

Pitti Sing beat Dinah C. and won.

THE DERBY.

Immediately upon the closing of the All-Aged, running was begun in the Derby. In these stakes there was but one forfeit, and the drawings were as follows:

MARCUS (R. G. Hervey, Brockville), liver pointer dog, 14mos. (pedigree not sent in),

against

IGHTFIELD BLITHE (T. Johnson, Winnipeg), liver and white pointer bitch, 20mos. (Dancer—Ightfield Bloom).

SNAP (Ed. Green, Chatham), black and white setter dog, 20nros. (Dash—Belle),

against

BREEZO (R. G. Hervey), liver pointer dog, 14mos. (pedigree not sent in).

BRIGHTON PRIDE (Davey and Richards, London), blue belton setter dog, 18mos. (Brant—Belle),

against

DOROTHEA (J. Lorne Campbell), black and tan Gordon bitch, 16mos. (Jack—Becky Sharp).

First Series.

MARCUS AND IGHTFIELD BLITHE.

Marcus was handled by J. McGregor, a good and quiet handler, Mr. Johnson handling Blithe. Down at 10:35. Blithe did it all, and in thirteen minutes the judge gave her the heat, Marcus refusing to hunt.

The next pair were Snap and Breezo. Snap was absent and the heat was given to Breezo.

BRIGHTON PRIDE AND DOROTHEA.

Mr. Davey handled Pride, Mr. Campbell handled Dorothea. Down at 10:50. Pride showed a very independent, cheerful and business-like ranger, quite surpassing Dorothea, who was too fleshy and unfit for field work. Dorothea pointed in a thicket to demerit, no bird being found, after a fair delay. Both dogs were obedient and easily handled. Pride made a very showy point on the stubble, crouching down with one forefoot doubled under him. Dorothea did not back. Mr. Davey snapped the bird down, but Pride broke shot and retrieved without order, the bird falling about 30ft. away. Dorothea now showed a disposition to hunt close in, while Pride ranged wonderfully well. Ordered up at 11:30. Brighton Pride won.

Snap was still absent. The judge put down Breezo with Marcus, for a confirmation of his opinion as to third place. By agreement, the placing of the winners was left in the discretion of the judge without further running. His decision was Ightfield Blithe first, Brighton Pride second, Breezo third.

Ightfield Blithe, winner of the Derby, has been fully spoken of before. She wins $25 cash as first money.

Brighton Pride (Brant—Belle), second, is a fine young blue belton dog, good in head, a bit tallish and not of great bone, but a workmanlike one. He wins $15 cash. He will be heard from later, and is much of a setter.

Breezo, third, is just a plain liver and bacon colored pointer, without much style about him, tall and large, but with the making of a good serviceable field dog in him. His owner neglected to send up his pedigree, but he is said to be well bred. He wins $10 cash.

SUMMARY.

First Series.

Ightfield Blithe beat Marcus.
Breezo a bye.
Brighton Pride beat Dorothea.

Final Heat.

Under discretion, Ightfield Blithe first, Brighton Pride second, Breezo third.

A nice little game dinner was served to the field party at the Grand Central Hotel in the evening. It was announced that the club had paid its debts, concluded the business of the meet, and had a neat little surplus in the treasury for next year. This is a worthy showing for a worthy club, and one which doubtless has a good future before it.

E. HOUGH.

THE INDIANA FIELD TRIALS.

INDIANAPOLIS, Ind.—*Editor Forest and Stream:* The third annual field trials of the Indiana Kennel Club opened at Bicknell, Nov. 1, with the Members' Stake, which was judged by Messrs. A. J. Gleason and P. T. Madison.

The weather for the first three or four days of the trials was very pleasant, but the remainder of the time was cloudy and rainy. The trials were stopped twice on account of the inclement weather. The grounds were not as good as they were last year on account of many of the best fields being full of corn, and the dogs had to be taken from one open field to another, which at times was very inconvenient and annoying. The Setter Derby began Monday morning, Nov. 4, and was judged by Royal Robinson, J. B. Stoddard and P. T. Madison. On Tuesday Mr. Stoddard was compelled to retire, and Mr. J. M. Freeman took his place and acted throughout the entire trials. The work done in the Setter Derby was of a high order, while that of the Pointer Derby was rather tame.

THE SETTER DERBY.

MONDAY, Nov. 4.—*Preliminary Series.*

Each dog must score not less than 60 per cent. in this series or be dropped entirely out of the race.

FRANKIE FOLSOM AND SIMONIDES.

Mr. A. J. Gleason's orange and white bitch Frankie Folsom (Marksman—Don's Nellie), handled by owner, and Rose and Madison's black, white and tan dog Simonides (Gath's Hope—Gladys), handled by D. E. Rose, were cast off in a ragweed field on the Phillippi farm, half a mile west of town, at 8:27. The handlers soon walked into a covey; Frankie being near, pointed a portion of the remaining covey indifferently. Following the birds through a small cornfield, to where they had alighted in a woods pasture, the spectators flushed another covey. The dogs soon pointed singles simultaneously. Both dogs were steady to shot. Gleason probably thinking he could rattle his opponent's dog, fired both barrels when his bird flushed. If such were his convictions he was badly mistaken, as Simonides held his point as solid as a stone wall. Judge Robinson informed Gleason that only one shot must be fired in the future, unless the judges ordered differently. Mr. Gleason was then ordered to bring his dog up to back Simonides, which she did nicely. Moving on Frankie pointed a single, and Simonides backed handsomely; both were steady to wing. Frankie pointed again in a bunch of weeds, Simonides backed; Gleason failed to flush a bird to the point. Being sent on Simonides pointed a single bird, and was steady to shot. Frankie soon pointed again, and Simonides backed; Frankie moved up and flushed the bird. Going down wind Simonides flushed a single, and dropped to wing. The dogs were taken up at 9:15, each winning a place in the first regular series. In style and speed they were equal, Simonides having the advantage of range and obedience.

ZULU AND KING LEO'S BOY.

Mr. J. I. Case, Jr.'s, black, white and tan dog Zulu (King Noble—Nellie Belton), handled by J. L. Barker, and Mr. Wm. Dingle's black, white and tan dog King Leo's Boy (King Leo—Flaxy Gladstone), handled by Gleason, were put down in an open pasture at 9:20. Passing into a stubble field, Leo pointed and moved on, Zulu pointed and was steady to wing; followed the birds to woods. Leo flushed a single and was slightly unsteady to wing; being ordered on, Zulu flushed a single. Leo pointed, but no bird was found to the point. Then Zulu flushed a single in the briers. Worked back into the stubble, and finding nothing more, the dogs were sent into the woods, which was drawn blank. Going on into another stubble, the handlers flushed a covey, which was followed. Leo got the first point on a single, but was unsteady in his point, and moving flushed the bird. Zulu then flushed a single. Leo pointed a single, drew up and flushed the bird. The brace was taken up at 10:49, both scoring less than 60 per cent. In style and obedience King Leo's Boy had the advantage; in all other respects they were about equal.

HOPE'S RAY AND MODESTY.

Mr. D. E. Rose's black, white and tan dog Hope's Ray (Gath's Hope—Lady May), handled by owner, and Dr. J. McDowell's blue belton bitch Modesty (Gath's Mark—Esther), handled by Geo. McLin, were put down in a stubble field on the Horn farm at 11:10. Going across wind, Ray flushed a single bird of an outlying covey which the judges flushed a moment later. Following the birds to the woods, Modesty was the first to find a point; she was very steady to shot. Going on Ray pointed a rabbit, and was steady to fur; moving further Ray pointed a single, but the bird flushed a moment later; then he pointed a covey. The birds were followed into the woods. Ray picked up three points on singles on dry leaves, and won his place in the next series. Modesty, not scoring 60 per cent., was dropped out. The dogs were taken up at 11:58. Ray was superior in everything but obedience. An adjournment was now taken for lunch.

TEMPIE CAMBRIDGE AND SAM C.

Mr. G. R. Howse's black, white and tan bitch Tempie Cambridge (Count Paris—Nellie Cambridge), handled by her owner, and Mr. J. I. Case's lemon belton dog Sam C. (King Noble—Cricket), handled by C. W. Barker, were cast off in an orchard at 12:55. In ten minutes the judges flushed a covey, which went to the briers. Sam soon pointed, but moved on after finding his mistake. In briers Tempie pointed, but Howse failed to flush a bird to the point; Sam backed indifferently. Being sent on Sam pointed, and Tempie backed handsomely; no birds were found. The dogs then began roading, and located the birds simultaneously. Both dogs were steady to shot. The birds were followed to the woods, where Tempie got two good points to one for Sam. They were taken up at 1:35, both winning their place in the next series. Tempie was superior in style, range, speed and obedience.

DAISY GIRL AND NANNIE B.

Mr. G. R. Howse's black, white and tan bitch Daisy Girl (Count Paris—Nellie Cambridge), handled by owner, and Mr. J. I. Case's lemon belton bitch Nannie B. (King Noble—Queen Vashti), handled by C. W. Barker, were put down in woods where last brace finished at 1:45. Daisy soon pointed a single; the bird flushed wild a moment later; she was steady to wing. Going on Nannie pointed in fence corner, Daisy backing beautifully; no bird found to the point. After a little spin Daisy pointed a covey, and was steady to shot. The birds were followed, Daisy getting three points on single, while Nannie got two. They were taken up at 2:20, both scoring over 60 per cent.

BRAXTON BRAG AND LILLY BURGES.

Mrs. Geo. N. Whiteley's orange and white bitch Lilly Burges (Gath's Mark—Esther), handled by Frank Richards, and Mr. N. N. Nesbit's black, white and tan dog Braxton Brag (Roderigo—Lufra) handled by owner, were cast off in an open stubble at 2:40. Lilly soon pointed but no birds were found to the point. After crossing a fence Brag pointed in briers, and Lilly backed, but Nesbit failed to flush his bird. Going on into stubble Lilly found and pointed a covey nicely, Brag coming up refused to back, went in and flushed the entire covey. The birds were followed, but before reaching the place where they were marked, Lilly pointed another covey. Brag backed, then deliberately walked in and flushed the birds, Lilly remaining steady. The birds were followed, and Lilly soon captured three singles to one for Brag. Then Brag flushed a single, and lost his place in the next series, while Lilly went in with flying colors. They were taken up at 3:20. Lilly had style, speed, range and obedience all on her side.

CLOCHETTE (A BYE) AND BRAXTON BRAG.

Mr. P. Lorillard, Jr.'s black, white and tan bitch Clochette (Roderigo—Lavalette) handled by D. E. Rose, having the bye, the judges selected Braxton Brag to run with her. They were put down in an open pasture at 3:30; working across this pasture and a newly sown wheat field and finding nothing, the dogs were turned into a stubble field, where Brag found a covey and pointed it nicely. Clochette backed. The dogs were steady to wing. Following the birds to edge of corn Clochette flushed twice and then pointed a single, and was unsteady to shot, although she dropped at command. Being sent on she flushed a single. The dogs were taken up and carried to stubble on the Horn farm, where Clochette flushed a covey and lost her place in the next series. She was taken up at 4:30.

TUESDAY, NOV. 5—*First Regular Series.*

Zulu, King Leo's Boy, Modesty, Braxton Brag and Clochette having failed to score the required 60 per cent., were retired, and the new drawing brought out as the first brace,

HOPE'S RAY AND SAM C.

They were cast off in an open stubble, both dogs going well. They both soon made game, but as they were both a little over anxious, they roaded into a covey going down wind. Sent after the scattered birds, Ray was the first to locate; he pointed a single in a fence corner very nicely, and was steady to wing. Passing on, Ray pointed another single, and was steady to wing. Then Sam located a single and made a stylish point; he was also steady to wing. The dogs were now sent on to find a fresh covey. Barker called point; the birds flushed wild before the judges and reporters could get near enough to see the dog. Being sent on after the scattered birds, both dogs pointed singles simultaneously, and were steady to wing. Then Sam false pointed. Moving on, Ray pointed a single in fence corner; Sam backed indifferently; Ray was steady to shot. Passing on, Ray pointed a single, which flushed wild a moment later. Then Sam pointed and Ray backed indifferently. Barker failed to find a bird to the point. The dogs were then sent on through a stubble into a woods pasture, which was drawn blank. Going into another stubble, Sam pointed a rabbit and Ray backed. Going on into corner of a small cornfield, both dogs pointed a covey simultaneously; both were steady to shot. Going into corn, Ray got lost and was out of sight five minutes; when found he was on a point. The dogs were then taken up, brought out of the corn and turned loose in a stubble field. Going up wind, Sam pointed a covey in style; Ray was not near enough to back; Sam was steady to shot. The birds went to the corn and were not followed. The dogs were sent into another stubble. Going down wind at a clipping gait, Ray flushed some outlying birds, and dropped to wing. He then roaded and located the rest of the covey, and was steady to wing and shot. The dogs were taken up at 10:04 and Hope's Ray declared the winner. The work in this heat was not of a high order, both dogs being hard to control. In speed, style and range they were about equal.

NANNIE B. AND SIMONIDES.

Mr. Madison, having an interest in Simonides, did not judge in this heat. The brace were put down in a stubble field on the west end of the Horn farm at 10:35. Nannie soon pointed a covey and Sim backed; both were steady to shot. Being sent on into woods after the scattered birds, Nannie pointed, Barker failing to find a bird to the point. Then she pointed again in the briers near the edge of the woods, which also proved false. Going back into stubble Sim jumped into a beautiful point, going across wind at a rattling gait; Nannie was brought up to back, which she did indifferently; Sim dropped to shot. In fence corner further on, Rose called point; birds flushed a moment later. Passing on into woods Sim pointed a single, and was steady to shot. Then he flushed a single from the dry leaves, Nannie then pointed a single in dry briers and was steady to shot. Passing on Nannie pointed in briers; Barker could

find nothing to the point. Later on she pointed a single, Sim backed; both dogs steady to shot. Passing out of the woods into a stubble field, the judges instructed the handlers to work in a notherly direction. Instead of doing as he was instructed to, Mr. Barker allowed his dog to get away from him and work in the opposite direction. She was soon out of sight, and when found was on a point in corner of cornfield near a ditch. Barker called point; Sim was brought up to back, which he did. Barker failed to find birds to the point. Being ordered on the dogs began roading. Sim located and pointed a small covey 75yds. east. Rose shot and Sim dropped. The dogs were then taken up at 11:30, and the heat given to Nannie B. I cannot agree with the judges in this decision, as Nannie was clearly outclassed. Sim was positive in his work, and the only mistake he made was in flushing a single bird in the woods.

An adjournment was now taken for lunch.

TEMPIE CAMBRIDGE AND LILLY BURGES.

This brace was put down in a stubble field on the Horn farm at 12:45, and immediately went away as if they were trying to catch a jack rabbit. Tempie soon came to a point, Lilly refused to back, and was dropped by Richards, House failed to flush anything to the point. Going on Tempie pointed twice on rabbits. Going down a fence at a terrific gait, Lilly wheeled into a point, stood a moment, then moved on, the judges coming up, flushed a covey. Being sent on after scattered birds Lilly pointed, but Richards could not find a bird to the point; Tempie flushed a single and dropped to wing. Going into woods Lilly pointed a single, and Tempie backed nicely; both were steady to shot. The dogs were taken up at 1:45 and the heat given to Lilly. In style, range and speed they were evenly matched, but Lilly had the best judgment on birds.

DAISY GIRL AND FRANKIE FOLSOM.

This brace was put down in a stubble at 1:57. Passing through this field into another of the same kind, Frankie pointed in corner of fence, Daisy backing nicely; Gleason failed to flush. The dogs were sent on into the stubble, where Daisy found and pointed a covey nicely. Frankie backed handsomely, both dogs steady to shot. Being sent on after scattered birds, Daisy soon began roading, continuing until she located a covey one hundred yards away; she was perfectly steady to shot. The dogs were sent on; going down wind Daisy flushed a single, Frankie flushed a covey in edge of briers, and dropped to wing. The birds were followed to woods, where Frankie flushed a single, then she soon false pointed. The dogs were taken up at 2:44 and the heat given to Daisy. In style and bird sense Daisy had the advantage, but in speed and range they were equal.

Second Series.

HOPE'S RAY AND NANNIE B.

This brace was put down in a stubble at 3:20. Nannie soon located and pointed a covey and was steady to shot. The birds were followed to the woods where Nannie flushed a single; she next pointed a single, and was steady to wing. Ray pointed a single on hillside, and was also steady to shot. Nannie further on pointed a single, and Ray backed; both steady to wing. The dogs were taken up and carried to the Horn farm, where they were put down in a stubble at 3:57. Nannie quickly located and pointed a covey; Ray backed; both dogs were steady to shot. They were taken up at 4:05 and the heat awarded to Nannie B. In style Ray had the call. In speed and range they were about equal.

LILLY BURGES AND DAISY GIRL.

This brace was cast off where last brace finished, at 4:10. They soon located a covey, both dogs dropping to the point simultaneously; they were both steady to shot. Being sent on Lilly soon located and pointed another covey, then she pointed a single and Daisy backed. The dogs were taken up at 4:28, and the heat given to Lilly. In style, range and speed Lilly had the call, decidedly.

Third Series.

LILLY BURGES AND NANNIE B.

This brace was put down where last brace finished at 4:38, to run for first honors. Lilly soon pointed a single, and Nannie backed, both steady to shot. Passing on, Nannie pointed and Lilly backed; Barker failed to find a bird to the point. They were sent on; Nannie pointed a covey and was very unsteady to wing, being inclined to chase. Going into another stubble Lilly flushed an outlying bird, then pointed the covey; Nannie then flushed a single and pointed the remainder of covey. Going on, Lilly pointed another covey and was steady to wing; passing on both pointed singles; then Nannie flushed a single; then Lilly flushed a single and dropped. Being sent, Lilly quickly got two single points and won. They were taken up at 5:15. Lilly had a decided advantage in style, and showed better judgment on birds. In speed they were equal, Lilly having somewhat the greater range.

WEDNESDAY, Nov. 6.

Third Series.

HOPE'S RAY AND DAISY GIRL.

This brace was put down in stubble on the Phillippi farm at 8:08, to determine which should run against Nannie B. for second money. Daisy soon pointed larks, and Ray backed; being ordered on she soon pointed, Ray backed; Howse failed to flush to the point. Sent on into high weeds a covey was seen to flush; when the judges got near enough to see, both dogs were down. They were ordered on after the scattered birds and got a single point each. Then Ray flushed a single. Daisy false pointed and Ray backed. Ray then pointed a single, the bird flushing wild almost instantly; Ray then began roading, and a bird flushed wild 30ft. ahead of him. Being sent on, Daisy flushed a covey. Ray pointed a single in briers, and was steady to wing. Passing into pasture, Ray pointed; Rose failed to find his bird. Passing through this pasture into woods, Daisy pointed covey, Ray backed, birds flushed wild. Ray then false pointed. Later on both pointed in cornfield, and were steady to wing. The dogs were now taken out of the corn and turned down in a weed field to find a fresh covey. Ray soon pointed a single, and was steady to shot, Daisy flushed a single and dropped. Then both dogs flushed a covey. Passing on, Daisy false pointed. Going into woods where nothing was found, the dogs were turned back into weed field; in the bottom near a ditch Daisy made two false points. The dogs were taken up at 10:38, and the heat given to Hope's Ray.

Nannie B. having already beaten Hope's Ray, she was declared winner of second money and Hope's Ray third.

SUMMARY.

BICKNELL, Ind., Nov. 6, 1889.—Indiana Kennel Club's Setter Derby; open to all setters born on or after Jan. 1, 1889; $5 to enter, and $15 to start. Sweepstakes purse, after deducting expenses 50 per cent. to first, 30 per cent. to second, and 20 per cent to third.

Preliminary Series (dogs to score 60 per cent. or better).

Mr. A. J. Gleason's orange and white setter bitch Frankie Folsom (Marksman—Don's Nellie) and Rose and Madison's black, white and tan dog Simonides (Gath's Hope—Gladys). Both scored.

Mr. J. I. Case, Jr.'s black, white and tan dog Zulu (King Noble—Nellie Belton) and Mr. Dingle's black, white and tan dog King Leo's Boy (King Leo—Flaxy Gladstone). Both failed to score.

Mr. D. E. Rose's black, white and tan dog Hope's Ray (Gath's Hope—Lady May) and Dr. J. McDowell's blue belton bitch Modesty (Gath's Mark—Esther). Hope's Ray scored, Modesty failed.

Mr. G. R. Howse's black, white and tan bitch Tempie Cambridge (Count Paris—Nellie Cambridge) and Mr. J. I. Case, Jr.'s lemon belton dog Sam C. (King Noble—Cricket). Both scored.

Mr. G. R. Howse's black, white and tan bitch Daisy Girl (Count Paris—Nellie Cambridge) and Mr. J. I. Case, Jr.'s lemon belton bitch Nannie B. (King Noble—Queen Vashti). Both scored.

Mrs. Geo. N. Whiteley's orange and white bitch Lilly Burges (Gath's Mark—Esther) and Mr. N. N. Nesbit's black, white and tan dog Braxton Brag (Roderigo—Lufra). Lilly Burges scored, Braxton Brag failed.

Mr. P. Lorillard, Jr.'s black, white and tan bitch Clochette (Roderigo—Lavalette), a bye. Failed to score.

First Series.

Hope's Ray beat Sam C.
Nannie B. beat Simonides.
Lilly Burges beat Tempie Cambridge.
Daisy Girl beat Frankie Folsom.

Second Series.

Nannie B. beat Hope's Ray.
Lilly Burges beat Daisy Girl.

Third Series.

Lilly Burges beat Nannie B., and won first.
Nannie B. second.
Hope's Ray third.

Previous Winnings.—Bicknell, 1887.

Cherry Stone (Trinket's Bang—Pearlstone), pointer, first.
Zetta King Don (King Don—Queen Faust), pointer, second.
Queen of Tennessee (Gath's Hope—Freda), setter } equal
Dash (Royal C.—Belle), setter, } third.

Bicknell, 1888.

Florence Gladstone (Gladstone—Flounce), setter, first.
Bertraldo (Corner Stone—Bessie Beaufort), pointer, second.
Rod's Gal (Rod—Juno), pointer, } equal third.
Tennie (Rod—Nell), pointer, }

POINTER DERBY.

Preliminary Series.—Conditions same as those of the Setter Derby. At the conclusion of the Setter Derby the first brace in the Pointer Derby was called.

DEVONSHIRE JILT AND THOMASTONE.

Mr. J. W. Patterson's liver and white bitch Devonshire Jilt (Fowler—Cherrystone), handled by J. B. Stoddard, and Mr. W. H. Holmes's liver and white dog Thomastone (Cornerstone—Firenzi), handled by A. J. Gleason, were put down at 10:50 in a stubble field, which was drawn blank. Crossing a new wheat field, to another stubble, Thomastone located a bevy and pointed handsomely, Jilt backed well, both dogs were steady to shot. Being sent on, Thomastone pointed a rabbit, Jilt pointed, moved and began roading; covey flushed wild, 20yds. ahead. Tom pointed two outlying birds of this covey. The birds were followed to the woods where Tom pointed a single, then moved up and flushed the bird; then Jilt pointed, but moved on after finding her mistake. The dogs were taken up at 11:50 both dogs scoring. In range, speed and style Tom had the advantage. An adjournment was then taken for lunch.

ROBERT SPRING AND PEARL'S DOT.

Mr. H. T. Schmidt's liver and white dog Robert Spring (Hairspring—Diables), handled by Geo. McLin, and Mr. J. B. Turner's liver and white bitch Pearl's Dot (Trinket's Bang—Pearlstone), handled by J. B. Stoddard, were put down in a stubble field on the Horn farm at 1:04. Going into briers near a fence, Dot flushed a covey; 50yds. further on near the same fence Robt. flushed a covey. Going on up the fence to the corner of the field, Dot pointed a single, Robt. backed indifferently, both dogs were steady to wing. At this juncture Mr. Madison was taken ill and was compelled to retire, leaving the judging to be done by Mr. Robinson and Mr. Freeman. Nothing more was accomplished by this brace and they were taken up at 2:03. Pearl's Dot scored, Robert Spring failed.

ELECTRIC AND FANCY FREE.

Mr. Frank Carlisle's orange and white dog Electric (Croxteth—Young Beulah), handled by S. J. McCartney, and Mr. Worthington Hoyt's liver and white bitch Fancy Free (Donald—Lady Bow), handled by R. B. Morgan, were cast off in stubble field, on west end of the Horn farm, at 2:10. Neither had much style, range or speed. The judges flushed a covey which dropped along a ditch; the dogs were called over to be put on these birds. Fancy was lost, birds were seen to flush in corner of field and Fancy was found there. In ditch both dogs pointed. The handlers moving around flushed the remainder of the covey. Moving along the fence, each dog got a point on singles, and were steady to shot. Going back into the stubble Fancy flushed a single, then the entire covey. She passed a covey which she should have pointed, as her handler coming up, following his dog, walked into the birds. She twice made game but moved on, and birds were flushed by spectators from these places. Passing into woods Electric pointed a single and Fancy backed; then Fancy pointed a single, Electric refused to back; both dogs were steady to shot. They were taken up at 2:45. Fancy scored, Electric failed.

First Regular Series.

PEARL'S DOT AND FANCY FREE.

This brace was put down where last brace finished. Dot soon began roading and flushed a single outlying bird, then she roaded into and flushed a covey. In the woods Dot flushed a covey, then she pointed a single, and was nicely backed by Fancy. In briers Fancy challenged, but was prevented from establishing her point by her handler continually cautioning her; a covey flushed by dog and handler together. Going over fence, on forbidden ground, Fancy pointed and Dot backed; the judges called the handlers and dogs back into stubble. In stubble Dot was missed, and while her handler was hunting her a covey was seen to flush, and she was then discovered running in that locality. Dot pointed and moved on; after she was gone a bird was flushed from where she had pointed; the handlers then soon flushed a covey. Going into woods, a covey flushed, both dogs were within a few feet of the birds, but failed to scent them. Fancy then flushed two singles in succession. Then Dot pointed a single, and Fancy also nailed one. Then Dot got another single, while Fancy scored a flush. The dogs were taken up and the heat given to Pearl's Dot. Dot did not go as well in this heat as she did in her other heat, while Fancy did better. Dot had the best style in motion, while Fancy made the most stylish point. In speed and range Dot was superior. This heat lasted 53 minutes.

DEVONSHIRE JILT AND THOMASTONE.

This brace was put down in weed field at 4:05. Tom ran into a covey and dropped to flush; then Jilt pointed a single and was unsteady to wing. Later on Jilt pointed, moved on and pointed again just as birds flushed all around her. Tom got a point on these birds a moment before they flushed. Moving on Tom pointed just as two birds flushed from high weeds; then he got a single in the same way. Further on, at different times, both handlers claimed points, but they failed to find birds to the points. Passing on Tom pointed a rabbit. In another stubble both dogs began pointing and roading; Jilt getting too near flushed the birds; Tom pointed a moment before the birds flushed. Going to hillside Jilt pointed indifferently on a single. Tom then pointed and Jilt backed indifferently; they were steady to shot. Tom had the advantage in style, speed and range. They were taken up at 5:00 and the heat given to Thomastone.

THURSDAY, Nov. 7.

Second Series.

PEARL'S DOT AND THOMASTONE.

This brace was cast off at 8:30 in stubble to decide first money. In ten minutes Tom ran through a covey in the stubble and dropped to wing. In the woods where the birds had been marked down Dot pointed a single nicely, and was steady to shot. Tom was not near enough to back. Across the creek in an old field Tom pointed a rabbit, Gleason corrected him, turned him loose, when he started on a chase of the fur, giving tongue. As Tom and the rabbit ran past Dot, she joined in the chase. This being all that was done in the heat the dogs were taken up at 9:10 and the heat and first money given to Pearl's Dot.

Third Series.

DEVONSHIRE JILT AND FANCY FREE.

This brace was put down to decide which of the two dogs should run against Thomastone for second money. In a thicket Jilt pointed a single, Fancy backed nicely, both steady to wing; Fancy next pointed in briers; when her handler tried to flush, she moved up and flushed two birds. In an orchard Jilt flushed a covey; going on, several birds flushed wild, the dogs, handlers and judges all among them. Going on to hillside in the woods, Fancy made a stylish point on a single, and was steady to wing. In a thicket close to the creek Fancy pointed a single. Three birds flushed near Jilt which she should have pointed; she then flushed a single. The dogs were taken up at 10:05 and the heat given to Fancy Free.

Fourth Series.

THOMASTONE AND FANCY FREE.

This brace was cast off at 10:15 to contest for second money. They were worked toward where a scattered covey had settled. Tom pointed a rabbit, which ran through a covey of birds and flushed four of them. The dogs coming along, flushed the remainder of the covey, which they should have pointed. In thicket near the creek several birds flushed; the dogs were near them at the time. In stubble on top of hill Tom pointed in good style. Gleason, going in to flush, saw a rabbit run from the point and tried to send his dog on; he held his point, however, and a covey flushed a few feet in advance of the dog. In weeds near fence Fancy false pointed. Then she pointed in a gully, but could not exactly locate the bird, which flushed as she moved on. The dogs were taken up at 10:50 and the heat and second money given to Thomastone, Fancy Free taking third.

SUMMARY.

Pointer Derby—Conditions same as those of Setter Derby.

Preliminary Series.

Mr. J. W. Patterson's liver and white bitch Devonshire Jilt (Fowler—Cherrystone) and Mr. W. H. Holmes's liver and white dog Thomastone (Cornerstone—Firenzi). Both scored.

Mr. H. T. Schmidt's liver and white dog Robert Spring (Hairspring—Diables) and Mr. J. B. Turner's liver and white bitch Pearl's Dot (Trinket's Bang—Pearlstone). Pearl's Dot scored, Robert Spring failed.

Mr. Frank Carlisle's orange and white dog Electric (Croxteth—Young Beulah) and Mr. Worthington Hoyt's liver and white bitch Fancy Free. Fancy Free scored, Electric failed.

First Series.

Pearl's Dot beat Fancy Free.
Thomastone beat Devonshire Jilt.

Second Series.

Pearl's Dot beat Thomastone and won first.

Third Series.

Fancy Free beat Devonshire Jilt to see which should run with Thomastone for second money.
Thomastone beat Fancy Free, and won second.
Fancy Free won third.

SUMMARY OF OTHER STAKES.

(Full report will be given in next issue.)

MEMBERS' STAKE.—Freeman's Esther beat Comstock's Hoosier Harry. Hinton's Daisy Hunter a bye. Esther beat Daisy Hunter for first. Hoosier Harry beat Daisy Hunter (absent) for second.

ALL-AGED SETTER STAKE.—In preliminary running (to score 65 per cent.), Daley's Count Erie, Swanman's Dot Belton and Kennedy's Prince Royal H. were thrown out.

First Regular Series.—King's Mark beat King's Dan. Dan Gladstone beat Babe Gladstone. Beaumont beat Noble Dido. Maud beat Stubble. Dashing Dixie beat Sam C. Blue Mark beat Nannie B.

Second Series.—King's Mark beat Dan Gladstone. Maud beat Beaumont. Dashing Dixie beat Blue Mark.

Third Series.—King's Mark beat Maud. Dashing Dixie ran a bye.

Fourth Series.—Dashing Dixie beat King's Mark and won first. King's Mark took second. Maud third. Blue Mark and Dan Gladstone divided fourth.

ALL-AGED POINTER STAKE.—Preliminary running (must score 65 per cent.)—Link's Topsy W., and Stafford's Reximus and Rank failed. In first regular series, Michel's Bannerman beat Allen's Rodman. Daniel's Lord Graphic beat Billing's Tamarack. Madison's Ossian beat Link's Rod's Gal. Judges then placed Ossian first, Lord Graphic second, Bannerman third, Tamarack fourth. RICHMOND.

A TRANSACTION IN DOG FLESH.—Cadiz, O., Nov. 11.—*Editor Forest and Stream:* In regard to the article published in FOREST AND STREAM, under date of Nov. 2, will say that if "Jeweler," "D. Fenwick & Co.," will come out like a man and state facts I will then vindicate myself. This "Jeweler" of Suspension Bridge, under his lawful name, has, I believe, been written up on more than one occasion for crooked dog dealing; and as there are always two sides to a dog trade I will say that if "Jeweler" will come out in his own name and state the case truthfully then I will give my side of the story, which will put a different phase on the subject.—S. C. G.

VORTIGERN.—Philadelphia, Nov. 17.—I am sorry to inform you that the black and tan terrier champion Vortigern (E.K.C.S.B. 8,633) died Nov. 15; cause, pneumonia. He was twelve years old last August, and as you know was sire of more winners than any black and tan terrier on this side of the water. I feel that I have lost an old friend.—EDWARD LEVER.

BUFFALO KENNEL CLUB.—Buffalo, Nov. 12.—*Editor Forest and Stream:* The Buffalo Kennel Club has recently been organized with the following officers: Geo. H. Bush, President; Otto W. Volger, Vice-President; A. W. Smith, Secretary; E. W. Greiner, Treasurer. We intend giving a dog show at Music Hall, March 18 to 21, 1890, and claim those dates.—A. W. SMITH, Secretary.

SPRATTS PROVENDER DID IT.—*Editor Forest and Stream:* You may be interested to know that the three winners, Trales, White Lips and Lord Neversettle, at the Great Bend meeting of the American Coursing Club, were all trained on Spratts dog cakes.—SPRATTS PATENT (AMERICA) LIMITED.

EASTERN FIELD TRIALS.

THE eleventh annual meeting of the Eastern Field Trials Club began on Thursday, Nov. 14, at High Point, N. C., with the Members' Stake. We are sorry to note that the entries for this stake were so few in number. As we have repeatedly said this stake should be the most important event of the yearly meeting, and the members, each and all, should strive to accomplish this by entering and running their dogs. A large number of the members are practical sportsmen, and many of them own good dogs and know how to handle them fairly well, and in furtherance of the interests which the club was specially organized and is maintained to foster, a greater interest should be manifested by its members in making the stake what it should be, the principal event of the meeting. By doing this there is no question that the influence of the club and its consequent usefulness would be greatly extended; and that in the future, as in the past, sportsmen throughout the country would generously support the association, and it would continue to prosper and grow in usefulness and maintain its high prestige for many years to come. It is to be hoped that next year we shall see an entry for this stake that will far surpass that of any previous year, an entry that will conclusively show that the members of the club are alive to its interests, and that they are not afraid to exhibit their dogs in public nor ashamed of their skill as handlers. We are pleased to note that there was a marked improvement this year in the manner in which the dogs were worked. There was not a single contestant that did not handle his dog in a creditable manner, and in some cases the skill displayed would have done no discredit to a professional handler.

Eight dogs were entered, the well-known Buckellew being the only one that failed to put in an appearance. The starters were drawn in the following order:

MEMBERS' STAKE.

BOB GATES (Jas. L. Breese, Tuxedo Park, N. Y.), black, white and tan English setter dog, 5 years (Count Rapier—Belle of Hatchie).

WHITIE (H. Merriam, Weston, Mass.), white and orange English setter dog, March, 1887 (Gus Bondhu—Royal Myrtle).

VOLLEY (Pierre Lorillard, Jr., New York), orange and white English setter bitch, 4 years (Antic—Princess Mix).

NAT GOODWIN (I. Norris Cochran, Philadelphia, Pa.), black, white and tan English setter dog, 4 years (Roderigo—Bo-Peep).

GUY (Geo. T. Leach, High Point, N. C.), black, white and tan English setter dog, 2½ years (Gladstone's Boy—Lady).

GLOSTER (Jas. L. Breese, Tuxedo Park, N. Y.), black, white and tan English setter dog, 5 years (Dashing Rover—Trinket).

NORA (I. Norris Cochran, Philadelphia, Pa.), black, white and tan English setter bitch, 3½ years (Count Noble—Lit).

The judges were Messrs. H. B. Duryea, F. R. Hitchcock and W. A. Coster.

Leaving the hotel a few minutes past 8 o'clock, we rode a short distance east of the town, and at 8:30 Bob Gates and Whitie were put down in a cornfield for the first heat. The weather was simply perfect, there was not a cloud to be seen, a slight breeze from the northwest scarcely stirred the tops of the sedge grass, and the balmy air among the fragrant pines was never more delicious to the senses than on this bright, beautiful morning. As our gallant (now don't let the compositor set this up galled) steeds gently ambled over the springy turf, the merry jest and joyous laughter of the riders gave assurance that the occasion was indeed a pleasurable one and that all were heartily enjoying themselves.

Bob Gates is too well known to need a description. He was in good form and did his work in a stylish manner, winning his heat with ease by finding two bevies in very good style. We have never seen him under nearly so good discipline as he was upon this occasion, and, although going at a good rate of speed and ranging wide, he worked better to the gun than he has done in previous years, and he appears to have improved in bird sense. Whitie, his opponent, is a white dog, with orange markings, of medium size; he moves fairly well, but is no match for Bob either in style, pace or range, he also seemed to lack experience, and did not get round to the likely places nearly so well as his competitor. He was the first to find, however, and he made a good point to a single that had been flushed by the spectators; he backs and retrieves nicely, and is said to be a killing dog, and we have no doubt that among scattered birds he would give a good account of himself; he carries his head too low for work on bevies. He was a bit unsteady to the rise of the first bird, but stopped to shot, and during the remainder of the heat he behaved nicely.

After a short wait the next brace was put down in an open lot. Volley has made a good record at the trials of the Philadelphia Kennel Club. She is a heavily-marked orange and white bitch, about medium size, with a fair amount of speed, good range and lots of bird sense; she moves a bit heavy, and, through being stale from work, she did not show the snap and dash that she is said to exhibit when at her best. She was under better control than any dog in the stake; she drops on her points and has not much style; she backs and retrieves nicely, and showed herself to be a capital dog. Nat is well known; he was quite lame, which detracted much from his elegant style; but he ran a game race and did some good work. He is naturally hard-headed, and has not improved in this respect, and did not mind readily. Some of the work during the heat was very prettily done by both dogs, and the margin between them was very narrow, except in style, where little Nat had decidedly the best of it.

Guy and champion Gloster was the next brace. Guy is a very small, prettily-marked white, black and tan, with a fair head, good shoulders, back, loin, and excellent legs and feet, his coat is curly beyond redemption, as the very thorough combing he gave it among the briers and brambles failed to straighten a single hair so far as we could see. He has a lightning turn of speed, is quick and stylish on point and back, and when he has had the necessary experience and is brought under good control, he will be fit for about any company. Gloster came out in good form and gave a very good exhibition of his finding qualities, but his work on birds was not up to his usual high standard of excellence; his heats were run in the middle of the day, and the condition of the scent may have had something to do with this, as he appeared to be all right. In pace, range and way of going there was not much to choose between the two, but Gloster's experience gave him a decided advantage. Neither was under good control, and the heat was a "go-as-you-please" from start to finish, the dogs at one time being a half mile apart, despite the efforts of their handlers to get them together. Near the finish of the heat some very pretty work was done by both dogs on some birds that were scattered in the big woods at the north end of the Model Farm. Gloster had the best of it here, and roaded out and located some of his birds in fine style.

This finished the first series, Nora having a bye. She is a heavily marked black, white and tan bitch, just under medium size, very taking looking, and is as good as she looks. She has a very nice, easy way of going that is not excelled by any dog in the stake. She is rather stylish on point and back, and roads her birds in a gamy way that is very pleasing. She lacks experience and was not under good control. She was with Bob Gates in the first heat of the second series. Bob had the advantage in speed, range and style on point; he nearly lost the heat, however, by an ill-advised chase after a very fast hare, going out of sight and hearing, and as he did not return it looked like a win for Nora by default, but he bobbed up serenely in season to finish the heat, which he won with something to spare.

It was now one o'clock and we went to lunch at our favorite resort, the large barn of the Model Farm. Capt. White, our host, gave us a hearty welcome, and an hour was very pleasantly spent in discussing the lunch and talking over bygone times.

It was nearly half-past 2 when Nat Goodwin and Gloster were cast off in the open lot west of the barn. Nat was quite lame, but he soon warmed up and went for all he was worth, but the champion had the legs of him and outworked him on birds and won the heat quite handily. Both dogs behaved well in this heat except that Gloster broke shot and in spite of orders to the contrary he brought the bird. Nat could not stand this and he also broke shot and joined Gloster, but under the circumstances he was not as much to blame as his competitor.

This finished the second series, Bob Gates having a bye, and he and Gloster were the only ones left in for first money. Both are owned by Mr. Breese, and at his request the judges decided to place the winner without running. After consultation the judges announced that Bob Gates was placed first, and that Nora should run with Gloster for second honors, and at 3:55 they were cast off in a stubble field near the creek northwest of the farmhouse. Gloster had the best of it in speed, range and style on point; in way of going there was not much difference between them. Gloster found the first bevy and the greater number of singles, Nora found the last bevy and roaded and located them in capital style, this being the best bit of work done by her during the day. They were ordered up at 4:40 and Gloster was awarded the heat and declared winner of second prize, and Nora was placed third and the stake was finished.

In placing Bob Gates over Gloster the judges decided that his work was of a higher order of merit, and in this they were undoubtedly correct, but as Bob did his best work in the morning, when scent was presumably better than in the middle of the day, we should have been loth to decide the matter without an actual trial between them, especially as we consider the average work of both dogs in past years, so far as merit goes, to be of a much higher grade in Gloster's case than Bob is capable of. In placing Nora third the judges made no mistake, as she fairly earned the position. During the morning of the last heat an incident occurred that caused considerable merriment. Mr. Breese called the judges' attention to a point and went to the dog in a thicket, and as the judges came up he flushed the bird and said, "There it is!" "I saw it," remarked one of the judges, "but that is Nora instead of Gloster." We hardly need say that this was fully appreciated by the crowd and enjoyed to the fullest extent, and by no one more than Mr. Breese, who squared the account upon our return to the hotel. The day's sport was most enjoyable; nothing occurred to mar the pleasure of the meeting and everything passed off pleasantly; birds were plentiful, some thirteen bevies being found, and upon the whole, the work of the dogs was commendable and the day was an auspicious opening of the meeting of 1889.

THE DERBY.

There were 61 nominations for the Derby, 14 of which filled—10 setters and 4 pointers. They were drawn to run as follows:

BEPPO IV. (E. L. Mayer), liver and white pointer dog, April 20 (Beppo III.—Lass of Bow),

against

FLIRT (O. W. Donner, Boston, Mass.), liver and white pointer bitch, April 8 (Mainspring—Merry Legs).

ANNIE F. (Memphis & Avent Kennels, Memphis, Tenn.), black and white English setter bitch, Jan. 6 (Roderigo—Juno A.),

against

TRIP OF KIPPEN (F. E. Lowe, London, Eng., and F. R. Hitchcock, New York), liver and white English setter dog, Jan. 17 (Tutsham Trip—Dido).

HARRY C. (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan English setter dog, June 10 (Roderigo—Countess House),

against

FANNIE M. (Dr. J. N. Maclin, Mason, Tenn.), black, white and tan English setter bitch, March 14 (Gladstone's Boy—Flame).

LETTY LYNN (Memphis and Avent Kennels, Memphis, Tenn.), black, white and tan English setter bitch, June 10 (Roderigo—Countess House),

against

BESSIE W. (C. E. Metzger, Harrisburg, Pa.), liver, white and tan English setter bitch, May 11 (Count Noble—Fate Gladstone).

SAM C. (J. I. Case, Jr., Racine, Wis.), lemon and white English setter dog, May 8 (King Noble—Cricket),

against

RIP RAP (E. Dexter, Boston, Mass.), white and black ticked pointer dog, May 20 (King of Kent—Hope).

SAMOA (N. W. Simpkins, Danville, Va.), liver and white pointer dog, Feb. 28 (Randolph's Guy—Rita Croxteth II.),

against

ROWDY ROD (Memphis and Avent Kennels, Memphis, Tenn.), black and white English setter dog, Jan. 6 (Roderigo—Juno A).

NANNIE B. (J. I. Case, Jr., Racine, Wis.), lemon belton English setter bitch, May 15 (King Noble—Queen Vashti),

against

BLUE RIDGE (E. Dexter, Boston, Mass.), blue belton English setter dog, April 22 (Count Noble—Belle of Piedmont).

DERBY SUMMARY.—*First Series.*—Beppo IV. and Flirt ruled out. Annie F. beat Trip of Kippen. Fannie M. beat Harry S. Letty Lynn beat Bessie M. Rip Rap beat Sam C. Rowdy Rod beat Samoa. Nannie B. beat Blue Ridge.

Second Series.—Annie F. beat Fannie M. by default (Fannie not found in time to run). Rip Rap beat Letty Lynn. Rowdy Rod beat Nannie B.

Third Series.—Rip Rap beat Annie F. Then Rowdy Rod beat Rip Rap for first. Nannie B. beat Harry S. to run with Rip Rap for second.

Special to Forest and Stream:—High Point, N. C., Nov. 20.—The final heat to-day for second in Derby was a capital one, Rip Rap beat Nannie B., both doing excellent work.

ALL-AGED SETTER STAKE.—The drawing was: Desmond II. against Bettye S., Dick Tate against Whitie, Rowdy Rod against Nora, Toledo Blade against King Leo, Polly II. against King's Mark, Chance against Orlando, Nora against Nannie B., Cincinnatus against Guy, Rapid Ann against Roi d'Or, Cassius a bye. Running began Tuesday. Bettie S. beat Desmond II., Dick Tate beat Whitie. The setter judges are Messrs. Lorillard, Hitchcock and Tallman.

AMERICAN PET DOG CLUB.—New York, Nov. 16.—*Editor Forest and Stream:* Will you kindly give notice in your next issue that as the weather was so stormy on Nov. 13, the annual meeting of the American Pet Dog Club was postponed to Thursday, Nov. 21, at 3:30 P. M., at 129 East Sixteenth street, and if Thursday should be very stormy, the meeting will be Saturday, same hour. Also that applications for membership should be sent to the secretary at the above address.—MARION E. BANNISTER, Secretary.

THE EASTERN COURSING CLUB.—Brooklyn, N. Y., Nov. 18.—I have the pleasure of advising you that the first consignment of Kansas jack rabbits have already been received at our preserve, and I am advised a second lot was shipped last Wednesday. Those that have already arrived are grand fellows and look as if they would give our dogs a good shake up before being caught, if they are caught at all. At present the odds are greatly in favor of the jacks. Though the trip was a long one, they arrived in magnificent condition. We are in great hopes that the entire complement will reach us this week, so that we may hold our meet next Thursday week (Thanksgiving day.) We shall give one or two of the jacks a trial to see how they act, and will be then ready to announce the exact date. A member of our club has donated a very elegant piece of solid silver for the winner. This will be very hotly contested for, and as each is "sure to win it," we expect some fun.—H. W. HUNTINGTON, Secretary.

NORTHERN ILLINOIS SHOW.—The fourth annual exhibition of the Northern Illinois Poultry and Pet Stock Association, including a bench show of dogs, will be held at Rockford, Ill., Dec. 9 to 14. Competent judges have been secured and liberal premiums offered in all classes, and arrangements have been made for special rates on all railroads, and to return free all stock exhibited. The premium list will be ready for distribution Nov. 18. John Teague, Rockford, Ill., secretary of the kennel department, will answer all inquiries in regard to the bench show.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lady Rosalind—Marquis of Stafford. Jas. F. Hall's (Philadelphia, Pa.) St. Bernard bitch Lady Rosalind to his Marquis of Stafford, Oct. 24.

Alpina—Marquis of Stafford. Lorenzo Daniels's (New York) St. Bernard bitch Alpina to Jas. F. Hall's Marquis of Stafford, Oct. 29.

Belle M.—Gruss Bayard. T. J. McGuinness's (Waltham, Mass.) St. Bernard bitch Belle M. to American Kennels' Gruss Bayard, Nov. 4.

Madam Barry—Bonivard, Jr. American Kennels' (Boston, Mass.) St. Bernard bitch Madam Barry to their Bonivard, Jr., Oct. 27.

Nancy Lee—Little Red Rover. T. J. Hook's (Rome, N. Y.) cocker spaniel bitch Nancy Lee (Sir John—Renah W.) to his champion Little Red Rover (champion Obo II.—Woodstock Dinah), Nov. 9.

Nellie—Romeo Obo. A. Jones's (LaFayette, Ind.) cocker spaniel bitch Nellie to H. F. Hildebrand's Romeo Obo (Robin—Woodstock Nellie), Nov. 10.

Lady Dido—Bradford Harry. W. D. Reid's (Elmira, N.Y.) Yorkshire terrier bitch Lady Dido (Prince—Flora) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady), Nov. 3.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Colina. T. J. Hook's (Rome, N. Y.) collie bitch Colina (Kilmarnock Bruce—Lady of the Lake), Nov. 7, seven (four dogs), by Dr. L. S. Quin's Scott's Jack (champion Dublin Scot—Effie Dean).

Lady Mariam. Elmwood Kennels' (South Framingham, Mass.) St. Bernard bitch Lady Mariam (champion Apollo—Flora), July —, fifteen (ten dogs), by Teague & Tilton's Beauchamp (champion Beauchief—Berengaria).

Queen of Scotland. Elmwood Kennels' (South Framingham, Mass.) St. Bernard bitch Queen of Scotland (Monarch—Lady Alacia), July —, thirteen (eight dogs), by Teague & Tilton's Beauchamp (champion Beauchief—Berengaria).

Daisy Bandle. Jake Moreline's (Cincinnati, O.) English setter bitch Daisy Bandle (Racket—Daisy Cambridge), Nov. 9, five (one dog), by J. Shelley Hudson's Ben Hill (Druid—Ruby).

Belle Obo. H. F. Hildebrand's (Indianapolis, Ind.) cocker spaniel bitch Belle Obo (Rome, Jr.—Sheeney Obo), Nov. 2, eight (five dogs), by his Romeo Obo (Robin—Woodstock Nellie).

SALES.

☞ **Notes mustbe sent on the Prepared Blanks.**

Beauchamp—Queen of Scotland whelps. St. Bernards, whelped July, 1889, by Elmwood Kennels, South Framingham, Mass., an orange and white dog to Chas. H. Tilton, Highland, Mass., and a tawny and white bitch to John Marshall, Troy, N. Y.

Beauchamp—Kron whelp. Tawny and white St. Bernard dog, whelped March, 1889, by Elmwood Kennels, South Framingham, Mass., to Jas. Lawrence, Mass.

Beauchamp—Lady Mariam whelps. Three orange and white St. Bernard dogs, whelped July, 1889, by Elmwood Kennels, South Framingham, Mass., to John Bouchard, New Bedford, Mass.

Konig. Tawny and white St. Bernard dog, whelped May, 1888, by Alp II. out of Myrtle, by Elmwood Kennels, South Framingham, Mass., to W. C. Davol, Jr., Fall River, Mass.

Zama. Tawny and white St. Bernard bitch, whelped 1887, by Duke of Wellington, Jr., out of Kron, by Elmwood Kennels, South Framingham, Mass., to E. T. Marvin, Fall River, Mass.

Knight. Brindle and white St. Bernard dog, whelped 1887, by Merchant Prince out of Nan, by Elmwood Kennels, South Framingham, Mass., to W. F. Tilton, Natick, Mass.

El Capitan. Brindle and white St. Bernard dog, whelped March, 1889, by Beauchamp out of Kron, by Elmwood Kennels, South Framingham, Mass., to E. C. Gale, Troy, N. Y.

Lady Rosmaud. Tawny and white St. Bernard bitch, whelped July, 1889, by Beauchamp out of Queen of Scotland, by Elmwood Kennels, South Framingham, Mass., to Jos. Stiner, New York.

Ben Hill—Texas Daisy whelp. White, black and tan English setter bitch, whelped May 15, 1889, by J. Shelley Hudson, Covington, Ky., to Richard Merrill, Milwaukee, Wis.

Sportsman—Lady Zoe whelp. Lemon and white English setter bitch, whelped April 14, 1889, by J. Shelley Hudson, Covington, Ky., to Chas. D. Thompson, Jr., Georgetown, O.

Ben Hill—Tempest whelps. Black, white and tan English setters, whelped June 12, 1889, by J. Shelley Hudson, Covington, Ky., a dog to John E. Hendricks, Peru, Ind., and a bitch to J. T. Tooley, Strawn, Ill.

Ben Hill—Dolly S. whelps. English setters, whelped April 27, 1889, by J. Shelley Hudson, Covington, Ky., a white, black and tan dog to C. Chambers, Gainesville, Tex., and a black, white and tan dog to J. F. Campbell, Dayton, O.

Paul Gladstone—Bohemian Girl whelps. English setters, whelped June 19, 1885, by J. Shelley Hudson, Covington, Ky., a black, white and tan dog to J. Norris Cochran, West Chester, Pa.; a black, white and tan bitch to W. T. Hunter, Wheatland, North Dak.; a black, white and tan bitch to Maj. J. M. Taylor, New York; a black and white dog to J. Tredwell Richards, New York; a liver and white dog to Herbert Cox, Glen Loch, Pa.; a liver and white bitch to Norvin T. Harris, St. Mathew's, Ky., and a lemon and white dog each to Westport Kennels, Fall River, Mass., and Richard Merrill, Milwaukee, Wis.

Paul's Bo. Black, white and tan English setter dog, whelped June 5, 1889, by Paul Gladstone out of Bohemian Girl, by J. Shelley Hudson, Covington, Ky., to T. M. Brumby, Marietta, Ga.

Texas Daisy. Black, white and tan English setter bitch, whelped June 19, 1885, by American Dan out of Countess House, by J. Shelley Hudson, Covington, Ky., to P. Lorillard, Jr., Jersey City, N. J.

Tempest. Black, white and tan English setter bitch, whelped Jan. 8, 1886, by Count Noble out of Lit, by J. Shelley Hudson, Covington, Ky., to H. Hulman, Jr., Terre Haute, Ind.

Virginia Dair. Liver cocker spaniel bitch, whelped Dec. 22, 1887, by Click (A.K.R. 133) out of Fidget (A.K.R. 308), by F. A. Thomas, Hudson, N. Y., to Harry W. Doll, Frederick, Md.

Doc Obo. Black cocker spaniel dog, whelped Nov. 2, 1889, by Romeo Obo out of Belle Obo, by H. F. Hildebrand, Indianapolis, Ind., to Albert Self, same place.

Razzel. Black cocker spaniel dog, whelped Nov. 2, 1889, by Romeo Obo out of Belle Obo, by H. F. Hildebrand, Indianapolis, Ind., to Jas. T. Smith, same place.

Jollie. Black cocker spaniel dog, whelped Sept. 12, 1889, by Red Rover out of Spunkey, by Theo. J. Hook, Rome, N. Y., to Constant White, Yorktown, N. Y.

Bob. Black cocker spaniel dog, whelped Sept. 12, 1889, by Red Rover out of Spunkey, by Theo. J. Hook, Rome, N. Y., to J. H. Eddy, same place.

Zip. Black cocker spaniel dog, whelped Sept. 12, 1889, by Red Rover out of Spunkey, by Theo. J. Hook, Rome, N. Y., to J. P. H. Houk, same place.

Medge. Black cocker spaniel bitch, whelped Sept. 12, 1889, by Red Rover out of Spunkey, by Theo. J. Hook, Rome, N. Y., to L. T. Goodrich, Owego, N. Y.

Rifle and Trap Shooting.

SMOKELESS POWDER.

THE report just made by Brig.-Gen. S. V. Benet, Chief of Ordnance, is especially interesting in its remarks upon the now popular topic of smokeless powder:

"In the absence of a suitable small-arms powder there has been no substantial progress in the matter of a small caliber rifle beyond what has been heretofore reported, except in the negative gain resulting in the apparent abandonment, or tendency that way, abroad of all powders but the so-called smokeless. This change, involving the return to a grained powder, is, if permanent, an appreciable gain for all in economy and efficiency of the product in the manufacture of the small-arm cartridges, and may have been brought about as much from the difficulty of obtaining uniform and satisfactory results in the way of velocities and pressures with the compressed powders as from the more valuable properties of the smokeless. No American has yet submitted for trial a smokeless powder, and experiment with compressed powders has shown the same eccentricity as developed abroad tending to destroy confidence in the final production of a servicable compressed powder cartridge. All effort, official or otherwise, to date to obtain a smokeless powder has been abortive, and American powder makers and chemists have not yet awakened to the lucrative opportunity presented to them. There is reason to believe, from an application made to an officer of the Ordnance Department more than ten years ago, that smokeless powders originated, like many other inventions, in America, only to be brought to the attention of the world in foreign countries, although in this instance the person concerned met with encouragement, of which he did not avail himself.

"In view of the present status of the powder question, it is not deemed expedient to produce a small-caliber rifle, for compressed-powder cartridges. Such a rifle, however excellent in itself, would be inferior to foreign arms using smokeless powder, and consequently unsatisfactory to the army and the country at large. It is believed, however, that all the elements entering into the problem, except the powder, are ready for use the moment this powder is obtained.

"A .30cal. rod-bayonet Springfield rifle has been made, and a rod-bayonet, .30cal. magazine arm is now in progress of construction in anticipation of the final acquisition of the much-needed powder, so that no time may be lost in presenting for trial both single-loading and magazine small-caliber rifles."

RANGE AND GALLERY.

NEWARK, N. J.—The following scores have been made in the United Amateur Rifle Association series of matches during the past week:

Monday, Nov. 11.

Essex.		Sheppard.	
A Coppersmith	110	D Ferguson	92

The postponed match between the Essex and Lakeside clubs will be shot on the former's range on Friday night.

PHILADELPHIA, Nov. 14.—The regular weekly contest for gold and silver medals of the Gaiety Rifle and Pistol Club was held at their headquarters, 818 South street, Tuesday, Nov. 12. Mr. A. F. Wiggins was the winner of the silver medal, while the competition for the gold medal was more exciting to the several directly interested. Mr. J. J. Mountjoy the secretary proved to be holding too strong, and with his new Wurfflein rifle, using the .22 extra long cartridge, very nearly took all the 10 spot out of the bull, his score of seven 10s, two 8s, and one 9, a total of 95 out of a possible 100, off-hand, plain open sights, Standard American target. Ten shot official score at 30yds.:

J J Mountjoy	8	10	9	10	10	10	10	8	10	10—95
E Travis	8	7	10	8	9	8	10	9	9	10—88
J M Green	8	10	9	10	8	7	8	8	10	8—86
M F Frees	8	8	7	8	8	8	9	10	6	10—82
J G Rea	9	5	8	8	9	8	8	7	7	8—78
J H Pollock	10	5	5	6	7	7	9	10	7	8—74
F Paul	6	9	5	7	9	5	8	10	10	6—74
W Young	7	8	6	7	9	6	9	6	8	7—73
J A Pollock	7	8	6	7	8	8	6	7	7	10—73
A F Simpson	9	10	6	9	6	6	6	7	8	6—73
W Wurfflein	10	6	9	5	7	9	5	6	9	6—72
C Beutelspacher	6	6	10	8	7	7	5	7	8	7—71
G Atkinson	7	9	10	5	5	7	6	8	4	6—67
H Buehn	6	5	5	10	7	5	5	10	5	4—62
R Roletta	8	9	6	5	10	5	6	9	4	4—61
A Simon	5	10	6	9	6	4	7	5	4	4—60
T F Shonert	5	7	9	8	7	6	3	7	3	5—60
W F Wiggins	3	5	7	3	6	4	4	6	8	4—49

PHILADELPHIA, Nov. 15.—On Wednesday evening, Nov. 13, the North Broad Street Rifle Club held their regular weekly practice with the following scores at 25yds., S. A. targets (reduced), plain open sight rifles, off-hand:

D E Wray	8	9	10	6	7	9	10	7	10	10—86
W W Ulrich	5	10	9	9	9	9	7	8	10	9—84
A Atkins	9	8	10	10	10	7	8	5	8	8—83
H F Jordan	4	9	10	7	8	10	8	10	10	4—80
F Geyer	10	6	7	4	8	8	9	9	10	8—79
W J Wood	9	8	5	9	7	8	8	10	7	7—78

SAN FRANCISCO, Nov. 10.—The long-talked-of match between veterans Lew Townsend and C. L. Lods, which has caused much interest among riflemen, came off to-day and resulted in a victory for Mr. Lods by one point after a hard fight. Mr. Townsend's eyes are not as strong as they once were, and as the setting sun began to throw long shadows across the targets his aim became less accurate, and though he tried hard he was unable to keep up an average which up to the last ten shots had been excellent. The scores were as follows:

C L Lods	4444545544—42	L Townsend	3443444544—39
	4324554444—39		4445544444—42
	4444444444—40		5544414444 - 42
	4444544343—38		5434444447—41
	4445434444—40—200		3323443444—35—199

The conditions of the match were 50 shots at 200yds. with a Springfield rifle, 6lb. pull, Creedmoor rules to govern. A. J. Ruddock acted as scorer. A. Johnson and F. O. Young, the celebrated rifle and pistol shots, held a match with pistols, the scores being the best ever made on this coast under the same conditions. In a match shot some weeks ago, between the same gentlemen, Young was the victor, and this was a return match, with slightly altered conditions. The former match was 50 shots at 40yds., with regulation revolvers. Creedmoor rules, Young winning by the phenomenal score of 248 to 243.

To-days' match was at 50yds. range, 50 shots, with .44-caliber revolvers, Creedmoor rules, and as in the case of Lods and Townsend, Johnson won by a point. The scores were as follows:

F O Young	5545554455—47	A Johnson	4555554544—46
	5555555555—50		5555454554—48
	5545455455—47		5555555555—50
	5552554655—49		5555545555—49
	5554555455—48—241		5555555155—49—242

The scores in the previous match stood:

Young	5555555555—50	Johnson	5554555555—49
	5555545555—49		5555545554—48
	5555555555—50		5545555555—49
	5555555555—50		5555554455—48
	5555554555—49—248		5555455555—59—243

Nothing like this was ever accomplished before in that part of the country, the cracks say. New Yorkers will get a better conception of what a great achievment Young accomplished when the fact is recorded that Young has but one eye and has to shoot left-handed. His mother accidentally put out his eye flogging him when a boy for climbing into an old-fashioned clock. His father later on cut off his right hand while mowing. Besides these mishaps Young has been struck by lightning, hugged by bears in a hunt, torn by wild cats, and gored by an infuriated Durham bull. He is known as the finest pistol shot on the Pacific slope, and writes splendidly with his left hand.

A rifle shoot between two teams captained by Messrs. Johnson and Kline resulted in a tie at 213 points. The scores were as follows: Johnson 45, Young 46, Charles Klein 42, Slitor 37, Lods 43; total 213. A. E. Klein 44, Stewart 40, Hult 46, Ruddock 41, Taylor 42; total 213.

WILMINGTON, Del., Nov. 12.—The faces of local riflemen looked very long on Monday when the weather showed no signs of clearing by afternoon. In consequence the regular weekly shooting at Healdmoor Rifle Range was postponed until this afternoon, which turned out very pleasant and in every way favorable for target shooting. The shooting in all of the matches was much above the average, but the work of Darlington in the pistol match was unusually fine. His two runs of 95, both of which together with one of his 89's were clean scores, made a brilliant piece of work. Trooper Leitch's shooting in the military match with the cavalry carbine was fine, considering his lack of practice. Following are the scores, Standard American target, off-hand:

Pistol Match, 50Yds.

E J Darlington	10	10	10	9	9	9	10	9	10	9—95
	10	9	8	10	10	10	10	9	10	10—95
	8	10	9	9	10	8	9	10	8	8—89

Pvt H Philips	3444434445—40	Corp P Terry	3433234434—32
Pvt A Jackson	3345344445—39		

The club met for practice at their gallery last Friday evening. Some fine shooting was done during the evening, that of Darlington being particularly fine. His two runs of ninety-four, both of which were clean scores, and a clean score by Simpson, made the features of the evening. Some new members were initiated and their shooting, which was their first attempt, promises well. Following are the scores at 12½yds., Standard American target, reduced from 50yds.:

E J Darlington	*10	8	10	8	9	10	10	10	9	10—94
	*9	10	9	8	10	9	9	10	10	10—94
H Simpson	*8	9	10	10	10	8	8	9	10	8—90
E Jackson	10	10	9	10	8	8	9	8	9	6—87
W H Johnson	7	10	10	10	7	7	6	9	10	7—83
H Philips	9	10	7	5	8	8	8	8	8	10—81
W Floyd	5	10	9	10	8	5	8	10	8	8—81
J Naudain	4	5	8	3	8	5	10	6	5	8—62

W H Hill	4	8	4	6	7	3	9	10	4	2—57
E Melchoir, Jr	7	7	9	4	3	2	2	5	6	7—52

*Clean scores.

BOSTON, Nov. 16.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day, with a good attendance. The day was very pleasant, but the bad light beat them all, as the low scores will show. Mr. Lee won the championship medal and Mr. Davis won the gold medal in the 20-shot rest match. Next Wednesday all the prize and practice matches for rifle and pistol shooting will be open at 12:30 o'clock. Following are the best scores finished to-day:

20-Shot Rest Match.

C H Davis	199	J Francis	191
J R Munroe	195	W P Thompson	191

Champion Medal Match—200yds.

H L Lee	77	A Newman	70

Victory Medal Match.

A M Binney	66	A S Hunt	59

Military Medal Match.

W M Foster	45	W Manson	42
W Underhill	38		
F Carter	44	A S Field	41
C C Lowell	42	O E Pettman	30

All-Comers' Off-Hand Match—200yds.

H L Lee	83	F W Chester	74
L Ames	69		
J B Fellows	81	L Loring	72
A S Field, mil	66		
H Severance	79	J E Kelley, mil	71
E James, mil	64		
F Daniels	79	A S Hunt	70
A McBean	74	F D Martin	70

All-Comers' Rest Match—200yds.

J Francis	106	C F Worcester	100
E O Hart	95		
C H Davis	104	W Pomeroy	98
M A Ramsey	93		
J R Monroe	103	M S Ham	98
A L Stone	90		
T Warren	102	A Ballard	98

CLINTON, Mass., Nov. 14.—The Stevens' Rifle Club recently had a contest for a gold and silver medal. The shooting was off-hand, distance 25yds., with the Springfield rifle. The following are the totals:

W C Peck	15	A S Wright	9
Geo W Green	6		
W E Taylor	13	Chas F Martin	9
Henry McMinn	3		
C H Chute	13	Wm S Stovey	8
Wm Duvoney	2		
W J Cox	12	Mr Card	8
A W Ladd	6		
C G Jefferson	12	Geo W Langton	6

In shooting of the tie W. E. Taylor had 10 and C. H. Chute 8, consequently Peck won the gold, and Taylor the silver medal.

The club at a recent meet made the following totals:

Martin	22	19	19
21	20—101	Connell	17
13	11	8—62	
Chute	18	20	17
24	21—100	Green	13
17	16	19 w—65	
Cox	20	19	20
17	20— 96	Harwood	14
10	9	18 w—57	
Wright	11	13	22
19	19— 84	Cannon	10
15	11	9 w—45	

MARION, N. J., Nov. 13.—The attendance of marksmen at the weekly shoot of the Marion Rifle Club, which was held on the club grounds, Marion, N. J., this afternoon, was very slim on account of the bad weather, and the only scores worth mentioning were as follows: John Spelcher 191, John Rebhan 191, William Weber 190, L. P. Hansen 186, and H. Hoersch 144. John Rebham, who is high man in the club championship competition, gained 5 more points on his nearest opponent, and barring accidents he will win the contest by a close margin. The last club contest will take place on Wednesday next.

ST. LOUIS, Mo., Nov. 16.—The members of the St. Louis Pistol Club are much discouraged over the miserable conditions of the cartridges which the cartridge companies are placing on the market at present. Miss-fires, keyholes and squibs are so numerous that good scores are altogether out of the question. Several members refrained from taking part in the last shoot because the cartridges are so bad. Bauer and Summerfield tied on 81 last Wednesday night, but on the shoot-off the former won; 20yds. standard American target is used for all shooting. The score:

W Bauer	6	8	9	10	7	7	8	9	8	9—81
M Summerfield	9	5	10	8	9	7	8	7	9	9—81
J A Lee	9	6	9	8	9	8	9	7	10	6—80
W J Lord	7	8	7	10	8	10	6	7	7	7—77
F A Fodde	8	7	7	10	5	6	10	8	5	8—74
E Mohrstadt	7	9	4	10	10	6	8	7	6	5—72
W H Hettel	8	7	5	8	10	9	8	4	7	6—72
A E Bengel	6	10	0	10	9	8	4	8	8	4—67
W C Mackwitz	6	6	7	9	7	6	7	4	4	9—65

UNSER FRITZ.

HALIFAX, N. S., Nov. 12.—The twenty-seventh annual meeting of the Nova Scotia Provincial Rifle Association was held last evening in Y. M. C. A. hall. There was a very large and representative meeting, a good number of members from throughout the Province being present. Lieut.-Col. Curren presided. The reports of the council and treasurer were read and adopted. The following 15 were elected to constitute the council, they to elect their own officers: Lieut.-Col. Curren, H. G. A.; Lieut.-Col. Murray, superintendent of stores; Major Weston, 66th; Capt. Maxwell, H. G. A.; Lieut. Jacques, 72d; Capt. Adams, H. G. A.; Major Garrison, H. G. A.; Capt. Barnhill, 78th; Lieut.-Col. McDonald, retired; Capt. Harris, H. G. A.; Lieut.-Col. Mackinlay, retired; Lieut.-Gen. Laurie, M. P.; Lieut.-Col. Mackintosh, 63d; Lieut. Stevens, 66th.; Capt. Anderson, H. G. A.

HARTRANFT RANGE.—Three special events at 200yds. for sporting and military rifles. Open to all comers. Thanksgiving Day, Nov. 28, commencing at 10 A. M., close at 4 P. M. All original entries must be made on or before Tuesday evening, Nov. 26, at W. Wurfflein's, 208 North Second street, by 6 P. M.; at E. Travis's Shooting Gallery, 818 South street, up to 11:30 P. M., or to J. J. Mountjoy, 911 Chestnut street, up to 12 P. M., and must be accompanied by the cash for the original entry or no notice will be taken. A full report of the shooting will appear in FOREST AND STREAM.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Nov. 28, 29.—Lincoln, Neb., Gun Club Tournament. Open to all. C. H. Clarke, Secretary.

ST. PAUL GUN CLUB.

ST. PAUL, Nov. 9.—Yesterday being a beautiful sunny day, warm as in June, albeit we are supposed to reside near the North Pole, the St. Paul Gun Club had an all day sweepstakes shoot at their beautiful grounds near Hamline, midway between the Twin Cities. It was not advertised as it should have been and none of the sportsman were down from Minneapolis, although our old friend "Barnes," of Stillwater, was present. He did not know of it, however, until he arrived in town, so he did not have his gun with him. He was badly handicapped by shooting a light 12-gauge gun, when he is used to a 12lb., 36in., 10-bore. The other members, particularly "Bennett" (who is a deaf mute) and "Hamline," did some excellent shooting, as their scores will show. Some of the old shooters have apparently lost their grip since the game season came on, this being the first event at the trap since the State Fair Tournament. The club expects to have an all day shoot soon, and will shoot at irregular times all winter, as they have a good warm club house convenient to the station, not more than 30yds. from it, with trains to and from both cities every hour. It is great fun for the boys to see the rival gun dealers, Burke and Kendy, shoot off a tie, as they never divide, and each is so anxious to win. The loser invariably lays the cause of his defeat to "poor ammunition."

First event, 10 singles, entrance $1:

Bennett	1111101111—9	Kennedy	1111101111—9
Boyd	1111011110—7	Forbes	1111110111—9
Hamline	1111101111—9	Kilby	0110001110—4
Holt	1111100010—6	Burk	1111111111—10
Pfister	1011011111—8	Skinner	1100110011—6

Burk first money after a sharp contest, Forbes second, Pfister third.

Second event, 5 singles and 3 pairs, entrance $1, three moneys:

Bennett	11110 11 00 11— 8	Kennedy	11111 10 10 10—8
Boyd	00111 11 11 11— 9	Forbes	11101 10 11 10—8
Hamline	01111 11 11 11—10	Burk	11111 10 10 01—8
Holt	10011 11 10 11— 8	Skinner	10111 10 10 11—8
Pfister	10111 01 10 10— 7	Richardson	10010 11 00 11—6

Hamline first, Boyd second, Holt and Skinner third.

Third event, same:

Bennett	11100 11 11 01— 7	Forbes	11111 11 10 11—10
Boyd	01110 11 11 10— 8	Burk	11111 11 10 10— 9
Hamline	11011 11 10 11— 9	Richeson	11101 10 11 00— 7
Holt	11011 11 11 11—10	Skinner	11110 11 11 11—10
Pfister	11111 01 11 10— 9	Cummings	11110 11 00 00— 6
Kennedy	00111 10 11 10— 7	Perrin	10100 10 10 10— 5

Holt, Forbes and Skinner div. first, Pfister second after shooting nine times on tie, Boyd third.

Fourth event, 15 singles, $1, three moneys:

Bennet	111101111111111—14	Burk	111111011111101—13
Boyd	111111111111011—14	Richeson	011111001011111—11
Hamline	111111111110111—14	Skinner	111101011111111—13
Holt	100110011110111—11	Cummings	111111001011111—12
Pfister	011101111011111—12	Perrin	011010110100011— 9
Kennedy	111111010111101—12	Barnes	101110110100011— 9
Forbes	110111110011111—12		

Bennett, Boyd and Hamline first, Skinner and Burk second, Kennedy, Forbes and Pfister third.

Fifth event, 5 singles and 3 pairs, $1, three moneys:

Bennett	11111 11 11 11—11	Forbes	01111 01 11 10— 8
Boyd	11111 10 11 11—10	Burk	11110 11 11 01— 9
Hamline	11111 11 11 11—11	Richeson	11111 00 11 00— 7
Holt	11111 11 01 11—10	Cumings	11011 11 11 11—10
Pfister	10011 10 10 11— 7	Perrin	10010 10 10 10— 5
Kennedy	11111 10 11 10— 9	Barnes	00110 10 00 10— 4

Bennett and Hamline first, Boyd and Holt second, Burk third.

Sixth event, same match:

Bennett	11111 11 11 10— 9	Forbes	11111 11 11 11—11
Boyd	11111 11 11 10—10	Burk	11101 11 11 10— 9
Hamline	11111 11 11 11—11	Cummings	10101 11 11 11— 9
Holt	11011 11 10 10— 8	Perrin	10011 01 10 10— 6
Pfister	10001 11 01 10— 6	Max	10111 11 11 10— 9
Kennedy	11111 01 11 00— 8		

Hamline and Forbes first, Boyd second, Bennett third.

Ten Pair Combination Shoot: The five traps are set as directed in the American rules. The combinations are 1 and 5, 1 and 4, 1 and 3, 1 and 2, 2 and 3, 2 and 4, 2 and 5, 3 and 5, 3 and 4, 4 and 5, thus giving four birds from each trap, or 10 pair in all. The combination is announced by the puller or other person, and a shooter must be very familiar with the directions to figure ahead where the birds are going. To such of our shooters as are considered good double shots, let me recommend the "combination" to take the conceit out of them. Owing to near approach of darkness only a few tried it. Below is the score:

Bennett	11	11	11 11 11 10 11 10 10 11—17
Boyd	00	10	11 11 10 11 10 00 11 00—11
Hamline	11	11	11 10 11 11 11 10 00 11—16
Holt	10	10	10 11 11 10 11 11 11 10—14
Pfister	00	10	01 11 10 10 11 11 10 01—12
Kennedy	00	01	10 10 10 10 11 10 01 11—11
Forbes	01	01	10 11 10 11 10 10 11 01—13
Cummings	10	11	11 10 00 10 00 00 00 09— 7

This ended the day's sport. There will be an all-day sweepstake at the Gun Club grounds on Thanksgiving day, and it is more than probable that the American Shooting Association will give one of their popular tournaments here in the early spring. All the Northwestern sportsmen are hopeful that they will.

WILLIAMS.

NEW YORK, Nov. 13.—The Manhattan Gun Club's regular shoot at Woodside, at 7 live birds, M. G. C. rules:

Lambrecht	0111111—6	Lichtenberger	1101011—5
Maisenholder	1100000—2	Eberhardt	1111014—6
Herbrand	1111001—5	Hoffmann	0010100—2
Bayer	1111010—5		

CLASS AND DALY VS. KLEINTZ AND IRWIN.

ON Thursday, Nov. 14, the match between Frank Class, of Pine Brook, N. J., and Phil Daly, Jr., of Long Branch, against J. Frank Kleintz and R. E. Irwin, of Philadelphia, was shot at Erb's Park, Newark, N. J. The conditions agreed upon were 50 live birds each man, under Hurlingham rules, and the amount at stake was said to be $200 a side. The general opinion among the fraternity was that the Philadelphia team had much the best of it, but a live-bird shoot is "one of those things no fellow can tell anything about." That was exemplified in the present case, as the Jerseymen finished winners by 8 birds. The race was called for 1:30 o'clock, and at that time about 150 spectators were present, eager for the fray to begin. Some offers of bets were made at odds of $75 to $50 on Philadelphia with no takers, but considerable even money was put up on the individual scores of Kleintz and Class. At the outset the Philadelphians took the lead and were shooting in good form, besides which they had the luck of the birds, particularly in Kleintz's case; however, that adjusted itself later, and Kleintz, as well as the others, was obliged to shoot at some extremely hard ones. Class's birds were a succession of rapid drivers and twisting quarterers, which he stopped in fine style. Irwin shot well up to the 15th bird, and then his work became very ragged, as in three different places he made 3 successive misses. Daly seemed troubled with nerves at first, but kept pounding away and finally shot himself into good form, his work on the last 25 being excellent, as among the lot were some "corkers." The birds were supplied by John Erb, and were the finest that have been seen for many a day. With the exception of two or three that could not fly, they were all strong, hardy creatures, and some of them managed to carry two charges of shot outside of bounds, flying directly into the wind, which blew with considerable force straight across the traps. In consequence of this their flight was mostly directed to the right, and with the strong breeze pushing them, rapidity and great accuracy of aim was necessary to bring them down. Several times when the trap were sprung the bird did not take wing at once, leading the shooter to expect a soft one, when suddenly, "whiz!" away he would be off at a speed that defied stopping. This feature, the unusual excellence of the birds, made the race a very interesting one. Up to the 42d bird Kleintz was 4 ahead of Class, but in the last 8 he missed 4, and their scores were a tie.

In the appended score the figure 2 denotes second barrel kills, and o dead out of bounds:

Frank Class, Jr....	2222121211	J Frank Kleintz....	1211022211
	0112221100		1011220111
	0111102201		2012201121
	2011211122		2112122212
	1212220211—41		2200110011—41

	0211122201		2002212000
	2112111211—40		1012200022—32
	81		73

Recapitulation—Class had 20 drivers, 9 left-quarterers, 16 right-quarterers and 5 incomers. His lost birds were 3 drivers, 1 left-quarterer and 5 right-quarterers, with two of them dead out of bounds. He used his second barrel 19 times, and shot a 12-gauge Lefever, full choke. His shells were U. S. G. climax, loaded with 3½drs. American wood powder, and 1¼oz. No. 8 chilled trap shot for first barrel and 3½drs. Curtis & Harvey, 1⅛oz. No. 7 chilled for second.

Daly had 13 drivers, 8 left-quarterers, 18 right-quarterers and 11 incomers. His lost birds were 4 drivers, 4 right-quarterers and 2 incomers, with 1 dead out of bounds. He used his second barrel 14 times and shot a 10-gauge Smith. His shells were Kynoch, loaded with 4¼drs. American wood powder and 1¼oz. No. 7½ chilled trap for both barrels.

Kleintz had 10 drivers, 8 left-quarterers, 22 right-quarterers and 10 incomers. His lost birds were 5 drivers, 1 left-quarterer and 3 right quarterers. He used his second barrel 17 times and shot a 12-gauge Greener. His shells were Ely, loaded with 3¼drs. Schultze powder and 1¼oz. No. 7 chilled trap for both barrels.

Irwin had 15 drivers, 9 left quarterers, 18 right quarterers and 8 incomers. His lost birds were 10 drivers, 2 left quarterers, 5 right quarterers and 1 incomer. He used his second barrel 18 times and shot a 12-gauge Parker, with same shell and load as Kleintz.

Prior to the match and after it, live birds sweeps open to all were shot. All were at 4 birds, $5 entrance, 3 moneys, ties all div. except in last one.

No. 1:

Frank Class	1121—4	S Castle	2101—3
H Leddy	2111—4	J Erb	1220—3
P Daly, Jr.	1112—4	C M Hedden	0011—2
M F Lindsley	1211—4		

No. 2:

Lindsley	2222—4	Erb	1012—3
E D Miller	1111—4	Daly	0111—3
Class	1022—3	Hedden	0120—2
Castle	0121—3	Leddy	2100—2

No. 3:

Castle	1211—4	Leddy	2110—3
Hedden	1112—4	Erb	1201—3
Lindsley	2122—4	Daly	2102—3
Miller	1211—4	Class	0011—2

No. 4:

Hedden	1111—4	E Collins	0111—3
Erb	1112—4	Castle	1100—2
Lindsley	2222—4	Leddy	0110—2
Kleintz	1111—4	Daly	2021—2
Irwin	2212—4	P Goff	2020—2
Miller	0121—3		

No. 5:

Collins	1121—4	Leddy	1111—4
Daly	1221—4	Castle	1210—3
Kleintz	1121—4	Hedden	0102—2
Irwin	2111—4	Freche	1111—4
Lindsley	1222—4	Riggott	0011—2
Class	1122—4	J E Wheaton	0011—2
O von Lengerke	2110—3		

The four first shot off and div. by Kleintz, Irwin and Class, second and third div.

At the conclusion of No. 5, and as darkness was fast falling, a match for the wine and birds was shot at 10 birds each:

Daly	2221111210—9	Lindsley	2200110102—6
Erb	1012220211—8		

Lindsley, as the loser, invited the boys to join him, and a merry party was soon seated around the stove discussing the merits of the day's events.

The announcement was made by Mr. Erb that a big sweep would be shot on Thanksgiving Day, open to all, at 20 live birds, for $20 and the birds. When this and the wine had been thoroughly discussed, the party separated. It is rumored that Class and Kleintz will soon shoot another match. FRANK MASON.

GRAND CROSSING, Ill., Nov. 13.—The South Chicago Gun Club medal shoot, at 10 live pigeons, 5 ground traps, 30yds. rise and 80yds. boundary, Illinois State rules:

C F Templeton	1101000001— 4	Ed Marsh	0111111111—9
Emery Reeves	0111111111— 9	Alfred Moore	1110111111—9
A Reeves	1101111110— 8	A E Trowbridge	0111111001—7
Lem Willard	1111111111—10	Chas Amstien	1011111011—8
Geo Kleinman	1010100111— 6	Jo Bayles	1010010101—5
Frank Willard	1101111111— 9	Jno Watson	1011101101—7
Henry Kleinman	1111111010— 8	A Kleinman	1110111111—9
Ben Fogli	1110111111— 9	Davy Reid	1001010010—4

Ties on 9: Moore 1, Marsh 3, Reeves 3, Kleinman 5, Willard 5, Fogli 6, and wins 2d. On 8: Kleinman 1, Amstein 2, Reeves 3 and took 3d.

Medal shoot same day at 20 Peoria blackbirds:

Emery Reeves	01111111111011110111—17
A Reeves	01111111101111110011—16
Lem Willard	11010110111011111111—16
Geo Kleinman	10101111111111110101—15
Frank Willard	11100011010111111100—13
C F Templeton	10011101101101101011—14
Henry Kleinman	11000111010111111011—13
Ben Fogli	10011111010110101111—14
Ed Marsh	11011110010101111111—15
Alfred Moore	00010000111001011001— 8
A E Trowbridge	00000000000101001001— 4

Match between Geo Kleinman and A W Reeves, at 25 live pigeons, Illinois State rules, shot Oct. 15 (this was not reported at the time), $25 a side.

Geo Kleinman	1121111221112121112121216002—22
A W Reeves	2120112112121212220111111—23

RAVELRIGG.

KLEINTZ AGAINST CLASS.—J. Frank Kleintz, of Philadelphia, and Frank Class, of Pine Brook, N. J., are matched to shoot a race at Erb's Park, Newark, on Friday, Nov. 29. Conditions are 50 live birds each for $100 a side, Hurlingham rules.

NEW YORK SUBURBAN.—New York, Nov. 16.—At Claremont, N. J., this afternoon the sunny, bright weather tempted a number of shooters to indulge in keepstake shooting. The traps were strung very hard and the bluerocks and Keystones went humming through the air, making it difficult to make good scores; however, they show up very well. The attendence at these shoots is increasing and will soon be up to the standard of a year ago. The preliminary steps to organizing the Claremont Shooting Grounds Association were taken this afternoon. The name was decided upon and the capital stock fixed at $2,500, divided into 100 shares at $25 each. As soon as the proper authority is received from the State, the officers will be elected and things begin to boom. Below are the scores of to-day, matches at 10 bluerocks, ties div.:

Sigler	5	Mack	2	Simpson	8
Collins	7	Nixon	7	Tatham	4

Sweep No. 2:

Sigler	9	Mack	1	Simpson	10
Collins	6	Nixon	9	Tatham	7

Sweep No. 3:

Sigler	10	Nixon	9	Tatham	8
Collins	8	Simpson	9	Hathaway	4
Mack	5				

Sweep No. 4:

Sigler	8	Nixon	8	Tatham	6
Collins	8	Simpson	8	Hathaway	5
Mack	3				

Sigler, Nixon and Simpson div. first on shoot-off, each scoring 9 out of 10:

Sweep No. 5:

Sigler	9	Collins	6	Hathaway	5
Nixon	9	Simpson	9	Moffatt	6
Mack	3	Tatham	5		

No. 6, same:

Sigler	9	Collins	6	Hathaway	8
Nixon	7	Simpson	9	Moffatt	7
Mack	1	Tatham	5		

Sweep 7, same:

Sigler	9	Collins	7	Tatham	4
Nixon	6	Simpson	9	Hathaway	7
Moffatt	8				

Sweep 8, same:

Sigler	10	Moffatt	5	Tatham	6
Nixon	8	Simpson	10	Hathaway	9

First divided.

Sweep 9:

Nixon	9	Moffatt	8	Tatham	6
Sigler	8	Simpson	8	Hathaway	8

Simpson won second in shoot-off:

Sweep 10:

Sigler	9	Simpson	10	Hathaway	7
Nixon	6	Tatham	4	Mack	3
Moffatt	8				

Sweep 11, same:

Nixon	7	Simpson	10	Hathawy	7
Moffatt	9	Tatham	7	Mack	1

CATSKILL, N. Y., Nov. 18.—Fred. Tolley's trap-shooting contest (Nov. 13), and the elements seemed to agree very well on the date for a display of rain and shooters. This was the second attempt to have a nice little tournament in Catskill, both being met with rainy days. The attendance was small from local as well as visiting shooters. Although small, a very good time was had by the visiting shots from Saratoga and Albany. The smoke banked over the traps, which caused considerable annoyance as well as some sport, because the shooter would have to look twice in order to see the bird, once as it would appear from the trap and again above the smoke. Following are the winning scores made through above rain and smoke, kingbirds, Keystone system, ties divided:

At 10 birds, entrance 75c.:

Mattice	10	Rockworth	9	Hollis	9
Beach	9	Levengston	8		

At 15 birds, entrance $1.50:

Mattice	15	Levengston	14	Beach	9
Rockworth	15	Hollis	14	Ramsdill	9

At 10 birds, entrance $1:

Levengston	10	Mattice	9	Rockworth	9
Hollis	9	Ramsdill	8		

At 10 birds, entrance $1:

Mattice	10	Hollis	10	Beach	9
Rockworth	8	Ramsdill	8		

At 15 birds, entrance $1.50:

Rockworth	15	Mattice	13	Beach	13
Levengston	11	Hollis	11		

At 20 birds, entrance $2:

Mattice	19	Ramsdill	19	Hollis	18
Levengston	17	Rockworth	17		

At 10 birds, entrance $1:

Rockworth	10	Hollis	10	Mattice	9
Levengston	7	Ramsdill	7		

DE TOLL.

WALNUT HILL, Nov. 13.—The usual number of shotgun enthusiasts reported at the range to-day, and put up some creditable scores in spite of the unfavorable weather conditions. A drizzling rain made the smoke hang low at the firing points, and rendered it difficult at times to follow the flight of the birds. In the gold coin match Perry and Stanton tied for first place, while Messrs. Bowker, Gale and Perry all recorded clean scores and won each a point in the match for the Standard Target Company's medal. Gold coin match, 15 clay birds and 15 Standard targets, Keystone system of squad firing:

	Clays.	Standards.
Perry	111111111111111—15	011111111011111—13—28
Stanton	110111101111111—13	111111111111111—15—28
Black	100111110111111—12	111111111111111—15—27
Curtis	111110111011101—12	111111111111101—14—26
Chase	010011111111111—12	111101011111111—13—25
Bowker	111111100111101—12	111110111110110—12—24
Lee	111110111101110—12	111111011001011—11—23
Longley	111101110011110—11	110111111010110—11—22
Nichols	110110111011011—11	011111111111000—11—22
Gale	110011001001111— 9	111111111011000—12—21
Gage	001010110011101— 8	000010101011110— 7—15

Standard Target Company's gold medal match, 20 Standard targets, handicap rules: Bowker, B, 20; Gale, C, 20; Perry, A, 20; Longley, C, 18; Nichols, C, 18; Black, A, 17; Chase, B, 17; Lee, B, 16; Stanton, A, 15; Gage, C, 9.

NEWARK, N. J., Nov. 16.—To-day a pleasant little encounter was had between two of the most prominent shooting men of the Orange Gun Club. Match for a wine supper at 25 birds each man, Orange Gun Club rules to govern:

A Crommelin	1011111101011110011—14
W Furth	1010111001000000 — 6

As it was impossible for Furth to tie, much less to win, he withdrew, leaving Crommelin an easy winner. The day was a delicious one in its weather, clear, bracing, and more than a suspicion of winter in the west wind that was blowing. The birds were a magnificent lot of flyers, as good as any that have been furnished for a shooting match this season. Furth had the worst of luck, no less than four dropping dead "as a sod" not a yard over the boundary line. Immediately after the conclusion of the Crommelin-Furth contest, the members of the Orange Gun Club inaugurated their regular monthly contest at the traps. This club is one of the most popular in Essex county. The shooting quality of the men is as good as the club is popular. On this occasion seven men came to the score to contest for the money prizes offered by the club, and for the very handsome gold badge as well. Conditions: Monthly shooting meeting, handicap rises, 8 birds each man; all ties to be shot out, otherwise modified Hurlingham rules to govern. Mr. Smith killed his birds straight and captured the badge and first money. Furth, Raynor, Crommelin, Matthews tied on 6 kill and divided second. Chapman captured third with 5 killed. Hurlbut scored 4 kills and took fourth.

UNKNOWN GUN CLUB.—The members of the Unknown Gun Club held their regular monthly shoot at Dexter's Park, Jamaica Plank Road, L. I., Nov. 14. The birds were extra good. One barrel allowed only. H. Knebel, Jr., J. Cahill and J. Akhurst tied for first prize and medal. H. Knebel, Jr., won, out-shooting the other two. G. Frohlman and M. Brown divided second prize. H. Knebel, Sr., won third prize with 4 killed.

H Knebel, Jr (30)	1110111—6	H Knebel, Sr (36)	1101100—4
J Cahill (23)	0111111—6	S Bohling (25)	1001001—3
J Akhurst (23)	1101111—6	H Van Staden; Sr (24)	1100000—2
F Frohlman (25)	0101111—5	J Coyle (23)	0010010—2
M Brown (25)	0111011—5	G Rankin (23)	1000000—1

Ties for first prize and medal, handicap as before: H. Knebel, Jr., 3, J. Cahill 0, J. Akhurst 0.

WHITE HOUSE, N. J., Nov. 18.—The fourth team shoot between the respective gun clubs of North Branch and White House, which was to have taken place Nov. 16, was postponed on account of the sudden death of Claudius Abbott, one of the members of the White House team. Mr. Abbott was an active and esteemed member of our club, a genial sportsman and an enthusiastic trap shot, and his loss will be much felt by the club. The shoot will probably take place on Thanksgiving day.—H. BISHOP.

WOODSIDE, N. Y., Nov. 12.—North Side Gun Club, of Long Island, eighth average shoot, at club grounds, Train's Meadow. Weather fine, birds good and strong. Match at live pigeons, 5 King's patent traps, handicap, 80yds. rise, no back bound, club rules, 6 money prizes for best annual average:

Duryea	1101110—5	Dr Franz	1100001—3
Bussell	1010111—5	Manch	1110001—4
Bohmcke	1111101—6	Manning	1111111—7
Lyon	0011110—4	Eberhardt	1100110—4
Meyer	1011001—4	Schroeder	1111016—5
Winholz	0101111—5		

THE NEW HAVEN GUN CLUB will hold a tournament on their grounds on West Chapel street, Thanksgiving Day. Events 1. 10 singles, 2. 6 singles, 2 pairs, 3. 10 singles, 4. 5 pairs, 5. Challenge cup, donated by Connecticut Shooting Association, 30 singles, 5 pairs; traps pulled by indicator. For residents of Connecticut only; 6. 8 straightaway, 21yds., 7. 10 singles, 8. 6 singles, 2 pairs. Shooting at 9 A. M.—C. B. BRISTOL, Pres.

BROOKLYN, Nov. 18.—Heavy fog in the morning, followed in the afternoon by heavy rains, which discouraged all but the most enthusiastic of the shooters of the Coney Island Rod and Gun Club. Despite the downpour the marksmen were all in jolly mood, and joked and laughed with the water dripping along their faces and pouring down their necks. Regular monthly club shoot, 7 birds each, handicap rises, four prizes and added money. H. Blattmacher, I. F. Schmadke, P. Ward, F. W. Pfaender, C. Plate, D. Monsees and A. Eppig all killed their 7 birds and tied for first. The ties was shot off at 5 birds each man, and if tied again it was settled by a miss-and-out shoot. Pfaender, Plate and Monsees dropped out of it on the last of the 3-bird shoot-off. In the miss-and-out P. Ward dropped out on his fourth bird, as did Schmadke, Blattmacher killed his and won both club badge and first. P. Dettiefsen, J. Voorhees and G. L. Ayres each killed 6 out of 7, tied for second and divided without any difficulty. J. E. Lake took third without a competitor, and fourth went to W. Green, the first named killing 5 out of 7 shot at, and the last killing 3.

RED BANK, N. J., Nov. 15.—The regular monthly shoot of the Riverside Gun Club took place to-day. First Event—Handicap for members only, 7 birds, Hurlingham rules, with 12 entries. William Conover and John Cooper both killed 6 birds and divided first money; E. M. Cooper, Charles P. Noble, William H. Little, Com. Bussell, Dr. Field divided second; Dr. Kinney, M. F. Cornwell, E. Throckmorton killed 4 for third; James Cooper, T. Davis got fourth money with 3 each, and J. B. Bergen brought up the rear with 2 killed. Open-for-all Event—At 8 birds, 30yds, rise for 10-bore and 28yds. for 12-bore guns. James Cooper won first money, with 7 out of 8; William H. Little got second, with 6 killed; E. M. Cooper, M. F. Cornwell, Dr. Kinney, E. M. Throckmorton killed 5 each and divided third; Commodore Bussell and James Cooper divided fourth money, with 4 scored; W. T. Conover, J. B. Bergen, A. R. Coleman each got 3, Charles Noble 2, and Dr. Field bringing up the rear with 1. The club will have an all-day shoot on Thanksgiving day. Blue rocks will be shot in the morning, and the afternoon will be given to live bird shooting.

TORONTO, Nov. 14.—The following match was shot this afternoon near East Toronto between E. C. Emond, of Lachine, and B. Adair, of Toronto, at 50 live pigeons for $50 a side, under Dominion Gun Alliance rules. The shooting throughout was of the highest class, especially that of Adair, who killed all his birds but three with the first barrel. Adair promises to be one of the best shots in America, as he is only 22 years of age. The following is the score, Mr. R. Thompson being referee:

Adair	11111111111001011111111111111111001111111111131—46
Emond	01111111011100111110111011111110011301100111—38

BRANCHPORT, N. J., Nov. 10.—A match was shot to-day between George Cubberly, of Long Branch, and Fred Beal, of Oceanport, Hurlingham rules, 50 birds each, $100 a side. Cubberly won, killing 38 birds. Beal killed 34. Many pigeon shooters were on hand to see the match. Beal was the favorite in the betting.

WELLINGTON, Mass., Nov. 16.—Several of the crack shots of the Wellington Club attended the shoot to-day to prevent Sanborn winning the silver pitcher. He had won it twice, and if he made the best score to-day the $80 trophy would have been his. Dill won the match to-day with a score of 13 out of 15. The other scores were: Perry and Lee, 12; Bond, Leonard and Nichols, 11; Sanborn and Chase, 10; Brooks and Bradstreet, 9; Cowee, 8; Bradbury, 6.

THANKSGIVING DAY.—At Erb's Park, Newark, N. J., a 20 live bird sweep will be shot, open to all, for $20 entrance and the birds.

Canoeing.

A FIFTEEN HUNDRED MILE CRUISE.

With the new year we will begin the publication of the log of a solitary cruise of 1,500 miles, made in a 14-foot Adirondack boat, on the Erie Canal, Lake Ontario, the St. Lawrence River, and other waters. The cruise began at Albany, finishing nearly two months later at Philadelphia, and includes exciting and dangerous episodes. The chapters will run through several issues. Cruisers should not miss this serial.

A. C. A. PADDLING TROPHY.

THE amounts subscribed for the A. C. A. paddling trophy are as follows:

Com. H. C. Rogers	$10	Brought forward	$200
R. W. Gibson	10	W. J Fairweather	2
E. H. Barney	10	L. W. Seavey	2
R. J. Wilkin	10	Fred Jones	1

R. W. GIBSON, WM. WHITLOCK, } Committee.

A PADDLE ACROSS LAKE WINNEPESAUKEE.

IT was two summers ago, and the scribe and his chum, having just entered the canoeing arena that season, had chosen Lake Winnepesaukee for their two weeks' cruising ground.

We had purchased two canvas Rob Roys a few days before our departure for the lake, and had had little chance to become acquainted with our craft, to know how they would sail, or in what fashion they would behave in a seaway.

Shipping the boats to Lake Village, a hamlet on the western shore of the lake, we followed two days later ourselves, arriving late in the afternoon. We at once prepared our ships for sea, and soon were paddling away up Lake Paugus, an arm of the larger lake. That night we camped on the west shore of Governor's Island, and tried the true canoeist's dodge of sleeping in the canoes. But we soon decided that either our 3ft. cockpits were three feet too short, or else that we were thus much too long. This latter conclusion was arrived at by my companion, who measures 6ft. 5in. in his stockings. At all events, very little sleep did we get, doubled up like jack-knives all night. And to complete our purgatory a skunk visited us at early dawn, forcing us to leave our "comfortable" quarters for the woods, while the "Giant's" black and tan, Sancho, drove our unwelcome caller out.

After an early breakfast and a bath in the bright and quiet lake, we landed and paddled northward round the island, our course lying to the southwest across the lake to Toughtonborough, where we later established our headquarters. Before we had covered a mile two fellows hailed us from the mainland, where we saw their tent in a splendid growth of pine. On going ashore

we found them to be paddlers also, and my chum immediately recognized old friends in the two brown and hearty brothers, who grasped us by the hand with the true grip of comradeship.

We found them just finishing their breakfast dishes, and while they put a finishing touch to pots and pans we took a look at their splendid boats and fully appointed camp.

On giving them our course for this day they decided to break camp and accompany us part way. The way those chaps went to work was delightfully interesting, everything went like clock work. No stopping to think "what next?" or "where is this or that now?" but with a snap and precision that would have done a naval corps honors, everything was collected and stowed away in its own proper place. When all was complete we paddled away on our course once more.

Nearly 10 o'clock, and the heat, which the chill, cold morning had not intimated in the least, now began to burn our arms and blister our cheeks. The little breeze of the morning was gone, and the lake lay still and dazzling in the scorching sun.

About 1 P. M. we made the southern end of Smith's Island for dinner, a distance of some five or six miles from Weir's. Here a long white sand beach allured us to take a swim, and then refreshed, we prepared and ate our rations. After dinner a punch was drunk; then bidding farewell to our escorts, we start out on our way alone under a threatening sky.

Scarce a mile had been made when big drops came down, but we quickly pulled up our rubber aprons and kept on, for it was now 3 o'clock, and being anxious to make Toughtonboro' that night, rain or no rain, we must push ahead.

We were now past the Forty Islands and out in the "Broad," with three miles of open water between us and Cow Island, the nearest land on our course, and for that point we headed.

This lake, noted for its quick and violent squalls, was a terror to us, and especially this "Broad," where the wind has an unbroken sweep of ten miles north and south, and four or five east and west.

When barely half a mile east of "The Forties," on looking southward we both detected, almost at the same instant, a line of dirty yellowish water stretching across the lake about five miles away. Both recognized it as an approaching squall, and instantly put about and began paddling for our lives toward "The Forties." Before we gained the leeward side of the islands the white caps were running in the "Broad," and shortly a lively surf was dashing on the rocky shores.

As it continued to blow steadily harder, we decided to make camp on some of the numerous small islands thereabouts, but the myriads of mosquitoes that we found in possession had a determination to hold it and to put us out; and despite volumes of pipe smoke they succeeded. It was evident we must try some other place, and sighting a cottage on Follet Island, about three quarters of a mile to the north, we steered for that.

Here we found a good beach, a pretty cottage and a fine lawn, quite an Eden to us stormbound mariners. The cottage doors were locked and its windows barred, so we proceeded to take possession of the lawn, and pitched our camp under the lee of a small woodshed. After the cramped and restless time we had had the night before, no desire remained to try the same mode of sleeping again, so the following idea was hit upon by the Artist.

The canoes hauled up on the grass were laid parallel to one another about five feet apart. This intervening space was carpeted with rubber and woollen blankets, and a roof of sails was pitched over all, the same dropping down so as to form walls for camp. Thus we had very comfortable quarters.

The shower of the afternoon having been reinforced by a legion of heavy clouds from the south, now hung dark about us, and in the chill air of the evening we could feel the storm that was close upon us. But no matter what the weather might be, we tired-out *voyageurs* turned into our shelter, pillowed our heads on our coats, and closely rolled in the warm blankets soon fell fast asleep.

By four next morning we turned out, and our first thought was of the weather. The appearance of the elements and our situation brought to mind a scrap from Addison:

> "The dawn is overcast, the morning lowers,
> And heavily in clouds brings on the day,
> The great, th' important day."

The sky was still heavy, the wind nothing abated, our rations low and we anxious.

What shall we do?

Whitecaps in the "Broad," making rather a nasty outlook for us, but cross that "Broad" we must or starve.

We consult the map, and find that by shaping our course northward about a mile to Jolly Island, thence half a mile to the eastward to Steamboat Island, we would escape at least three miles of the open water and cross seas. From there across the narrowest part of the Broad in a southeasterly course to the southern end of Long Island, and we could feel secure. This we decided to do, although it would make three miles more paddling than a direct course to Toughtonboro would give.

No time for breakfast. A gill of brandy and water apiece warmed and braced us, and having stowed all duffle, we launched, with rubber aprons securely battened about. The first half mile was smooth and encouraging, being under the lee of the islands; but once out from their protection, the wind sweeping up the lake from the southeast chopped up the sea and tossed us about in great shape.

At first the scribe was a trifle scared, but seeing how handsomely our craft behaved, we were soon enjoying the rather exciting situation. After about an hour's battling wind and wave, we landed on the lower end of Long Island about 6 o'clock, having covered not quite half the distance we must go before breakfast.

After a short rest we again pushed on, and with the thought of breakfast uppermost in our minds dug ahead, in spite of the cold rain that had begun to fall, till we made Sandy Island, where we ran up just long enough to mix another dose of the fortifier. Off again, and after half an hour's paddling we caught sight of the long-sought shores of Toughtonboro'. Here in full sight of the Promised Land, and within a mile of its shores, the scribe, almost exhausted, had to make frequent resting spells, and in attempting to brace himself with the thoughts of a good breakfast awaiting him ahead, was quite overcome with hunger, and unearthing a loaf of musty bread from among his duffle, he made a cannibalistic attack upon the same. Thus by a series of munching and paddling spells he and his companion reached the welcome shore at last.

Establishing our headquarters here we spent the remainder of our all to short vacation in making short cruises about this lovely lake; among its picturesque islands, along its wild and woody shores, nosing into every lovely nook and corner, where all the gnomes and fairies of our childhood might well abide, and returning to camp at nights to see old Sol throw his last golden rays up from behind the western mountains, whose lines are deeply reflected in the placid waters of the lake. CHOKIE.

A. C. A. EXECUTIVE COMMITTEE.—The meeting of the Executive Committee will be held at Clark's, 22 West Twenty-third street, on Nov. 23, beginning promptly at 10 A. M.

A. C. A. MEMBERSHIP, ATLANTIC DIVISION.—Sandford Northrop, Wm. Northrop, Camden, N. J.; Wm. Potts, Brooklyn.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

ALEX. R. will oblige by sending us his address.

J. C. MCA.—For rabbit shooting within three hours of New York city, try some of the stations on the Newburg Short Cut of the Erie Railway.

M. F., Rushville, Ill.—There are several well-made guns for the price you name; they are of practically equal merits, and we cannot make distinctions between them.

N. H., Medina, O.—Application to Chief Game and Fish Warden John N. Law, Cincinnati, O., will give you the desired information. Each county in your State has a game warden.

P. H. F., St. Louis, Mo.—I have a breechloader made by "Tatham," London, laminated steel. Kindly tell me who is "Tatham" and what his reputation is. Ans. We know Tatham (American) shot, but the Tatham (English) gun is not known to us.

COMPANION WANTED.—Coney Island, Nov. 10.—I purpose going South on a deer and turkey hunt on the 28th inst. The place I go abounds in quail and an occasional bear is to be had. I would like a congenial companion. Expenses will be confined to fare and provender, not exceeding $60.—CHAS. M. GRAINGER.

H. P. W., Norfolk, Va.—Will wild rice or wild celery flourish in the inlets of Chesapeake Bay, if so which will do better? If it is planted this fall would it be up in time for ducks to feed upon in the spring? Ans. Both flourish there. See article on canvasbacks last week. If the rice were planted this fall there would be nothing for the ducks in the spring; they eat the seed, which of course does not mature in the spring. See note on page 347 of this issue.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

CLASSIFICATION BY CORRECTED LENGTH.

THOUGH the new classification should not be adopted at once by either of the clubs now considering it, something has been accomplished in the direction of its ultimate adoption by the presentation of the subject in a definite form in the reports of the two committees. The chief obstacle at present is that yachtsmen have given little thought to the matter, they are unfamiliar with its details, and consequently afraid of it without knowing exactly why. In order to show the practical operation of the rule we have calculated the amount of sail allowed for each length of waterline in the single-stick classes from 30 to 77ft. corrected length, as proposed to take the place of the existing classes, 23 to 70ft. waterline length; also reproducing on a larger scale a part of the diagram previously published, with the addition of the new British yachts. The classes and allowance of sail are as follows: The first column giving the various waterline lengths, the second the corresponding amount of sail, the third the amount of sail for each foot of length in the different classes, and the fourth the ratio of square root of the sail to the waterline. We have not gone above the present 70ft. yachts for the reason that there is now no well defined class, Volunteer and Puritan, the only existing boats, not racing; and it is impossible to say what the future of the class will be, or to lay down any limits for it. In the other classes the table covers rather more than the extreme practical limits; as, in the 77ft. class for example, no one would be likely to build a 68ft. waterline yacht with 552ft. more sail than Titania; nor to go to the opposite extreme of 77ft. waterline with an allowance of no more sail than Bedouin to drive the 7ft. additional length. We have attempted to indicate by the full-faced type the limits for experiment with any chance of success:

Hera	41.94	Shadow	38.28
Peri	40.38	Volusia	37.33
Iseult	38.63	Beatrice	36.05

36ft. Class, 30 to 36ft. Corrected Length.

Kathleen	37.56	Tom Boy	34.99
Saracen	36.40	Shona	34.25

30ft. Class, 30ft. and under Corrected Length.

Yolande	30.78	Daisy	30.00
Gael	30.63	Bantam	29.91

In the 77ft. class Titania and Katrina are found very near the top, their measurements being 76.40 and 76.76ft. In designing a new yacht for the class one or two feet additional length could be taken with advantage, but by the time that 73ft. is reached the sail is considerably reduced, and at 74ft. the proportions of the old 60-tonner Marguerite are reached, or say a reduced Genesta. As Irex, the sole survivor of this type in the large classes, has just been sold out of racing to be replaced by a much wider boat, there is little to be feared from the same type here. The present boats in the class, Bedouin, Gracie and Fanny, would be placed as they now are in the Eastern and Seawanhaka clubs so far as Titania and Katrina are concerned.

The yachts in the 68ft. class would be as at present, there being little or no racing between them, but Mischief, Hildegard, Vision, Wenonah, Thetis and Ilcen have always been considered as fairly matched together as far as size goes. The class limit, 68ft., provides for a somewhat larger boat, as Mischief could be a foot longer with her present rig and yet be in the class. This increase of size was necessitated in order to take in all the boats of about Mischief's size and yet make an even number, 68. The desirable limits in this class would be within 61 and 64ft.; the old British 40-tonners being about 64ft. waterline with 5,000ft. of sail, in fact Stranger, so well known on this side, would just come at the limit of the class by a reduction of 60ft. of sail, her length being 65ft.; and we fancy no one would consider her a very formidable rival to a Mischief or a reduced Titania.

In the next class there are practically no racing boats at present save Clara, neither Cinderella, Athlon nor Whileaway doing any serious amount of racing; but at the same time the class would be unchanged as far as the existing boats are concerned. In any event there is a strong probability of a revival of the class, in which case the present boats would be greatly outbuilt, so that their chances as racers will be little altered by the change to corrected length. The new class offers a very good choice of sizes, from 54×17ft. for a centerboard similar to Cinderella, to a moderate keel boat of 56×13ft. 6in.; a 57ft. boat would be possible, but the proportion of sail allowed her is very small for a racer.

The next class includes the old 45ft. yachts, none of which are doing any active racing; however, they would be very fairly classed with Alga and the new or promised 45-footers. Bertie would come within the limit of this class instead of the next class, and though she has always raced with Clara and Cinderella she would be placed to much better advantage in the smaller class; if, however, she did not like the company, she could still increase her canvas and remain with Clara. It appears that the new British 20-raters, Dragon, Windward and Vreda, would come in this class near its lower limit with such an increase of canvas as would be necessary for racing in these waters, in which case there would be little to fear of their saving time from new boats built to the top of the class. Should any cross, however, they would probably be canvassed for the lower class, which includes the present 40-footers, in which case also they could hardly carry canvas enough to be very dangerous in a season's steady racing.

The limit of 48ft. for the next class was made necessary, not only in order to preserve a certain uniformity in the intervals and to keep the class from crowding closely on the one above it, but because the next even figure, 49ft., would leave the majority of the existing boats, all new and built for the class, as Nymph, Chiquita, Verena, Helen, Alice, Baboon, Xara, Lotowana, Awa, Choctaw, Banshee and Chispa, a long way from the top of the class; the corrected lengths of all but the very latest boats being about 47ft. It is proposed to admit those forties which exceed the limit of 48ft. corrected length by a modification of the special clause in the New York and Seawanhaka rules made to admit Titania and Bedouin. The new class would also include several yachts formerly in the class above, Ulidia, Maggie and Bayadere; but there is not one of these which would be a dangerous rival to the keel of a modern 40-footer. As above stated, it is possible that the 20-raters might squeeze into this class, but at a reduced sail area that would cripple them in the average weather.

In the way of new boats to beat the present leaders there are two extreme positions from which the question may be considered. If it be conceded that Minerva can repeat next season her sweep of this year, and consequently the Minerva type must prevail in racing, then an enlarged Minerva, 41ft. 7in. in waterline and 11ft. beam, would be a far better boat than the present craft in the eyes of American owners, and presumably be as fast in proportion, and able to race on even time, which is more satisfactory to every sportsman than to receive an allowance. If on the other hand the prizes are considered able to beat both Minerva and the type represented by Baboon and Xara, which is generally conceded to be a very good one; the man who would beat either Liris or Gorilla need not do so by a more powerful boat on the same length, but may use his judgment in taking 2 or 3ft. more length, with less sail and power and a finer model. The letters of Messrs. Fife and Burgess in another column have a very important bearing on this matter, both declaring their belief in what may be called extreme dimensions, but we are of the opinion that though the crude elements of 45ft. waterline and 2,600sq. ft. of canvas may in the most skilful hands be moulded into a fast boat and may win in an exceptional season and under favorable conditions of ownership and handling, that most attempts on these dimensions will be unsuccessful, and that the safer proportions will be found between 41 and 43ft. length. The way will still be open for experiments in the direction of power in a 39ft. boat rigged as heavily as Liris, and taken altogether the class will afford ample opportunity for experiment within moderate limits of cost.

The next class is thus far a weak one, having few racing boats at any one point. Shadow, the leader in Eastern waters, and Iseult, in New York, are probably the best of the class. The new limits would include Peri, now racing at the bottom of the 40ft. class, while if she chose Pappoose could cut down to 42ft. corrected length, about her original rig, and have a better chance at the top of this class, where she properly belongs, than at the bottom of the class which includes Liris and Tomahawk. It is in this class, and not with Kathleen and Saracen, that the British 10-raters, Decima, Dis and Yvonne would probably come, unless they reduced their rigs. They would be in the middle or in the lower half of the class, and with little hope of winning from new boats built to the class limit.

Kathleen, like Liris, would have come into the 36ft. class through the special clause mentioned, being considerably above the limit, Saracen being about on it, we have not her official measurement. This arrangement would give some advantage to Liris, Gorilla, Tomahawk and Kathleen over newer and longer boats that might be built to beat them, but as the four were built this year and yachtsmen are interested in the results of their racing, no one would grumble at their being allowed every possible chance to show whether power in excess is worth what it costs. In order to be in the event of a change, to give opportunity for boats recently built for an existing class, like the forties and some of the schooners, we would go further than the committees in recommending that all yachts built for existing *waterline* length classes be allowed to race in the corresponding classes by *corrected* length which include the majority of their former classmates. The classes in which this exception would mainly apply would be in the present 40 and 30ft. sloops and the 90ft. schooners.

Several new boats, Merlin, Mayflower, Sachem, Alert and Sea Fox, built for the existing 90ft. waterline class, will measure from 1 to 5ft. corrected length over the corresponding class, 90ft. corrected length. Of course they could reduce sail and come into the class where Grayling, Miranda and Elma now are, but as they were not designed for such short canvas it would be unfair to compel them to cut down to a rig that might prevent any racing. By admitting them arbitrarily to the class the only harm would be that they would remain rather larger than any new boat built to the class, and so for the time have a slight degree of protection from being outbuilt by boats especially designed for the new class; certainly no greater advantage than they are entitled to. Yachts of the size of Merlin or Sea Fox represent a large amount of money and demand more consideration in any change of rule than the small fry. We do not know the feeling of the owners of the yachts, but such an exception as this, giving them a certain advantage for a few seasons, might remove any objections on their part to the new rule. It is true that there is a certain prejudice against such exceptions on the part of the clubs, but such a clause of the kind has always been found necessary in the past in attempting to secure a uniformity of classes, and there is no practical objection to it so far as we have heard.

The 90ft. schooner class has proved a very difficult one to manage in laying out new classes, being in itself the most important of the schooner classes and at the same time requiring an odd limit, 94ft., to take in all existing yachts, which limit destroyed the uniformity of the series. The limits laid down, 70, 80, 90 and 100ft. corrected length, are satisfactory in all other ways, the only difficulty being to accommodate four or five existing boats to the limit of 90ft. By admitting these boats to the class, together with a few of the smaller sloops to theirs, the greater part of the objections from vested interests will be removed.

Two general objections have been made to the new system; one, that it will be difficult to tell in what class a yacht belongs; the other, that yachts may shift from class to class at will. The first objection is imaginary rather than real, and will disappear with a sufficient number of classes and boats built to the limit, as all new ones will be. The table given above shows that the waterline length which may be taken in the new 77ft. class cannot be longer than 75ft. at most, and is not likely to be shorter than 70ft. waterline. In the 48ft. class the lengths of waterline will prob-

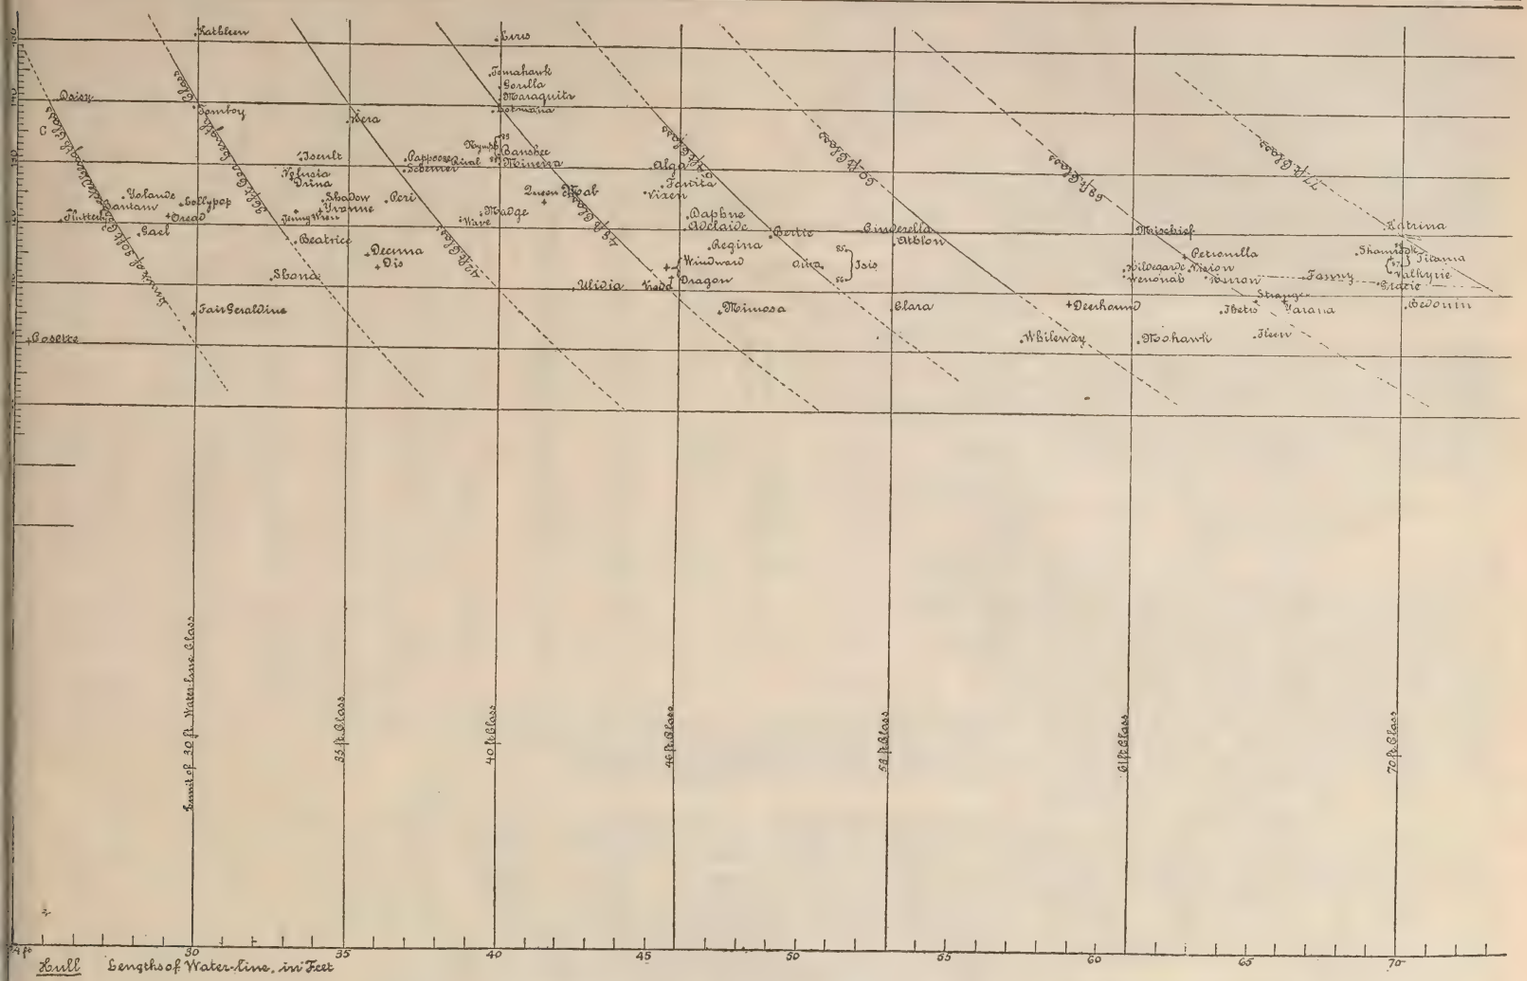

DIAGRAM SHOWING RATIO OF SAIL TO LENGTH IN THE RACING FLEET.

The vertical lines indicate the present limits of classes by waterline length; the inclined lines indicate the limits of classes by corrected length. The relative position of each yacht in its class, near the upper or lower limit, is shown by its proximity to lines indicating the class limits.

ably run from 40 to 44 or 45ft., and in the other classes the variation in length will be from 4 to 6ft.; so that, when once tolerably familiar with the new classes, a man can quickly place any yacht. Of course, in theory a yacht of any length can enter any class; thus one of 53ft. length might be built for the 48ft. class or for the 54ft. class or the 60ft. class; but in the first instance she could have but 1,849ft. of sail, being little more than a huge canoe; in the second she could have 3,025ft., and would be a 7-beam cutter, and in the third she would be allowed 4,356ft., and would be a larger boat than Athlon or Cinderella. It would even be possible in theory to go further and build a scow of 53ft. to carry some 7,000ft. of sail; but with all these possibilities on the given length no one boat could go in all these classes by varying her canvas, and, practically, the man who selected a 53ft. waterline would be compelled to go in the 60ft. corrected length class and no other. It may very safely be assumed, in considering the possible changes from class to class, that only under exceptional circumstances will a man go down in a class, as the influence of the time scale favors the larger boats, and makes it desirable to give rather than to receive time.

As to yachts changing at will from class to class, the same condition of affairs exists now, though unnoticed because no one wishes to avail himself of the privilege. It would be perfectly practical for Sea Fox or Merlin to ship a little ballast and go in the class with Fortuna; Bedouin and Titania, as we have before mentioned, technically belong in the class by themselves, and might refuse to race with the other seventies; half a dozen of the new forties are over the limit of their class in many races, and might go in the class above if they wished, while some thirties push the limit so hard that by neglecting to strip to the last bit of china or bedding, they would be in the 35ft. class. This state of affairs has existed without causing any trouble or exciting comment, the main point being that men do not want to go up and be at the tail end of a higher class instead of the head of a lower one. Under a classification by corrected length there may be somewhat greater facilities for a change among the odd sizes of existing yachts, and at first a man may be in doubt as to which class he can do best in, but there will be few cases of this kind. Liris could go into the class above and make a clean sweep, perhaps winning more pots than in her legitimate class, but she never would do it; and on the other hand, Clara, finding nothing in her own class, might reduce her rig and try for prizes in the class with such boats as Daphne and Alga, but it is no more likely that she would do so than that she will put in ballast and a heavier rig under present conditions and go into the class above her to race with Hildegarde and Mischief. In a case like Pappoose, an odd size near the bottom of a class, it would only be good policy to reduce the rig a little and go into the lower class, and no harm could result from such a change. This has been done in the smaller classes in England, a boat sometimes shipping a larger rig and increasing her rating from 2½ to 4, taking time in the 5-rating class, but this is only with odd-sized craft not especially built to the limits of a class. With a new boat built to the highest limit of a class, as is certain to be the case, it will be impossible to carry the very large increase of sail allowed to the length if she goes in the class above her own; and equally impossible to drive her with the very small rig allowed for her length in the class below her, so there is no opportunity to change. In the case of the change from one class to another which came up in the Seawanhaka Corinthian Y. C. in 1884, and which was the cause of the change from corrected to waterline length, there were but four classes of sloops in place of the present eight classes, with few boats in each class, or the fact of a boat going from one class to another would not have been noticed.

It is too much to expect that the change from one system to the other can be made without trouble or inconvenience to any one; but at the same time the practical difficulties in the way are very slight, especially in comparison with the good points of the new scheme, and will disappear after one or two seasons of building and racing.

KATHLEEN, A GOOD RECORD.—The 30-footer Kathleen of New York, owned by William Whitlock, has made a good record this year, winning nine first prizes out of fifteen starts. In three other races Kathleen crossed the line first, but lost twice on time allowance, and once from being ruled out. The Kathleen has won the Atlantic Y. C. pennant, as the Arab and Guide refused to race with her for it.—*Boston Globe.*

THE CRUISE OF THE ALERTE.—Mr. A. H. Tredwen, who accompanies Mr. Knight on his search for buried treasure in the yawl Alerte, has wired home the safe arrival of the party at Rio Janeiro on Nov. 5, having left England on Aug. 28.

MEASUREMENT ON LAKE ONTARIO.

THE committee of the Lake Y. R. A. has lost no time since the season closed in collecting information and in compiling a very clear report, with the result that the changes recommended were unanimously adopted at the annual meeting. The following very interesting letters were received in answer to a circular sent out by Mr. Jarvis, chairman of the committee, some time since to the leading designers, American and British. The circular read in part as follows:

"At present our Association classifies by L.W.L. length, time allowance being given on the corrected length or rating. Our rule is that of Seawanhaka Y. C. $\frac{L+\sqrt{S\,A}}{2}$=corrected length or rating. Our present classes are 20, 25, 30, 35, 50 and over 50ft. L.W.L., and it is our intention to substitute for these 20,30, 35, 40, 48, 60 and 70ft. corrected length with a length and sail area card, of which I inclose you a copy: the first column showing the L.W.L., the second the maximum amount of sail that can be taken to bring a craft up to the class limit as shown in third column. Now our idea, of course, in making the alteration is to produce a moderate vessel, an economical and wholesome craft, avoiding extremes in beam and draft. Therefore we request the benefit of your experience, and if not asking too much, that you would state what amount of length, beam, draft, sail area and displacement you would take in a design for the 48ft., *i. e.*, the last class on our card for which we have worked out sail area. In giving sail area figures, kindly quote by Seawanhaka rule. I may mention that few of our fleet have been built for the classes, but rather the classes made to suit the fleet, and that we have not the question of vested interests to consider to the extent that the seaboard American and English yacht clubs have. Therefore, if advisable, we wish to make the change before we have these troubles to contend with."

The replies were as follows:

MR. BURGESS.

I am myself on a committee of the Eastern Y. C. on the subject of classification, measurement, etc., but we have not yet come to any decision.

Judging from the success of Minerva, I should think that a classification based on our rule (Seawanhaka) would form a pretty narrow type of boat—too narrow to suit my ideas of a good boat. For a 48-foot corrected length class, I think a boat 45 to 46ft. long by 10ft. beam would probably be most successful; and it seems to me that the New York Y. C. rule $\frac{\sqrt{S}+2\,L}{3}$ would be safer for classification.

There is one important consideration that I should want to see settled before advocating *any* classification based partly on sail area; *i. e.*, the question of measuring the sail area. By any of the present methods all sails are treated as of the same value for speed and equally taxed. The result will be, when the sail area is heavily taxed, as in the case of using it for classification, that the important sail or sails will be increased at the expense of less valuable sails, and this will produce a bad rig for seagoing purposes. There may be a way to avoid this difficulty, but I have not found it. One improvement will be to add to the base line any excess of the spinaker pole beyond the point in the bowsprit taken for the base line. This will be a premium on keeping the main mast aft near its proper place.

If we recommend any change of classification I shall be happy to let you know. I should think it a good plan if the L. Y. R. A. fell in with whatever our large clubs do, as this will open a market from which you can import yachts for the lakes.

BOSTON, Oct. 4.

MR. SMITH.

In reply to your favor of Oct. 8 would say that I would make a boat for 48ft. corrected length, S. C. Y. C. rule, about 44ft. L.W.L., 12ft. beam and 9ft. draft, sail 2,704ft., and about 28 tons displacement. Of course these figures might be modified when the design would be worked out, and would vary with the construction; if made very light the displacement would be less, and if built cheaply would be more. You will bear in mind that dimensions cannot be determined until the plan has been worked out. I frequently make a plan and change the dimensions and make a new one.

NEW YORK, Oct. 10.

MR. WILL FIFE.

In the first place I do not consider that the Seawanhaka rule for taking sail area gives anything like sufficiently accurate results, and it could be evaded to a very large extent, in fact it could be evaded to such an extent as to make the result depend on cleverness in cheating the rule (which is to be deprecated), rather than on merit in design. I therefore hold that sail area should be taken in a similar manner to that in which it is taken by the Yacht Racing Asssociation of Great Britain, and classify by corrected length as in Seawanhaka rule.

If the Y. R. A. rule were used for taking area, the dimensions of a boat built to race as 48ft. corrected length would be about:

Length	45ft.
Beam	10ft.
Draft	9ft.
Displacement	26 tons.
Ballast	14 tons.
Sail area by Y. R. A. rule	2,605ft.
Corrected length $\frac{L+\sqrt{S\,A}}{2}$	=48ft.

FAIRLIE, Oct. 12.

MR. WATSON.

I have always had the strongest feeling, ever since the establishment of the length and sail area rule, that yachts should be classed on their corrected length, or what is the same thing, on their rating. This, in my opinion, is a very strong check on excessive sail spreads, more even than taxing sail area more heavily.

Your proposed rule $\frac{L+\sqrt{S\,A}}{2}$ equalling corrected length, gives exactly the same respective values of length and sail area, as our present rule does, and in your club I think it should produce fine wholesome vessels, such as it has done and is doing here.

As to stating what length, beam, draft, sail area, and displacement I would take for a 48ft. corrected length class, this means practically designing the boat, I would not care to make any statement just in a rough and ready way, and would only care to do so after going very carefully into it. This, I fear, I have not the time to do.

GLASGOW, Oct. 14.

MR. GARDNER.

In the 48ft. class I should use different lengths according to the circumstance. If for light winds and smooth water, 41ft. and 3,025ft. sail, for heavy winds and sea 45ft. and 2,601ft. sails for an all round boat to sail under varying conditions, 43ft. and 2,800ft. sail. The latter boat would be the most successful in a season's racing, unless the boat was owned and sailed only at such a place as Newport, where you usually get a sea, whether the wind be light or heavy. In such a case the longer boat would have the advantage. A really superior design might win all the races though she be anywhere between 41 and 45ft. length. In that case it would be due to the merits of the design alone and not to the crude quantities. There have been a great many attempts made in England to produce a moderate beam boat to defeat the 90ft. Southampton boats. The Minerva is the first of her proportions to do well. On the other hand, the Southampton boats have been notoriously bad sea boats, plunging and stopping in the sea. The Kathleen, although of about the same proportions as those boats, never plunges and is, according to the testimony of those who have seen her in a gale at sea, an unusually good sea boat for any type, so you can see how difficult it is to draw inference from the performance of a single or a few boats. The Minerva has surprised a great many people here, in fact thoroughly scared some of them. It is due to the fact that we have of late considered ourselves invincible on the water. Mr. Fife has been, in spite of the performance of the Clara, very much underestimated. I do not consider Minerva's good performance due to the fact that she has small sails and is a moderate boat, but to the very good model and wonderfully good canvas and rigging. I think it would be a good change to adopt a classification by rating on the lakes, although it would not be so essential there as here. I see from your letter that your classes are nearly all small ones. In the smaller classes the change is not so important. It is absolutely necessary in the large classes to have a definite limit to combined power-and-length in each class. Excessive power to length in the large classes is a very dangerous thing. If one has to give up length, which is valuable, to obtain a large sail area, the tendency would be to prevent the large rig.

Time allowance is, and always has been, a very unsatisfactory thing. The value varies according to the strength of the wind. It seems to me absurd to have a lot of boats built to the limit of a class and one giving time to another on account of sail, when the time allowance is based on the increase in speed due to an increase in size in every direction and not to sail at all. I think a one gun start just as essential as a good rule. If boats start with a strong wind and finish with a light one, the boat that starts

four minutes ahead in the beginning may get twelve minutes advantage at the finish. A boat starting four minutes late in a light wind may cover the same distance in a strong breeze in one minute. It is needless to say it can only be guess work how the wind will be at the finish of a race. Good seamanship gets its reward all through a race and at the finish: I can see no reason why it should not get the same reward at the start. The exact dimensions I would use and the disposition of the sail for a 48-foot rating boat I could only determine after I had a design well under way. I would not like to state here what I would do, for I might change them before the design was completed.

P. S.—My experience this year has been that large rigs pay from a racing point of view. The difficulty has been that we have tried to make too rapid strides. We have tried to kill the goose and get all the eggs. Because we have not put five years' advance in one, a great many say the goose was no good after all. That we have obtained the highest speed possible in the large rigs I very much doubt. I would with perfect confidence undertake to produce a boat with the same sail area that would be 10 minutes faster than the best performance of the Liris this year. I can see no reason why we should expect to have very narrow boats.

NEW YORK, Nov. 7.

The point raised by Mr. Burgess and Mr. Fife is quite an important one, as under a heavier tax of any form on sail there will be a tendency to cheat the rule if possible, and it is difficult to foresee what form such evasion may take. The changes proposed by the New York and Seawanhaka committees are intended to prevent any such evasion if possible, but some further restrictions may prove to be necessary in time. The Y. R. A. rule would not be practicable in America, as the conditions of measurement are so different. A very good point is made by Mr. Gardner in favoring a one gun start. The concluding paragraph of his letter is especially interesting, and bears out the views we expressed very lately.

YACHT BUILDING IN GREAT BRITAIN UNDER THE NEW RULE.

WHETHER or no the result of the proposed classification if carried will be to encourage a very narrow type of yacht, as some would have us believe, the change is a very important one, and must exert a powerful influence on the racing fleet within three or four years after its adoption. While it is impossible to say with absolute certainty what the result of any new rule will be, there is generally sufficient evidence available on which to base very fair conclusions; and as a guide in the present case American yachtsmen have before them the results of three seasons' experience in Great Britain in practically the same methods which are now under discussion with a view to their adoption here. The rule of measurement now in use in Great Britain was recommended for adoption by a committee of the Yacht Racing Association on Nov. 17, 1886, after a most thorough inquiry into the operation of the existing tonnage rule, its evils and the best means of remedying them. As the result of this inquiry, in which the evidence of Messrs. Watson, Fife, Clayton, Richardson, Webb, Payne, Kemp and other designers was taken, all attempts to patch up the existing rule were abandoned, and an entirely new method was substituted. By this new rule the length on waterline and the sail area are multiplied together, the product being divided by a constant, 6,000, and the result being a rather anomalous unit called "rating"; approximating closely enough to the old tonnage to permit the same time scale to be used; thus the old 3-ton class is made 5 rating; the 5 ton is made 10 rating; the 10 ton, 20 rating; the 20 ton, 40 rating; the 40 ton, 60 rating, etc. The sail is measured differently from the American method, as will be noted later, but the formula itself is practically equivalent to that of the Seawanhaka rule, though one gives a result in "rating" (which may be called a cubical measurement); and the other gives a result in "corrected length," a linear measurement. How closely the two methods approximate was shown in the case of the Volunteer and Thistle, where the difference was but a few seconds.

Regarding the actual measurement of the sail, by the American method the spars alone are measured in such a way as to form a triangle which includes no topsail but the ordinary working sail, making no allowance for clubtopsail; while in the Y. R. A. method the measurements are taken, not from the vessel, but from the spar and sail plan by the sail maker, the head sails being considered as a triangle, while the mainsail and topsails, together with the foresail in a schooner and the mizen in a yawl, are measured to find the actual area of each; the certificate of rating being based on the topsail, either sprit or club, which the owner elects to carry while the certificate holds good; many yachts being rated only for a sprit or yardtopsail and using consequently no "jackyard" or clubtopsail. The question of the merits and defects of the two methods, alluded to elsewhere in the letters of Messrs. Burgess and Fife, is quite an important one in itself; but it has no direct bearing on the one which is now under discussion, of the proper use of sail as a factor in the rule. The Y. R. A. method would be impracticable in this country owing to the number of sail makers, some of whom could not be depended on to give the correct measurements; in Great Britain this is practically done by one large firm.

The two more serious objections which have been urged against the proposed classification are that it would directly encourage very narrow yachts here; and also that it would at once put the existing boats, say of the 40ft. class, at a disadvantage compared with the corresponding class of 20 raters, should any care to cross the Atlantic. We propose now to look into the actual working of the rule in Great Britain in order to ascertain the type of boat which it has developed there after a tolerably fair trial for three seasons. The condition of racing and building when the rule went into effect is familiar to all American yachtsmen; racing has come to a standstill owing to the expense of beating the existing winners by more extreme craft, and the undesirable type of vessel produced in all, especially the smaller classes. The racing fleet was reduced to Irex and a few smaller craft, all of extreme narrow beam, and the C class, intended to give a chance to the older racers, simply resulted in killing the A class without being a success in itself. The only opening left to designers was in the direction of length, with a limit practically set to the speed in the larger yachts by the draft which could be used in practice. At the same time the prejudices of most designers and yachtsmen were on the side of great length and corresponding narrow beam rather than of the American type of wide craft, and as great fear was expressed then by many that the new rule would produce extremely *wide* yachts as is now felt on this side that the rule will produce *narrow* ones. The following table contains the yachts built under the new rule within the years '87, '88 and '89, together with several representatives of the old narrow boats which are still in the racing. The list is of course not complete in the sizes under 30ft., but it includes all large yachts and all the faster boats in the smaller classes. We have not included several yachts built for cruising and that do not race, such as Merry Maid, Woodcock, and the schooner Asterope. As the sail measurements by Seawanhaka rule are not obtainable we have based all calculation on the Y. R. A. figures, which must be borne in mind in comparing the table with that published several weeks since, of American yachts. The Y. R. A. measurement is larger than the Seawanhaka, the difference in the case of Thistle, in which the official figures for both are given, being 11 per cent. In Valkyrie as nearly as can be measured from photographs, the American measurement would be about 200ft. less than the Y. R. A. with sprit topsail; in Vreda and Dragon it would probably be about 100ft. less, and in some cases in the smaller sizes the two measurements would be about the same. By the Y. R. A. area the corrected length is thus greater than it would be if the boats were measured in this country for a race here, and the ratio of sail to length is also larger than it should be in comparison with the figures previously given for American yachts, and on which the accompanying diagram is based; so that all through the British vessels are given a little larger sail-spread than they really carry by our rules.

The largest yacht yet built under the new rule is the yawl Lethe, the first on the list, a cruiser similar to Wendur, and a little larger; the only noticeable point about her being that she is wider, the ratio of length to beam being 4.84 in place of 5.21 in Wendur. Thistle was built specially to race in American waters and under the New York rule, her ratio of length to beam being 4.27, so she is hardly a fair basis for comparison; but looking at the other new yachts in the larger classes we find that the proportion is nearly as great, being 4 43 in Yarana and 4.36 in Valkyrie and Deerhound. In the medium-sized yachts the proportions run from 3½ to 4½ beams, and in the smaller sizes the greater number are from 3 to 4 beams.

The standard proportions of the old tonnage yachts is given in the following table.

	Tons.	$\frac{L}{B}$		Tons.	$\frac{L}{B}$
Galatea	90	5.79	Tara	40	5.75
Irex	90	5.57	Clara	20	5.86
Genesta	90	5.4	Ulidia	10	5.83
Erycina	90	5.30	Delvyn	5	6.22
Marguerite	60	5.49	Currytush	3	6.07

From this it will be seen that in all sizes, from 25ft. to 85, the ratio of length to beam was nearly six to one. A comparison of the two tables will show the great change that has taken place within three years, a widening of the whole fleet from the largest down. Thistle is 5ft, 3in. wider than Galatea on the same length; Yarana is 3ft. wider than Tara, both of the same length; Deerhound, 58ft., has the same beam as Marguerite, of 74ft.; Dragon, for 3ft. of length over the old 10-tonners, has also 3ft. of beam; Yvonne is but a foot longer than Shona, but 3ft. wider, while Oread is also 3ft. wider than Mascotte and the other old threes of nearly her length. The value of beam has been appreciated from the first opportunity to use it by all the British designers, and there is not an instance of a very narrow boat being built since the rule was changed. The record seems to show beyond question that the rule has actually produced a fleet of comparatively wide yachts; the next question then is as to their performance.

*Windward was designed late in 1887, but not built until 1889. It is reported that she has had a centerboard inserted this fall.
†Doris was widened last spring, and is now some 6in. wider than the beam here given.
Queen Mab and Thief are of the same design. Cosette and Scaramouch are centerboard boats. Humming Bird is rigged with a large lug mainsail and jib. Her dimensions are only approximate, as is the length of Oread; all the other figures are taken from Lloyd's Yacht Register and the official Y. R. A. measurements.

While comparatively few narrow yachts were left to race when the change was made, there were still some, such as Irex, Melissa, Queen Mab, Lenore, Foxhound, Jenny Wren, May, Neptune, and others of less note, that have kept up the fight until now. In the classes over 20-rating it is very difficult to place the winners accurately, owing to the great disparity in sizes, Irex, of 97-rating, often being matched against Mohawk, Deerhound and even Vreda; but the general results are sufficiently clear. The new boats are about as fast, size for size, as Irex, the latter having an advantage from perfect form and good handling which some of the newer have not had. Yarana and Deerhound are both considered successful boats, though Valkyrie, to Americans at least, is still in doubt. Neither of the two widest boats, Petronilla or Mohawk, have been successful, though it does not appear that this is due to an excess of beam entirely, if at all; the respective designers have not fallen in with the new rules as well as Messrs. Fife and Watson have. Mr. Richardson, in his evidence before the Y. R. A. committee before the rule was changed, declared his belief that it would produce wide boats, and acting on this belief took more beam than any one else in his first attempt. That she was not a success is certain, but, like other of the Richardson boats, she may have needed the best of ownership and a season's tuning up before winning; and the failure cannot be laid solely to her beam, though she probably exceeds the proportion which will be found most desirable in British waters. Mohawk's failure is commonly laid to lack of draft, as she draws but little over 9ft., but she is nearly 3ft. longer, 1ft. wider and has 200ft. less sail than her successful rival; so the fault may be partly in the proportions. Opinions differ as to the cost, utility and seagoing ability of the old and new type: but the latter may at least be considered equal to the former in all of these, as well as in speed, with the probability that with more boats in each class and closer racing, a greater improvement will be made. After three seasons Irex has given up the racing, and her owner will build a comparatively wide boat to replace her. As she was the fastest of her class in the narrow boats, this alone shows the value of moderate beam under the rule.

Coming down to the smaller classes, there is found, as in this country, a much more satisfactory collection of facts to guide us. In the 20-rating class there has been some very good racing in the past two years, with conclusive results. To sum these up briefly, neither of the two old boats, Melissa nor Queen Mab, have any chance with Vreda, as was proved in the latter's first season; and further, Vreda has in turn been decisively beaten by Dragon this year, so that the latter now stands at the top of the class. Not only are the old 10-tonners unable to sail with the new boats, but the old 20, Lenore, once considered almost as good as Clara, has been beaten by them.

It is impossible to give even an abstract of the large number of races sailed in this and the smaller classes in '88 and '89, but all go to show that Dragon can beat Vreda, that the latter can beat Windward, that none of the old boats have any business beside the new and wider ones, and finally that Mimosa thus far is not in it with Dragon and Vreda. This latter boat it will be noticed is both longer and wider, consequently bigger, than the other two, while at the same time she is allowed less sail; and the inference is that her designer attempted to eat his cake and have it too; first building a larger hull than his competitors, only to find that he could not drive it with the sail allowed him for the length he had selected. As similar cases are bound to come up under the new rule here, designers may take warning, in order that if they do fail they may not blame the rule, but their attempt to evade it by building a larger boat than it will legitimately admit of. Of the three new and successful boats Dragon is the widest, having nearly the beam of Minerva and Kathleen. Windward was designed by Mr. Fife immediately after his return from America in '87, when he was pondering over the centerboard, though she was not built until this year. She is narrower by a foot than Dragon, and not so fast. It is reported that since the racing season she has been fitted with a centerboard. Melissa has given up racing and her owner will have a new 20-rater for next season.

In the 10-rating class a very interesting lot of old and new boats is found; the old ones, Doris and Jenny Wren, being well known (the lines of the latter appeared in the FOREST AND STREAM of Feb. 24, 1887). Doris was altered this year by stripping her planking from the deck to the bilge and hipping the timbers, making her some 6in. wider, an evidence in itself of the tendency of the new rule. Florence, another old 5-tonner, is to be treated the same this winter with a clipper bow added. Of the new boats the great success has been Decima, the widest, while the least successful has been Darthula, the narrowest. Yvonne, a Fife boat of less than four beams, has been quite successful, but has been beaten by the wider Decima. In the racing in the north, Doris held her own at the start against the new Yvonne and Darthula, but soon Yvonne improved sufficiently to beat her. Meanwhile Decima was doing much as she pleased about Southampton, and the question as to the winner when they should meet became an interesting one. When Yvonne and the others went south the matter was soon decided, as Decima beat them all beyond any cavil; taking 34 prizes to 39 starts, 28 firsts, 5 seconds and 1 third. Three of the seconds were won when larger yachts, Foxglove, Deerhound or Vreda, took first; while two of the losses were due to carrying away spars, one to a protest and one to no second prize being given, the first being lost by only 38s. and four starters. In the last of the five she beat all her class, but was beaten by Dragon and Vreda. The 7 boats in the 10-rating class represent all proportions from extreme to moderate beam, and the work of a number of skilled designers, making a comparison both interesting and valuable. The boat of 3½ beams wins safely and easily from all the others, while the other prizes in the class go to the moderate boats, and the extremely narrow ones are clearly out of the racing. The 5-rating class has furnished similar examples in the contests of Oread with the old threes, while the 2½-rating class has developed a very nice lot of small craft, keel and centerboard, of varying proportions, the winner being under 3½ beams.

The only conclusion to be drawn from the facts is that the result of the rule in Great Britain has been to produce much wider boats, and that these boats have beaten fairly the old narrow cutters. Some examples are found where beam alone has not won, as in Petronilla and Mimosa, but against them must be set the many successful boats of 3½ to 4½ beams. It is probable that the winning boats of the future will not depart very widely from the dimensions of Valkyrie, Deerhound, Dragon and Decima; and if these proportions result from the rule under such conditions as have always existed abroad, and starting from the standpoint of extreme narrow beam, there need be no fear that the same rule here will developanything nearly as narrow as Valkyrie or Vreda.

In this country the whole education of the yachtsman, from the time he first takes the tiller of a toy catboat, teaches him to reverence and respect beam as the chief, if not the only, desirable quality in a yacht, and this belief is fostered as he grows until it becomes the standard by which everything is judged. It would be possible, by putting a very heavy tax on sail, to compel a man either to build a very narrow boat or to give up racing; but with any opportunity at all to take beam, the American yachtsman will do so. That the rule has not compelled the use of narrow boats abroad is proved above, and if moderate beam can be taken here, with stronger winds, it will be taken here in nearly every instance. No doubt the best beam of the old and new boats will be reduced, with great advantage, but as far as the home fleet to be developed and encouraged by the rule is concerned, there is no reason to fear that it will not have more beam than has been taken abroad, and as much as is compatible with a good all-round racer, in which convenience and deck room are considered, even though they may not be made of paramount importance. A classification by corrected length will undoubtedly reduce beam and draft to a certain extent, but will be most felt in the reduction of the area of the midship section which has been carried to such an extreme of late. The advantages of a good working platform, that have made themselves felt in England in such a short time, have always been realized in this country, and while the tendency of the rule itself is toward moderate rather than extreme wide or narrow beam, the tendency of all the conditions which govern American yachting will act with the rule to preserve a fair amount of beam, at least a foot or two more on a 40ft. yacht than would be taken in England.

As to the home fleet that would be built up under the new rule we have no doubt that it would include a most wholesome type or types of vessels, at least as good as anything known in the past; let us now look at the probable effect of a British invasion headed by the dreaded Dragon and Vreda, on the present and also the prospective home fleet. In the ninth column of the larger table will be found the ratio of the square root of the sail area to the length, corresponding to the fifth column of Table A in our issue of Oct. 24, except, as before stated, that the Y. R. A. figures are now used, giving a higher value than in the smaller table. The diagram is an enlargement of that previously published with the addition of the British yachts. One curious circumstance appears on the table; with the exception of Irex, a fast boat with very small sails, all of the narrow, deep boats of heavy displacement require more sail than the new and more moderate type; for instance, Vreda and Dragon compared with Melissa and Queen Mab; Decima compared with Doris and Jenny Wren. As the smaller rigged boats are the faster it is but reasonable to assume that they are of better form and model. The average ratio of sail in the new British boats from 45ft. waterline down is 113 per cent., equivalent to about 110 per cent. by American measurement. Referring now to the diagram it will be seen that the yachts which win races in American waters are grouped about the line representing 140 per cent. in the smaller classes, and 130 per cent. in the 70ft. class. The fastest in each class, Titania and Katrina, Mischief, Fanita, Vixen, Liris, Tomahawk, Gorilla, Tom Boy, Kathleen and Saracen, are all near the maximum limit of their classes. Two exceptions are found lower down, Minerva and Pappoose at 131 per cent., but even this denotes a sail plan that would have been considered enormous a few years since.

In all the fleet—and it is a representative one—there is but one instance of a yacht that is undoubtedly fast with very small sails, and that is Clara. Bedouin has been a very successful boat, but she has failed to hold the newer craft, and besides has a larger sail plan for her length than Clara. Shadow appears as a boat of moderate rig, but she would have no chance with a new boat built to beat her. It requires no deep consideration for any one familiar with all the fleet to say that in order to win races a yacht must be canvassed up at least to the 125 per cent. line in the classes below 45ft., and to 115 per cent. in the 70ft. class. No one to-day would be in the least afraid of the boats on the 110 per cent. line—Shona, Ulidia, Stranger or Ileen—even if their canvas were considerably increased, nor would Madge have won here if kept down to her original rig, near this limit. In order to race in the proposed 48ft. class, Dragon or Vreda could have about 2,550ft. of sail by Seawanhaka rule, making just 48ft., or practically what they have now. If we may judge by Maggie, Ulidia, Madge and Bayadere, the latter of the same dimensions and by the same designer as Vreda, they would not have the least show with the best or the present forties on even time.

Mr. Burgess, in his letter to the Lake Y. R. A. cites a 20-rater as the winning boat under the proposed rule, and Mr. Fife expresses

a belief that such craft would beat Minerva, but we do not agree with either. It has been argued on the other side that as the twenties beat Lenore, and she is as good as Clara, they would stand to beat the American forties, but we doubt whether Lenore ever was as good as Clara; if so, it was not fully proved on the few occasions when they met. If the new twenties can sail on even terms with the American forties, much more with Clara, then they are very much faster boats than either their dimensions, their record, or the performances of other boats of small sail area would lead one to suspect. In comparing Dragon and Minerva, the former is 5½ft. longer, 3in. narrower, and presumably of the same draft. In order to race in the 43ft. class Dragon could carry but 2,550ft., or 174ft. less than Minerva; or if Minerva's rig were put on her she would measure the same as Liris, over 49ft., and race on even terms with her, in place of receiving 4min. over a 24-knot course, as Minerva now does. With this sail, or with more if required, the longer boat might beat Liris, which at the worst would be no such great misfortune, as she would be a less costly boat to build and run, and while by no means extremely narrow, the type, if adopted here, would almost inevitably be widened somewhat to suit American ideas. If, however, she were kept down to the sail area allowed for her length in the 48ft. class, it is very unlikely that she could sail to windward with the shorter and more heavily rigged boats, whatever she might do on a reach, nor is it likely in any case that she would reach the same speed here with her present sail as she does in England.

In considering Decima in the next class Kathleen naturally suggests herself for comparison, as the two measure the same by Seawanhaka rule and American measurement of canvas. We doubt very much whether Decima could win from Kathleen or the rest of her class, but if she did there would be a gain rather than otherwise. As compared with the American thirties Decima is nearly 6ft. longer, 2in. wider than Saracen, 4in. narrower than Kathleen, and the same beam as Rosalind. Her draft is probably the same as Kathleen, while her sail area is less by over 400 ft. If a boat of 6ft. greater length, the same beam and about the same draft, possessing at least as good accommodations as the average modern thirty, can be driven as fast with smaller sails, there is no reason why she should not replace the shorter and more heavily rigged boat to the advantage of yachting. The same is true of Dis, of nearly identical dimensions, while even Yvonne, 35×9ft., would probably compare favorably in most respects with the American thirties, even though her beam was less than is popular here. We believe that one season of trial would lead Messrs. Fife and Burgess to seek other dimensions than those named; but even conceding that Dragon, as the representative of the 20-rating class, could win in our 48ft. class, no great harm would be done. It is assumed by Messrs. Fife and Burgess that Minerva represents the present 40ft. class, and that they would replace her with Dragon. The former boat is 40ft. l.w.l., 10ft. 6in. beam, and carries 2,734ft. of sail; the latter is 45.50ft. l.w.l., 10ft. 3in. beam, and carries 2,550ft.; the draft of the two would be the same, the longer boat would cost a little but not much more to build, she could be raced with the same crew, and she would be much better below for the added 5½ft. of length, while giving up but 3in. of beam.

If it really is true that the big boats are not in it and that a man must take a small boat to win, he will get more for his money out of a Dragon than a Minerva. A visit from Dragon or Vreda next year would be a most useful test just now and would throw needed light on the question of type. If one of these boats should come over and race with the 40ft. fleet under the present Seawanhaka rule of measurement but with no limit to corrected length, taking all the sail she wanted and merely giving time for it under the rule, as Liris does now, she might be made to beat Minerva and the brute together; but if she comes here to race under a class limit of 48ft. corrected length, and thus kept down to a small sail plan, there is little likelihood of her winning from either Minerva on the one hand or Liris and Tomahawk on the other. All this, however, is of comparatively small importance beside the larger classes. In the case of Volunteer the proposed change has practically no effect. For ordinary home racing the 85 or 90ft. class is in much the same condition as the late lamented Humpty Dumpty, with no prospect of being "set up again." As far as the America's Cup is concerned it is beyond the reach of the scheme, as the only thing a challenger can do is to build the fastest possible machine for American waters on the fixed length of 90ft.; there being no option of taking length by giving up sail. In the 70ft. class Titania would allow Valkyrie about 1m. 20s. in 40 knots, and we have found very few yachtsmen this season who do not think that she could do this and win easily. In place of this time Valkyrie might be lengthened 2ft., retaining the same proportion of sail, and even then it would be hard to convice Americans that she could beat Titania on even time. Mr. Burgess, for one, would hardly admit such a possibility. That Titania must be beaten some day is a matter of course, under existing conditions she must be beaten by a wider and heavier rigged boat on the same length; under the proposed rules by a slightly longer boat of no greater beam or sail, and we fancy that most American yachtsmen would prefer the latter. That she will be beaten by a much longer boat of very narrow beam there is very little to show.

SKIFF RACING ON THE ST. LAWRENCE.

SINCE the race at Prescott a fortnight ago, the boating men of Gananoque, thinking if Prescott could not produce a boat to beat Brockville, they could, have been talking up the race which took place at Gananoque on Thanksgiving day. Mr. Wallace's Yukwa again represented Brockville, and the Spray, built by A. Ramsay and owned by Mr. Nicholson, was selected as the fastest craft in the town fleet, this question having been settled by a series of races before the main event. The Yukwa was sailed by Mr. Wallace, her owner, with Messrs. Ford and Frank Jones as crew. The Spray was manned by W. Stone, O. Harris and W. Lashay, well known river skiff sailors. There was a regular gale blowing when the race was started at 11:50, and the Gananoque people preferred a postponement of the race, but the Yukwa's crew wished the race sailed at once. It was a flying start and twice around a five-mile triangle, with a dead beat of two miles back from Jack Straw Light. The Yukwa got some 20s. lead at the start and held her lead to the first mark, from which she drew away steadily, making quite a lead on the windward work. The sea, especially near Jack Straw Light (which is above Stave Island and probably well known among A. C. A. men) was tremendous, but both boats got through safely, the Brockville boat especially, which did not seem to be at all thrown off by them when on the wind. The first round was timed Yukwa 12:38, Spray 12:43. The Spray seemed to sail better on the second round, but never gained on the leader. The second round and finish was timed Yukwa 1:25, Spray 1:34. Yukwa winning by 9m., having completed the course in 1h. 35m., time that would rather upset Kemp's limits for boats that size.

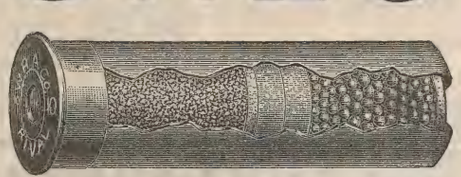
The interest in the Prescott race was tame compared with the amount of excitement over this one. It being a fine day and holiday, the whole town turned out to witness the race, and two bands helped the onlookers to enjoy themselves. It was scarcely thought by the townpeople that the amateur crew in the Brockville boat could sail with any chance against such a crew as the Spray's, but the way they started and sailed their boat upset many calculations. The Spray carried a large spritsail and a small dandy, which latter was discarded on the second round. The Yukwa sailed the whole race with double-reefed mainsail and mizen.

This race clearly makes the Yukwa the fastest boat of her class on the St. Lawrence, and reflects great credit on her builder, Sauve, of Brockville.

NEW JERSEY Y. C.—Some days ago a report was current that the New Jersey Y. C. could not longer retain its present quarters at Hoboken, that owing to improvements being made to the water front it would have to go elsewhere; such, we are glad to say, is not the case. It is true, however, that vast improvements are being made to Hoboken's water front, but these do not and will not come further north than Ninth street, and begin again at the foot of Eleventh street, where the Savannah Steamship Company have bought or leased a large tract of land. The members of the club were uneasy at the shape matters were assuming, and at a recent meeting a committee, of which Commodore E. A. Stevens was ex-officio chairman, were appointed to confer with the owners of the property, at present occupied by the club, the Hoboken Land and Improvement Company. The committee obtained every assurance from said company that they would not be disturbed probably for some years to come. It is possible that when next season opens the anchorage facilities of the club will be better than ever. The club at present occupies a large piece of land at the foot of Tenth street—about an acre—on which are the club house, originally built for and occupied by the New York Y. C. by the elder Commodore Stevens—two sets of ways, a splendid sandy beach, and all the facilities necessary for hauling out boats. The club was never in a more prosperous condition. Its fleet of yachts consists of some thirty-five odd, from the large cutter Isis and sloop Defiance down to the small 18ft. cat Frankie. Some recent additions are the cabin cat Henry Gray, 26ft. 4in., the property of John Ortlieb and Thomas McArdle, and the large cat Villard, 25ft. 10in., belonging to R. Gretten and B. Deefjen. The next regular meeting of the club will be held on Nov. 29.

YACHT BUILDING IN ENGLAND.—The new order of things is at least working to the benefit of designers and builders in England, and considerable work is already promised, though the building season has hardly begun. The new 117-rating cutter to replace Irex, a wide craft, and perhaps with a centerboard, will be built at Fay's. Another narrow cutter, Melissa, 10 tons, has given up the racing and will be replaced by a 20-rater. Mr. Arthur Payne has already two orders for this fashionable size, one for Mr. Reginald Cox, part owner of Mimosa, and one for Capt. Victor Montague, R. N., owner of Humming Bird. Both of these will be designed and built by Mr. Payne. White & Son, at Cowes, will build a 20 from Mr. Clayton's design for Mr. Ames, owner of Fair Geraldine and the yawl Atlantis. Decima has been sold and her owner will build a new racer. Thalassa will be replaced by a new 5-rater designed by her owner, Col. Bucknill, an amateur, while Mrs. Rudston Read and Miss Mabel Cox will have a new 2½-rater from Mr. Payne. This is a very good showing for the first of November, and promises a large fleet next season.

A LIGHTHOUSE AT WHITESTONE POINT.—The Lighthouse Board give notice that on or about Nov. 15, 1889, a fixed white Post light will be exhibited from the structure recently erected at Whitestone Point, East River, New York. The light will illuminate 270° of the horizon; its focal plane is 20ft. above the ground, and 40ft. above mean low water. The structure consists of a square pyramidal frame tower, on piers, with gallery for fog-bell and lantern. Lower part of structure painted white, upper part wood color. The approximate geographical position of the light, as taken from the charts of the U. S. Coast and Geodetic Survey is as follows: Latitude 40° 48′ (2″) north; longitude 73° 49′ (12″) west. Magnetic bearings and distances of prominent objects are as follows: Throg's Neck Lighthouse, E. ⅝ N., 1⅜ nautical miles. Old Ferry Point, N. W. ¾ W., ⅝ nautical mile. During thick and foggy weather a bell will be struck by machinery a double blow every 30 seconds. Bearings are magnetic, given aproximately, and from seaward.



FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

LOG CABINS;

How to Build and Furnish Them.

By WILLIAM S. WICKS.

The book is thoroughly practical. Every step in the process of construction is explained. The author is an architect who has himself built log cabins, and very handsome ones, too, as shown in the plates. The designs are numerous and varied. Plans are given for cabins, large and small, with details of exterior and interior finish; and there are also some very useful directions for constructing temporary shelters—the Indian camp, brush house and bark camp. The furnishing consists of tables, chairs, bedsteads and other articles, all made of the material at hand, and all in keeping with the style of the house. The illustrations are numerous and helpful. Price $1.50.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

YACHTS, BOATS AND CANOES,

WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.

BY

C. STANSFELD-HICKS.

AUTHOR OF "OUR BOYS, AND WHAT TO DO WITH THEM.

NUMEROUS ILLUSTRATIONS AND DIAGRAMS

AND

WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.

DESIGNS:

Model Yachts.—Defiance, Isolde, Bonny Jean, and 10-tonner with sail plan.
Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe.
Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehander by C. P. Clayton, Puffin, 3-ton Racer, 3-ton Cruiser, 24-ft. Auxiliary (steam and sail) fishing boat.

This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.

Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

The Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls, Etc., Etc. With 96 illustrations.

By C. P. KUNHARDT.

This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY NEW YORK.
DAVIES & CO., London, England.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable disnes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

Sam Lovel's Camps;

Uncle Lisha's Friends Under Bark and Canvas.

A SEQUEL TO "UNCLE LISHA'S SHOP."

By ROWLAND E. ROBINSON.

The two series of papers published in FOREST AND STREAM, with added chapters. An inimitable portraying of the woods and village life of Danvis folks. Cloth, 253 pp. Price $1,

FOREST AND STREAM PUBLISHING COMPANY,

ANSWERS TO CORRESPONDENTS.

THE THANKSGIVING TURKEY SHOOT.

THIRTY years ago Thanksgiving Day was immediately preceded by a day of sport, whose coming was quite as impatiently awaited by a considerable portion of the community as was the following day of feasting by the other. This was the day dedicated to the "turkey shoot;" and as on his successful shot at the living target depended many an impecunious rifleman's next day's roast turkey, such were far more anxious that that day might prove soft and windless, than that the sun should shine on the succeeding one. Then there were others, who were not in like predicament, but were eager to exhibit their skill in the exciting contest, with a view to which months of practice with their favorite weapon had been devoted. It was a great day, too, for the boys, with the cracking of rifles, the smoke and smell of gunpowder, the bustle and no end of opportunities to get in the way.

The provider of such entertainments who was fairest in his measurements of distance, and most liberal in his rules, and who furnished the largest turkeys, drew to his "shoot" the best shots of two or three townships—a motley assemblage of men with arms of various fashions. Here might be seen the white-haired hunter, who had outlived the day of abundant game, garrulous of former exploits, with the long-barreled rifle, stocked to the muzzle with curled maple, its thimbles, guard, patchbox and peaked heel-plate all of battered but shining brass. There was likely to be another old hunter, carrying a similarly mounted but longer smooth-bore that had killed deer and bear where neither had now been seen for years, or the last panther that had ever ranged the mountains, and that had hit its turkey at forty rods many and many a time, as it might again if eye and hand of the owner were as keen and steady now as then. Both guns, if not now flint-locks, were altered from that fashion, with strikers screwed into the old place of the flint. There was sure to be at least one target rifle, which, too heavy to carry or be fired but from a rest, had never been hunting, nor had its telescope sight focused on living game. There were "Windsor" rifles with inconvenient and dangerous strikers on the under side; double rifles, rifle and shot, over and under, and side by side, and a two-grooved military rifle, a wonder from over the seas that had been known to put its ball into a barn at short range. Well-to-do young men brought the best work of some local maker who had put no end of painstaking labor into the barrel and covered the stock with a glitter of German silver ornamentation.

Sometimes the shooting was off-hand at 80 rods—the distance was never given in yards—but oftener from a rest at 40, 50 or 60 rods. The rest was a plank, with one end sustained by a log or wooden horse, the other on the ground, the shooter lying on the plank and resting his gun upon the raised end. Even this admitted of various styles of shooting, for there were the hasty and careless shooter, he who shot with deliberate celerity, the slow and careful shooter, and he who pottered and aimed so long, squinting over his uncocked rifle that all became tired of waiting their turn. There, too, was the wobbler, shaking with gobbler ague and firing wide of the mark; the man who shot with both eyes open, and he who shut both eyes when he pulled the trigger.

The turkey was put up on a barrel or box, to which he was fastened by a cord drawn through a hole; and here he sat in some bewilderment at the cracking of rifles, the whistling of bullets, the mob of shouting boys rushing down upon him at every shot, till a bullet grazed or killed him or the gloaming fell upon the range.

Though there were always some successful shots made, there was always such a percentage of misses that the proprietor of the turkeys was certain to receive a good price for every bird killed, and in the evening the birds left over were raffled.

In some States the pastime is prohibited by law, and though in some parts of the country it is still kept up, for the most part it has fallen into disuse. This is not greatly to be regretted, for with much of the cruelty of field sports, it possessed none of their fairness, and the most that can be said in its favor is that it stimulated rifle practice.

SNAP SHOTS.

THE poets are fond of likening love to fishing; and as it is never too late to hope for success in love, so one should never despair of luck in fishing. The papers last Friday reported the case of a man, who, voluntarily or unwillingly having persisted in celibacy for sixty-nine years, had at last taken to himself a wife. And a correspondent, who tells us that he is seventy-two years of age and has been visiting the St. Lawrence River for twenty-two summers, reports that last October he caught his first maskalonge, a beauty of nineteen pounds and an odd ounce. If congratulation and good wishes for a long life are becoming at the wedding of one whose head is frosted with the lapse of sixty-nine winters, what may not be said in felicitation of an angler who at seventy-two marks with a red letter the day he scores such angling fortune?

Thanksgiving Day is not all that it once was on the New England farm—that great feast day of the year, when sons and daughters gathered from near and from far, drawn by the strong cords of affection, to meet once more under the old home roof, to look out with glad eyes upon the familiar landscape, to drink from the old well, and so be young again, if only for a day. For the New England farm itself is not all that it was. In scores and scores of instances the well-tilled fields have been abandoned; and even the houses and barns have fallen into decay. More than one New England gunner will to-day flush his game amid the tangled growth which conceals abandoned garden spots; and perchance eat his frugal lunch as he rests on the stone ruins of a home which once rang with Thanksgiving cheer. In many parts of New England farming is on the decline. Land has lost value for agricultural purposes. The old men are passing away. There are no young men to take their places. Cultivated acres are reverting to their original wilderness. Forest areas are increasing.

Among the suggested new avenues of enterprise and profit open to the proprietors of declining farm lands, Judge Charles C. Nott suggests in a recent issue of the New York *Evening Post* the industry of raising the new cattle, half-breed buffalo, which could well withstand the rigors of the northern climate. Another enterprise is that of deer farming. If fifty farms were thrown into one ring-fence, suggests Judge Nott, with hounds and hunters excluded, they might in time become semi-domesticated like those in English deer parks; they would be as prolific as sheep, subsisting on lands and in woods where sheep could not they might be found a profitable source of income. It is not quite clear in what manner Judge Nott expects deer parks to be made to pay; whether by the sales of deer skins and venison or by a revenue to be derived from shooting privileges. Nor does he tell us how he would protect the game and exclude the hunters and hounds. The protection would be the most expensive feature of a New England deer farm; and that expense would eat a hole into the profits. On the other hand, now that the game preserve system is taking such a hold upon this country, and there are found so many clubs and organizations ready to lease and protect game grounds, it may not be at all Quixotic to project extensive deer parks in New England which shall bring in to the proprietors of the land satisfactory returns in annual rent. But has the time come when, by the dwindling of her hardy farming population and the growth of a class which can indulge in the luxury of rented game parks, New England must formally abandon a portion of her cultivated fields and hillside pastures to wilderness tracts for deer and woodcock and grouse?

A correspondent who writes from Delaware reports that there is great indignation among the farmers of his vicinity because one of their number has recently been arrested and fined for shooting game on his own land out of season. The notion appears to be held by our correspondent and to prevail among the indignant farmers that this is an "unconstitutional" and highly tyrannical invasion of their "natural rights." As a matter of fact, all game laws are based upon the right of the State to control the taking of game on private property; if this were otherwise there would be little usefulness of game laws. The "property" in game on one's land consists only in the exclusive right, as against other people, to take that game whenever the State declares its taking to be lawful. The established principles of game legislation are that the State shall conserve the native supply by restricting the destruction, and jurisdiction is exercised over all land, whether of public or private ownership. The individual has no more "natural right" to kill the game on his land in violation of the public statutes than he has to manufacture apples or corn into whisky in defiance of the internal revenue laws, or to market his day-old calf for veal, or in a well-regulated community to let his Canada thistles grow, or in the city to maintain a barking dog at night, or to wave a red flag in Chicago streets. As a matter of fact, the natural rights of mankind are abridged as he becomes civilized; and the sooner our Delaware friends realize that they as individuals must conform to the laws which are based on public advantage, the sooner will Delaware game protection be relieved of this "natural rights" fog.

With the Christmas Number of the FOREST AND STREAM will be given a double supplement, consisting of four pages of text and a double page folder with portraits of elk, drawn expressly for this number. The issue of January 9 will be a special Florida fishing number. It will contain a four-page illustrated supplement, describing the fishes of Florida waters; it will be of value and interest to all anglers who may go South this year; and it will be welcomed also by those who have fished in that sunny land.

This season appears to be more than any former year prolific of shooting accidents; and the casualties are in nine cases out of ten due entirely to carelessness and recklessness. Age cannot wither nor custom stale the temerity of the gunner who leans on his gun, pokes with it, draws it muzzle-foremost, and in divers ways invites the death concealed in its barrel.

The story of the "Dun Horse," printed to-day, is not credited to the book of "Pawnee Hero Stories and Folk-Tales," because the manuscript of the story was in the FOREST AND STREAM'S possession before the book was projected.

The Sportsman Tourist.

THE DUN HORSE.

A Pawnee Folk-Tale.

BY GEO. BIRD GRINNELL ("YO").

MANY years ago, there lived in the Pawnee tribe an old woman and her grandson, a boy about sixteen years old. These people had no relations and were very poor. They were so poor that they were despised by the rest of the tribe. They had nothing of their own; and always after the village started to move the camp from one place to another, these two would stay behind the rest, to look over the old camp, and pick up anything that the other Indians had thrown away, as worn out or useless. In this way they would sometimes get pieces of robes, worn out moccasins with holes in them, and bits of meat.

Now, it happened one day, after the tribe had moved away from the camp, that this old woman and her boy were following along the trail behind the rest, when they came to a miserable old worn out dun horse, which they supposed had been abandoned by some Indians. He was thin and exhausted, was blind of one eye, had a bad sore back, and one of his forelegs was very much swollen. In fact he was so worthless that none of the Pawnees had been willing to take the trouble to try to drive him along with them. But when the old woman and her boy came along, the boy said, "Come, now, we will take this old horse, for we can make him carry our pack." So the old woman put her pack on the horse and drove him along, but he limped and could only go very slowly.

The tribe moved up on the North Platte, until they came to Court House Rock. The two poor Indians followed them, and camped with the others. One day while they were here, the young man who had been sent out to look for buffalo, came hurrying into camp and told the chiefs that a large herd of buffalo were near, and that among them was a spotted calf.

The Head Chief of the Pawnees had a very beautiful daughter, and when he heard about the spotted calf he ordered his old crier to go about through the village, and call out that the man who killed the spotted calf should have his daughter for his wife. For a spotted robe is *ti-war'-uks-teh*—big medicine.

The buffalo were feeding about four miles from the village, and the chiefs decided that the charge should be made from there. In this way, the man who had the fastest horse would be the most likely to kill the calf. Then all the warriors and the young men picked out their best and fastest horses, and made ready to start. Among those who prepared for the charge was the poor boy on the old dun horse. But when they saw him, all the rich young braves on their fast horses pointed at him, and said, "Oh, see; there is the horse that is going to catch the spotted calf;" and they laughed at him, so that the poor boy was ashamed, and rode off to one side of the crowd, where he could not hear their jokes and laughter.

When we had ridden off some little way, the horse stopped and turned his head round, and spoke to the boy. He said: "Take me down to the creek, and plaster me all over with mud. Cover my head and neck and body and legs." When the boy heard the horse speak, he was afraid; but he did as he was told. Then the horse said, "Now mount, but do not ride back to the rest of the warriors, who laugh at you because you have such a poor horse. Stay right here, until the word is given to charge." So the boy stayed there.

And presently all the fine horses were drawn up in line and pranced about, and were so eager to go that their riders could hardly hold them in; and at last the old crier gave the word, "*Loo-ah*"—Go! Then the Pawnees all leaned forward on their horses and yelled, and away they went. Suddenly, away off to the right, was seen the old dun horse. He did not seem to run. He seemed to sail along like a bird. He passed all the fastest horses, and in a moment he was among the buffalo. First he picked out the spotted calf, and charging up alongside of it, *U-ra-rish!* straight flew the arrow. The calf fell. The boy drew another arrow and killed a fat cow that was running by. Then he dismounted and began to skin the calf, before any of the other warriors had come up. But when the rider got off the old dun horse, how changed he was! He pranced about and would hardly stand still near the dead buffalo. His back was all right again; his legs were well and fine; and both his eyes were clear and bright.

The boy skinned the calf and the cow that he had killed, and then he packed all the meat on the horse, and put the spotted robe on top of the load and started back to the camp on foot, leading the dun horse. But even with this heavy load the horse pranced all the time and was scared at everything he saw. On the way to camp one of the rich young chiefs of the tribe rode up by the boy and offered him twelve good horses for the spotted robe, so that he could marry the Head Chief's beautiful daughter; but the boy laughed at him and would not sell the robe.

Now, while the boy walked to the camp leading the dun horse, most of the warriors rode back, and one of those that came first to the village, went to the old woman and said to her, "Your grandson has killed the spotted calf." And the old woman said, "Why do you come to tell me this? You ought to be ashamed to make fun of my boy because he is poor." The warrior said, "What I have told you is true," and then he rode away. After a little while another brave rode up to the old woman and said, "Your grandson has killed the spotted calf." Then the old woman began to cry, she felt so badly because every one had made fun of her boy because he was poor.

Pretty soon the boy came along leading the horse up to the lodge where he and his mother lived. It was a little lodge, just big enough for two, and was made of old pieces of skin that the old woman had picked up, and was tied together with strings of rawhide and sinew. It was the meanest and worst lodge in the village. When the old woman saw her boy leading the dun horse with the load of meat and the robes on it she was very much surprised. The boy said to her: "Here, I have brought you plenty of meat to eat, and here is a robe that you may have for yourself. Take the meat off the horse." Then the old woman laughed, for her heart was glad. But when she went to take the meat from the horse's back he snorted and jumped about and acted like a wild horse. The old woman looked at him in wonder, and could hardly believe that it was the same horse. So the boy had to take off the meat, for the horse would not let the old woman come near him.

That night the horse spoke again to the boy and said: "*Wa-ti-hes Chah'-ra rat wa-ta.* To-morrow the Sioux are coming—a large war party. They will attack the village, and you will have a great battle. Now, when the Sioux are drawn up in line of battle, and are all ready to fight, you jump on to me, and ride as hard as you can right into the middle of the Sioux, up to their Head Chief, their greatest warrior, and count *coup* on him and kill him, and then ride back. Do this four times, and count *coup* on four of the bravest Sioux and kill them, but don't go again. If you go the fifth time, may be you will be killed, or else you will lose me. *Laku-ta-chix*—remember." So the boy promised.

The next day it happened as the horse had said, and the Sioux came down and formed a line of battle. Then the boy took his bow and arrows, and jumped on the dun horse, and charged into the midst of them. And when the Sioux saw that he was going to strike their Head Chief, they all shot their arrows at him, and the arrows flew so thickly across each other that the sky became dark, but none of them hit the boy. And he counted *coup* on the chief, and killed him, and then rode back. After that he charged again among the Sioux, where they were gathered thickest, and counted *coup* on their bravest warrior, and killed him. And then twice more until he had gone four times as the horse had told him.

But the Sioux and the Pawnees kept on fighting, and the boy stood around and watched the battle. And at last he said to himself. "I have been four times and have killed four Sioux, and I am all right. I am not hurt anywhere; why may I not go again?" So he jumped on the dun horse and charged again. But when he got among the Sioux, one Sioux warrior drew an arrow and shot. The arrow struck the dun horse behind the forelegs and pierced him through. And the horse fell down dead. But the boy jumped off and fought his way through the Sioux, and ran away as fast as he could to the Pawnees. Now, as soon as the horse was killed, the Sioux said to each other: "This horse was like a man. He was brave. He was not like a horse." And they took their knives and hatchets and hacked the dun horse and gashed his flesh, and cut him into small pieces.

The Pawnees and Sioux fought all day long, but toward night the Sioux broke and fled.

The boy felt very badly that he had lost his horse; and, after the fight was over, he went out from the village to where it had taken place, to mourn for his horse. He went to the spot where the horse lay, and gathered up all the pieces of meat, which the Sioux had cut off, and the legs and the hoofs, and put them all together in a pile. Then he went off to the top of a hill near by, and sat down and drew his robe over his head. And he began to mourn for his horse.

As he sat there, he heard a great wind storm coming up, and it passed over him with a loud, rushing sound, and after the wind came a rain. The boy looked down from where he sat to the pile of meat and bones, which was all that was left of his horse, and he could just see it through the rain. And the rain passed by, and his heart was very heavy, and he kept on mourning.

And pretty soon came another rushing wind, and after it a rain; and as he looked through the driving rain toward the spot where the pieces lay, he thought that they seemed to come together and take shape, and that the pile looked like a horse lying down, but he could not see well for the thick rain.

After this came a third storm like the others; and now when he looked toward the horse he thought he saw its tail move from side to side two or three times, and that it lifted its head from the ground. The boy was afraid, and wanted to run away, but he stayed.

And as he waited there came another storm. And while the rain fell, looking through the rain the boy saw the horse raise himself up on his forelegs and look about.

Then the dun horse stood up.

And the boy left the place where he had been sitting on the hilltop, and went down to him. When the boy had come near to him, the horse spoke and said: "You have seen how it has been this day; and from this you may know how it will be after this. But *Ti-ra' wa* has been good and has let me come back to you. After this do what I tell you; not any more, not any less." Then the horse said: "Now lead me off, far away from the camp, behind that big hill, and leave me there to-night, and in the morning come for me;" and the boy did as he was told.

And when he went for the horse in the morning, he found with him a beautiful white gelding, much more handsome than any horse in the tribe. That night the dun horse told the boy to take him again to the place behind the big hill, and to come for him the next morning, and when the boy went for him again he found a beautiful black gelding. And so for ten nights, he left the horse among the hills, and each morning he found a different colored horse, a bay, a roan, a gray, a blue, a spotted horse, and all of them finer than any horses the Pawnees had ever had in their tribe before.

Now the boy was rich, and he married the beautiful daughter of the Head Chief, and when he became older, he was made Head Chief himself. He had many children by his beautiful wife, and one day when his oldest boy died, he wrapped him in the spotted calf robe and buried him in it. He always took good care of his old grandmother, and kept her in his own lodge until she died. The dun horse was never ridden except at feasts, and when they were going to make medicine, but he was always led about with the chief wherever he went. The horse lived in the village for many years, until he became very old. And at last he died.

A BIG BEAR'S SKULL.—A correspondent, Mr. M. C. Mohr, who writes us from Brevard county, Florida, says: "By this mail I send you a bear skull killed by me by moonlight on the night of June 13, 1889. One shot from a shotgun at 80yds. did the busine-s, but he ran about 150yds. before he fell. Please accept the same with my compliments." The skull, which has been duly received, shows that it was carried by a large bear, and Mr. Mohr is to be congratulated on his good fortune in securing it.

GUNNING DOWN BY THE SEA.

GRAY SQUIRRELS NEAR CAPE MAY.

AS the years go by I grow fonder of the sports which fired my youthful zeal among the beech trees and oak woods of Indiana. Shooting wild pigeons—I mean in the field—is "a lost art" with me now, because I don't know where to look for anything but clay pigeons.

But Oh, the joy of it! as I recall the days when I went gypsying with a small muzzleloader (cost $6.50), accompanied by Bob Shannon with a rifle. When Bob got tired of knocking the eyes out of the frisky rodent lying *perdu* on the sunny side of a hickory limb, he would kindly permit me to blaze away at a fugitive gray squirrel making his way across the lofty tops of the beech or oak trees, or hastening down the tree trunk scared within an inch of his life.

These were happy, happy days, and at fifty-five (with my modern gun)—even after a hot political campaign, in which I didn't win—I think I enjoy the chase as much as I did forty-five years ago. My eye kindles up as quickly when the deep baying dogs indicate a buck near a runway or a squirrel up a tree, and again I feel the old thrill of pleasure somewhat akin to "the stern joy a warrior feels" in a four-footed foeman "worthy of his steel." I admit I can no longer, as I could readily at twenty-one, knock a recumbent, reluctant close-hiding gray squirrel off a hickory limb at 150yds., but woe be to the frisky rodent that thinks he is smart enough "to flee the wrath to come," in the shape of a Krider cartridge loaded with No. 7 shot in my new double-barreled breechloader.

It was the sad, bad, glad and witty Heinrich Heine, who said he thought the reason he was so fond of hunting was because his Jewish ancestors had been hunted so much.

But if I wander away from the squirrel woods so far, FOREST AND STREAM will think I am like Mailaigne, who began to write the history of the world and wound up by telling his readers how some of his ancestors suffered with the gravel.

Possibly this *insouciant, non sequitur* kind of writing is not without a certain charm, at least to the writer if not to the reader; for with a double-barreled gun and fifty cartridges, intent on getting the taste of politics out of one's mouth, and honing after an old-fashioned squirrel potpie, one is not expected to set himself up straight on the "blackboards of convention," or to carry Archbishop Whateley's small treatise on "Logic" in his pocket.

So much by way of premise. "I was tired, my soul and I," and I really knew no other way to get rested, save to get out into the woods. When to my delight my morning mail brought me a letter from my irrepressible and delightful friend, a gentleman and sportsman, Col. John J. Lansing, with whom I had taken my pleasure in the squirrel woods of Cape May two years ago, all of which is recorded in the dear delightful pages of FOREST AND STREAM many months ago. Lansing's letter simply said:

Col. S.: The woods are full of them. I know you feel badly over the election. But Election Day, like Christmas, comes once a year, and you may get even with me next year. Bring your gun and fifty cartridges and I will show you some fun among the squirrels.—LANSING.

I stood not upon the order of my going. I went at once, and at 6:10 I had made the run down the West Jersey Railroad eighty-six miles to Cape May City. A tall shapely man, whose long gray beard gave a semi-patriarchal dignity to the father of sixteen children, a boniface whose step recalled Sheridan's "stallion shod with fire," welcomed me right heartily at the door of his Cottage Hotel, a comfortable mansion built thirty years ago by Billy Fotterell, of Philadelphia.

By the time the gallant Lansing—for he it was—could send my satchel up-stairs to a room in which were auks and dusky ducks and rabbits and squirrels, cunningly prepared by good friend Lansing, who is a self-educated taxidermist, and in the room was snowy linen and a downy couch—by this time I had my slippers on and was ready for a supper of broiled rock (caught at ebb tide that day), flanked with venison done brown in a chafing dish, and as a side dish I saw an old time game pie, filled with quail Lansing had shot that day. The coffee was brown and fragrant; and, ye gods and diminutive fishes! as good digestion waited on appetite, I felt as if I never again wanted to run for office. We talked over our last squirrel hunt, and Lansing explained how his friend Dr. Walker, at Hot Springs, down in "Arkansaw," enjoyed that tale as it was told by me in the pages of FOREST AND STREAM.

At 10 o'clock I was in a dreamless sleep, lulled by the murmuring waves of the sea under my window. At 6 o'clock in the morning I was up and ready to take my day's pleasure in the squirrely woods.

A short ride to Cold Spring behind Mulliner's bay trotter brought us to Rube Johnson's grocery store at Cold Spring. We wanted Rube, but we wanted his dog worse than we wanted Johnson.

Johnson's wife, a comely woman of thirty, demurred to Brother Rube's going a-gunning, because she had been promised the horse that day to go to a church fair. But a solemn covenant on the part of Col. Lansing that she should have $1.50 for the use of the squirrel dog, subsidized Sister Johnson so much that she consented that Rube, her husband, should go with us. Sheriff Bob Hand joined the party, which was now made up. There was only one drawback to our happiness, and that was the fact that Rube Johnson was such a teetotaler and temperance agitator that he would not permit any surreptitious flasks of even Hostetter's Bitters to go into the woods with the party. But as no search was made, Bob Hand and Taxidermist Lansing passed investigation and got through the lines with their flasks in their inside pockets, Rube Johnson to the contrary notwithstanding. But it was a trifle amusing to an old soldier like myself to see Lansing and Sheriff Hand dodge behind a stalwart oak to get out of sight of Br'er Johnson every time they wanted a nip of Hostetter's Bitters.

The squirrels were reasonably abundant, and our dog, a beautiful cross between a spaniel and a beagle hound, made the welkin ring with the deep-voiced announcement of a find. While the dog located the game, I came in for a lecture on the virtues of temperance, interspersed with an impassioned account of how Br'er Johnson "got religion," how he saw "three great lights" at the northwest corner of the old meeting house, and Br'er Johnson, warming with the theme, told how he went home at midnight to tell his wife "how he had got it again," and how

she said, "Rube, it was real mean in you not to wait and get religion to-morrow night, when I could be there to see it with my own eyes!" But barring Br'er Johnson's aggressive views on politics and religion he was as good a hunter after squirrels as I ever went into the woods with. Every time Shep (the dog) barked we knew he had treed a squirrel.

Br'er Johnson was anxious I should do great execution among the gray and hickory-nut devouring rodents, and he always gave me the first shot, and I wiped Col. Lansing's eye several times by bringing down the game before he reached the tree—I did what I never did before in my life, killed six squirrels seriatim and never missed a shot. The trees are not very tall, which gives the gunner a good purchase on the squirrel, the dog frightens the game, and the squirrel lies close to the limb till he thinks the danger is over. I killed six gray squirrels and two flying squirrels before I began to get warmed with our tramp through the swampy woods. By firing in the nests we frequently killed two at a time, and the wounded one rarely got out of his nest-hiding tree with a whole skin.

We paused under a huge oak to enjoy the chicken sandwiches with trimmings, which had been prepared by Col. Lansing's better half, and we drew inspiration in a tin cup from a clear trickling stream which ran singing softly through the woods. Four tired men never more enjoyed a perfectly-appointed lunch.

The squirrels came out after that, drawn forth by the balmy, spring-like air. Scarcely a nest that did not contain a squirrel; but it always took an exploded cartridge to fire the rodent out. Then the fun began. Rarely one would escape us by slipping into a hollow tree, whence the nimble Johnson would attempt to dislodge him. In the woods we traversed we found eight different kinds of timber. The changing foliage brought vividly to my mind Uhland's picture in four lines:

"The dying leaves
A crimson streak disclose,
As on consumption's waning cheek—
'Mid ruin blooms the rose."

Hand, the sheriff, frequently rested beneath a wide-spreading oak, but generally got away with a squirrel before he left his perch. I ought to apologize for killing two soft, silky little flying squirrels, one of which "levanted" out of a maple tree, flying 60ft. to the foot of the tree, and I bagged it as it ran nimbly up the second tree. Lansing is a skillful taxidermist, and for his sake I slew the flying squirrels. One of them I will reclaim when mounted.

We saw a good many fish hawks through the woods we traversed, and examined with interest their nests of broken sticks. Many of the farmers hereabouts regard the fish hawk with superstitious awe, and money will not tempt them to shoot a hawk. Near Cape May Court House, within a stone's throw of the waters of the bay, in a stunted pine treetop, is a fish hawk's nest built in 1862. Several times either the male or female bird has been killed by some adventurous gunner, but the fittest surviving bird soon got himself another "crest" and another mate, and began punctually in the spring restoring and rebuilding the old nest, multiplying promptly and replenishing the brood of young hawks.

At Fishing Creek one of these fish devourers built its nest years ago in the chimney of a fisherman's two-story cabin. The smoke did not annoy the birds, young or old. But the hawks were a nuisance to the family of the jolly fisherman. Every device save a loaded shotgun was used to get rid of the nest and its owners. The fisherman was too superstitious to kill the birds, and the unequal contest between the fisherman and the fish hawk ended by the family deserting their cabin home, and the birds still rear and feed their young in the old chimney top of the deserted cabin year by year.

We had good luck about 4 P. M. along the fences which surround the sugar house, built by the late Tom Scott's triple millionaire son James Scott, in an unsuccessful endeavor to produce sugar from the Jersey sorghum or sugar cane; $200,000 has been put into improved machinery, but either there is not saccharine matter enough in the cane grown in sandy soil, or from "some other contingency," as General Pike says. Col. Scott has dismantled his sugar factory and disseminated his costly machinery and closed up his sugar shop. I believe the State of New Jersey is making another experiment in sugar culture, and with a mild subsidy seeks to help the new sorghum "plant."

At last as the tired beagle hound lapped with his heated tongue the cool swamp water, now and then wading up to his belly in the refreshing coolness of the swamp stream; at 5 P. M. we anxiously looked around for the gamy game hunter, Lansing. For half an hour he had not been visible to the naked eye. We were all alarmed, knowing that his deadly enemy, the gout, sometimes struck him between the joints of the harness and came on him like a thief in the night. We all, with one consent, struck through the thick woods for the open road, hoping to find our genial companion. We found the road but we didn't find Lansing. Then we hastened on to the barn where the horses were safely housed. There, on the sunny side of the barn, on a buffalo robe, like a warrior taking his rest, lay the gallant Lansing. He told us how the gout struck him in the woods, and rather than break up the hunt he had in intense agony walked over a mile to the wagons. We fully appreciated his unselfish spirit, true test of every gentleman and every sportsman; and with a satisfactory game bag all around, we hastily caused our colored Jehu to hitch Mulliner's trotter to our little phaeton and whistled our willing steed off toward Cape May and the Lansing cottage. Col. Lansing bore the exquisite torture of the rough roads with Christian and uncomplaining fortitude. I gently insisted that as a gunner my heroic friend was a case of innocuous desuetude, that he must surround himself with the halo of past conquests with fin, feather and fur, and repose his angelic adiposity under the asphodels of the future. "Old boy," said I, "there will be no more music for you in the Cape May woods, and your rambles by water in pursuit of the dusky duck have ended."

When we reached the Lansing cottage Lansing hobbled out of the wagon, and proudly laid out twenty-six gray squirrels on the piazza. He said, "Well, old boy, it may be as you say, and the pitcher may be broken at the fountain; but when the season comes in next July I will take another whack at the sugar house squirrels, gout or no gout."

The jackets were soon off half a dozen of the youngest specimens from our game bag, and with broiled squirrel and fried eels we soon forgot all our woes, and at 10 P. M. four tired gunners were sound asleep.

JAMES M. SCOVEL.

THE "SUMMER HUNT."

Editor Forest and Stream:

I want to express my pleasure in reading "Yo's" account of his "Summer Hunt with the Pawnees." It is to be hoped that his forthcoming book will contain all that he can recall from note book and memory of experiences impossible ever to be repeated on earth, and as valuable for science as they are interesting as literature. It has been the strong wish of many a man to have such experience, but it has been given to few who have the right quality of mind to appreciate it and the ability to record it as "Yo" has done, in style so vivid that we almost seem to have been participators in the events he describes.

So swiftly has the tide of civilization flowed across the plains, and up every cañon, and over every mountain pass of the great West, that it has not only swept out of existence the old order of things, but with the present generation will die even the memory of it, and then will be seen the value of such veracious records, which will give material to the poet, novelist, historian and ethnologist of the day. Imagine some dweller in some city of the future, built on the very ground over which swept that wild herd of buffalo and their Pawnee pursuers, reading the account and trying, in the midst of churches and streets and business blocks, to realize what once had been. Yet this will surely come to pass, nay, has already in many an instance. Fortunately many of our Western towns have not grown up haphazard, but have been deliberately founded, the plans of the founders being well laid before the first sod was turned, and records and photographs of every stage of its growth are preserved. In many, in fact, one of the first officials appointed has been the town historian. In places where such wisdom prevails it will not be left to dim tradition and myth to furnish to the future inhabitant a picture of the early time.

C. H. AMES.

Natural History.

OUT-OF-DOOR PAPERS.

V.—WINTER FISHING.

ONCE upon a time a very learned professoress was met in the way by an Audubon committee. With dejected looks the committee declared themselves unable by all their joint and several allurements to entrap any learned ornithologist into addressing their next Audubon meeting; ornithologists proved much too shy birds to be caught by any of their chaff, and had constitutional disinclinations to addressing Audubon societies. But, added the depressed committee, a certain justly celebrated entomologist who knew nothing at all about birds would be pleased to aid them in their difficulty. "Ah!" said the learned professoress, looking very owl-like, "what is the connection between the two?" The committee always gave up conundrums. "I see," said the professoress, looking trebly wise, "birds eat insects. Let us invite the entomologist." And he came.

If any ill-naturedly ask the connection between birds and winter fishing, be it known that birds eat fish as well as insects.

Even in this region, where the mercury curls itself up in the bulb most of the winter, in order to keep itself warm, and the wind often blows furiously from the top of old Katahdin, while four months of unbroken sleighing is nothing unheard of, winter fishing ranks among sports. Far be it from us to say anything against an occupation which demands so much endurance and stout-heartedness. The man who has tried it will not speak lightly of the wind-burn and sun-burn, the snow-blind and the bitter cold of these great fallow lakes, miles in extent, plowed by the north wind until they lie welted with long, irregular ridges of snow and alternating furrows of flinty ice. A road across them is marked only by a line of bushes, set at intervals to guide the teamsters, and except this line of low, green bushes, nothing breaks the monotony of whiteness. The lake in winter is one glittering level, whose length and breadth are indeterminable. It is whiteness unrelieved, without perspective, absorbing everything into itself, giving only an impression of blankness. The uncertainty of the judgment is increased rather than diminished by reference to the rim of the shore. The first impression of whiteness, the whiteness of molten metal if the sun is shining, is succeeded by one of loneliness. The open sea, the sandy desert, the barren plain, the lone and skyey mountain peak, do not give a greater idea of separateness from the world than do these lone, wintry lakes. Then there is the stillness—oppressive, horrible, obtruding itself into notice. It is a stillness like a magic spell. No wonder the owls living in such desolation go stark mad.

But the winter fisherman does not court the solitude of these great lakes. He bides under the shore—the lee shore, if a good fishing ground happens to be on that side—where he can hear sounds more companionable than the hollow bellowing of the ice. There is always an awfulness about these heavy groans and mugient reverberations heard at a distance, and swelling in crescendo as they pass under foot, to which one never can become indifferent. These muffled noises speak to our credulity of an unknown about us. It is the voice of the blinded Polyphemus roaring in his rocky cavern that he is the victim of Woman. Even the noise of trees cracked by the frost or beaten by the wind is preferable to these unearthly and unaccountable sounds.

After the fisherman has cut his holes through the thick, clear ice, and put in his "gang" of lines, fastening them to limber "spring poles" or to ingenious "tip-ups," which are intended to give notice when any fish bites the hook, he is free to build him a fire under the shore, perhaps against some granite boulder, shaggy with tough black lichen, which, pursuant to the providence that cares for the shorn lamb by giving him a new suit of clothes, while it leaves the wind to the charge of the Weather Bureau, covers these exposed rocks with a garment like leather, as if to atone for the inclemencies of their position. All along the shores of our lakes and on the brows of our mountains, wherever the granite crops out, it is sure to be ornamented with these rosettes, brown on the outer surface and black beneath, and as dry as if grown expressly for a *hortus siccus*. A fire on ice is certainly good for little unless for its company and the work needed to take care of it. You cannot warm yourself by it; you cannot dry your mittens by it, except with great odds on the side of getting them burned; you can have no comfort near it, for on whatever side of it you place yourself it will puff smoke into your eyes; but the red flames are a pleasant reminder of warmth, and the smoke, rising and drifting away to leeward, often toles a few small birds to the spot where they may find company, for the smaller kinds are creature-loving things.

Most of the day is passed on the ice in tramping from one fishhole to another, bailing out the slush and fast-forming ice, rebaiting the hooks, and keeping sharp watch on the spring poles. What little there is to see tends rather to strain the eyes than to rest them. The slender spring poles, some of them so far away as to look of scarcely more than a hair's breadth—such wands as Robin Hood never shot at—so slight that being gazed at intently, they seem to bend when they do not bend; the narrow track of a fox stretching away across the lake until it is lost in the level whiteness, yet continually tempting the eyes to trace it a little further; a dark object on the ice which may be large, may be small, far or near, but which at all events must be visited before its size can be known; the wide expanse of dazzling snow, itself as undetermined as everything upon it; all these things weary the brain far more than they do the eyes. Even the sky affords little relief. It is as measureless as the lake itself. Few of our city dwellers know the wonderful clearness of our northern winter skies, which in purity of color rival the summer skies, and in delicacy of tint surpass them. In bright weather, for days at a time, there will be scarcely a cloud across the blue, until the sunset paints clouds where we had seen none. Before an approaching storm they often assume royal hues—green, blue and purple, colors whose depth and splendor are neither seen nor appreciated by inhabitants of smoky towns.

In such a dearth of sights and sounds our eyes and ears, both accustomed to being overcharged and capable of disentangling hardly more than a centesimal of the impressions which besiege them constantly, now suffer as if in a vacuum. Instead of selecting merely they are compelled to change their habit and actually to seek for sensations. Every little suddenly acquires value. The chirring of a squirrel, the rattle of a logcock* hammering a green hemlock, the sharp cry of a hairy woodpecker, the lisp of redpolls flying over, become suddenly prominent. There is a most welcome break in this unnatural stillness, which makes all sounds seem distant, and the ears hyper-sensitive, when, after a time, the red-bellied nuthatches and chickadees smelling the smoke, follow it up and flit about confiding and curious, frequently making work for themselves in order the better to watch the fisherman's movements. Sometimes also those gray-headed miscreants, the meatbirds,† come whistling about, and succeed before the visit is over in lugging off an assortment of things they do not want, chuckling over their knavery. There is no hope for the meatbird—none; he is incorrigible.

The chickadees are the greatest favorites of all, however, and the most social and trustful. I shall always remember some which visited my father and myself five years ago. It was one of the worst days of the winter—clear and bright, but bitterly cold, and with a keen north wind which drove through our heavy robes as if they had been burlaps. Eight miles from home prudence counseled us to return; ten miles away and pride would have yielded "if it hadn't come so far already." We got all the lee there was and built a fire; but there was little comfort in it. At noon our bait pail made ice, although it stood full in the sun, and within three feet of a good fire. At dinner time we partially thawed our frozen food, and made some coffee to hasten the thawing process a little. As we ate, some hungry little chickadees that had been digging for wood worms came up to us, probably attracted by the smell of food. They lighted on the robes, looking up confidently with their big heads cocked on one side, as if to say, "You don't care, now, do you?" and helped themselves. What a dinner we had! Two of us entertaining four chickadees and proud of the honor. They ate everything—meat, bread, mince pie, orange even. We tried them to see if they would pick at the orange peel, but although they were attracted by the color they never mistook it for the pulp. Fortunately these winter birds like salted food, so the chickadees fared well. They grew more and more familiar. They brushed our faces with their wings as they flitted past. One lighted in my greasy tin plate and slipped about in it unable to get any footing, looking up meanwhile with the drollest possible air, which said, "Quite a rink, quite a rink, for a small chap like me." Another actually alighted on my hand, and sitting on my forefinger ate meat which I fed to him. Could any one ever forget the thrill those tiny, clasping bird's claws gave? We came home happy. Fish? Yes, one about the size of a clothespin; but we didn't go for fish that day.

The only other authentic instance that I have of equal tameness of any wild bird was reported last winter by a woodchopper. He said that several chickadees stayed about his chopping for a long time, ate his luncheon with him, frequently lighted on his person, and one even allowed him to stroke it with his finger as it sat on a bush.

Ostensibly the winter fisherman goes for fish. In reality who ever believed that a string of slimy, broad-snouted pickerel paid him for his work and exposure and suffering? No matter if their mottled hides outshone the jaguar's and their bellies were overlaid with silver, they would not be worth the trouble. They serve only as an excuse, and their attraction does not compare with the strength of that savage desire to taste solitude, and for the space of a day to feel the loneliness of barbarism.

FANNIE PEARSON HARDY.

*"Logcock" is the hunter's name for the pileated woodpecker *Ceophlœus pileatus* Cab. (Linn.).

†"Meatbird" is the common Maine name for the "whisky jack" or Canada jay, *Perisoreus canadensis* Bonap. (Linn.).

HAWK, CROW AND TWO SMALL BOYS.—Rockland, Me., Nov. 17.—Two boys while out hunting heard a disturbance in the bushes, and found a crow and a hawk fighting for dear life. After watching them a while they walked up and secured both. While taking them home the crow escaped, but was shot. The hawk was taken home and remains a captive. The crow was the smalles but held its own well.—J. W.

GAME IN TOWN.

WEBSTER, Mass., Nov. 21.—*Editor Forest and Stream:* I inclose a clipping from our local paper of Nov. 15, which may be of interest to you:

CURIOUS BUT TRUE.—It is a curious repetition of a strange occurrence that four partridges should be taken alive around buildings in town this season, and in three cases windows were broken, two of the birds being found on the floor, while the third was kept out by a screen. The other instance the bird was in the corner of a porch. Three of these happened on School street and three to one man, Mr. E. W. Tourtellott, two at his house and the other was found in the morning having come through the window in front of his bench in Corbin's cutting room, smashing out the entire upper sash, such was the force. The last instance was Tuesday morning when he heard a crash, found the window broken, the curtain fixture broken, the curtain torn from the roll, and a fine cock partridge which weighed a pound rolled up in the curtain on the floor. The account of the partridge that Mr. George Tracy found on the porch of Mr. Butler Bates a few weeks ago and afterward set at liberty, must have traveled, for a letter was received by Mr. Bates this week from a gentleman from Toledo, O. —and an editor at that—inquiring for the partridge and saying he wished to set a hen to mate with some cock partridges he has to raise partridge chicks. He is willing to pay a fair price. If any one is favored with a bird of that descripton hunting him and will communicate with J. B. Battelle, editor of the *Business World*, Toledo, O., he may receive enough to have his windows repaired.

These four occurrences all happened this season, and I can add another. Some two weeks ago my sister brought a dead partridge to me and asked whether it was good to eat. She had been sitting at the window sewing and noticed a large bird lying in the yard moving its head, and on going out found it to be a partridge, still alive but in its last struggles. After the feathers were stripped a large bruise showed on one shoulder and on the side of the head where it evidently had struck the house. She lives on an outlying, but well-settled street of the town and about 200yds. from a point of woods in which a brood of partridges were reared last summer. C. G.

Editor Forest and Stream:

There are several coveys of quail in the city of Columbus, mostly in a large abandoned cemetery, now grown up to briers and bushes, in addition to the ornamental trees there, and all of which makes a grand cover for them. During the past summer it has been a common occurrence to see them sitting on the fences around residences in the vicinity. This location is within half a mile of the State House. The most conspicuous wild bird in Columbus, during the warm weather, is the red-headed woodpecker. There are numerous old virgin forest trees all over Columbus, and many of them have large dead limbs, which afford ample nesting places for these beautiful birds. Wherever one goes throughout the city these dead limbs and treetops are seen to be pierced with woodpecker holes, and around them, in season, a pair of the birds; and later on, the young brood. Although there are no dead limbs in the State House yard, the woodpeckers are often seen there. They perch upon the house tops, but rarely, if ever, upon the chimneys. Their single ringing note can be heard almost any minute during the pleasant days of warm weather. Many robins and other common varieties of birds are here in their season, notwithstanding the quarrelsome English sparrow, which is the bird-nuisance here as elsewhere. MILTON P. PEIRCE.

COLUMBUS, O.

Editor Forest and Stream:

One of my correspondents writes from Lancaster, O., that the quail season opened on Nov. 11 and that quail are plenty. A party of three persons brought in over 100 as the result of one day's shooting. Opposite my friend's house is a cemetery, and she writes that one or more broods of quail make that place their home and are quite tame, no one daring of course to trouble them in their sacred home.

My correspondent has a little dog named Bob. On looking out of the window the other morning—she saw what she thought was Bob, running down the street, but on closer observation she was surprised to see it was a big rabbit that had come out of the cemetery. It ran down toward the railroad; then after a short run set himself gravely down on the sidewalk as if to think what way he would go next; then turned round and came back to his home among the dead. MEDICUS.

RARE BIRDS IN RHODE ISLAND.

PROVIDENCE, R. I., Nov. 18.—*Editor Forest and Stream:* There was killed at Natic, R. I., about Oct. 1, a little brown crane (*G. canadensis*), adult female. The party who killed it reports there were two of them. The specimen was sent to this city to be mounted and is now in the hands of J. M. Southwick, taxidermist. I saw the bird in the flesh the day after it was killed, and there is no doubt of the fact.

If any one of your interested readers can give any information about this species, I for one should be very glad to learn something about it. Dr. Coues says, to the best of his remembrance, that it inhabits northern British America, migrates through the West and winters in Mexico, but expresses a doubt about the bird. It is a sand-hill crane in miniature, say three-fifths, identical in color and with all characteristics of that bird.

I have killed many sand-hill cranes in the West, but I never saw one of this small species there, and how it should get so far out of its longitude as to get to Rhode Island is a puzzle.

This little State seems to be a Mecca for estrays. On the 13th of January last, there was found dead at Warren's Point, two miles east from West Island, in the town of Little Compton, R. I., a purple gallinule not quite in adult plumage. I fortunately got it with some trouble, and it is now in Dr. Gardner's collection at his summer residence at Seaconnett, R. I. This bird has been taken twice before in the past thirty years in this State to my knowledge, but both captures occurred in summer. How could this semi-tropical bird have reached this bleak coast and in the bitter freezing weather.

Thinking you will be interested to know of these two captures I venture to intrude on you, and hope I may learn something of *G. canadensis.* NEWTON DEXTER.

[The little brown crane was perhaps the one referred to by Mr. Brewster at the meeting of the A. O. U. last week.]

RUFFED GROUSE PLUMAGE.—Butler, Pa., Nov. 18.—I send you another skin of what you called a faded grouse. In the Thorncreek region of our county, birds of this coloration two years ago were plenty, and were found in coveys the same as those of black markings, but when found elsewhere they are invariably solitary birds. I intend to watch the market and note birds of this coloration, where shot and where they seem to be plenty. This bird was shot by my son John on Nov. 18, and it was done in true sportsman style on the wing—G. W. Z. [The skin is that of one of the cherry-colored or mahogany grouse. The ruff being a rich, deep, chestnut brown, except at the tops of the feathers, which are black. This plumage is much more common than is generally supposed, and is not precisely what we mean by the faded or bleached plumage which seems to be an approach to albinism.

BUFFALO IN CAPTIVITY.—An African buffalo, born in the Central Park Menagerie, of this city, the other day, lived only two days. It died of rickets. Superintendent Conklin is quoted as saying that "its death was a foregone conclusion from the first, since all attempts to rear buffaloes have proved unsuccessful of late years, as the breed has become so feeble that their offspring has proved hopelessly rickety. The last buffalo born before the one which has just now died, lived for six months, but was never able to stand on its legs. The original stock belonged to Wade Hampton. He had imported a herd from Africa at an enormous expense. When Gen. Sherman's army was on its famous march to the sea the animals were captured and confiscated. They were sent North and ultimately placed in Central Park."

THE SNOWY OWL IN NEW JERSEY IN NOVEMBER, 1889.—Two individuals of this arctic species have been observed in New Jersey recently. One on the 16th, at Morristown, and one on the 20th, at Sea Isle City, Cape May county. This, together with the early appearance of the pine grosbeak in New Hampshire, and the mulitude of pine siskins now present at Lake George, N. Y., indicate that northern birds will be common this winter south of their usual habitat. To enable me to map out the winter home of the snowy owl (*Nyctea nyctea*), I should be glad to correspond with observers of this bird. Information to be of value should be exact as to date, and precise as to locality. Where possible send note of contents of stomach. —L. S. FOSTER (New York, Nov. 25).

SNOWY OWL IN PENNSYLVANIA.—Athens, Pa., Nov. 19. —On Monday last James S. House, of Sayre, Pa., killed a snowy owl which measured 5½ft. from tip to tip. The recent cold snap had probably driven it south. It chose for a resting place the roof of the foundry at the Lehigh Valley Railroad car shop at Sayre, and failed to fly at the noise of engines, whistles, etc. I purchased the specimen and will mount it for my collection. This is the first specimen of the owl that has been killed here in several years, only one other having been brought to my notice.—W. K. P.

RUFFED GROUSE ON NEST.—Mr. J. B. Cooke sends us a photograph of a ruffed grouse sitting on her nest. It is an admirable piece of photographer's skill, and as a picture of bird life most charming.

WHALES NEAR THE ORKNEY ISLANDS.—Two hundred whales have been taken in the vicinity of the Orkney Islands, from which locality they were supposed to be disappearing.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One hochear monkey (*Cercopithecus nictitans*), one kinkajou (*Cereoleptes caudivolvulus*), one white-nosed coati (*Nasua narica*), one brown capucin (*Cebus fatuellus*), three common seals (*Phoca vitulina*), two cat squirrels (*Sciurus niger*), three black-handed spider monkeys (*Ateles geoffroyi*), two black ducks (*Anas obscura*), two gray-headed parrakeets (*Agapornis cana*), two West African love birds (*Agapornis pullaria*), two passerine parrakeets (*Psittacula passerina*), two Pennant's parrakeets (*Platycercus pennanti*), two cole tits (*Parus ater*), one greater tit (*Parus major*), two great spotted woodpeckers (*Picus major*), two ring-necked parrakeets (*Palæornis torquatus*), two European partridges (*Perdix cinerea*), ten copperhead snakes (*Ancistrodon contortrix*), six banded rattlesnakes (*Crotolus horridus*), fifteen common water snakes (*Tropidonotus sipedon*), one indigo snake (*Spilotes crebennus*), two pine snakes (*Pityophis melanoleucus*), one common hog-nosed snake (*Heterodon platyrhinus*), three king snakes (*Ophibolus getulus*), two black hog-nosed snakes (*Heterodon platyrhinus niger*), two ground rattlesnakes (*Crotalophorus miliarius*), one common black snake (*Bascanium constrictor*) and one glass snake (*Opheosaurus ventralis*). Presented—Eight opossums (*Didelphys virginiana*), one red fox (*Canis vulpes fulvus*), one raccoon (*Procyon lotor*), two great-horned owls (*Bubo virginianus*), one Levaillant's amazon (*Chrysotis levaillanti*), one red and blue macaw (*Ara macao*), one ring-necked parrakeet (*Palæornis torquatus*), one mountain linnet (*Linota flavirostris*), one cardinal red bird (*Cardinalis virginianus*), one king lory (*Aprosmictus scapulatus*), one Muhlenberg's terrapin (*Chelopus muhlenbergi*), seven garter snakes (*Eutænia sirtalis*), three common water snakes (*Tropidonotus sipedon*), one painted terrapin (*Chrysemys picta*) and four small alligators (*Alligator mississippiensis*). Born—Three Egyptian geese (*Chenalopex ægyptiaca*).

Camp-Fire Flickerings.

"That reminds me."

287.

I HAD a rather amusing experience, and one which it may benefit some brother to know. I bought a setter dog from Messrs. Davey & Richards, of London, Ont., and I trust the wicked advertising department of this paper will not prevent my saying that it was an almighty good dog, with a pedigree that runs right back to William the Conq. I expect it was about the best dog ever was, and worth at least $1,000 of anybody's money. At least, that is what I told an innocent-looking party who was in the baggage car as we neared the Canada line, and who asked me what he was worth.

"That's a good deal of money for a dog," said the innocent-looking party. "He must be a corker."

"Corker?" said I. "Say, now you have hit it. That dog is probably the most perfect specimen of symmetrical canine excellence that you ever saw. You want to look at him before I take him away, because you don't often get a chance like this. Look at those legs. Get on to that tail. Observe the faultless set of his ears. Make a note of his shoulders. Examine his superb loin. Congratulate yourself on having been permitted to touch a coat of such quality, and to stroke a muzzle that will henceforward be adopted as the bench show standard. Say, that dog's a daisy, and don't you forget it!"

"No, I won't," said the innocent man. Then he figured a little bit, and said:

"Cost you $200.70 to get 'im over the line."

"What?"

"Two hundred dollars, 20 per cent. *ad valorem*, 70 cents entry fee. Come now, be lively, ye know!"

He was a customs officer, and when I knew it I broke out in a cold sweat. I think my smile must have been something ghastly.

"As I was saying," I continued, taking hold of the dog's tail, "this tail would be simply perfect if it wasn't about fourteen inches too long. If there's anything I do hate about a dog it is a snipy, pinched-up muzzle, and a weak back, and no body and wobbly legs. Beats the world how a fellow gets stuck on a dog sometimes, don't it?"

"What'd you pay fer 'im?" asked the innocent party severely.

"Nothing. I stole him. He was given to me. I paid a dollar and a quarter for him. Say, do you want to buy him at six bits?"

Then we had more talk, and the end of it was that, before I got my puppy over the water, I had to leave $5.70 in a place where it will never do me the least good in the world. All because I was human enough to praise my own dog. I would like to know what fellow has a dog that isn't worth at least $1,000 when it comes to a straight question; and I would like to know if it is fair to call a man down in any such way as that incendiary did me. For one, I wish immediate annexation of Canada, or else war, I don't care which. It goes too hard on a sportsman to bring a dog across the line and not be allowed to state his correct worth, unless he goes without coal all winter. I am told that an affidavit stating that the dog is brought in for breeding purposes relieves one of duty, but that is a very unsatisfactory solution of the grave question here involved. E. HOUGH.

288.

The ducking season having come around again, I am reminded of a rather good yarn I have been promising for some time to spin. The joke is on a first-class all-around sportsman, and a jolly good fellow he is, too, ready for anything from an early morning start and frosty wait on the bay for a chance at the ducks to an all day tramp in the backwoods after the wily fox. He is a practical joker as well as sportsman, and is always ready to work off a "rig" on the boys, so we were all unusually hilarious when at last he had to succumb and own himself outwitted. He had gotten the best of me on several occasions, and many a minute had I given to concocting plans for getting even.

At last my chance came, and in this way. Out on a gunning trip I had the good fortune to shoot a superb fresh-water shelldrake, and when I went home I said nothing to Lucien, but began to perfect a scheme that took shape in my mind almost as soon as my bird dropped. Lucien lived on the banks of a pond in which ducks would now and then light, and he always had his gun ready. I carefully skinned my bird, stretched the skin over a wooden decoy in as lifelike a manner as possible, and then began to think how best to make it seem alive. My device was merely to fasten one end of a line to the decoy under the breast and lead it through a ring in a stone sunk to the bottom of the pond and from there to some bushes up on a high bank.

All being arranged I took my position, and one of the men went to the shop just below the dam and told Lu to hurry up and get his gun to shoot the queer looking bird that had just lit there. Lu was at first suspicious, but finally went up to take a look. The bird was moving around, ducking, etc., in such evident life and spirits that Lucien was, for once at least, completely taken in. He dodged down behind the dam, crept carefully to his cabin, got his gun and as stealthily crept back. Reaching the right spot, up he came, looked over to reconnoiter, and being entirely convinced banged away. How the feathers did fly! and how we all shouted, and how disgusted Lu looked, I will leave to your imagination.

RITA.

Game Bag and Gun.

BEAR AND MAN.

REVELSTAKE, British Columbia, Nov. 9.—*Editor Forest and Stream:* The snow and dense fogs that have within the past few days enveloped the mountains and valleys in this region, have driven the hunters and Indians out of the mountains, with the exception of a few hardy trappers who still remain in the larger valleys. The kill of big game in this vicinity has been a large one this season. The most notable is that of an old grizzly, a veritable patriarch of his kind, who was laid low by an Indian and his klochman. They followed the bear two days before they bagged him, the klochman carrying besides her gun a five-months old papoose strapped to her back. She came up with the bear first and fired a charge of buckshot into Bruin, which detained him until the Siwash arrived and finished him with a couple of bullets. Then they held high carnival. Seated themselves astride of their dead game and heaped insult after insult on his senseless head. Such is the squaw's story, though her noble lord and wife-beater says that he "over took um first; had big fight; kill um; then squaw come up, shoot um, buckshot; sit on um, etc." If they had a big fight the bear must have charged at them side on, for the bullets passed through its body behind the shoulders. The bear was quite likely running past the Indians when shot.

Regarding a grizzly charging at the hunter. Most that is written about such facts is "bosh." A bear, either black or grizzly, will in the great majority of instances run from the presence of man, as fast as his legs can carry him. If wounded he may turn his head and bite at the spot where hit, but will keep running, in fact, as Mr. Fannin says, "It will 'hump' itself in its efforts to get away, as the black horse with a 'pack on his back' did."

That reminds me. They had gone 200 miles to shoot a grizzly. One fine evening they meet a big one on the trail. J. F. raises rifle to let the fast waning daylight shine through its carcass. Companion calls out, "Don't shoot, it's a black horse with a pack on." J. F. lowers rifle. Bear jumps into the bushes and "humps" himself away in the deepening gloom. J. F. runs after him. No use; bushes too thick, and too dark to get a shot. J. F. comes back to the trail, and dances then and there, and indulges in melody and words not found in any edition of the gospel hymns.

Bear will occasionally when approached by man, stand and stupidly gaze for a few moments at the intruder, until it can gather its wits. Then it will "hump" and bob away like the walking-beam of a sidewheel steamboat.

If surprised in a corner, it will then hit out savagely until it has cleared a way to escape. Regarding a grizzly's trailing a man by scent, charging at him at sight and climbing a tree after the hunter, etc., all such narratives are mere talk without foundation. If a grizzly bear ever mounts a tree it must be a prostrate one. An examination of the claws on a grizzly's front paws will convince the most sceptical that it is no tree climber.

STANSTEAD.

SOME FIGURE ANOMALIES.

Editor Forest and Stream:

I have been somewhat interested as the various reports of your gun trials have come to hand in noting the variations of the shot and powder charges, and it would seem that either your counting and weighing are recklessly done, or there is little reliance to be placed on the uniformity of the measures used in gauging shot and powder charges or in the fashion of using them.

I have ventured to make a list of the various cartridges you have used from time to time, correcting several manifest errors such as the slip of the type in putting No. 6 shot in the Colt gun paper cartridge instead of No. 8. I have arranged the tables according to the size of shot used.

Gun.	*Shot.*	*Wt.*	*Count.*	*Powder.*	*Wt.*
Parker 12 (2d test)	1¼oz. Tath. No. 8	.554	536	3½drs. black	.107
Winchester 12	1¼oz. Tath. No. 8	.545	514	3¼drs. black	.91
Colt 12 (brass shell)	1¼oz. Tath. No. 8	.606	569	3¼drs. black	.81
Parker 10 (2d test)	1¼oz. Tath. No. 8	.559	535	4¼drs. black	.125
Greener 10 (Such)	1¼oz. Tath. No. 8	.547	517	4¼drs. black	109
Winchester 10	1¼oz. Tath. No. 8	.554	512	3½drs. black	.98
Colt 10 (brass shell)	1¼oz. Tath. No. 8	.591	554	3½drs. black	.99
Colt 10 (paper shell)	1¼oz. Tath. No. 8	.601	542	4½drs. black	.119
Remington 16	1oz. Soft No. 8	.492	489	3drs. Schultze.	.87
Remington 16	1oz LeRoy No. 8	.423	367	2½drs. black	.71
Greener (Am. cart.)	1¼oz. LeRoy No. 8	.510	560	3¼drs. black	.89
Folsom 12	1⅛oz. LeRoy No. 8	.487	432	3drs. black	.91
Smith 12	1⅛oz. Tath. No. 8	.548	501	3drs. wood	.40
Folsom 10	1⅛oz. LeRoy No. 8	553	490	3½drs. black	.101
Colt 12 (paper shell)	1⅛oz. LeRoy No. 8	.482	418	3½drs. black	.97
Hollis 10	1¼oz. LeRoy No. 8	.609	617	4¼drs. black	.132
Hollis 10	1¼oz. LeRo No. 8	.586	563	4drs. Schultze.	.52
Colt (Merrill&Moss)	1¼oz. Cin. No. 8	.545	570	3½drs. black	.98
Parker 12 (1st test)	1¼oz. Cin. No. 8	.529	546	3½drs. black	.99
Parker 10 (1st test)	1¼oz. Cin. No. 8	.576	595	4¼drs. black	.132
Greener 10 (Such)	1¼oz. Tath. No. 7	.548	377	4½drs. black	.109
Greener 10 (Mead)	1¼oz. Tath. No. 7	.596	460	4drs. black	.122
Scott 10	1¼oz. Tath. No. 6	.588	274	4drs. Schultze.	60
Scott 10	1¼oz. Tath. No. 6	.581	273	4½drs. black	.122
Greener (Such)	1⅛oz. Tath. No. 1	.664	107	5drs. black	.127
Greener (Eng. shot)	1¼oz. Newcastle	6.604	376	3¼drs. black	.91

Now I find by catalogue that Tatham shot weigh for the chilled grade: No. 8, 495 pellets to the ounce; No. 7, 299 to the ounce; No. 6, 223 to the ounce, which would make an ounce and a quarter of No. 8, 619, of No. 7, 374, of No. 6, 279, and in not one case does your figures of analysis carry out their totals by average.

Looking at the LeRoy catalogue I find that No. 8 gives 400 pellets to the ounce, or 500 for an ounce and a quarter, while you make it 560 in one case and 617 in another.

The Cincinnati works make their No. 8 shot to run 445 to the ounce, and an ounce and a quarter would therefore be 555 pellets, from which your figures vary somewhat.

The figures I adjoin on the weights and measures of powder also show variation, but this is probably because of the various sorts of powder used. E. T. M.

CLEVELAND, O.

[Our correspondent must not have read our report aright, or must have little experience in gun matters, to be surprised over such a matter as this. We say explicitly that the charges are stated as given by the holder of the gun. We then take them apart, and upon the analysis we stand. We know the weight and count to be correct. We only know in the other case what has been stated to us. The charges are loaded by those who bring the gun, or in some instances we order cartridges or buy them from stock, and put down just what the loader says he has put in the cartridges. It would have been very simple indeed to have taken the holder's statement on one side and the shot catalogue figures on the other, and given them in our tests, and then our tests would have been just as valuable and just as useless as many previous gun tests have been. Such is not the method of FOREST AND STREAM. We mean to make our tests exhaustive and standard, and to that end spare no pains, labor nor expense. We cannot help shot catalogue vagaries nor the carelessly false and misleading assertions of those presenting guns for trial. We think now that every one who has had a gun on test thought they were giving the exact figures when they told of the gun. How far out they can be is shown say in the charges presented by expert Gaines of the Parker Co., who had two sets of cartridges in his first test, each of which he said had 1¼oz. of No. 8 Cincinnati shot in, but which varied 50 pellets in count, and he at once saw that one set had 1¼oz. of shot, and that he was in error. So of other tests. All our test loading has either come direct from the gun factories, or has been made up by the most expert gun shop here. At another date we will have some tables to present on shot irregularities, but so far as the gun test goes we guarantee our analysis and give the charges as stated, and it is for our readers to judge of their accuracy.]

RESTRICT THE GAME KILLED.

Editor Forest and Stream:

Partridges and quail have been fairly plenty around here this season, but a couple of men who hunt "for pleasure" and "sell their birds to cover expenses" have found it paying enough to give up well-paid work for four to six weeks to hunt. They are the best shots and have excellent dogs—guess the rest. C. G.

WEBSTER, Mass.

Editor Forest and Stream:

Here market butchery is exterminating the game. We have thousands of acres of sedge and cornfields; we have only a short open season, yet we have almost no quail. A few days ago I spent a whole day in hunting with an excellent dog and just at dusk I found the first bevy. I killed two and left fully a dozen birds. Two days later I returned and found but two quail of that large bevy left. In the meantime the others had been snared and sold alive in the Anniston market. A law against snaring would be most beneficial, but why not strike at the root of the evil rather than at its branches, and make it a crime to sell a game bird? Because such a law could not be passed? Not in New York, certainly, but here in the South, where every good citizen is a sportsman, there should be no such difficulty. Everywhere the market butchers are at work exterminating the game, and at this rate we shall soon have no game left. Something must be done; but what? In New York, for instance, a law against snaring would be of no use, for the favorite method of butchers there is to use curs, who drive the birds into trees and bark at them till the "hunters" come up and shoot the birds. Possibly a law limiting the number of birds that one person might kill would do some good, for a man would be afraid to sell more than his share of birds to one person, or to have it known that he had killed more than his share. Here, however, such a law would be a dead letter, and the only way to secure a permanent game supply is to prohibit altogether the marketing of game. SETTER

ANNISTON, Ala., Nov. 18.

THE WORCESTER FOX HUNT.

WORCESTER, Mass., Nov. 21.—That the fourth annual hunt of the Worcester Fur Company was not a complete failure was no fault of the weather. Tuesday the rain fell in torrents, continuing nearly all night, and only the "veterans" had sufficient sand to start for Worcester in the face of such an unpromising outlook for the morrow's hunt. But there were those for whom the elements had no terrors, and this party included President Geo. W. Roraback, of the Western Massachusetts Fox Club, Secretary Shepardson and Orin Beach from Chester, the latter with his hound Billy. Chas. Pierce, of Rutland, A. D. Norcross, of Munson, and Geo. W. Russell, of Fall River, were also on hand. John White, of Millbury, with his pack, was on hand at daylight.

An informal gathering was held at the Bay State House during the evening, and the programme for the hunt, in case the weather permitted it, was laid out. Observations were taken from many windows during the night, but little encouragement could be found in the clouds which hung over the city continually, emitting a miserable cold drizzle, which would have discouraged any one but a fox hunter.

Five A. M. found every one astir, and after a hasty breakfast a 'bus load was made up and started from the Bay State House for the Heywood farm, the place of meeting. A dozen or more private teams followed, and when the Heywood place was reached about thirty hunters could be discerned through the fog.

They were dispatched to their various localities by President Kinney and the hunt was opened. Webster Thayer and party put their dogs out on Milestone Hill, but were unable to start a fox and worked across on to Burncoat Plains, where Mr. Kinney's pack had one started which was run in before any one could get an opportunity to kill him. Secretary Knowles with Dr. Shepardson, of Chester, went to the north end of Bond Hill, where they remained till the middle of the afternoon without hearing much driving, and came home just in season to miss the only sport of the day in that locality. Alva Houghton and Joe Smith went over toward Lovell's, and just as they concluded they had got enough of it and were packing away their guns a fox ran right up within three rods of them.

Uncle Nathan Harrington and Billy Dean went to Sewall's Hill. They had with them Uncle Nathan's new bitch Slippery Sal, which came here with a great reputation as a flyer, but was something of an unknown quantity, as she has only been out a few times and it was not known just what she would or could do. She struck a scent and soon had one started. The rest of the dogs in that section of the country joined in, and the woods and pastures rang with clear voices of the pack as they took a turn along the ridge toward the shoemakers, with the apparent intention of crossing to the north end of Cushing Swamp. Right on the crossing was drawn up in line of battle, about ten rods apart, the party who had put their dogs in at Cushing Swamp, consisting of E. T. Whittaker, M. A. Linfield, C. H. Morse, G. W. Roraback, John White, Will Perry and Geo. Russell.

The hounds came up through the sprouts within a few rods of the line, and it seemed every moment as if the fox must burst out somewhere. Every man stood with eyes strained and finger on trigger. Mr. Roraback, who had the stand on top of the ledge in sight of the rest of us, kept us informed by a wave of his hand of the exact location and direction of the pack, from second to second, and when he signalled that they were coming directly toward him, and planting himself more firmly on the rock awaiting the outbreak, the suspense was terrible. They swept around toward Harlow's, however, without coming into view, and finally shut down, evidently having run them in. Sal led the pack during the entire drive, and Uncle Nathan was happy.

About this time the rain began to fall in earnest, and we made a break for the barn, and remained under cover until the shower had passed, and then sauntered out toward the crossing, gathering about Mr. Roraback to talk over our hunt at Chester, and curse the fates that duplicated their day for us, atmospherically. Not a dog had been heard for a half hour, when suddenly one burst out and a second later was driving at a lively pace, with the entire pack close behind. Uncle Nathan's Sal was again leading them, and Uncle Nathan was radiant.

We scudded for our different stands and the dogs made two or three turns around the ledges, and they were "just combing him," too. For about fifteen minutes the hunt was about as hot as you could get it in our immediate vicinity, and then they ran this one in. Before he holed, however, it was discovered that they had had a rabbit going instead of a fox both times, and Uncle Nathan was doleful. Sal made up for her break in the afternoon, though, when she took a fox right away from them all just as handily as she had the rabbits.

As it had cleared off by noon it was thought best to strike into a new country and try to jump a fox on some of the ledges, where they were probably curled up out of the wet; so we drove over to East Ridge and put out part of the hounds back of the brick schoolhouse and the rest down by Rocky Pond, while the hunters strung themselves out along the road between the two packs. The party had been joined by this time by E. T. Smith and E. F. Swan, Silas Balcom and Mr. Jackson, G. J. Rugg, Allie Perry, J. H. Locke, D. M. Earle, Horace Adams and a number of others; in fact the hunt had been pretty much moved up there. Locke and Whittaker took the dogs around by the pond and soon Whittaker's hound Tilden winded a fox on the ledges, which he started at once and drove beautifully, while the others joined in with him, and soon eight dogs were running. Linfield rode along with John White, and coming to a likely-looking spot, hopped out, taking by mistake John's gun. Linfield shoots a Parker hammerless, John a Parker hammer, and to this exchange one fox owes his life.

As John and Mr. Roraback drove along they suddenly heard the hounds driving directly toward them. Mr. Roraback jumped out, grabbed his gun and dashed for a position, while John hitched the mares beside the road as lively as possible, and had just time to get to the rear of the wagon, snatch up Linfield's gun and slip in a couple of shells, when the fox crossed the road about four rods off. John felt for the hammers to cock the gun, but they were not there, so he pulled it up and pulled first one trigger and then the other, but they were blocked and it was no use. You, who know John, probably know just what happened, and can see him in your mind's eye as he did a war dance in that road, and ejaculated, "How in the name of all that's cursed do you work one of those hammerless guns, anyway?"

The fox trotted along toward Roraback, but saw him when about 16 rods off and turned. Distance estimated by Mr. R. himself, and undoubtedly correct. He was down here to shoot and so he "unhitched," and as the fox rounded a knoll and went out of a bar-way he cut loose again, but without effect.

The dogs came down the trail like the wind and went over the wall in a heap, where John White would pick them up, fire them over the next wall right side up, and away they would go again. While they were driving, Mr. Locke selected a stand and soon a fox crossed about twelve rods from him. He gave him both barrels and hit him hard, as he could scarcely drag himself up into the pines, and Locke expected of course the hounds would be along in a minute and catch him. None came on his track, however, and it was concluded that this fox must have been thrown out by the dogs driving the other; so Whittaker was dispatched to try and catch off one of the hounds and bring him up to catch the wounded fox. The main pack had, however, by this time swung around Rocky Pond, and the only dog he could get was old Railsplitter, who has not been hunted any this fall and is so fat he cannot run faster than a man could walk. He was taken up and put on the trail and started the fox where he had lain down, and in less than 100 rods he went into a burrow. A fast-running dog would have caught him before he made half the distance.

This was the nearest we came to getting a fox, although Mr. Beach, of Chester, shot at one within easy distance and should have killed him. The old gentleman could not get over his misfortune, and all the evening he looked the picture of disgust.

The afternoon hunt had been all that could be asked for. Nearly every one had been in hearing of the hounds until they led off out of hearing toward Northboro. One gentleman was very near them, so near that it sounded to us (about 50 rods away) as though he shot at the game, as the hounds turned back directly after the shot, but he claimed that he was hitching his horse and the fox came right up to the road, and seeing him turned back. His horse was hitched there when we drove by before the fox was started. He was probably hitching him tighter.

About 4 P. M. we started for home and met at the Bay State at 7 for a fox hunters' dinner, many being present who had not participated in the hunt. The dinner was an excellent one, and after cigars had been lighted and the experiences of the day, ludicrous and otherwise, gone over, stories of other hunts were told and a jolly good time was had. We had not secured a single brush, it is true, but the weather had made that almost an impossibility. Still, every one had a good hunt, and Mr. Roraback was so favorably impressed—I don't know whether it was with the hounds, the lay of the land, the weather, John White or Worcester generally, but at any rate he is coming down in January to spend a week with John and hunt foxes.

It was talked over and partially decided to hold another meet and try to get a better day, and if it is arranged, many who stayed away this time will undoubtedly be here, now that it has been proved that we can start foxes enough, even under unfavorable circumstances, right here in the heart of the Commonwealth. HAL.

GIVE THE BOYS A CHANCE.

Editor Forest and Stream;

I think that it is about time for the small country boys to come to the front and defend their own rights in regard to pleasure in the fields and woods.

I am a constant reader of the FOREST AND STREAM (which my father subscribes for), and, as a rule, I know what is going on among the sportsmen in general.

Just to think of "Cohannet" calling himself a sportsman, and then trying to impose a tax upon the small boy who uses a rifle. No doubt all he says about the unknown skeletons being found is true, and those deaths may have been due to careless shooting; but do not let him lay the blame on the country small boy, when it is the green city amateur hunter at whose door it can be laid, for the city greenhorn would shoot at a sparrow not knowing where his bullet would land. When a country boy goes a-shooting, he knows where to go, at what to shoot, and, as a rule, where his bullet lands; for the country boy knows the lands upon which he lives and for miles around.

Let all the small country boys join now together in sending their hearty thanks to "Wacautah" for giving "Cohannet" a rub in regard to the tax on the small boy who uses a rifle; for he can say to him what the boys would not think of.

Now I think I have done my share (as a boy should) to "defend our rights." J. J. S.

CLOVE VALLEY, Dutchess County, N. Y., Nov. 13.

N. B.—Mr. Editor, please insert this, and bear in mind that "Boys will be boys."

MY FIRST WILD TURKEY.

I left home one beautiful morning in the month of November, with gun and dogs, in search of game. One dog, Bang, was a reliable setter, and I felt confident of finding either grouse or wild turkeys. I trudged along for some time without success, and tired and disappointed determined to move homeward. Presently Bang stood; to my delight and surprise up flew a wild turkey. I fired away and brought her down with a dull thud. My heart leaped within me. I felt half afraid to go to her, thinking it might be a tame turkey after all. But no, its long legs and long neck proclaimed it the genuine wild bird. I hurried home with buoyant step and joyous heart, full of pride and exultation, and laid my trophy at my mother's feet, believing myself her man indeed, though only 14 years old. D. H. LEAKE.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 19.—Mr. G. W. Pratt, of Wauconda, Wis., and Messrs. Sam and Melville Brown, of Curry, Ill., are lately back from a trip on the North Peninsula of Michigan, in which, besides a number of partridges, etc., they killed three deer and a bear that weighed 330lbs., the latter falling to Mr. Pratt's rifle. The party went into Michigan from Wausaukee, Wis. They killed their deer about Oct. 28, but violated the law by using dogs.

Mr. Pratt says that the deer law is not in the least observed in the North Peninsula. The fact that it is not observed is the reason urged for its non-observance. The game wardens are about the worst law breakers, and they make the best guides. There is one warden, by the name of Beach, I believe, who has the district of Michigan lying east of Wausaukee, who has always been prominent as an illegal deer hunter, if one can gain prominence at that in such a country. This man took his dog over into Michigan with the party above named. Beach figures as a sort of desperado, and was leader in a late hanging-bee in that neck of woods. Doubtless he has killed and helped kill as many deer illegally as Mr. Jock Darling. Doubtless there are dozens of Jock Darlings in our North Woods. They are too common to attract much notice. The position of game warden is one of singularly desirable features for a natural Jock Darling. The game warden system in its true beauty can be seen only in this big Western country.

Two men from Springfield, O., whose names I could not get, are just back from a three weeks' trip in the above-mentioned locality. They are known to have sold twenty deer at seven cents a pound. They must have had a game warden for a guide.

I am glad to say, however, that one instance of a hard path for transgressors has come to hand out here. Owing to the prosecution of Coroner Henry Hertz, of the Fox River Fish and Game Association—about the only organization we have that is of any account for protecting game and fish—three illegal chicken shooters, Messrs. Simeon Russell, Geo. Hewson and Chas. Dunnell, all of Fox Lake neighborhood, were fined $25 and costs each, at Wauconda, Wis. They have thus acquired some little information.

I notice in the issue of Nov. 14 Mr. Ames's query as to the grizzly "Tom," which he states was kept at Union Park perhaps eighteen years ago. I think Mr. Ames is right in presuming this to be the bear killed shortly after he was moved over to Lincoln Park, he having broken into a pit where there were several other bears with younger teeth than his. Perhaps Mr. Ames has not remembered the name quite correctly. This old grizzly was known as Bob, and was one of the attractions of the park, well known to all visitors. He was very tame and friendly, and possessed of a disposition which nothing seemed to ruffle. He dearly loved peanuts and candy, and would wheedle them from the most reluctant pocket. He was an enormous creature, and a sufficient refutation of the skeptics who say the grizzly bear does not go over 600lbs. Any one could have "won my money" if Bob weighed less than 1,500, though I never heard his weight. Before I had ever seen this bear, a friend told me of him. "He could scrape the ceiling of this room with his front feet," said he, pointing to that part of the room in the modest little city cottage where we were sitting. I laughed at him. Later on, when I saw the old fellow rear himself to full height along the side of his cell, I knew that my friend's statement had been correct.

Nov. 20.—In a late trip I made to Canada small game seemed as plentiful along the railway in Canada as it is in this country, and indeed more so. Their lands are much more closely posted and their game laws are better observed. As a consequence of this we found plenty of quail within five to fifteen miles of Chatham, which is a city of probably 15,000 inhabitants, and constantly heard of good bags of quail and partridges made by Chatham sportsmen. A party of four, consisting of Messrs. Nelson and Goodrich, of Chatham, and Mr. Briggs and another gentleman, of Toronto, in two half days killed forty-three quail, some partridges and two wild turkeys near Big Point, fifteen miles out from Chatham during the field trials at the latter point. The turkeys were thought to be half-breeds between the wild stock and tame ones run wild. All the quail shooters of that neighborhood were having good luck. At the depot at London, just as I was taking the west-bound train in the evening, I saw a hale, hearty-looking old gray-haired gentleman in good shooting rig and accompanied by a fine-looking setter. "Well, what luck to-day, Doctor?" some one asked him. "Oh, fair," he replied; "I got eight partridges." I wonder if this could have been Dr. Underwood—I believe that is the name—whom I so often heard mentioned as a capital shot and steady hunter of London.

We were speaking about the latter gentleman on the train, Mr. T. G. Davey, Mr. John Davidson and I, and the former gentleman remarked that the worthy Doctor could perhaps beat anybody in that end of the world shooting quail. To this Mr. Davidson took exception, declaring himself to be the great original dead shot on quail, and all others base imitators. Mr. Davidson formerly shot for the market for years at a stretch. He says he has killed 49 quail straight, and thinks that in his life he has killed 50,000 quail. I submit that this is sufficient grounds for capital punishment.

We fell to talking at the hotel table about the number of shells it took to kill a quail. One gentleman present named an average something like three or four out of five as being his ordinary record. One or two of us suggested to him that he could gather in some of our substance if he could take 100 shells and bring back 50 quail, all shot flying singles, and without especially picking his shots, but taking them as in an ordinary day's shooting. I presume this can be done, but there are not very many men who can walk right out and do it. I would rather dig post holes than bag every other quail in the brush. It's easier.

The FOREST AND STREAM gun tests have been watched with a great deal of interest by our Western shooters. I have already found a number of shooters out here who have guns which will discount the best record yet made by any gun shot in the tests. I am endeavoring to get some of these guns sent on to the range for trial. I wish to state that the best gun in the world is owned right here in Chicago. It is owned by a number of shooters.

Seriously, however, I have met many instances of patient and curious targeting of guns here, and have seen some remarkable patterns. One shooter of prominence here showed me some phenomenal pattern sheets, but would not give me his formula for loading, though I charmed him never so wisely. A little later than that, however, he told me that if I wanted to make my 12-gauge gun shoot close, I should load it as follows: A 12 gauge card wad on the shot, an 11-gauge pink-edge, a 12-gauge black-edge Ely, a 12-gauge black-edge U. M. C. and a 12-gauge card; then the shot, with a 12-gauge card on that. He said he had found it a mistake to use much wadding a size larger than the shells, as the wads in going through the choke were crushed or broken out of shape, and so distorted the shot charge. I should think that with the above load a fellow could get an almighty good pattern, for wads, anyway.

I wonder how long this mania for close-shooting guns is going to last. It is all a mistake for most field shooting, as every real field shot knows; yet no one will buy a gun to-day which makes as wide a pattern as the gun with which he has in earlier days done the very best shooting of his life. You can hardly coax a gun maker to build you an open gun. The sole question of merit in a gun seems to be, How many shot will it put in the 30in. circle? This is all fashion and all nonsense, and the shooting craft will some day abandon it, if so be we are not entirely reduced to artificial methods. The shooting of to-day, general as it is and exact as it is, is not so beautiful in point of genuine sportsmanship as the broader and more generously genial exercise of the past generation. They had more fun than we do. We are too much in earnest. We have got it down too fine. This is war, not sport, and science rather than good pleasure. When will reaction come and we return to broader, mellower, less selfish and yet more thoughtful days? Not, perhaps, until the tooth of time shall have bitten the choke out of all our guns, or until some population of the future shall say of us, as we do of the gentlemen gone before us—

> "The knights are dust,
> Their arms are rust,
> Their souls are with the saints, we trust."

If we stopped to think we could see the pity shining in those unborn eyes.

Nov. 21.—No very great success at ducks is reported. A good many mallards were seen on Maksawba marsh on Saturday, but not many killed. Fox Lake has plenty of ducks in also, but nobody can work them, it seems. One market got 67 one day not long ago, but that was an exception. Cumberland marsh does not seem to afford much shooting just now. Mr. Robt. Sheet, of New York, a member of Cumberland Club, was out lately, but had poor luck. He and Mr. Stephens then went up to Lake Koshkowong, Wis., but though they saw plenty of ducks there, they were not working well and the shooting was poor.

It is reported to-day that the shooting at Lake Senachwine, at Hennepin Club, at Peoria, and indeed all along that part of the Illinois River, is very good. Gov. Joe Fifer, of Illinois, was at Hennepin Club yesterday. Mr. George Davis reports good bags there lately. Yet Mr. Sibley, day before yesterday, had a letter saying shooting was not very good on Hennepin marsh.

Mr. Joseph Card, shooting at Toledo, O., reports large bags of ducks and great fun.

Messrs. W. W. and H. B. Foss, C. W. Lapham, Thos. L. Patterson and F. A. Place are back from a trip to Heron Lake, Dakota, where last year they had great sport. They got but poor shooting this time, though they say the ducks were there in good numbers.

Messrs. Mark Baldwin, of this city, L. N. Wood, T. J. Abt, Dr. Alden, Messrs. Moore, McCloskey and Alexander, of Duluth, lately had a little deer hunt at Midland Station in Wisconsin, on the N. P. R. R. They killed four deer in one day and saw sixteen. Sign seemed very abundant, and they thought the country well fixed for deer. Dr. Alden had killed two good bucks a few days before this hunt. Mr. Baldwin went on west from this point for a goose hunt on the Platte in Nebraska, but found that stream frozen up tight. That was on Nov. 15.

Grand Calumet Heights Club will append to the annual Thanksgiving festivities a grand coon hunt. Some wolves have lately been seen near the house.

On last Monday morning the lake between Twelfth and Randolph street was full of bluebills and redheads, more than have been seen in a body before this year.

Mr. Fred A. Fodde, of St. Louis, is in town visiting sportsmen friends.

Quail are reported fairly plentiful on Mak-saw-ba grounds. That bird is unusually abundant this year, it seems.

Nov. 23.—Mr. John L. Stockton, Mr. Thomas Edwards, and Mr. M. C. Lightner, are recently back from a deer and bass trip of several weeks duration. They had a good camp not far from the Escanaba, but far enough from the railway to necessitate a long drive over a rough road. They were near a little lake which has no apparent outlet or inlet, but which was abundantly stocked with small-mouthed bass. I presume these men are as real and genuine sportsmen as any who go into the woods. They killed just four deer on the trip, although they could have killed many more. It is one of their principles to kill no more than can be consumed. The catch of bass was limited to half a dozen each day. The camp was always easily supplied. The hunters thought that shooting partridges along the old lumber road they called the "boulevard" more fun than almost anything else they did. They had in a cook and two guides, and although much troubled by rainy and cold weather, they had a most enjoyable fall outing. They do not come back to brag of a number of deer killed before dogs, and possibly out of season. I wish some of our other Chicago shooters would take them as example.

Speaking of game law violations reminds me of a Colorado story I heard in Kansas last month, and which may or may not be true. I was told that two game butchers who had been often warned out of the Middle Park region by the cowboys, and who persisted in illegal slaughter of the big game, were finally taken by the cowboys and cattlemen and hung. This was during the past season some time. This is an effective way, if not the only way, to handle the persistent game butcher. It looks a little tough, but it is probable that in this case, as in most others, mountain justice was just.

I have some more light on the Manitoba duck egg destruction question. Mr. Thomas Johnson, a prominent commission man and produce dealer of Winnipeg, tells me that the reports of the gathering and shipping of ducks' eggs from Manitoba are all nonsense. "I am in a position to know," said he, "if any such work was going on, and I unqualifiedly say that nothing of the sort is done." It is probable that this column was responsible for the starting of this rumor, although it came to me on good authority. If the rumor is not true it is cause of congratulation for duck shooters surely.

Speaking of ducks' eggs reminds one of ducks, and speaking of ducks reminds one of duck calls. I wonder how many people know how to blow a duck call. A lot of us were together on the cars the other day, on a little trip, and each fellow fished out his duck call and began to play, the total result being very melodious but hard on the window glass. There were more of the Monmouth metal calls than of any other make—I presume there are ten of those Fred Allen calls in use to one of any other make, and there is none better if you will follow directions, or listen to Fred Allen play on one of them. Charley Burton could beat any of us, and he used one of these calls. "You don't want to give a long yowl, and then a lot of short squawks after it when you are calling mallard," said he. "That's the alarm call. If you want to simulate fat and lazy content, and a complete harmony with environments, you want to make each note of about the same length, and with a rich, unctuous fullness to it that speaks of good feed and plenty of it. This is the way it goes—'Haw! haw-haw-haw-haw—I'm so happy!' That's what knocks. The other ducks look on this as a plain invitation to dinner."

E. HOUGH.

RUTLAND FISH AND GAME CLUB.

THE second annual game supper of the Rutland, Vt., Fish and Game Club, was held at the Berwick, Rutland, Wednesday evening, Nov. 20. It was a representative gathering of the sportsmen and fishermen of the city and State, as shown by the list:

The dining hall was decorated with snowshoes, fishing rods and game bags, with mounted game trophies galore. The *ménu* included red snapper, striped sea bass, bear, venison, wild goose, mallard, blue widgeon, bluerock pigeons, coon, partridge, quail and prairie chicken.

In the much regretted absence of President Charles H. Sheldon, Club Secretary J. H. McIntyre presided as toast master, filling the part most felicitously. The set toasts were: "Our Guests," by Henry Clark; "The Big Game of Vermont," by E. L. Howe; "The American Clay Pigeon," by Dr. C. A. Gale; and "Reminiscences from Sam Lovel's Camp," by E. L. Temple, the "reminiscences" being readings from Mr. Robinson's inimitable pictures of Vermont life in the times of Sam Lovel and Uncle Lisha. Among other speakers were Mr. C. F. Orvis, of Manchester, who deprecated the posting of trout brooks, supported the 6in. trout law, advocated a State hatching house, and suggested the open season for trout should be from May 15 to Sept. 15; Dr. Swift, of Pittsfield, who spoke of the value of Vermont trout streams as profitable attractions to city people. Letters of regrets from many invited guests were read. The occasion was a most happy one, and the committee deserve great credit for its success.

KENTUCKY DEER CHAT.

Editor Forest and Stream:

I have been a subscriber to your paper almost from its infancy, and get many valuable hints from its contributions. One in particular I saw two or three years ago, in regard to loading for deer, with two bullets or large buckshot in center of shell, and space between bullets and shell filled with BB's or some size that just fills it evenly. I had been seeking an opportunity to try that load on deer ever since, but never found it until last week, when a large four-prong buck came within range out of a pine thicket, saw me and wheeled back, but caught the two bullets from the right barrel lengthwise. Going through they lodged in the shoulder. Turning to the left the game gave a broadside at about 50yds., and got the two balls from the left barrel, which passed through and out the other side, besides sprinkling the smaller shot all around the bullets at each fire, mutilating the carcass and making a sieve of the hide.

The bullets from my 10-bore go almost as true as any rifle, and of course the smaller shot are as good for any uncertainty of aim as ordinary loading. I have had considerable experience with shotguns for more than thirty years, and tried every device for concentrating shot, but for all-round shooting at large game I prefer this to any other load (although I have killed many deer with Ely's wire cartridges), and for exclusively long-range shooting I would ask nothing better.

And "that reminds me" that about twelve or fifteen years ago I sent you a flint or "Indian arrow head," taken from the shoulder of a large doe that I killed not far from Rockcastle Springs, in Laurel county, Ky., an account of which was then published in FOREST AND STREAM. Many

times, when relating the circumstance around the camp fire, I would have given a good deal to be able to produce that flint, in vindication of the story as told by W. M. G. Hale, Esq., at whose house the venison was cooked and the flint found. A more reliable man or true sportsman does not live, although only a plain, unassuming backwoods farmer.

It is snowing here to-day, which means extermination for the deer. One good tracking snow at this season will cause the death of more deer in this section than by every other means for a whole year. They will soon be gone, and my camp hunts at an end. But send along our dear old FOREST AND STREAM; I can at least live over again in its pages some of the hallowed past, in following the "Kingfishers" from camp to camp, and others of the many correspondents, whose writings I have enjoyed so much. Almost every number calls up associations of a past, that will not, can not, be blotted out this side the dark river. J. T. B.

KENTUCKY, Nov. 18, 1889.

MARYLAND DUCKING CLUBS.

A GLANCE at a map of the country between Baltimore and the east side of the Susquehanna River, and from the Philadelphia, Wilmington & Baltimore Railroad south to the Chesapeake Bay, will show the waters where the sportsmen kill thousands of ducks each season. Almost every foot of available land bordering on the waters where the ducks feed is either in possession of some sportsman, who uses it for his own shooting, or is owned by a ducking club. Thousands of dollars have been spent on many of the shores and the club houses are as comfortable as money can make them. They are well constructed, and many are handsomely furnished—gas, heat, hot and cold water being supplied in some. A few are especially fitted with a view to the comfort of the members' wives and families. It is rare that the ladies try their hands at duck shooting. They usually remain indoors while their husbands slaughter the ducks. One Baltimore gentleman, who is often accompanied to his shore by his wife, exacts a promise from her before they start that she will in no way interfere with his servants or household affairs while at the house.

The club gunner is in the business for the sport it furnishes. He is generally a wealthy city gentleman who can afford to indulge his love of sport, and who finds diversion from business cares at the shores. He is equipped with all the paraphernalia necessary to make his shooting a success. His clothing is of the warmest kind, and frequently there is an attendant who carries the club member's gun and ammunition, and who brings in the ducks slaughtered by the aforesaid club man, who remains in a dry blind or tub. For him the sport loses all its uncomfortable features, but all of its pleasures are retained. The ducks are becoming more scarce yearly. There is still, however, a supply that makes the sport a choice one, and it is enjoyed by thousands of Baltimoreans every season. Many who cannot get shores to their liking on the rivers at the head go lower down the bay for their shooting. There has been much complaint among the gunners that the feeding grounds in the rivers are covered with mud brought down by the floods, and especial y those in the upper parts of the streams, and that the ducks can be found only at the mouths of the rivers or in the bay. Just what chances the ducks have in the rivers emptying into the upper part of the bay is a mystery, as both shores are a skirmish line of gunners trying to inveigle the ducks to destruction. One of the best posted duck shooters in the State, besides being one of the best shots, is Mr. Jack Williar. He says that many of the shores fail to furnish good shooting, because the club members do not know how to lay out their shore blinds, and when they are laid out bad management keeps the ducks away. Mr. Williar thinks that Grace's Quarter is best situated for sport.

Among the best known ducking shores on Back River, are Island Point, Japanese and Swann Harbor. "Island Point" is on the west side of the river, about 7¼ miles from Baltimore out the Eastern avenue road. Adjoining this are the "Japanese" and "Swann Harbor" shores. In years gone by they were famous places for ducking, but of late have furnished but little sport. The members of the club have royal good times, however, and enjoy good fishing in the summer.

The next shore is Twin Oaks, one of the best known in the State. It formerly included in its membership Mr. D. T. Bartlett, Mr. Hayward, Mr. Jerry Mallory, Mr. H. P. Luca, Hon. H. B. Holton and other gentlemen who knew as well when a canvasback was cooked to a turn as they did how to shoot. The shore was rented last week by a club of which Mr. Edward Hyatt, T. Wallis Blakiston and others are members. Though not what it used to be there is still shooting to be done there. The club house, stables and surroundings are the finest in Black River Neck.

"The Cedars" adjoins Twin Oaks on the south. The shore is about equal to Twin Oaks, each having a good river front. The club house is connected with the city by telephone, and there is also a telephone in the blinds so that the members can sit in the blind and order more ammunition, or solid or liquid refreshments. If the river fails to supply ducks a call through the telephone brings after a 25-minute wait, a hot roast canvasback from the well-supplied club kitchen. The club numbers among its members Messrs. Reuter & Mallory and Wm. H. Cole.

The next shore is the "Bright Lights." It was formerly Lynch's Point. "Brickhouse Farm" was formerly the late Samuel Grover's shore. It is now a club shore.

At the mouth of Black River is Cockel's Point, which was at one time a splendid shore. The point runs into Miller's Island Narrows. Since the lighthouse has been on the island the shore has deteriorated. Among others who gunned the shore was Mr. Hamilton Easter, who killed many thousand ducks there.

Off the mouth of Black River is Miller's Island. It is accessible from land by wading or driving. A bridge at one time connected it with the mainland, but it has disappeared. The island contains about 10 or 12 miles of shore. The bay front of the island is one of the best swan and goose shores in the State. Wm. H. Evans leases the island, and a club of Baltimore gentlemen shoot there.

Leaving the island and going up the east side of Black River, the first shore reached is Rocky Point, which is owned by J. W. S. Brady and Alexander McComas. It is a good shore, containing several miles of water front. Adjoining on the north is Jerry Miller's place, which of ate years has been rented by the day to gunners. This season it is leased by a club. It is reached, as are all the shores on the east side of the river, by driving from Baltimore over a good shell road, which runs nearly to the mouth of the river.

North of Miller's is "Porter's Bar." It is owned by Mr. Matt Townsend, and is rented by a New York gentleman. The shooting privilege is said to bring $1,000 per season. It is a magnificent shore, and usually furnishes good shooting all the season.

Next on the river is Mr. George H. Brown's private shore. Next is "Broadbelt's," which was formerly a famous tolling ground, and belonged to Moses Fox. Hyde Park, formerly owned by Mr. Sam Hyde, is the next up the river. It is a club shore. "Walnut Grove" is next. It is leased to a club, of which Robert Gilbert, William Numsen, J. M. Matthews and Dr. Pue are members. Several members of the club are crack shots and belong to the Baltimore Gun Club. Next is "Coxe's Point." Mr. Joshua Harvey formerly shot there. The last shore north, which is just below the bridge, is Mr. Robert Scarlett's "Newport." The club house is a model one.

The shores along Middle River are accessible from Middle River Station or Benjies Station on the P., W. & B. R. R. Eastern avenue road from Baltimore also leads to them. The river is about 11 miles from Baltimore. Near the west side of the mouth of the river is Valmar's, adjoining Rocky Point, in Back River. It is a big shore, and occasionally wild geese are killed there. It was gunned one season by the Messrs. Easters. Around in the river the first shore is Planter's Point, which is a club shore. Next up the river comes Bull Neck, which was a famous place for overhead shooting as the ducks crossed the necks of land. At times there is good shooting there.

Paster's Point and Log Point are the next. They belong to Biddison. Messrs. Andy Poplein, M. Tyson, A. and M. Jenkins and their friends extract much sport here, and have been having as good shooting as they could desire this season. It is a splendid shore. Cold Spring is next. Mr. H. Vonderhorst and Frank Kenley formerly shot there. Bowly's Bar is next. It was recently purchased by a syndicate of Baltimore and Eastern sportsmen, who have erected a handsome club house. It is a fair shore and is responsible for the absence of Dr. Delano Fitzgerald from the city during the shooting season. Mr. Gillet Gill is also a member. This shore borders on the river and the bay. Adjoining it on the west and north is Seneca Creek, where the Seneca Duck Club enjoys the season. It is a fair shore. Mr. T. Norris, H. Vanderhorst, Dr. Winslow and other Baltimoreans are members.

The great and famous Carroll's Island is here. It is partly in Seneca Creek, partly in the bay and partly in Gunpowder River. The island has numerous gunning points. Among them are Briar, Lower, Weir, Carroll's and White Oak points. The island comprises about fourteen hundred acres of land, a great deal of it being marsh. A stock club company owns it. The shares are distributed among twenty members. The original price per share was $7,500. It is said a New York gentleman recently offered Mayor Latrobe $10,000 for his share. Mr. James Frick and several other Baltimore gentlemen are members, but the majority are Eastern sportsmen. The club is exclusive. The property was sold for about $34,000 to the club, which has had possession five years, although many of the original members have been sporting there for many years. The island has not been in the last few years up to its standard. The overhead shooting is of the choicest order. Geese are also killed on its shores.

The next shore adjoining to Carroll's Island is "Benjie's," made famous this season by a visit from the President. The shooting there has been first-class this season. The shore is so situated that it furnishes sport whenever ducks are to be had in Maryland waters.

The next points in Salt Peter and Dundee creeks are Marshy and Sandy Point, belonging to Mr. Alexander Brown. They are private grounds. Opposite them on Dundee is Mr. Eugene Levering's shore. Mr. Levering, who has not been in good health for some time, killed eighty-eight ducks one day last week at his shore, and could have killed more had he been able to stand the fatigue.

Persimmon and Marshy points, or Grace's Quarters, are in the Gunpowder and are owned by Mr. Wilmot Johnson, Mr. John Gill, Mr. Fisher and several other Baltimoreans. The shore is the finest, in the opinion of the duckers, in the State. The five shares in the club are said to have been sold for $60,000. It is also one of the finest fishing shores in the State. In the finely appointed club house many celebrities have been entertained by the members. Up the Gunpowder, on the west side, is Wm. McCay's private shore. It is a fair one.

Above McCay's is Hax's shore. It formerly brought $600 rental per season. Whitely and Gaither leased it some years ago. Mr. Peter Hax, a well-known sportsman, was a few years ago found dead in one of the blinds with a number of ducks which he had killed beside him. Attention was attracted to the dead man by the howling of his famous dog Drake, who was in the blind with him. Mr. Hax's death was caused by apoplexy. The shore is still a good one, though the freshets covered up the grass to a great extent. The last place up the river is Porter's, which runs to the bridge. At times there is good toll-shooting there. Above the bridge are Bird River, Harwood Park, Doc. Allison's, and other minor points where shooting is had occasionally.

Opposite Porter's is the San Domingo ducking shore. It has for shooting places Piney and Hog Points, which are guarded by Peter Swanspy, and Canal Point is looked after by John Sweden. San Domingo is the property of Gen. Cadwalader's estate. The shooting privilege rents for over $1,000 a year. There are five or six miles of shore. The club also has a shooting point across in Bush River, at the head of Dove's Cove. The members include Messrs. John Stewart, Weild, Gilmore, Hoffman, and about a dozen other Baltimore gentlemen.

Maxwell's Point ranks with the finest shores in the State. It embraces point, creek, blind and bar shooting. It is guarded by John Lynch. The shore brings to Mr. John Cadwalader, the owner, an income of $2,000 a year. On Maxwell's Point some of the handsomest imported fruit and shade trees grow. The estate was one of the finest in Maryland. The club house is a grand old structure about 80ft. square. The shore is known as "Gunners' Paradise."

Below Maxwell's are Rickett's and Robbin's Points, famous for goose shooting. Robbin's Point is at the mouth of the river, while Rickett's Point is on the bay, opposite Poole's Island. During a south wind it furnishes good goose shooting.

"Lego's Point," which is next, is at the mouth of Bush River on the west side. It was formerly owned by Mr. John S. Gittings. It now belongs to Messrs. W. and H. Hurst. The shore furnishes good all-around shooting. It is a favorite shooting ground for Dr. E. R. Baer, Mr. W. Hurst's father-in-law. It is a valuable shore. Up the west bank of the river are Sandy Point and Briar's Point. They are gunned by clubs. Wilson's Point and Possum's Cove, at the mouth of King's Creek, comprise the Philadelphia Ducking Club's shore. It is a good shore at times. The shores of Taylor's Creek are owned by Messrs. Ed. Bartlett and Thomas Haywood. The Tydings property, which is included in the shore, furnishes general first-class shooting. The shore is about twelve miles long. It is the favorite shore of the many belonging to the owners. Their steam yacht Comfort is a model craft for gunning purposes. The shore of Messrs. Bartlett and Hayward extends to the Bush River bridge, and over on the east side of the river below the bridge is Stockham's shore, which runs from the bridge to Sod Creek. The Chelsea Shore is below Barren Island.

Next comes Old Baltimore, a place which bears the distinction of having been an original site for Baltimore, and on which rest the remains of the distinguished Paca family. The property belongs to Mr. James Richardson, who is an old time duck shooter. He could never be persuaded to rent the shooting privileges of the shore. James Walker's shore is next down the river. Stockham's second shore begins at Walker's line and runs down to the mouth of Redmond's Cove. It is a private shore. In Redmond's Cove is Lemuel Matthews's shore, and adjoining this is Mr. Jay Towner's shore, which runs around into the river, taking in Bar Cove. It is gunned by Chas. K. Harrison, of Pikesville. The balance of the cove and river on the lower side running down to Bush Point, and extending part of the way into South Cove, as far as Monk's Island, is owned by Mr. Middleton. The property formerly belonged to the celebrated sportsman, Jack Sutton, who, together with the late Billy McDonald, killed thousands of canvasbacks at Bush Point. It is still a first-class shore. Adjoining is Abbey Island, the property of Dr. Farnandis. The island is a good place for big fowl, and at times ducks trading down the bay on a south wind furnish shooting. The island is in the bay at the mouth of the river.

Along the bay shore toward the mouth of the Susquehanna are Michael's and Hog Neck shores, where occasionally shooting is had. Abbey Island, as are the shores on the eastern side of Bush River, is accessible by driving over good roads from Perryman's station on the P., W. & B. Railroad. Up the bay from Hog Neck is Quill Nelson's Locust Point Bar, at the mouth of Romney Creek. It is owned by Mr. Wilde, who lives at Red Bank, N. J. Locust Point is a first-class shore for big fowl and ducks. Across Romney Creek is Harry Hyatt's property, Stony Point, which is a good shore. Several of Mr. Hyatt's Baltimore friends shoot there. Taylor's Island is the next shore. It belongs to a syndicate composed of Messrs. Bartlett and Hayward, M. Ould and John Bey. Up the bay shore there are no shooting points of note until Mulberry Point at the mouth of Spesutia Island narrows is reached. It has quite a reputation. Eastern sportsmen gun it. In the Island narrows on the north side are two shooting points, and the southern side is Middleton's shore, and through the narrows into the Susquehanna River is Swann Creek. "Woodpecker," "Oakington," "Davis," "Old Bay" and "Mitchel's shores," which run up the west shore to Havre de Grace. On the east side of the river, at the mouth of Northeast River, is Carpenter's Point, where the crack shot Perry Barnes lives. It is reserved for his individual shooting. On the south is Turkey Point, which is at the lower end of the flats. Between these shores, beginning with Swan Creek on the south, are the celebrated Susquehanna Flats, where sinkboats and sneak or bushwhack boat shooting is practiced.—*Baltimore Sun.*

THE WILDFOWL RANGE.—St. Paul, Minn., Nov. 19.—I inclose you extract from a letter just received from a friend, in which he advances some ideas new to me. As he is an old sportsman they may be worth publishing.—F. A. K. The extract reads: "I have seen the ducks work gradually west, and have kept following them up. At my time of life I can't make many more moves, but think I will try Dakota next. People generally think they will become practically extinct like the pigeons and buffalo; but they never will. I am satisfied there are as many ducks now as there ever were, but hunting them to excess drives them to new routes on their up and down passages. They go further north to breed each year, as civilization advances. I have been a close observer of the habits and characteristics of them, many of which I cannot account for. The one thing that bothers me most is this, why are there three drakes for each duck, particularly among the divers? It is so and has been since I can remember."

INDIANA GAME.—Terre Haute, Ind., Nov. 20.—I see your numerous correspondents write of the abundance of game this season in different parts of the country. Hoosierdom is no exception to the rule. For five years quail have not been so plentiful as this fall, and as for rabbits, "the woods are full of 'em." A good many ducks are killed along the Wabash, and squirrels are found in large numbers in the bluffs and hills west of the city. One party of four returned this evening from a two days' hunt in the vicinity of Cory, this county, bringing in 149 quail and 53 rabbits. Last week Mr. Edwin Seldomridge, editor of the *Argo*, and the writer, bagged 27 quail, 3 pheasants and 7 rabbits in a day's shoot, and neither of us can boast of being good "brush shooters."—H.

ONTARIO DEER AND MOOSE.—I have been a little while with the deer this fall; managed to get two fine bucks. I found moose very plenty all along the line of lakes and rivers in the Muskoka district down as far as Trading Lake; they seem to be driven in from the Mattawa District; weather good the whole ten days and not too cold. —MEDICUS.

OVERLAND FLYERS.—To Washington, Oregon and California, over the Chicago and Northwestern and Union Pacific Railways, Limited fast mail, through sleepers Chicago to Portland in eighty-two hours; Chicago to San Francisco, eighty-five hours. Denver limited, solid vestibuled train Chicago to Denver, thirty-eight hours. Overland express, first-class coaches and colonist sleepers Chicago to Portland. Dining cars on fast mail and Denver limited.—*Adv.*

Sea and River Fishing.

BIRDS, BEARS AND FISHES.—II.

ONE of the prime requisites for a journey with Alaskan natives is tea, and of this we carried a bountiful supply. During the tramp across the portage from Uyak Bay we halted at noon to give our carriers an opportunity to brew their favorite drink, and on the way up Karluk River the two halves of our party met at a convenient point on the shore and drank tea together. The natives had a simple device for hanging the kettle over the fire whenever low shrubs were available: they cut off part of the top, removed the small branches and hung the kettle filled with water on the end of the shrub, the elasticity of which was sufficient to hold the utensil at the proper elevation from the fire. When the natives furnish tea themselves it is made very weak, quantity of the beverage rating higher in importance than strength. The noonday tea we discovered to form one of the essentials of a happy existence with our helpers, and we never omitted this mode of ministering to their welfare; indeed we soon acquired a decided taste for the innocent stimulant ourselves, and were quite ready to join in the "chipeet" of the country. Hard bread is the necessary accompaniment of tea, and if you add to this a supply of dried salmon, called *ukali*, a little sugar, salt and pepper, some matches and tobacco, you will have furnished enough to satisfy the wants of any party of natives. In the fishing season they will easily catch with their hands or despatch with stones all the salmon they need in the fresh condition. One peculiarity of these people is their improvidence. If they receive a supply of bread, tea and other provisions sufficient to last several days they will generally consume the whole quantity in one day. For this reason I found it necessary to deal out rations day by day and abandon the attempt to teach the natives economy.

The morning of August 18 broke upon us with a persistent fall of rain, which made walking along the lake shore extremely difficult, owing to the presence of decaying vegetation and the residue of last season's dead salmon. The shores for the most part are composed of large rounded boulders, and the effect of the mixture of rain, salmon oil and confervæ can readily be imagined. The lake stretched away to the southward, fading out against a low-lying point and a barrier of undulating mountains. Near the shore the clear water revealed the bottom of boulders and irregular rocks, alternating with occasional areas of clean sand over which salmon in their vivid nuptial colors were hovering, intent upon reproducing their kind. Lurking in nooks and crannies on all sides was that small but vicious enemy and contemporary of the salmon, the fresh-water sculpin with several significant aliases, such as "mullhead," "bullhead" and "miller's thumb." Though always of small size, the pigmy of his family, he is extremely hardy and wonderfully prolific. In Karluk Lake his name is legion and his ravages among the salmon eggs are deplorable. The fame of this little pest as a destroyer of eggs and of young trout and salmon is everywhere notorious among fish breeders and students of the life history of the salmon family. The fish assumes a bewildering variety of forms and is co-extensive in distribution with the trout and salmon.

Notwithstanding the steady downpour, Mr. Booth and I stowed away in the bidarkas a supply of food, our instruments, rifles, blankets and other necessaries, and started on a reconnoissance to the head of the lake. This sheet of water, roughly speaking, is Y-shaped and contains near the middle of its length a group of three small islands. On the south island of this group there is an old barabara, which is used by winter hunting parties, and this was our objective point for the first stage of our journey. Two natives paddled the bidarka for each of us, and we moved along close to the shore at a nearly uniform rate of about four miles an hour. Mak Cem kept up a continual chatter, principally in his own tongue, but the rest were less inclined to talk. We were greatly hampered in our movements by our oil clothes, but our companions were very snug and comfortable in their light kamlaykas, or water-proof shirts made of bear gut, which were securely tied at the wrists and around the hatch of the bidarka. We reached the island about eleven in the forenoon and hurried our belongings into the barabara, where we soon had a welcome fire burning and preparations under way for tea. Presently we discovered that we lacked several necessaries of camp life—salt, sugar, bacon and matches. One meal, a stew, without salt was enough, and a bidarka was sent back to our tent for the missing articles. Mak Cem remained with us and exerted himself to make us as comfortable as possible in our somewhat dilapidated quarters. A few bunches of grass to mend the roof and a scanty supply of wood to dry our wet clothing speedily improved our condition.

About the middle of the afternoon we crossed over to the mainland to get a lot of dry wood from the cottonwood trees, and glance at the tributary lake which communicates with Karluk through a short, rapid and very crooked river. We found the river to be nearly as wide as Karluk River. Salmon, trout and sculpins were abundant. Dead and dying fish were all around, and we were soon made aware that many of the salmon had not died a natural death. Traces of foxes and bears were abundant; these animals had beaten down the grass in many directions and left numerous evidences of recent feasting on fish. The bears had consumed vast quantities of berries also, which appeared to be the common and very showy red elderberry of the region, a species of *Sambucus*. Among the common birds were terns, gulls, magpies, eagles and several kinds of ducks. The gulls included a goodly proportion of kittiwakes in very fine plumage. Magpies were met with frequently in small, noisy colonies, and the eagles were in family groups, generally among the tall cottonwoods. The young eagles were nearly as large as the adults, but not strong in flight, and very easily obtained. The ducks were as shy and difficult of approach as they are near the centers of population. In this little unpremeditated excursion we had with us only one native, and everything progressed favorably enough until a moderate head wind raised a small sea and swell on the lake; then we discovered the unstable nature of our frail canoe in unskillful hands, and wished ourselves safe in the barabara.

We resolved never again to venture out in deep water, and especially the very cold water of such a lake, except in the care of two natives for each bidarka. Lisiansky remarked upon the elasticity of the skin canoe as an objectionable feature to persons unaccustomed to this form of boat, but we were more seriously annoyed by the fear of capsizing. In the event of overturning there would be practically nothing to do but to breathe a prayer and indulge a farewell thought of home and kindred. The position for paddling in the first batch is attended with great discomfort to a beginner, since it compels him to kneel and bring his weight principally on the extended foot, pressing the instep and soon causing a numbness of the extremities. The disposition to rise becomes irresistible, and thus the danger of capsizing is greatly increased. There is a good deal of misplaced confidence about handling a bidarka on the part of white men, and numerous accidents are the result. Sudden immersion in water not many degrees above the freezing point is not a subject for joking, to say nothing about the great risk of being immovably fixed in the bidarka and carried down with it.

The party sent back for supplies returned to us in time for breakfast on the 19th, and we were soon ready to continue our voyage to the head of Karluk Lake. During the run we made the unexpected discovery that our companions knew next to nothing about the names of the prominent headlands, mountains and rivers around us, but were always ready after a little consultation and some half-concealed merriment to give us names manufactured for the occasion. Inasmuch as these natural objects probably have no other nomenclature, we may as well refer to some of them the names evolved out of the lively imaginations of our Kadiakmuts. After we had passed the spot where "Chuck-soo-wah-net," the big mountain of the peninsula between the two arms of the lake, speaks to "Ning-guh-wuck," the smaller long-ridged mountain on the opposite side of the lake, Goolia's sharp eye discovered a grizzly with two cubs crunching salmon near the mouth of "Nettick" River, and you should have seen our swift canoes quiver under the rapid and powerful paddles of the thoroughly excited natives.

"Ta-goo-gack!" "ta-goo-gack!" exclaimed first one and then another, while we substituted the English equivalent, bear! bear! and shared in the general enthusiasm. We were skurrying to leeward of the bears, which none but the trained eyes of the natives could make out, owing to their distance from us. In a very little while we gained the shore and hauled up the bidarkas on the beach. We were not seen by the bears and soon began a nervous and stealthy descent in force, keeping concealed in the tall grass. Slowly we neared the feeding place of the grizzlies, occasionally raising our heads to discover them. Presently about 100yds. ahead of us a huge hairy head appeared above the grass and a clumsy paw was thrown up to steady the sight of the now suspicious beast. A sudden snap of a stick beneath the foot of one of our party alarmed bruin just as some of us were preparing to fire. The shaggy head disappeared and with it our first chance to slay a grizzly on his native shores. T. H. B.

[TO BE CONTINUED.]

PROTECTION OF FISH A BLESSING.

BY J. LIVINGSTON REESE, D.D.

MANY arguments and reasons have lately been called forth in the public press for the enforcement of the game laws, and for the passage of such bills by the State legislatures as will preserve the game and fish of our forests and streams. Almost all of them are written in the interests of the sportsman who has the time and the means to spend in hunting and fishing, and perhaps for this reason all game laws are thought by some to be intended for the pleasure of a small, though important class of our citizens. No doubt considerable jealousy has grown up on this account on the part of those who are deprived of these pleasures by the necessities of life, or who have no taste for them. And such legislation in some quarters does not touch the popular heart and is difficult to be enforced because it has somewhat the odium of class legislation. And yet there is not a family in the whole community that should not be particularly interested in such legislation, especially in the laws which protect the fish in their spawning season, and which prevent their extermination by the net pirates.

There is no civilized country in the world excepting those countries that stretch their narrow boundaries along the ocean, and whose people draw from it their living as the farmers do from the soil, where the markets are as well supplied with fish and where they are as cheap a diet as in the United States. And this is as true of the fresh-water supply as that which comes from the ocean. Our great inland lakes and our grand rivers furnish food, good, nourishing food, cheap and abundant, such as is given to no other nation of the world. Let any one imagine how restricted the diet of our people would be, if by any great catastrophe this supply should be cut off, or be made so dear as to be only the luxury of the rich. Our fish are now so cheap that the poorest can afford them. But if there were no fish laws and no protection against netters, they would soon become the dearest articles of food in the market. In demanding therefore of the State such adequate protection, we are asking it not for a small and favored class, but for the masses of the people. It is the poor, the working man, who wants fresh fish on Friday, who is especially benefitted by such laws. The angler can always get his fishing somewhere, either on his club preserve or in some remote district, far away from civilization but accessible to men of means, where they can carry their comforts and where they can enjoy their sport unmolested.

But the borders of our great lakes and of most of our rivers and streams are now inhabited by large and ever increasing populations. Among them, of course, men whose sole thought is the gaining of the dollar for to-day, and who give little thought for the morrow. They consider the fish in these streams their natural property. What care they, if in some few years these great bodies of water be stripped of the food that should supply the wants of the people for all time, providing they can gather together by their merciless nets the dollars which wickedly earned are so often wickedly spent. The poacher and the netter have neither conscience nor pity, nor care for the morrow. To let them alone is to rob the poor of the food which the Almighty made for them and made so abundant as to be upon the table of every workingman in the city and in the country. No class of people should be more interested in protecting our waters than the working classes. Let it be understood that if in the spawning season, fish, though at that time not fit for food, are allowed to be caught, and if netters are permitted by their wholesale slaughter to strip our streams, there is but one ending of it. Fresh-water fish will be so scarce that the workingman must restrict himself to his salt codfish and his dried herring. We ask our Fish Commissioners to keep this in mind.

We would rouse the people all over the land to protect themselves in protecting the fish. We tell the Fish Commissioners of the State of New York, and some of them we know personally to be most honorable and high-toned men, to make it their main object to protect and multiply the fish that are found on the tables of the working man. They are not appointed nor paid by the State to stock private ponds nor to protect club waters. Not a fish should be planted in club waters by the State without the payment of every expense incurred. Fish hatcheries and fish protectors and fish commissioners are made and paid by the State, not for the sake of private anglers, but to keep up and replenish the food supply of fish for the millions. Let our Fish Commissioners make it their chief business to protect and replenish our great public streams, the St. Lawrence, the Hudson, the Mohawk and the hundreds of smaller streams accessible to the public without paying for that privilege. If by their efforts they will so multiply the fish in such streams, as to make the supply abundant and cheap, and fishing a means of livelihood for hundreds of honest fishermen, they will make themselves the most popular men in the State, and their work will be cherished and encouraged by thousands of grateful people.

Private lakes and club preserves can and will take care of themselves, but we ask in the name of the poorer people, for our workingmen and our honest artisans, an abundant supply of food fish. The St. Lawrence association of anglers, though it may not know it, has done more for this than it has done for the pleasure of the cottagers and visitors who frequent those lovely waters.

Will the Fish Commissioners of the State of New York bend their energies to this one purpose, and make themselves and their work a blessing to thousands?

ALBANY, N. Y., Nov. 22.

CLUBS AND PRESERVES.

Editor Forest and Stream:

In your issue of the 7th ult. I see a letter from "R. O. S." on "Fishing Clubs in Canada." In it he exempts Quebec; why, I am not aware, for that province does not hesitate to lease its lakes or any other water by which they can draw a dollar; and I have yet to know or hear of New Brunswick not following suit. There are lakes in both provinces teeming with trout, so far removed from civilization that it is not possible to reach them except in winter by snowshoes—often a journey from thirty to eighty miles. Few visit them except poor Lo, who hauls a hundred pounds of fish on his hand sled, selling them at some station on the I. C. R., or hauling them to the nearest village, where he realizes from eight to ten cents per pound; and as he is now shut out from both moose and caribou this is about his only living for the long winter.

The pretense made by the local governments, who now own all the inland waters, is that it will not answer to exempt any waters from the cast-iron regulation, as it would be a precedent for others to obtain the same privilege. In the good old days, when Charlie Hallock visited our country, not much law was in existence, and what there was, was ignored. But times are now altered, and without some more stringent regulations I confess we would have been without a fish in either lake or river.

For eleven years the Federal Government claimed the right to the inland as well as the tidal and coast fisheries, and they let them at a nominal rental; in fact were almost glad to get clear of them, in order not only to have assistance in protecting them, but to bring them into notoriety. In those days every man was nearly a law unto himself, as far as catching either salmon or trout went, and the rivers were far behind what they are to-day.

Riparian rights being acknowledged, changed things very much. Men of wealth and leisure and fond of sport came, saw and conquered, by buying from those who had the power to sell, and by leasing when they could not buy. Common men, who have to labor for a living, have neither the means, inclination nor ability to undertake the rôle of sportsmen; and as any other mode of capturing fish in lake or river is now forbidden, those parties who regret so much the decay of the old times, when they could use the net and spear at all seasons, must bow to the inevitable, and make the most they can in the way of money out of those into whose possession it has fallen.

Allow me now to give you an item on the salmon fisheries in the Bay of Chaleur. The net-fishermen in the bay and estuary number nearly 500, catching over 1,000,000lbs. of salmon, worth in round figures $100,000. There are some six angling rivers leasing for somewhere near $20,000; some 200 anglers now visit them yearly; at the most moderate calculation they themselves and guides, with canoe, cost $200, giving $40,000. For protection, for five months those lessees and proprietors are bound, not only by the terms of their leases, but in cases of proprietorship for, I may say, self-preservation, to employ over fifty guardians at a cost of $15,000. The erection and maintenance of the buildings, ice houses and the numerous conveniences men of leisure require make up a balance more than equal to the whole net catch; and when it is considered that all this expenditure of money arises from the catching by the anglers of, say, 2,500 salmon (not over), while the netters take 50,000 fish to obtain the same amount of money, I think "R. O. S." must admit that if they get the sport they pay for it, and leave a lot of the "dust" in places where otherwise there would not be a color. JOHN MOWAT.

CAMPBELLTON, N. B., Nov. 14.

Editor Forest and Stream:

I am not and never was a member of any club, nor do I have any financial interest in any club or preserve, but I do feel a growing interest in the good work they are doing. Oh, that some club might have been organized twenty years ago to protect and preserve the now nearly extinct buffalo.

From many parts of our country there has been sent up the cry that no club can legally acquire the exclusive right to shoot and fish on any tract of land. Now I would

like to ask those parties if they ever examined one of those common legal documents known as a warranty deed; and if so did they feast their eyes on this clause: "To have and to hold said granted premises with all the privileges and appurtenances thereto belonging to the said grantees and his (or her) heirs, and assigns to him (or her) and his only proper use and benefit forever."

As the laws now stand in this State, any person holding deeds of real estate can prohibit shooting and fishing on his property; but the law does not prohibit him from leasing the right to shoot or fish to any persons that he may choose.

In this State it is lawful to shoot woodcock, ruffed grouse, partridges or quail from the first day of September to the first of January; but in order to do the shooting legally the shooter must either own the land that he shoots on or have the permission of the owner.

It is quite easy for the observing person to see where the cry of illegality originates. It is not with the backwoodsman, but the business men of the cities, who in summer come up into the country with the regulation fishing outfit and a carefully prepared package which is not unwrapped until the fishing ground is reached and the gaudy flies prove a failure. Then the magazine is opened, showing several small dynamite cartridges, which enables the otherwise unsuccessful angler to return to the hotel with a full basket; and after a couple of weeks of such villainous work, he is ready to go into the wilderness and contribute his mite toward making notorious lawbreakers.

Why will business men resort to such means when, with the same amount of money, and often much less, they could become members of some club where legal and honorable sport with the rod and gun would be assured, and not only that, but how much better would he feel to be able to look his friends squarely in the face and tell them how and where he lawfully shot his deer or caught his trout: and last but not least the guide that he now hires to break the law could be employed on the preserve at least a portion of the year, and thus become a game preserver and a useful citizen. R. S. F.

New Hampshire.

WABAN LAKE FISHING.

THE lake about which I write is situated near Wellesley, Mass., and is well known to every one who has seen Wellesley College. It was on a misty and unpromising morning last August that I went fishing in Waban, accompanied by my three neighbors, who may be called for the purpose of this reminiscence Thomas, Richard and Henry. We rose very early and seined a pailful of live minnows in School House Pond. Minnows have been introduced here and have multiplied wonderfully. Before 6 o'clock we were on the ground and ready for sport. Richard and I carried common fishing poles, while Thomas and Henry were equipped with light fly-rods. I regret to say that in this instance the poles beat the fly-rods more than two to one, and we had the bulk of the fun on our side. We took a boat supplied with an anchor at each end and rowed out to a depth of 10 or 15ft., just near the edge of a shoal. This shoal is a long way off from the shore and makes off gradually for a great distance, when the water deepens all at once to about 25ft. On the shoal was a luxuriant growth of lilypads. The ground is a favorite one and has often furnished us with excellent fishing.

When we were ready to begin our trials, Richard said to Thomas as he looked at his little fly-rod, "Humph! what do you expect to catch with that thing?" "I want you to understand, young man, there ain't any fish in this pond big enough to break this rod," and he proceeded to put on a live bait with the air of a conquering crusader. Scarcely had the bait sunk in the water, when Thomas became aware of a tremendous bite and commenced reeling in vigorously, when—snap! went his tip, and he was obliged to haul hand over hand, finally discovering that he had fastened to a huge eel. We all laughed as a matter of course. When the eel neared our boat Thomas exclaimed, "What am I going to do with this thing?" The "thing," however, answered his question very promptly by parting the line along with its owner's company. "Go down below," shouted Thomas, "and tell them what we're doing up here, but don't send any more of your kind." Then said Henry: "Just wait till I get something on and I'll show you how the thing is done." I will relate to you presently how he kept his word.

We were soon on confidential terms with the fish life of the lake and drew up a handsome score of yellow perch, eels, hornpout and pickerel; but the great bass for which this locality is famous gave us a severe letting alone. Even a few chafin, or dace, which my friend Dr. Bean tells me are known also as fall fish (*Semotilus bullaris*), took the live minnow as readily as the perch and other fishes. I have occasionally caught chafin before with live bait, once with a small frog while fishing for black bass. The perch were very fine, some of the big ones weighed fully a pound and were very bright orange in color. The small perch, on the other hand, were green or bluish.

But while we were contentedly caring for our growing creel, trouble was brewing for Henry of the fly-rod. It was announced to me by a rush and a great splash, followed by a deluge of water over my back, and I soon perceived that it was caused by a monster black bass hooked by Henry, who thereupon proceeded to show us "how the thing is done." Almost instantly his rod bent double. The reel clicked and sung. Great was the excitement of Henry. We kindly volunteered to help him, but "this is all right," said he, "just leave it with me," and we subsided. The bass jumped out of water several times and shook his head to get rid of the hook. After a while he was brought so near to the boat that Richard tried to lift him in with his hands. The frightened bass rushed away and Henry, in trying to keep a strain on the line, got it fouled in the reel. He then attempted to clear it and unshipped the reel, dropping it into the water, and the line ran out as the bass frantically sped away. Henry with great difficulty recovered the line and began hauling in again hand over hand. The bass sulked along to within 10 or 12ft. of the boat, just near enough to show us his enormous size, and then, with a mighty breach out of the water, parted the line. Henry stood up with the broken line in his hand, gazing sadly into the vacancy caused by the disappearance of the fish, and deliberately remarked, "Well, I'll be teetotally blank blanked," and this was the way the thing was done. As Henry had the instincts of one of "the finest" and soared above us common mortals, we didn't bubble over with sympathy for his misplaced confidence and cruel disappointment. With Thomas and Henry honors were now easy, and as for the plebians with the poles, they had no mishaps, most of the fish and the cream of the fun.

Washington, D. C. S. F. Denton.

AQUARIA NOTES.

Occasional Observations of the Fishes in the Aquaria of the U. S. Fish Commission.

MIMICRY IN FISHES.

THERE is an interesting little fish—the *Antennarius*—which is a favorite subject for popular illustrated articles; but very few persons have enjoyed the opportunity of observing it in the aquarium, and but little is generally known of it beyond the mere fact of its living and building its nest in the floating *Sargassum* or Gulf weed. Occasional specimens have been taken by the steamer Albatross and transferred to the Wood's Holl Aquaria, where, by reason of their curious form and coloration, they have been sources of great interest to naturalists as well as general visitors. The *Sargassum* is one of the commonest of seaweeds, and may be known when found dry on the sea beach by the little round balls (not bladders) in the axils of the leaves. When alive the plant is of mixed shades of yellow and brown, generally speckled with white, this being caused by the calcareous deposits of low form of life. The fish is of the same colors so mottled as to make it difficult to distinguish from the plant when hiding in it. The fish is also of very curious and un-fishlike shape (to the popular notion), and is covered with tufts of leaflike appearance which add to the similarity. But the oddest characteristic of the fish is the modification of the pectoral fins into handlike organs, which are used like hands and by means of which it climbs about on the *Sargassum*, back downward, with all the agility of a monkey. It is one of the oddest creatures imaginable.

Another queer kind of fish is the batfish, and it is another remarkable example of mimicry. In coloring and markings it is so exact an imitation of coral that it would be almost impossible to distinguish between it and a mass of *Astrangia* if it were resting upon it. In color it changes from dark to light, and *vice versa*, very quickly. Its manner of eating is quite curious. It has a proboscis-like extension of the mouth which it shoots out suddenly and seizes its food. Should it take hold of a worm at one end there would be no further movement of the mouth; in fact, the fish would appear as if chiseled out of stone; but the worm would glide rapidly into the orifice, which would fit closely around it, evidently pulled by some power within. The head of the batfish is crested or tufted and looks very much like that of a cockatoo. Its pectoral fins have the appearance of forelegs and the ventrals that of hindlegs (what would be the knee joints bending back in both cases), and it walks about exactly like a quadruped. These fins are also used in swimming.

Some spring swellfish or burfish were brought from the Gulf of Mexico by the steamer Fish Hawk last spring. They are very odd-looking creatures, covered with hard spines, which, when the fish swells into a round ball by filling itself either with water or air, which it does as a protection against enemies, give it much the general appearance of a giant horse-chestnut in the bur, except in color. It is said by some of the scientific corps of the Albatross that they have seen the burfish rise to the surface of the sea, and filling themselves with air go sailing off before the wind like toy balloons, undoubtedly by that means escaping enemies. It was not known for some time what food would suit them, as they did not seem to have a relish for dead food. They did not appear to enjoy earth worms as most fishes do. One day, however, they were given some fresh-water snails, which they ate with avidity, crunching the snails and extracting the meat with evident enjoyment. This giving the clue they are now fed on small salt-water mussels and snails, varying with marine worms and oysters, and occasionally beef, of which they eat sparingly, but for which they are apparently acquiring a taste.

Wm. P. Seal.

East Indian Game Fish.—A controversy has recently appeared in the Calcutta *Fishing Gazette* as to what is the largest mahseer caught in India on the rod and line, and it appears that a fish weighing 103lbs., caught by the late General Sir Herbert Macpherson in the Ganges near Hardwar, takes the palm among fish caught fairly on rod and line, and not on a night-line or bank runner or any similar contrivance. Mr. Sanderson, in his book, "Thirteen Years Among the Wild Beasts of India," records the capture of one weighing 150lbs., but this was on a 400yds. night-line. There is also a record of an 82-pounder caught at Torbela, some years back, by an officer of the Rifle Brigade, and also of 74, 73, 62 and 61-pounders, caught all fairly on rod and line; but according to our contributor "Shikaree," the general run of mahseer taken in the Ganges and Ramgunga rivers range from 8 to 25lbs.

Restigouche Salmon Culture.—*Editor Forest and Stream:* We are pleased to hear this season has resulted favorably for the spawning salmon on the famed Restigouche. We are also pleased to learn that over 3,000,000 salmon ova have been laid down in the hatchery there, double the quantity of any previous year. We understand the river needs all the assistance possible to supplement its stock, owing to the enormous number of nets and the loose manner in which the regulations are carried out. It is to be hoped the river will have the whole proceeds of the hatchery, and that the general Government, which owns the hatchery, will keep the eggs at home and let every tub stand on its own bottom.—Scar.

Clackamas River Salmon Angling.—Portland, Ore.—I have not seen any mention in your columns of the remarkable sport which was had on the Clackamas River last spring, fishing for salmon with a fly. The fish ran from 10 to 36lbs., and it was not unusual to catch twenty per day to the rod. As the river is only two hours' drive from this city, the sport was enjoyed by a great many.—B.

Mr. F. C. Gilchrist, a son of Chas. Gilchrist, of Port Hope, Ont., has been appointed Fishery Inspector for the Northwest Territories. If he does as well for that country as his energetic father has done for Rice Lake, the fishing interests will be well cared for.

Saw Mills, Tanneries, Mine Water and Fish.—Catawissa, Pa.—Our trout streams are rapidly becoming nothing but pleasant memories. A number of small mountain brooks around here contain a few trout, but Fishing Creek is the only good trout stream. During the past few years several large saw mills and a tannery have been erected at the headwaters, and I fear it is but a question of a few years more until the trout will disappear from that stream also. The Susquehanna River, which was once one of the best fishing streams in this country, is fast being depopulated by the mine water, and Catawissa Creek, which fifteen years ago abounded with trout, pike, white chubs, etc., now contains no animal life—not a frog, not a snake, not even a turtle. All this was caused by mine water. It makes me mad every time I take a walk along the creek to think that such a beautiful stream should be so desolate.—C. E. R.

The Castalia Club, of Toledo, O., last winter added to its territory sixty-four acres of meadow land on the Castalia Creek, and made a new stream, which winds through the tract, making sixty zigzags, and at convenient spots spanned by rustic bridges. At a recent meeting of the members at their pretty cottage, a number of trout were transplanted from the old stream to the new; and some of the pools and bends and eddies were given names in honor of the club anglers, as follows: "Bills's Bend," after Capt. G. W. Bills; "Oswald's Pool," after Col. John W. Oswald; "Hasbrook's Annex," after a member from Cleveland; "Waite's Dam," after John Waite; "Brown's Hole," after Clarence Brown; "Spencer's Stretch," after Joe Spencer; "Reed's Eddy," after I. N. Reed.

Menhaden.—Wood's Holl, Mass.—In my letter last week where it read that there had not been seen south of Cape Cod any menhaden, it should have been no young menhaden seen south of Cape Cod, for there were schools of old ones.—Vinal N. Edwards.

Snake Caught on a Hook.—A gentleman of Wellesley, Mass., while fishing for pickerel one day with live frogs for bait caught a water snake.

Fishculture.

ILLINOIS FISH COMMISSION.

THE report of the Board of Illinois Fish Commissioners for the period from Oct. 1, 1886, to Sept. 30, 1888, has recently been published in a very attractive and instructive form. We have already called attention to the method of stocking streams inaugurated by this Commission several years ago, and now adopted for the more extensive regions covered by the operations of the U. S. Fish Commission. The sloughs and holes along the Mississippi River are filled with food fishes during times of high water, and the fish left by the receding waters would perish if they were not removed before the holes dry up. Men are employed in seining the fish and placing them in deep water near at hand or forwarding them to some point for distribution by rail to inland lakes and streams. A small steamboat was used to move a 25ft. barge, which could be converted into a live box capable of holding 4,500 to 6,500 fish, or as many as could be tranported in one of the cars employed in the distribution. Two of the cars belonging to the U. S. Fish Commission were lent to the Illinois Commissioners with the men necessary to handle them, and were in this service from July 15 to Oct. 5. A number of the railroads transported these cars to nearly all parts of the State without charge, and thus made possible a beneficent work which would not have been accomplished otherwise. Black bass, croppies, wall-eyed pike, pickerel, pike, white bass (*Roccus chrysops*), yellow bass (*Roccus interruptus*), rock bass (*Ambloplites rupestris*), ringed perch, spotted catfish, channel catfish, white perch (*Aplodinotus grunniens*), sunfishes and buffalo were among the species rescued and distributed. The increase of native fish from this plan of action is notable. At Quincy, in ten days, over 10,000 fish were taken with rod and line. In early spring fully 500 anglers could have been observed daily about this city, and they were generally successful, strings of 35 to 50 white bass and wall-eyed pike of good size being very common. F. K. Whittemore's pond of about eight acres at Lanesville was stocked in 1882 and 1883 with carp and native fish. In 1887, on account of the dry weather, the pond had to be emptied of fish; but their number and size were so great that the transfer was pronounced impossible. Black bass of 3¾lbs., croppies of 1½lbs., and carp weighing 7lbs. were among the fish removed. This result was obtained in a poud fed by tile and surface drainage.

In the reservoir of the Illinois Central Railroad at Clinton, which was stocked three to three and a half years, 2,000lbs. of fish were taken out at one seine haul. This was a still-water pond, and yet black bass were found weighing 4½lbs. and carp of 14½lbs.

Twenty-six carloads of fish were safely deposited in Illinois streams during the time specified.

The Commissioners engaged in a struggle to secure the introduction of fishways over all obstructions in streams, and with the timely and substantial help of the Fox River Fish and Game Association, they have secured the enforcement of the law regulating this matter. The Association agreed to advance the funds necessary to build fishways when dam owners refused to comply with the law, and receive reimbursement out of sums recovered by prosecution of the offenders. Mr. Geo. B. Cole, a leading member of the Association, visited every dam on Fox River and served notices upon the parties interested. The result of such energetic measures if applied wherever obstructions exist can be readily imagined.

The fish laws do not provide sufficiently for their enforcement and do not clearly define violation, nor specify what kind of nets may be used. In prosecutions the burden of proof rests with the State, and many offenders go free when their guilt is plainly evident.

Ten protective organizations in various parts of the State exert their influence in favor of law and increased distribution.

The Commissioners ask for a car for use in the transportation of fish throughout the State.

The growth of carp in Illinois is remarkable. Mention is made of a 3-year-old fish, 28in. long and weighing 11lbs. The largest one noted was 36in. long and weighed 24½lbs.

The appendix contains a noteworthy report on the animals of the Mississippi Bottoms near Quincy, by H. Garman, assistant in the State Laboratory of Natural History. Prof. Forbes, the director of the laboratory, introduces the report in the following words:

"The investigation of which the present paper is intended to set forth in a general way a few of the results, has for its purpose an exhibit of the animal life of the waters of Illinois as related to fishculture primarily, but also and finally to nature at large. To this end studies have been carried for

ward on the kinds and comparative abundance of animals of every description occurring in the localities and situations selected for examination, at different seasons of the year, and under various conditions as to food, temperature, stage of water, and the like, and as affected by the general system of relations obtaining among the organisms themselves. In reporting these studies we shall not confine ourselves to annotated lists, but expect to enter into the fullest profitable detail with regard to habits, methods of association, and relations of mutual benefit, rivalry or injury, and to show how and to what extent these habits and interactions vary from time to time with changes of condition."

Mr. Garman states briefly the physical characteristics of the localities and of the bodies of water examined and names the chief elements of the fauna. No mammals except raccoons occur in the district investigated. Birds were scarce at the time. Bank swallows are noteworthy because of the number of winged insects destroyed by them. Only one species of snake was found. Turtles were taken in abundance. The snapping turtle and soft shells (*Aspidonectes* spp.) are important for food. Frogs and toads were almost entirely wanting. The fishes are divided into groups represented by creek fishes, pond or slough fishes, and river fishes. The scientific and common names are stated, together with notes on breeding and feeding habits, mode of capture, size and localities where found.

Through the pages of the Commissioners' report are scattered 28 handsome plates of well known food and game fishes of Illinois copied from the "Fishery Industries of the United States." Of these the hickory shad represents the eastern and not the western species.

We hope the Illinois Commissioners will be enabled to carry on their proposed work of propagating the whitefish and enlarge their operations in the Mississippi Bottoms.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 5 to 7.—First Dog Show of the Continental Kennel Club at Denver, Col. A. L. Weston, Secretary.

Dec. 9 to 14.—Fourth annual show Northern Illinois Poultry and Pet Stock Association, Rockford, Ill. John Teague, Secretary.

Jan. 6 to 11, 1890.—Annual Dog Show of the Michigan State Poultry and Pet Stock Association, at Bay City, Mich. W. F. Brace, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 18 to 21, 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mills Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

THE INDIANA FIELD TRIALS.

[*Concluded from Page 352.*]

THE MEMBERS' STAKE.

Judges, P. T. Madison and A. J. Gleason.

ESTHER AND HOOSIER HARRY.

Mr. J. M. Freeman's blue belton bitch Esther (Doncaster—Eudora) and Mr. H. A. Comstock's liver and white pointer dog Hoosier Harry (Devonshire Sam—Gipsy) were put down on the Phillippi in a stubble at 9 o'clock. Harry was the first to find birds, pointing a covey fairly well, although he was not rigid in his points. Esther backed. Both dogs were steady to shot. In a thicket, on the scattered birds, Esther found and pointed a single nicely, Harry not near enough to back. Freeman surprised himself by killing the bird. Esther retrieved nicely, jumping a high fence with the bird in her mouth. Mr. Comstock claimed two or three points, but, although he produced the birds, the dog wavered on his points, and was not rigid. Esther next found and pointed a bevy, and was steady to shot. The dogs were taken up at 10 A. M. and the heat awarded to Esther.

Mr. J. H. Hunter's orange and white bitch Daisy Hunter (Gath's Hope—Daisy F.) had a bye in this series.

Second Series.

ESTHER AND DAISY HUNTER.

This brace was put down in a ragweed field at 10:20. Daisy showed more range and speed than either of the other dogs. Going down by the side of a ditch Daisy stopped, Hunter claimed a point, but no birds were found. After the dogs had gone on the spectators flushed a covey about forty feet behind where Daisy had pointed. The ditch was crossed and the dogs sent after the scattered birds, but nothing was found. The dogs were brought back into stubble, where Esther found and pointed a bevy nicely, Daisy refused to back and was dropped by her handler, Freeman shot and missed; Esther steady to shot. The birds were followed to the woods, where Hunter claimed a point. Daisy stood wagging her tail, and did not point rigidly. Hunter shot and missed; Daisy steady to shot. Moved on, Esther pointed a single, Daisy backed indifferently, both steady to shot. Moved on, Daisy pointed a single nicely, and was backed by Esther; Hunter shot and killed. Daisy was sent to retrieve and flushed two single birds in doing it. She was held to the road for the dead bird with difficulty, and consumed several minutes in finding the bird. After she found the bird she retrieved it very well. Esther next got a point on a single, Daisy refused to back. When the bird was flushed Esther dropped to wing. The dogs were taken up at 11:20, and the heat and first prize, a handsome silver cup, awarded to Esther.

The next brace, Daisy Hunter and Hoosier Harry, were called to run for second honors; Daisy Hunter not appearing at the expiration of twenty minutes, the heat and second prize (Mr. B. Waters's book) were given to Hoosier Harry.

SUMMARY.

BICKNELL, Ind., Nov. 1, 1889.—Members' Stake. Each dog to be handled by owner, a member allowed to enter one dog only, which must be owned by the member ninety days preceding Nov. 1. First, silver cup (the club trophy); second, Mr. B. Waters's book, which was kindly donated by the author.

First Series.

Mr. J. M. Freeman's blue belton setter bitch Esther (Doncaster—Eudora)

beat

Mr. H. A. Comstock's liver and white pointer dog Hoosier Harry (Devonshire Sam—Gipsy).

Mr. J. A. Hunter's orange and white setter bitch Daisy Hunter (Gath's Hope—Daisy F.), *a bye.*

Second Series.

Esther beat Daisy Hunter, and won first.

Third Series.

Hoosier Harry beat Daisy Hunter (absent), and won second.

The All-Aged Setter and All-Aged Pointer stakes were filled with exceptionally fine workers, the work in some of the heats being the best I have ever seen. Especially is this true in the case of the two winners, Dashing Dixie and Ossian. I will speak of the work of the dogs further on. There were more people on the grounds during the trials than I have ever seen at any similar meeting. I noted the following gentlemen in attendance from abroad: Gen. W. B. Shattuc and C. W. Paris, Cincinnati; D. E. Rose, Lawrenceburg, Tenn.; G. R. Howse and W. B. Stafford, Trenton, Tenn.; H. J. Gleason, Alma, Kan.; S. J. McCartney, Forest, O.; P. T. Madison, Royal Robinson, R. P. Daggett, H. A. Comstock, Wm. Kerr, J. H. Kerr, W. G. Griffith, F. W. Samuels, W. B. Allen, Indianapolis; Ed. S. Shultz, Attica; H. A. Foulks, B. Kuhn, Harry Foulks, J. A. Balmer, P. Tindolph, Dr. McDowell, Wm. McAndrew, L. A. Weis, Robt. Glass, Pat Galager, Sam'l Gimble, Eugene Hack, H. J. Hellert, H. Hackman, Hon. Frank Murphy, John Creamer, John Kirk, Ed. Linler, Mr. Ditterman, T. P. Agnew, Dan Atton, Jas. Harris, Vincennes; W. H. Shawhan, Petersburg, Ind.; E. W. Erwin, G. A. Webb, J. B. Stoddard, Koutz, Ind.; W. B. Shepherd, Geo. W. Ballou, Carlisle, Ind.; J. A. Hunter, Sandborn, Ind.; J. H. Hunter, Washington, D. C.; J. W. Patterson, Noblesville, Ind.; C. W. Barker, Majors, Neb.; J. L. Barker, Racine, Wis.; N. B. Nesbit, Chesterville, Miss.; Frank Richards, Stewart, Minn.; B. Waters, C. P. Doer, J. B. Turner, Thos. S. Bell, Chicago; R. B. Morgan, Akron, O.; Geo. W. Ewing, Ft. Wayne, Ind., and many others, who seemed to take a deep interest in the trials. The judging, upon the whole, was good, although I did not agree with the judges in every particular.

Esther, the winner in the Members' Stake, is a blue belton English setter of about fifty pounds weight. She was bred by the late Arnold Burges, and is by Doncaster out of Eudora. She is used by Mr. Freeman as a brood bitch, and his private shooting dog. She is kind and obedient, and makes a nice companion; her puppies will hereafter be greatly sought after, as she is (besides being the winner of first in the Members' Stake) the mother of Lilly Burges, the winner of the Setter Derby.

Hoosier Harry, the winner of second, is a very handsome, large-sized liver and white pointer, and is highly prized by his owner as a companion and private shooting dog.

Lilly Burges, the winner of first prize in the Setter Derby, is a beautiful orange and white bitch, weighing about thirty-eight pounds. She works with a high head and merry tail, has a good nose, and knows how to use it. She displayed wonderful intelligence in her work, and won on her merits; she was ably handled by her breaker, Mr. Frank Richards, who made his initial bow as a handler at this meeting. I bespeak for him a bright future in his chosen profession. Lilly Burges was bred by Mr. J. M. Freeman, of Bicknell, Ind., and sold by him to Mr. P. T. Madison, of Indianapolis, who in turn presented her to his friend, the late Geo. N. Whitely, of Helena, M. T.

Nannie B., the winner of second prize, is a lemon belton of about 38lbs. weight, is very speedy and a good ranger, with the exception of her tail (which is of the foxhound order) she is a stylish little bitch.

Hope's Ray, the winner of third prize, is a handsome black, white and tan dog, weighing about 50lbs.; he has a good nose and is a clipper on single birds, especially in the woods. If his handler succeeds in getting him under thorough control he will be a dangerous dog in future trials.

DOGS IN THE POINTER DERBY.

Pearl's Dot, the winner of first, was rightly placed, as she was by far the best dog in the stake; she is a beautiful animal, liver, white and ticked, works with a high head and a merry tail, and is very stylish on point; if she were trained on she would make it hot for the winner next year.

Thomastone, the second prize winner, is a stylish little liver and white dog, not yet one year old. If Mr. Gleason works him until next year and starts him in the All-Aged Stakes you will hear from him again.

Fancy Free, the third prize winner, is like the others in this stake, she needs work to bring out her merit. Should her owner decide to have her trained on I will expect to see her among the winners next year.

ALL-AGED SETTERS.

Dashing Dixie, the winner of first prize, is a beautiful blue belton English setter weighing about 40lbs., she is a wide and fast ranger, works her ground systematically, and is under perfect control; she is what I term a high class field dog. She was ably handled by Mr. Gleason who knew his dog thoroughly. With the exception of the work done last year by Bohemian Girl, Dashing Dixie has shown better work than any setter that has ever started on this club's grounds; I look upon her work as equal in every respect to that of Bohemian Girl.

King's Mark, the winner of second prize, has often been described in your columns, he is now a much better dog than he was last year, and is a dangerous dog in any company; keep an eye on him.

Maud, the winner of third prize, is a very pleasant bitch, black, white and tan in color, is thoroughly broken, and has a great deal of confidence in her own ability. If she had more range and speed, she would be a good one. She is a little clipper on single birds.

Dan Gladstone, who divided fourth prize, is a beautiful little black, white and tan dog, and is just such a dog as any gentleman would feel proud to own. I can imagine few greater pleasures than a day's shooting over Dan.

Blue Mark, the other fourth prize winner, is a blue belton with much merit, he ranges wide and fast, has a good nose, and hunts in likely places for the birds. If he can be brought to thorough staunchness he will make his mark in future trials.

ALL-AGED POINTERS.

Ossian, the winner of first prize, has often been described, and is well known throughout the country as a winner, having been placed third in the Eastern Derby in 1887, third in the same club's All-Aged Stake in 1888, and second in the Southern trials in 1888. In these trials, as in all his former races, he was handled by his breaker, Mr. D. E. Rose, of Lawrenceburg, Tenn. Ossian displayed wonderful judgment in his work, seeming to know just where to look for birds. In his first heat he did not make a mistake, and scored 100. It was remarked by many that he was by far the best dog started in the trials. One of the judges said, after the trials were over, that he was the best dog that started in either stake, and was the highest-class pointer he had ever seen. Mr. Madison took Ossian home with him, and he will not appear in public trials again, but will be placed in the stud and used by his owner in his private shooting.

Lord Graphic, the winner of second prize, has improved wonderfully in Morgan's hands. If Morgan continues with this dog as he has started, his owner will have no grounds for complaint of his handler.

Bannerman, the winner of third prize, is a nice little black and white dog, has considerable range and speed, and works very nicely on scattered birds. If he were a little more careful in his covey work, he would be much more valuable.

Tamarack, the winner of fourth prize, I look upon as the second best dog in the stake, as far as natural ability goes. He is a very stylish little follow; but is very nervous, and in consequence is unsteady at times to shot and wing. If he can be brought under complete subjection, he will make a dog fit to go with the good ones.

ALL-AGED SETTER STAKE.

Preliminary Series.

The rules require each dog to score 65 per cent. to remain in.

STUBBLE AND BABE GLADSTONE.

Mr. J. D. Sperry's Gordon setter dog Stubble (Malcolm—Dream IV.), handled by S. J. McCartney, and Mr. N. N. Nesbit's lemon and white bitch Babe Gladstone (Paul Gladstone—Bessie A.), were cast off in a ragweed field at 11:05. Stubble pointed a covey within thirty yards of where he was put down; Babe across ravine backed in fine style, McCartney shot and missed, Stubble going very fast got out of sight in another field, Babe roaded and pointed a covey, Stubble coming back was brought around to back, which he did indifferently, Nesbit shot and missed. In another field both dogs pointed, backed and roaded alternately; the field was full of chickens, which the judges decided the dogs were working on; Stubble was seen in high weeds just as a covey flushed therefrom, Babe ran into edge of cornfield, pointed nicely, and was steady to wing. Dogs taken up at 11:35. Both dogs scored. In style they were equal, Babe had the advantage in speed and range.

FRIDAY, NOV. 8.

DAN GLADSTONE AND NOBLE DIDO.

The rain which began falling yesterday at noon had ceased, and the trials were resumed by starting the first brace down. Col. J. W. Renfroe's black, white and tan dog Dan Gladstone (Gladstone—Sue), handled by D. E. Rose, and Gen. W. B. Shattuc's black, white and tan dog Noble Dido (Count Noble—Dido II.), handled by J. B. Stoddard, were put down in a stubble field on the Bunting farm at 8:30. Mr. Madison, having sufficiently recovered from his recent illness, resumed his position as judge in this heat. In nine minutes the judges flushed a covey in the stubble, which went to the woods. The birds were followed, Noble soon pointed a rabbit in a bunch of briers, Dan backed nicely. Being sent on, Noble pointed in or near briers, Dan coming up pointed on the opposite side of the patch, Stoddard shot and killed, Noble retrieved nicely. Moving on, Dan located and pointed a single, Rose shot and missed, Dan steady to shot. Noble pointed in fence corner, Dan backed, no birds were found to the point. Next Noble pointed a single, and dropped to wing. The dogs were taken up at 9, both dogs scoring. In speed and range Noble had the advantage; they were equal in style.

MAUD AND COUNT ERIE.

Mr. Bert Crane's black, white and tan bitch Maud (Dog Whip—Juno II.), handled by N. N. Nesbit, and Mr. W. H. Daley's black, white and tan dog Count Erie (Count Noble—Fannie W.) were put down where last brace finished at 9:05. Count flushed a bevy in fence corner and jumped to catch a bird when they flushed. The birds were followed to thicket, where Maud pointed a single nicely and Count backed; both dogs steady to wing. On side of hill Maud pointed and was slightly unsteady to wing; she pointed again on foot scent, birds flushing wild several yards ahead. Passing on Count pointed and Maud backed; nothing was found to the point; then Maud roaded to a point and was steady to wing. She again pointed a single near a fence; Nesbit shot and killed; Maud retrieved nicely, but was slow in finding the dead bird. The dogs were taken up at 9:51, Maud scoring, Count failing. In speed and range they were equal; in all else Maud was very much superior.

DASHING DIXIE AND KING'S DAN.

Mr. W. G. Peter's blue belton bitch Dashing Dixie (Dashing Dale—Dashing Model), handled by A. J. Gleason, and Mr. G. W. Ewing's black, white and tan dog King's Dan (King Noble—Elsie Belton), handled by W. B. Stafford, were cast off in a clover field at 10:03. The spectators flushed a covey in seven minutes; the birds were followed; Dixie pointed a rabbit; Gleason ordered his dog on, and when she moved, a covey flushed in front of her. They were followed, Dan pointed a single and Dixie backed; Dan broke his point, moved on and flushed the birds. Then Dixie pointed and Dan backed; Gleason shot and killed. When Gleason ordered Dixie to retrieve, Dan rushed in to get the bird, he was brought back by his handler with difficulty; then Dixie went out and retrieved handsomely. Going on Dan flushed a single. The dogs were taken up at 10:40, both scoring. In style, range and speed they were equal, but Dixie had decidedly the best judgment and was better broken.

SAM C. AND DOT BELTON.

Mr. J. I. Case, Jr.'s black, white and tan dog Sam C. (King Noble—Cricket), handled by C. W. Barker, and Mr. Clarence Swanman's blue belton bitch Dot Belton (King Noble—Elsie Belton), handled by Frank Richards, were put down in weed field at 10:52. Going into brush, both dogs pointed foot scent, a single bird flushed wild ahead of the dogs. Dot pointed in fence corner and moved on. Going to another field, Dot false pointed and Sam backed indifferently. Dot then pointed, moved up, roaded, and located a bevy, and was steady to shot. The birds were followed to the woods. Dot made another false point, then she pointed a single, and Sam, instead of backing, moved in ahead and stole the point; Barker shot and killed, Sam retrieved. The dogs were now taken up. After lunch, which lasted thirty minutes, the dogs were put down again. They both pointed where chickens and turkeys had been, and moved on. Sam soon pointed a covey and dropped to shot. They were taken up at 12:09, Sam scoring, while Dot was dropped out. In style, speed and range Sam had the advantage.

KING'S MARK AND BEAUMONT.

Mr. J. I. Case, Jr.'s black and white dog King's Mark (King Noble—Belle Belton), handled by C. W. Barker, and Mr. H. R. Huntington's black, white and tan dog Beaumont (Prince Royal—Nettie), handled by R. B. Morgan, were put down in a stubble field at 12:12. Beau soon pointed and Mark backed; Beau moved on after finding he was mistaken. Mark pointed, Barker shot and killed, Mark retrieved nicely, jumping a high fence with the bird in his mouth. Being sent on in stubble, Beau pointed and moved on; Mark flushed a single and dropped to wing. Going into woods Mark pointed in leaves, Beau backed 30yds. away. Sent on, Beau pointed, Morgan shot and killed, Beau retrieved badly. Beau pointed again near fence, and moved on. The dogs were taken up at 12:50, both dogs scoring. In speed and range they were nearly equal, but Mark was superior in style, both on point and in motion.

BLUE MARK AND NANNIE B.

Mr. Frank Richards's blue belton dog Blue Mark (Gath's Mark—Lufra), handled by owner, and Mr. J. I. Case, Jr.'s lemon belton bitch Nannie B. (King Noble—Queen Vashti) were put down in an apple orchard at 12:55. Going through orchard into stubble, Mark jumped into a fine covey point, Richards shot and killed, Mark was slightly unsteady to shot, but he retrieved nicely; Nannie on the opposite side of the field pointed a covey at the same time. Nannie was

steady to shot; being brought together the dogs were sent away; Nannie soon pointed in or near briers; a rabbit ran out; Mark backed poorly; the dogs next worked on after scattered birds. Nannie first pointed falsely, then pointed a covey, and Mark did the same. Mark now moved up when Richards went in to flush, and refused to stop at command; Richards caught and dropped him. Crossed over fence to weeds where Nannie got two single points and Mark one; Nannie retrieved to Barker's kill. The dogs were taken up at 1:30, both dogs scoring. In style, range and speed they were about equal, except on point, where Mark had a decided advantage.

PRINCE ROYAL H. (A BYE) AND HECTOR.

Mr. Fred H. Kennedy's black and white dog Prince Royal H. (Royal Ranger—Daisy Queen), handled by G. R. Howse, was put down against Hector in an orchard at 1:50. The spectators soon flushed a covey; the birds were followed, Hector pointed, Prince backed indifferently, nothing found to the point. In corner of field Prince flushed a covey, then he pointed a single and was steady to wing. He was taken up at 2:44, failing to score 65 per cent.

First Regular Series.

The drawing for the regular first series brought together as the first brace,

KING'S DAN AND KING'S MARK.

This brace was put down in woods on the Bunting farm at 3:05. Mark went away like a shot, and was seen on a point 200yds. away, in edge of stubble beyond the woods, Dan not being near enough to back; Barker shot and killed, Mark retrieved nicely. Being sent on, Mark pointed again, but nothing was found to the point. Both dogs struck foot scent of birds, and roaded and pointed alternately, but the birds had flown before the dogs arrived. They were ordered into the thicket after scattered birds, where Dan flushed a single, Mark pointed in thicket by side of ditch, nothing found to the point; they were now taken to the woods pasture on the Horn farm, where Dan pointed a covey; Mark backed, Stafford shot and missed, both dogs steady to shot. Dan then pointed and moved one, Mark pointed; Dan coming up refused to back, both dogs roaded and pointed alternately, Mark located and pointed staunchly, and was steady to shot. They were taken up at 3:49, and the heat given to King's Mark, who was superior in style, speed and range, and was very much the better broken.

DAN GLADSTONE AND BABE GLADSTONE.

This brace was put down in woods pasture where last brace finished, at 4:03. Babe bolted, and was gone for 30m.; she was at last found in a cornfield and brought back, and the dogs sent on. Babe soon pointed a single, Dan backed, Nesbit killed, and Babe retrieved; then she pointed again and was steady to wing. Dan then pointed a single; Babe backed a moment then moved on, Rose shot, Dan was slightly unsteady to shot. Passing into stubble on the Phillippi farm, Dan pointed, Rose shot and missed; a dead bird was thrown for Dan to retrieve, which he did fairly well. The dogs were taken up at 5:00, and the heat given to Dan Gladstone. In speed and range Babe had the call, but in obedience and training, Dan had a decided advantge. If Babe could be cured of her bolting she would be a dangerous competitor.

SATURDAY, NOV. 9.

NOBLE DIDO AND BEAUMONT.

Rain prevented going to the fields until after dinner, when it cleared away somewhat, and this brace was put down in a stubble field on the Bunting farm at 1:13. Noble pointed in briers after passing through the stubble, and Beau backed; both dogs moved on and began roading, but neither could locate. Going to orchard on hill, Beau pointed and moved on, Noble scoring a point on a rabbit. Passing out of orchard to stubble, Noble pointed in fence corner and moved on. Going up a hill the handler flushed a covey, Noble got another rabbit point and Beau backed. Going on into another stubble, Beau found and pointed a covey nicely, Noble backed, Morgan shot and killed, and Beau retrieved. Going into another stubble, Beau found and pointed another covey and retrieved a bird to Morgan's kill. The dogs were taken up at 2:26, and the heat given to Beaumont. In speed and range Noble had the call, and had he not been inclined to false point and had been favored with luck in finding birds, the decision might have been different.

MAUD AND STUBBLE.

This brace was put down in stubble where last brace finished, at 2:35. Stubble was the first to find; he located and pointed a covey nicely; Maud coming up, caught scent of the birds just as she saw the dog pointing, and pointed herself. McCartney shot and killed; Maud was slightly unsteady to shot; Stubble retrieved nicely. Maud then soon pointed a single in heavy grass, but when Nesbit went in to flush, she left her position and moved after her handler; they together flushed the bird; Nesbit shot and killed, Maud retrieved. In this point Stubble refused to back, and was dropped; Maud then pointed a rabbit. Going into woods, Maud pointed a single and retrieved to Nesbit's kill. Stubble then pointed a covey and was very unsteady to shot. Passing into stubble field, Stubble flushed a covey that Maud was roading near a fence; Maud dropped to a point just as the birds flushed. Stubble deliberately walked into this covey. The birds were followed to the woods, but could not be found. Going into an orchard on the top of a hill, Stubble flushed a single, and Maud roaded and located a bevy and was steady to wing. The dogs were taken up at 4:03, and the heat given to Maud. In style, speed and range they were about equal.

SAM C. AND DASHING DIXIE.

This brace was put down in a pasture on the Bunting farm at 4:18. Going into stubble, Dixie pointed twice where quail had roosted; Sam backed one of these points indifferently. The dogs were taken us at 4:30, to be put down again Monday morning.

MONDAY, NOV. 11.

The running of this brace was resumed at 8:14. The dogs were cast off in a stubble field on the E. Horn farm. Sam going down a path near a fence pointed; before Barker could get to him he broke his point and ran into a covey. Going into another stubble Dixie took a wide cast to the left and pointed a covey. Gleason going to his dog flushed the covey, which was lying between him and his dog; Dixie was steady to wing. While Dixie was on his point Sam flushed a covey going up wind; the dogs were sent after the scattered birds; Sam made another flush, Dixie scoring a point on a single, which she retrieved nicely to Gleason's kill. The dogs were taken up at 8:53 and the heat awarded to Dashing Dixie. Sam had the greater speed and range, but Dixie was far superior in style, obedience and bird sense.

NANNIE B. AND BLUE MARK.

This brace was put down at 9 o'clock in stubble where last brace finished. Going into another stubble Nannie flushed a single and chased it several yards. Mark pointed a covey and retrieved nicely to Richards's kill. Being sent on both dogs pointed a covey; Barker shot and Nannie retrieved the bird well. Sent on Nannie pointed again, but the birds flushed before the judges got up. She soon pointed again, moved up and pointed; Barker ordered her on; she was undoubtedly pointing foot scent. Mark pointed, moved on, roading, the bird flushed wild 10yds. ahead. Being sent in by Richards he soon located and pointed a covey nicely. The dogs were taken up at 9:30 and the heat given to Mark. In speed and range they were equal, but Mark had the call in style and bird sense.

Second Series.

KING'S MARK AND DAN GLADSTONE.

This brace was put down in stubble field on west end of Horn farm at 9:48. Mark dropped to a point, soon discovered his mistake and moved on. Passing into woods Dan made game, but could not locate it. Mark coming up pointed and Dan backed, both steady to wing. Going across the fence Mark pointed and Dan backed nicely; Barker failed to flush his bird. They were sent on, and both handlers called point at same time; a single bird was flushed in front of the dogs. In briers Rose flushed a covey before he saw his dog on the point. Going on Dan pointed, and birds flushed wild almost instantly. Going on both dogs got a single point; Mark retrieved to Barker's kill; Rose shot and missed. Being sent on Mark pointed, the bird flushing wild behind him; then Dan pointed and Mark backed; several birds were flushed, both dogs were steady. Then Mark pointed and Dan backed poorly. Going on Rose walked into a covey; Mark pointed, Barker failed to flush. Sent on Mark pointed again, but nothing was found. Further on Mark pointed a covey nicely and won. The dogs were taken up at 10:34. In range Mark had the advantage, but Dan was the best in style and obedience.

BEAUMONT AND MAUD.

This brace was put down in a stubble field at 10:36. Maud soon pointed, Beaumont backed indifferently; the point proved a false one. Beaumont then pointed and moved on. A covey was seen to flush from a cornfield, Beaumont came out of the corn, but whether he flushed or not could not be determined. Going into stubble Beaumont pointed and Maud backed; Beaumont moved on; both dogs began roading, but could not locate anything. Passing into woods Beaumont pointed in briers and dropped to shot. Going on both dogs pointed at the same time, nothing was found to the point; then Maud pointed a single and retrieved nicely to Nesbit's kill. Then Beaumont pointed. When Morgan went in to flush, Beaumont broke his point, rushed in and flushed the bird. Morgan shot and missed. Maud backed this point nicely. The dogs were taken up at 11:16 and Maud was awarded the heat. In range and speed Beaumont was the better, but in style, obedience and bird sense Maud was far superior. An adjournment was taken for lunch.

BLUE MARK AND DASHING DIXIE.

This brace was put down in a clover stubble at 12:30. Mark soon pointed covey in fence corner, and was steady to shot, Dixie not near enough to back. The birds were followed. Dixie was first to point a single, Gleason shot and killed, Dixie retrieved nicely. Then she pointed another single and was steady to wing. She again pointed a single, and was steady to wing. Dixie then pointed in a ditch; the birds flushing almost instantly. Mark then pointed a single in the briers. Just as the bird flushed crossing the fence, Dixie pointed a single, then she scored two single flushes going down wind; the birds were followed to woods, where Mark pointed three or four birds in a brush pile, and was backed by Dixie; Richards shot and killed, the bird falling across the fence; Mark was not requested to retrieve, but he did so when, with his handler, he crossed the fence. Passing through thicket Dixie stopped in briers just as a single flushed; this was considered an excusable flush. Crossing a stubble a covey was seen to flush across and near a fence in the briers. At this instant Gleason called point. When the judges got up Dixie was standing with her head turned around almost to her tail, pointing, Mack was backing; Gleason flushed a covey which was behind his dog. There were undoubtedly two coveys here, one on each side of the fence, and Dixie was clearly entitled to a point on the covey which Gleason flushed. Both dogs were steady to wing. The dogs were sent on a circuitous route in order to give them the benefit of the wind. In going Dixie took a short cast to the right and pointed in a fence corner, Mark was slightly unsteady in his back, Gleason shot and missed, both dogs were steady to shot. The dogs were taken up at 1:23, and the heat given to Dashing Dixie.

Third Series.

KING'S MARK AND MAUD.

This brace was put down in stubble where last brace finished, at 1:37, and was judged by Robinson and Madison. Dashing Dixie having the bye, was put down at same time with Dan Gladstone, and was judged by Judge Freeman, who reports that she ran a brilliant heat, not making an error. The rules require the bye dog to run a side heat for the same length of time that the dog does against whom she will come against in the next series. Maud pointed a covey in a brush pile, Mark backed; the birds were followed along a ditch, where Mark pointed a single; he next pointed on side of hill, Maud backed, nothing was found. Then Maud pointed a rabbit and Mark backed. The dogs were now taken across a barren field and put down in a stubble. A covey flushed near a stump, Nesbit claimed a point, but the judges were not near enough to see. Further on Mark pointed a covey near a fence, and retrieved nicely to Barker's kill. The dogs were sent into the woods after the scattered birds. Maud pointed a single and was steady to wing, then she pointed another and retrieved nicely; Mark was slightly unsteady to back. Maud pointed and moved on; Mark flushed a single, then false pointed; Maud pointed; Mark coming up forced ahead and pointed; both steady to wing. Then Mark pointed and moved on. Soon after he pointed a single nicely, and Maud backed; then Mark flushed three birds and dropped to wing; he then pointed in close proximity to Judge Robinson, who stepped aside, and the bird flushed. He again pointed a single and was steady. Mark then false pointed, and Maud did the same. Maud then pointed a rabbit and Mark backed. A covey flushed wild, which Mark had been roading, and settled on hillside. Mark crossing the ravine, pointed the covey staunchly and won. They were taken up at 3:08. In range and speed Mark was superior, but in style and obedience Maud had the advantage.

Fourth Series.

KING'S MARK AND DASHING DIXIE.

The rules say no dog shall be compelled to run three successive heats the same day without the consent of its handler. Mr. Gleason waived his right in this matter, and started his dog. By doing so he exhibited his wisdom, as Dashing Dixie showed up in fine form, while King's Mark was very weary.

The dogs were put down in a stubble on the Horn farm at 3:50, and had not gone over 75yds. when Dixie wheeled into a beautiful point on a covey; Mark cut in across her and pointed a single outlying bird of the covey; Dixie retrieved to Gleason's kill. Being sent on Mark pointed, moved up and located a covey; Dixie coming up on the side, pointed an outlying bird of this covey; Mark retrieved the dead bird nicely. The birds, scattered in an open stubble with very little cover, the dogs were sent in after them, and Dixie soon pointed. Gleason failed to flush, but King's Mark coming up flushed the bird and jumped to catch it when it flew. Dixie then pointed a single in fence corner, and was steady. Mark then pointed a single and was handsomely backed by Dixie, then Dixie pointed a single near the fence; Gleason flushed the bird, which flew toward Judge Freeman, who killed it with his hand. The dogs were taken up at 4:18, and the heat and first money given to Dashing Dixie. In range, speed, style, nose and bird sense as shown in this heat, Dixie was superior. This ended the running of the All-Aged Setter Stakes.

SUMMARY.

Preliminary Series—The rules require each dog to score 65 per cent. to remain in.

BICKNELL, Ind., Nov. 11.—Indiana Kennel Club's All-Aged Setter Stake; open to all setters that have never won first prize in any All-Aged Stake in any recognized field trial in the world; $10 to enter and $15 to start. After deducting expenses 40 per cent. to first, 30 per cent. to second, 20 per cent. to third, and 10 per cent. to fourth; closed Oct. 1 with 29 nominations.

Mr. N. B. Nesbit's lemon and white bitch Babe Gladstone (Paul Gladstone—Bessie A.) and Mr. J. D. Sperry's Gordon setter dog Stubble (Malcolm—Dream IV.). Both scored.

Gen. W. B. Shattuc's black, white and tan dog Noble Dido (Count Noble—Dido II.). and Col. J. W. Renfroe's black, white and tan dog Dan Gladstone (Gladstone—Sue). Both scored.

Mr. Bert Crane's black, white and tan bitch Maud (Dog Whip—Harrison's Juno II.) and Mr. W. H. Daley's black, white and tan dog Count Eric. Maud scored, Count Eric failed.

Mr. W. G. Peter's black and white bitch Dashing Dixie (Dashing Dale—Dashing Model) and Mr. Geo. W. Ewing's black, white and tan dog King's Dan. Both scored.

Mr. J. I. Case, Jr.'s black, white and tan dog Sam C. (King Noble—Cricket) and Mr. C. Swanman's blue belton bitch Dot Belton (King Noble—Bessie Belton). Sam scored, Dot Belton failed.

Mr. J. I. Case, Jr.'s black and white dog King's Mark (King Noble—Belle Belton) and Mr. W. R. Huntington's black, white and tan dog Beaumont (Prince Royal—Nettie). Both scored.

Mr. Frank Richards's blue belton dog Blue Mark (Gath's Mark—Lufra) and Mr. J. I. Case, Jr.'s lemon belton bitch Nannie B. (King Noble—Queen Vashti). Both scored.

Mr. Fred H. Kennedy's black and white dog Prince Royal H. a bye (Prince Royal—Daisy Queen). Failed to score.

The judges then announced the winners. Dashing Dixie first, King Mark second, Maud third, Blue Mark and Dan Gladstone divided fourth.

This finished the running for the day.

TUESDAY, NOV. 12.

THE ALL-AGED POINTER STAKE.

Mr. P. T. Madison having a dog in this stake, Mr. A. J. Gleason was selected to act as judge with Mr. Robinson and Mr. Freeman. The drawing brought forth nine starters out of fourteen nominations.

TOPSY W. AND BANNERMAN.

Dr. J. E. Link's black pointer bitch Topsy W. (Sweep—Lady Pape), handled by W. B Stafford, and Mr. C. E. Michel's black and white dog Bannerman (Osborn Ale—Keswick), were put down in a rag weed field on the Phillippi farm at 7:56. This field being drawn blank, they were sent through a woods to a stubble on the north side of the railroad. In the corner of this field Topsy pointed, moved on, roading and pottering on a piece of ground not over 30ft. square, for fully five minutes, without locating anything. Bannerman had made a cast to the north side of the field where he made game, and in roading he flushed a covey which went to the woods; the dogs were sent into the woods after the scattered birds, Bannerman pointed and moved on, both dogs passed by birds without pointing, that were afterward flushed by the spectators; considerable time was spent in this woods before a point was established, Bannerman at last pointed a single and was backed by Topsy; Nesbit shot and missed; the dogs were steady to shot. Bannerman then pointed again and was steady to wing, then he false pointed, and was backed by Topsy; then he pointed another single, and was unsteady to wing. Topsy then false pointed, and the dogs were taken up at 8:59, Bannerman had some style, speed and range, Topsy had neither.

RODMAN AND TAMARACK.

Mr. W. B. Allen's liver and white dog Rodman (Rod—Belle), handled by W. B. Stafford, and Mr. Frank Billings's liver and white dog Tamarack (Tam O'Shanter—Croxteth Rival Queen), handled by J. B. Stoddard, were put down in a stubble at 9:26, which was drawn blank. Passing into woods pasture on the Horn farm, Rod pointed and Tam backed. Rod moved on after finding his mistake. Going into stubble, both dogs made game; Rod located and was unsteady to shot; Tam at the same time pointed, but nothing was found to the point; Rod retrieved to Stafford's kill, but was very slow in doing so. The scattered birds were followed; Tam soon pointed, but when Stoddard went in to flush, Tam broke his point and followed his handler; nothing was found to the point. While Stoddard was doing this, Rod swung into the left and pointed a covey, which flushed wild. Then Tam pointed and Rod refused to back, ran in and flushed two birds. Going into woods after scattered birds, Rod pointed and Tam backed. Both dogs moved up, and began roading and pointing alternately until they flushed the birds. Going on, both dogs passed by birds which they should have pointed. Near a brier patch Tam pointed and Rod backed indifferently; the point proved false. Further on Tam pointed in briers; Stoddard shot and missed. They were taken up at 10:13, both scoring. In style on point and in motion Tam was superior. In range and speed they were about equal.

ROD'S GAL AND OSSIAN.

Dr. John E. Link's liver and white bitch Rod's Gal (Rod—Juno) handled by W. B. Stafford, and Mr. P. T. Madison's liver and white dog Ossian (Croxteth—Amine) handled by D. E. Rose, were put down in stubble on the Bunting farm at 10:24, which was drawn blank. Passed through woods pasture to stubble on the Horn farm, Ossian ranging wide and fast, found and pointed a covey in corner of the field, Rose shot and killed. When Ossian was sent to retrieve, he found and brought in the bird tenderly. The birds having gone to the corn they were not followed. The remainder of the stubble was drawn blank. The dogs were now taken up, and a cornfield passed before the dogs were again sent on. Arriving at a stubble which adjoined a cornfield on the west, the dogs were put down in the south end of the field, the wind at this time was coming from the southwest. As soon as the dogs were told to go, Ossian went away like a shot, running close to the corn, evidently intending to go to the north end of the stubble, and work back against the wind; he had not gone over 75yds. when he caught the scent of a covey to his left in the stubble. He had probably gone past the birds 20ft. before he got the scent, he was in air at the time, and before he struck the ground he had turned completely around and alighted with his nose to the birds. He was going with such force, that when he struck the ground he slid backward at least 4ft., tearing up the ground with his toenails. He stood perfectly rigid until after the birds had been flushed by Rose, and he was told to go on. After he had gone on, the spectators examined the spot where he had alighted on his point, and the earth looked as if a gardner had been at work there with a rake. Going into oak woods after scattered birds, Rod's Gal pointed two birds in briers, Ossian backed staunchly, 75yds away. Sent on, Ossian going across wind jumped into another of his stylish points; Rod's Gal refused to back, went in and flushed the bird, Ossian dropping to wing. Ossian's work in this heat was the finest ever seen on the club's grounds. Up at 11:25. Both dogs scored.

REXIMUS AND LORD GRAPHIC.

Mr. W. B. Stafford's liver and white dog Reximus (Mainspring—Dell) handled by owner, and Dr. J. R. Daniel's liver and white dog Lord Graphic (Graphic—Daphne) handled by R. B. Morgan, were cast off in a stubble at 11:38. Reximus

flushed a covey in corner of the field at 11:47. The dogs were sent after the scattered birds; Rex flushed a single, Graphic pointed a single and dropped to shot. Passing on Rex pointed a single and was backed by Graphic, Stafford shot and killed, Rex retrieved poorly. Sent on Graphic pointed near a straw stack; Morgan failed to flush. Going back into stubble Graphic pointed a single nicely and was backed by Rex. When Morgan shot Rex broke shot, but was brought back by command of Stafford. Graphic was then sent to retrieve the bird, which he did nicely. Going on in stubble Graphic flushed a single which he should have pointed. The dogs were taken up at 12:17, Graphic scoring, Rex failing. In style, speed and range Graphic was superior.

RANK (A BYE) AND TOPSY W.

Mr. W. B. Stafford's black dog Rank (Manimus—Lady Pope), handled by owner, was put down in stubble with Topsy W., also handled by Stafford, to run a heat. At 1:11, not finding any birds in this field, they were taken to the stubble at the west end of the Horn farm and started again. The spectators flushed a covey, which went to the woods and corn. In going to woods after scattered birds Rank pointed a covey in fence corner. When Stafford went in to flush the birds Rank left his point, went in and flushed; Stafford shot and killed, the bird falling across the fence; Rank retrieved fairly well. Passing on Topsy pointed covey near the woods; both dogs dropped to shot at command, Topsy retrieved badly. Going to woods Topsy flushed a single, Rank did the same. Then Topsy pointed, Rank refused to back, went in and flushed the bird. Taken up at 2:43, Rank failing to score. He had some range and speed, but very little sense.

First Regular Series.

RODMAN AND BANNERMAN.

This brace was put down in stubble at 3:10. Both dogs ran into and flushed a covey that they should have pointed. Bannerman next pointed a single in fence corner, and Rod backed. Nothing was found to the point. Moving on, Bannerman pointed a single, and was steady to wing. Rod pointed a rabbit. The dogs were taken up at 3:25 and the heat given to Bannerman. In range and speed they were equal, but in style, in motion, and on point Bannerman had the call, he was also superior in nose and obedience.

LORD GRAPHIC AND TAMARACK.

This brace was put down in stubble on the east end of the Horn farm 3:42. Tam found and pointed a covey in fence corner near a thicket, Graphic backed poorly. In the thicket each dog flushed a single, Tam very unsteady to wing. Going on both handlers claimed point, but before the handlers could flush, the dogs moved on. Then Graphic false pointed. Going back into weed field, which was crossed without anything being found therein, Tam jumped the fence and a covey flushed ahead of him and went to the woods. The dogs were sent into the woods after the scattered birds, both dogs pointed at same time; the birds were running and the dogs moved on. Tam located and pointed a single, Graphic not up to back, Stoddard shot and killed the bird, which fell over the fence. Tam retrieved well. While Tam was retrieving, Morgan let Graphic go over the fence, where he pointed a single. Morgan shot and killed. Graphic, after considerable searching, in which he was ably assisted by Morgan, retrieved the bird. On in woods Graphic ran into the main part of the covey and flushed them, but dropped to wing. Being sent on Tam pointed a single. On again he pointed in a fallen tree top, Graphic slipped in ahead and stole the point. The bird flushed, Graphic moved up a few feet, and Morgan claimed a point. Morgan shot and killed, Tam saw the bird fluttering in the leaves about twenty-five yards away, broke in, and ran to the bird, but returned without it after being commanded to come back by his handler; Graphic then was sent on and he retrieved fairly well. On over the field Graphic pointed a single, which was flushed by Morgan. Graphic was steady to wing. Further on Tam pointed a moment before the bird flushed. Sent on, Graphic false pointed. On again, both handlers called point on same bird, the judges instructed Morgan to flush the bird, which he did. The dogs were taken up at 4:13, and the heat given to Lord Graphic. I cannot agree exactly with the judges in this decision. I think the dogs should have been run longer. Tam's unsteadiness and breaking shot is in my opinion offset by Graphic's point stealing and false pointing. In speed and range they were about equal. In style Tamarack was decidedly his superior.

WEDNESDAY, NOV. 13.

OSSIAN AND ROD'S GAL.

This brace was put down in the woods on the Bunting farm at 8:20. Passing into stubble, Gal flushed three birds up wind and dropped. Ossian pointed on foot scent, moved on, roading a running bird. The bird flushed wild 30ft. ahead. Passing on, Ossian pointed a rabbit, which Gal chased when it ran; she, however, stopped to command. In edge of corn Ossian pointed and began roading the birds into the corn; he was called back, as it was impossible to see his work in such cover. Both dogs pointed at edge of corn at same time, and moved on, Ossian made game and roaded a single running bird into bare ground, where it flushed wild. Drawing blank two other fields, the dogs were sent into another field, where the spectators flushed a covey which went to the woods. The birds were followed. Ossian pointed where the birds were seen to drop, moved up, and roaded to a point near a bunch of briers. Two birds were flushed by Rose to the point. Rose shot and missed. Ossian steady to shot. The dogs were taken up at 9:35 and the heat given to Ossian, who ranged fast and wide, and hunted industriously. The condition of the grounds and weather prevented further running, and the judges placed the dogs on the work already done, as follows: Ossian first, Lord Graphic second, Bannerman third, Tamarack fourth.

Thus ended the third annual field trials of the Indiana Kennel Club, which has in many respects been the most successful meeting held by the club.

SUMMARY.

BICKNELL, Ind., Nov. 13.—Indiana Kennel Club's All-Aged Pointer Stake; open to all pointers that have never won a first prize in any All-Aged Stake in any recognized field trials in the world; $10 to enter and $15 to start. Sweepstakes purse. After deducting expenses, 40 per cent. to first, 30 per cent. to second, 20 per cent. to third and 10 per cent. to fourth. Closed Oct. 1 with fourteen entries.

Preliminary Series.—The rules require each dog to score 65 per cent. to remain in.

Dr. Jno. E. Link's black bitch Topsy W. (Sweep—Lady Pape). Failed to score.

Mr. Chas. E. Michel's black and white dog Bannerman (Osborn Ale—Keswick). Scored.

Mr. W. B. Allen's liver and white dog Rodman (Rod—Belle). Scored.

Mr. Frank Billings's liver and white dog Tamarack (Tam O'Shanter—Croxteth's Rival Queen). Scored.

Dr. John E. Link's liver and white bitch Rod's Gal (Rod—Juno). Scored.

Mr. P. T. Madison's liver and white dog Ossian (Croxteth—Amine). Scored.

Mr. W. B. Stafford's liver and white dog Reximus (Mainspring—Dell). Failed to score.

Dr. Jno. R. Daniels's liver and white dog Lord Graphic (Graphic—Daphne). Scored.

Mr. W. B. Stafford's black dog Rank (Manimus—Lady Pape). Failed to score.

First Regular Series.

Bannerman beat Rodman.
Lord Graphic beat Tamarack.
Ossian beat Rod's Gal.

The judges then placed the dogs: Ossian first, Lord Graphic second, Bannerman third, Tamarack fourth.

RICHMOND.

EASTERN FIELD TRIALS.

THE DERBY.

THE weather on Monday was rather unpromising. It rained on Sunday, and the storm had not fully cleared off. The air was raw, the clouds looked cold, and a chilly breeze was blowing from the northwest. The ground was full of water, making the traveling very bad, and the scent during the morning appeared to be poor, but it improved and plenty of birds were found. As a whole the work of the dogs was good and would compare favorably with that of previous years. Messrs. H. B. Duryea, Pierre Lorillard, Jr., and Wm. Tallman judged the stake. Starting from the hotel we drove about one mile to the well-known Glass house, and the first brace were put down in a cornfield at 8:50, Beppo IV. and Flint, both pointers. They did not add to the reputation of the short-haired breed, and at the end of the allotted 45 minutes no work had been done, and they were ordered up and out of the stake for want of merit. The verdict just about covered the ground, and it is unnecessary to go into particulars.

The next brace, Annie F. and the celebrated winner in three foreign countries, Trip of Kippen, made a better showing, although neither exhibited extraordinary speed or range nor anything very wonderful in the way of hunting qualities. Annie is a sweet little bitch, a merry worker, and, taken altogether, is quite a promising puppy. She was not in good form as she had not fully recovered from a spell of sickness. Trip was a disappointment to us. Perhaps we expected too much of him, but his reputation as a winner abroad led us to think that he must be a wonder, but he showed up just as a good fair dog, not fast nor a wide ranger, but with apparently a fair nose, and with more experience he would undoubtedly make a very good working dog; he has no tail action and does not work systematically. In speed and range there was not much difference between them, in way of going and style when on game Annie had the advantage, she also outworked him and showed more bird sense and won the heat.

The next brace, Harry C. and Fannie M., ran a very good heat. Harry is a well-formed, upstanding dog with quite a turn of speed; he runs a bit heavy but shows up well when on game. Fanny is a cobby-built pretty little bitch, quite speedy, a wide ranger, and for her age she shows considerable bird sense. Both pointed and backed nicely and both did very creditable work. Fannie M. won the heat. She is the wider ranger and had the legs of Harry somewhat, although she let down toward the finish, while the long stride of Harry was still carrying him over the ground at a good rate. Fannie also showed the most bird sense.

The next brace, Letty Lynn and Bessie M., also ran a very good heat. Letty is a heavily-marked black, white and tan bitch, well formed, with excellent legs and feet, and with no serious faults in her make-up; she is fast, a wide ranger and shows considerable style. Bessie is also a well-made, taking-looking bitch, an easy mover and she is also stylish. At the start they were about equal in pace and range, but Letty lasted the longer, and before the finish she was working outside and going nearly as well as when she started, while Bessie had let down somewhat. There was not much of a margin, but still we thought Letty fully entitled to her win, as she stayed better, had the better style and was not out-worked.

After the finish of this heat we went to lunch at the Holton school house. At 2 o'clock a start was made, and a few minutes later Sam C. and Rip Rap were put down in the sedge grass. Sam is rather a loosely-put-together dog, above medium in size, fairly fast, but not a graceful mover, as he buck-jumps occasionally. He had a little the best of it among scattered birds, but in other respects he was not up to the pointer. Rip Rap is a fine-looking, up-standing dog, with good head, shoulders, chest, back and loin, and splendid legs and feet. He is quite fast, an easy mover, wide ranger, is stylish when going and on point. Take him all round, he is the best pointer that has shown up for a long time, and does credit to his handler. He won well, having the best of it in pace, range and style, and was not much behind his competitor in work among the birds.

Samoa and Rowdy Rod were next put down in a cornfield on Col. Holton's farm. Samoa is a nicely-made, smooth-looking pointer, fast and stylish, and he ranges well. He is inclined to rake and sometimes potter on foot scent, but upon the whole he is quite a good dog, and gets on his birds in good form. Rowdy is a big little one, with lots of go and bird sense. He moves better than any dog in the stake, and appears to have a good nose. He is also quite stylish, and goes up to his birds in a gamy way that is very pleasing. We consider him as promising a puppy as we have seen in a long time. He won the heat, beating his competitor in pace, range and style, and work on birds, although once or twice he was not quite so staunch on point as he should have been.

The last brace, Nannie B. and Blue Ridge, were put down at 4 o'clock in a large stubble field and worked toward town. Nanny, at first glance, looks weedy, but upon examination she showed up fairly well, her good quarters, legs and feet helping her out. She is fast and ranges well, and appears to have considerable bird sense; her style on point is at times rather queer, as she throws her head well up and curls her tail almost in a circle over her back; this gives her a funny appearance, and is the reverse of stylish. Blue Ridge is a handsomely marked dog, above medium in size, well put together, and has a fair amount of speed, and is quite stylish when in motion and on game. He is inclined to dwell on foot scent, and was unsteady to shot. When his education is finished we shall expect to see something much above the average. Nannie B. won the heat, beating Blue Ridge in pace and range, and in work on game. The dog had much the best of it in style when on game and in way of going. This ended the work for the day and finished the first series. Avent handled Annie F., Harry C., Letty Lynn and Rowdy Rod; Tucker handled Fannie M., Bessie M. and Samoa; Capt. McMurdo handled Rip Rap and Blue Ridge; C. W. Barker Sam C. and Nannie B.; S. W. Everett Beppo IV.; C. E. Buckle Flirt, and John White, Trip of Kippen.

On Tuesday morning the weather was decidedly cold; there was a heavy white frost, a chilly wind was blowing from the northwest, and overcoats were in demand. Just after the deciding heat for first money there was a slight sprinkling of rain, but not enough to cause much inconvenience.

Annie F. and Fannie M. were the first brace on the card for the second series, but Fannie broke away from her handler in the morning and could not be found, and after a short wait it was decided to start the next brace, Mr. Avent, the handler of Annie F., consenting to wait until the last heat of the series, at which time Fannie had not been found, and Annie F. won the heat by default. It was extremely unfortunate that Fannie made her escape, as she was in season and bad results may follow.

It was late when we left town, and it was 8:50 when Letty Lynn and Rip Rap were put down in a stubble field about one mile east of town. Considerable ground was gone over before birds were found, the pointer showing the best speed and range. He was the first to find, pointing a large bevy in good style. Not much work was done on the scattered birds, Letty having a bit the best of it, but scent was evidently bad and the work was not satisfactory. Both behaved well through the heat, pointing and backing in good style, and working out their ground nicely. Rip Rap won the heat, to which he was entitled by his superior pace and range.

The heat between Rowdy Rod and Nannie B. was a very interesting one, both are flyers and went at speed nearly all the time from start to finish, ranging wide and working out their ground very well. At the end of an hour Rowdy was declared the winner. He displayed the better hunting qualities, searching out the likely places and staying out to his work better than Nannie. She followed him too much, and although about his equal in pace she did not hunt with the judgment that he displayed. Both did good work on scattered birds, Nannie having a slight advantage in this respect. In obedience neither was up to the mark, although Rowdy was under fairly good control.

This ended the second series, and only three were left in, Annie F., Rip Rap and Rowdy Rod. The former two were put down a few minutes past 10 o'clock in some weeds just north of the Model farmhouse. At the end of the heat Rip Rap was declared the winner. His pace, range and style were superior, and although Annie outworked him on singles he was clearly a winner. He was a trifle unsteady to wing once or twice, but readily obeyed the order of his handler. He is rather inclined to dwell on foot scent, but upon the whole he behaved nicely. Annie appeared to be better than when she ran her first heat and handled her birds in good style, having a little the best of her competitor in this respect. This ended the first series, Rowdy having a bye.

After lunch, which was taken at the barn of the Model Farm, Rowdy Rod and Rip Rap were put down in the large stubble field south of the house at 1:05. The handlers were instructed by the judges to let the dogs do their work in their own manner, without restraint, except such as was necessary in order to keep them in the right direction. This course is eminently proper, and we believe that better and more satisfactory results would be obtained if handlers were not allowed to assist their dogs, especially when in the vicinity of game. One of the most necessary and important of the qualities that a hunting dog should possess is bird sense, or a knowledge as to how and where to look for game and the proper manner in which to handle it when found. Some dogs possess this quality in an eminent degree and these are the dogs that we are all in search of. Others that are more or less deficient in this respect can be made by judicious handling to show up fairly well, and there is no doubt that in some cases good handling has beaten merit. It is sincereiy to be hoped that in the near future judging at our field trials will in a great measure be confined to the grading of the natural qualities of the dogs according to the merit shown. We would by no means ignore training, as it is of the utmost importance that a dog should be obedient and free from faults, but it should be impossible for a fourth-rate dog to win over a first-class one, simply for the reason that he was better trained, provided that the first class animal was not guilty of serious faults.

But to return to Rowdy and Rip. They have been racing at speed for some time and have covered a lot of ground, hunting out the likely places without a find, nor have they let up in their speed. Rip has just a trifle the legs of his competitor, and is also the more graceful when in motion. Rowdy has the better idea of where the birds should be, and he beats out the good spots in a manner that would do credit to an older dog. As they both swing into a fine thicket Rowdy whirls in beautiful style to a bevy, and a few seconds later Rip comes round and very gracefully honors the point. On the scattered bevy some capital work was done by both, Rowdy having considerably the best of it. At the end of the heat the flag went up for Rowdy Rod, and he was declared the winner of first prize. He is a son of Roderigo, and for three successive years this stake has been won by the sons of this grand dog, all of them from different dams.

The judges selected Harry S. and Nannie B. to run a heat to decide which should compete with Rip Rap for second place. They were put down at five minutes past 2. Nannie had slowed down very much. Her heat with Rowdy had about used her up. Nevertheless she ran gamely and outworked Harry, and won the heat. She was too tired, however, to compete with Rip Rap, and her handler refused to run her. Capt. McMurdo, under the rules, had the option of running them or waiting until the next day, and he very generously agreed to wait till morning. Two heats of the All-Aged Setter Stake were then run, which finished the work for the day.

On Wednesday the weather was fair and delightfully cool for walking and not uncomfortable for those who rode. Rip Rap and Nannie B. were put down at 8:34. Rip came out in better form than in any of his previous heats, doing some capital work and winning the heat and second place. He ranged the wider and showed more bird sense than Nannie. She, however, did some good work on single birds, and ran a good heat. Under the rules, the judges selected Nannie B. for third and Harry S. for fourth place, and the Derby for 1889 was ended. Following is a complete summary:

First Series.

Beppo IV. and Flirt ruled out.
Annie F. beat Trip of Kippen.
Fannie M. beat Harry S.
Letty Lynn beat Bessie M.
Rip Rap beat Sam C.
Rowdy Rod beat Samoa.
Nannie B. beat Blue Ridge.

Second Series.

Annie F. beat Fannie M. by default.
Rip Rap beat Letty Lynn.
Rowdy Rod beat Nannie B.

Third Series.

Rip Rap beat Annie F.
Rowdy Rod a bye.

Final for First Place.

Rowdy Rod beat Rip Rap and won first prize.

Ties for Second Place.

Nannie B. beat Harry S.

Final for Second Place.

Rip Rap beat Nannie B. and won second prize.
Nannie B. was placed third, and Harry S. fourth.

First, Rowdy Rod, $400 and Breeders' Cup; second, Rip Rap, $200; third, Nannie B., $100; fourth, Harry S., $100.

Taken as a whole this Derby was the best we have seen run, and the quality of the dogs was of a high order. The judges accomplished their difficult task in a very acceptable manner, and placed the dogs in their proper order. The high class of the dogs run and the character of their work reflect great credit upon the breeder, and shows conclusively that the improvement of the field qualities of our hunting dogs is steadily going on.

THE ALL-AGED SETTER STAKE.

There were 36 nominations for the All-Aged Setter Stake, 19 of which filled. They were drawn in the following order:

DESMOND II. (C. J. Thompson, Philadelphia, Pa.), red Irish setter, 3yrs. (Frisco—Grouse II.),

against

BETTYE S. (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan English setter bitch, 3yrs. (Roderigo—Bo Peep).

DICK TATE (A. M. Tucker, Charlestown, Mass.), black and white English setter dog, 2yrs. 2mos. (Gus Bondhu—Lady Dixie),

against

WHITIE (H. Merriam, Weston, Mass.), orange and white English setter dog (Gus Bondhu—Myrtle).

ROWDY ROD (Memphis & Avent Kennels, Memphis, Tenn.), black and white English setter dog, Jan. 1888 (Roderigo—Juno A.),

against

NORA (I. N. Cochran, Philadelphia, Pa.), black, white and tan English setter bitch, 4½yrs. (Count Noble—Lit).

TOLEDO BLADE (J. E. Dager, Toledo, O.), black, white and tan English setter dog, 2½yrs. (Roderigo—Lillian),

against

KING LEO (E. F. Thomas, Arapahoe, Col.), black, white and tan English setter dog, 4yrs. (Count Noble—Ruby).

POLLY II. (J. Simpkins, New York), black and white English setter bitch (Josh Whitcomb—Polly),

against

KING'S MARK (J. I. Case, Jr., Racine, Wis.), blue belton English setter dog, 3½ years (King Noble—Belle Belton).

CHANCE (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan English setter dog, 4 years (Roderigo—Bo Peep),

against

ORLANDO (J. Simpkins, New York), black, white and tan English setter dog, 2½ years (Roderigo—Bo Peep).

NORNA (P. C. Ohl, Plainfield, N. J.), lemon belton English setter bitch, 2½ years (Buckellew—Minnetonka),

against

NANNIE B. (J. I. Case, Jr., Racine, Wis.), lemon belton English setter bitch, May 16, 1888 (King Noble—Queen Vashti).

CINCINNATUS (J. E. Dager, Toledo, O.), black, white and tan English setter dog, 2½ years (Count Noble—Dido II.),

against

GUY (Geo. T. Leach, High Point, N. C.), black, white and tan English setter dog, 2½ years (Gladstone's Boy—Lady).

RAPID ANN (W. F. Towner, Danville, Va.), blue belton English setter bitch, 2½ years, pedigree not given,

against

ROI D'OR (O. W. Donner, Boston, Mass.), black, white and tan English setter dog, Jan., 1887 (Roderigo—Bo Peep).

CASSIO (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan English setter dog (Count Noble—Lizzie Hopkins), a bye.

On Tuesday, after the heat between Nannie C. and Harry S., in the Derby, the All-Aged Setter Stake was begun. There were not so many starters as were expected, only nineteen of the thirty-six nominations filling their entry. The judges were Messrs. Hitchcock, Lorillard and Tallman.

First Series.

The first brace were Desmond II., a well-known Irish setter, winner on the show bench, owned by Mr. C. T. Thompson and handled by John N. Lewis, and Bettye S., owned by Mr. Duryea, although the Memphis & Avent Kennels do not deliver her to him until after the field trial season closes. She is the dog that her owner has matched against the pointer bitch Sally Brass II. She was handled by Avent. They were put down at 3:10, and both started at a great pace. Desmond is a very nice-moving dog, with lots of speed and considerable range. At times he showed up quite stylish on game, especially when backing, but some of his points were rather ordinary. Bettye S. is a flyer and no mistake. She ranges wide, too wide for the ground we were working, and was lost to sight twice during the heat, but came round all right. She is a very easy mover and quite stylish when on game. Both pointed and backed nicely. Bettye refused to retrieve, but Desmond brought a bird fairly well. Bettye won the heat, having the best of it in pace, range and style when on game.

The next brace were not flyers and the heat was a bit tedious. Dick Tate, owned by Mr. A. M. Tucker and handled by John Lewis, is a fairly well-formed dog of medium size, he worked steadily, but is slow and did not range very wide. His competitor Whitie ran in the Members' Stake; he was handled by S. C. Bradley. The brace was very evenly matched in speed, range and style. Very little work was done on game, Dick Tate having the best of it and he was awarded the heat. This ended the work for the day.

On Wednesday, after the finish of the Derby, Rowdy Rod and Nora were put down at 9:30 in the sedge field, where the Derby was finished. Rowdy won the Derby, and Nora won third in the Members' Stake; she was handled by Bradley. This heat was run on ground ill-suited to show the qualities of a fast, wide-ranging dog like Rowdy, as the country was broken and nearly covered with thicket. Nora is at home on this ground, as she is not a bevy dog, but on scattered birds there are few that can beat her, as she is very stylish on game and picks up her singles in a masterly manner. Rowdy made a wide cast and was lost sight of by his handler, although he was seen well to the front of the party, hunting out his ground in capital style, but as he did not come round Nora was taken up, and search was made for Rowdy and he was found on point to a bevy, a good piece of work that he got no credit for, as Nora had been ordered up. Rowdy had hunted the ground in front and had passed no birds, at least Nora and the spectators failed to find any behind him. It is true he ranged too wide for the ground he was working, but the blame rests on the country and not on the dog. Nora, until ordered up while a search was made for Rowdy, had worked diligently, but she showed no disposition to go out and search for birds, keeping close to her handler. In the work on the scattered birds Nora had the advantage although both did good work and each pointed, backed and retrieved in the best of style. At the end of an hour Nora was declared winner. We were surprised at this decision as, taking everything into account, it was plain to be seen that in hunting qualities and natural ability Rowdy was greatly the superior, he ranged much the wider and showed lots of bird sense in working out his ground. If the judges ignored the performance of Rowdy previous to the work on single birds or even penalized him for getting lost we do not see how the heat could be decided on the work as it was far from being a true test of the hunting qualities of the dogs, and had a portion of the time spent in working the dogs here and there and back again pottering on singles been devoted to a search for another bevy and a test of the qualities that go to make up a good dog, there would have been something more satisfactory upon which to base an opinion.

It is often the case that in deciding between two dogs the judge has a very difficult task, while one may have done a portion of the work required of him in a faultless or even brilliant manner he may have utterly failed in other respects or have so bungled that his work is comparatively worthless. His competitor, perhaps, has done nothing especially meritorious, but has run his heat in about fourth-class style and has made no serious mistakes. In striking the balance between them it is often a hard matter to decide which of the two is entitled to precedence, and in many cases in the past the winner was selected by counting up the number of points made. Under the old order of things the fact that the winner had made even one more point than his opponent was an unanswerable argument in favor of the justness of the decision, no matter how much he had been beaten in other respects. This was found to be all wrong, and the rules now instruct the judges to grade the dogs by the quality of their work and not by the quantity. Of course if a dog strikes out and finds his birds by searching for them in a workmanlike manner and points them he is entitled to greater credit than if he simply picked up birds that were shown to him. The mere fact that a dog points his birds should have but very little influence in determining the value of his work; it is his duty to point and the manner in which he does it should only be taken into consideration. The dog that points his game at a long distance, and in a gamy, stylish way, is entitled to vastly more credit than the one that waits until the birds are nearly under his nose and then points them in a slovenly manner. In fact pointing should be judged precisely as we estimate backing or retrieving, and that is by the excellence of the performance and not by its frequency. We do not mean that a dog making one or two magnificent points, and then slobbering his birds or flushing those that he should have pointed, is entitled to much credit for his work in this respect as a whole, and more or less work on singles is required to determine this as well as his staunchness and steadiness, but the principal test should be of their hunting and finding qualities. Field trials were established and are ostensibly maintained for the purpose of improving the pointer and setter especially in field qualities. Natural ability to do the work required, sense to do it in the best manner, coupled with proper confirmation and grit to stay up to the finish, are qualities that we all wish to see brought to perfection, and the best way to induce the breeder to strive to produce animals perfect in these respects is to encourage each step in the right direction by a prompt recognition of the merit of an animal that in natural ability and hunting qualities is in advance of his competitors.

The heat between Toledo Blade and King Leo was a very close one. Not much opportunity was given to test the actual hunting qualities of the dogs, as the work was mostly on singles. Both did excellent work that conclusively proved that each both could and would point every bird that he had a fair opportunity on. There was not much difference in speed, range and style, Toledo Blade having a trifle the best of it in these respects, and at the end of a very pretty heat he was declared the winner. Blade was handled by Tucker and King Leo by John Lewis.

At 11:17 King's Mark, handled by Barker, and Polly II., handled by Haight, were put down near where the last brace was taken up. In speed Mark had a slight advantage, although neither was fast. In range they were about equal. Polly had the best of it in style and was far superior to him in bird sense as well as in the quality of her work, and she should have had the heat, but at the end of the allotted 45 minutes King's Mark was declared the winner. It is possible that the judges may have seen Polly do bad work enough to lose; if so, it must have been very poor indeed, as the character of the work done by Mark was decidedly ordinary.

We then went to lunch, and at 1:30 Chance and Orlando were put down. Both are well known field trial winners. Chance was handled by Avent, and Orlando by Haight. This heat needs little description. Chance outclassed Orlando and beat him in all essential points. Chance was rank and not under good control, and did not work out the singles as he should, but his better speed, range, style and quality of work landed him a winner. Orlando showed only fair speed and range, but he worked out his ground very well.

Norna, handled by Lewis, and Nannie B., handled by Barker, were the next brace. Nannie was evidently tired from her work in the Derby, and did not go nearly up to her form in previous heats. Norna showed finer style, but she has no speed nor range, and her work on birds was far from good. Both were very slow at the finish, and the heat was an uninteresting one. Nannie B. deservedly won.

The next brace, Cincinnatus, handled by Tucker, and Guy, handled by Bradley, were put down at 3:37. Both are well known. Cincinnatus ran here in the Derby of 1887, and last year in the All-Aged Stake. Guy ran in the Members' Stake. Cincinnatus has a fair amount of speed, ranges well, and shows considerable bird sense. Guy was under good control for a while, but he finally became a bit wild, and not much could be done with him. Cincinnatus did some good work on birds and was declared the winner.

At 4:36 the last brace of the series was cast off. Rapid Ann was handled by Tucker and Roi d'Or by Buckle. After working half an hour they were taken up to go down again in the morning. Thursday morning it was raining and it was after 11 o'clock before a start was made, and at 11:30 they were put down in an open lot to finish their heat. Birds were found and some uncertain work was done, but everything was wet and scent was evidently poor. When time was up Roi d'Or was declared the winner. Rapid Ann is a heavily marked pretty little bitch with good pace, range and style. She also has considerable bird sense and does her work very well. Roi is a fine-looking upstanding dog with no serious faults in his make up and it would take a good one to beat him on the bench. He is about as good as he looks and beat his competitor at all points except, perhaps, in speed, in which they were about equal. This finished the first series, Cassio having a bye. Following is a summary:

Betty S. beat Desmond II.
Dick Tate beat Whitie.
Nora beat Rowdy Rod.
Toledo Blade beat King Leo.
King's Mark beat Polly II.
Chance beat Orlando.
Nannie B. beat Norna.
Cincinnatus beat Guy.
Roi d'Or beat Rapid Ann.
Cassio a bye.

Second Series.

At 10 o'clock Cassio and Dick Tate were first down at the north end of the Snow farm to run the first heat in the second series. Cassio and his work have often been described in these columns. He was handled by Col. Merriman. He was a good dog and ran his heat well except that he was not quite bold enough on the single birds of the first bevy, which was apparently owing to fear that Lewis was scolding him when he was only trying to handle Dick, who seemed to want to do things his own way. Dick showed up much better than in his previous heat, getting away at a good pace and ranging fairly well, he also did some fair work on birds, but was outclassed by Cassio, who won the heat handily. At the finish of this heat we went to lunch on the Model Farm.

At 2 o'clock Bettye S. and Nora were put down in the field north of the farmhouse. Bettye had the advantage in pace and range, but was evidently a bit off in nose and Nora outworked her on birds and won the heat, which was a very good one, both doing some capital work. Nora was going better than we had seen her and did some brilliant work among the scattered birds.

The next brace was Toledo Blade and King's Mark. Blade had the best of it from start to finish and won handily. He showed better speed and much the best style both in way of going and when on game, and also had the best of it among the singles.

Chance and Nannie B. were next put down. Chance was under good control and ran his heat in good form and won it easily. Nannie went better than in her previous heat, but with such a dog as Chance she had not much opportunity to show her quality. This ended the work for the day which upon the whole was satisfactory in view of the very unpromising outlook in the morning.

Friday morning it was fair and cool, but it soon became cloudy, clearing in the afternoon with a stiff breeze from the northeast, which made it impossible for the dogs to do much with scent, unless directly down wind from the birds. Cincinnatus and Roi d'Or were the first brace put down. In this heat as well as during the day, the judges ordered the dogs hunted to better purpose than had in many instances been formerly done and there was not so much beating out ground without result. Cincinnatus won the heat by superior pace, range and finding ability, although Roi had slightly the advantage on singles, doing some good work. This ended the second series with the result as follows:

Cassio beat Dick Tate.
Nora beat Bettye S.
Toledo Blade beat King's Mark.
Chance beat Nannie B.
Cincinnatus beat Roi d'Or.

In the third series Cassio beat Nora, Chance beat Toledo Blade, Cincinnatus a bye. Fourth series—Cassio beat Cincinnatus, Chance a bye. In final for first, Chance and Cassio, Chance was selected without running. For second, Toledo Blade beat Orlando and Cassio and won. Cassio third. Nora and Cincinnatus equal fourth.

POINTER STAKE.

First Series.—Rip Rap beat Lad of Bow. Consolation beat Fan Fan. Count Fauster beat Fred. Lebanon beat Seldom. Duke of Hessen beat Pontiac. Tammany's Boy beat Roger Williams. Woolton Game beat Miranda. Bonnie beat Dalgarouki.

Second Series.—Rip Rap beat Consolation. Count Fauster beat Duke of Hessen. Lebanon beat Tammany's Boy. Woolton Game beat Bonnie.

SOUTHERN FIELD TRIALS ENTRIES.

MARIETTA, Ga., Nov. 23.—*Editor Forest and Stream:* I inclose list of entries to All-Aged Stakes of the Southern Field Trial Club, which number thirty-seven, twenty-five setters and twelve pointers. The trials will take place at Amory, Miss., commencing Monday, Dec. 16. The usual arrangements for transportation have been made with the railroads, viz., first-class fare going and one-third to return. The accommodations of all kinds will be ample, and I will be in Amory three or four days before the trials begin, and any one who wants arrangements made for horses or vehicles, can have the same attended to by addressing me there, care of the Amory Hotel.

T. M. BRUMBY, Sec.-Treas. S. F. T. C.

SETTERS.

J. Bell's lemon and white setter bitch Hope's Fawn.
J. W. Renfroe's lemon, white and tan setter dog Tom Hendricks.
Whyte Bedford's black, white and tan setter bitch Flounce Gladstone.
D. E. Rose's lemon and white setter bitch Daisy F.
W. J. Cannon's black, white and tan setter dog Mark of Brunswick.
W. W. Titus's black, white and tan setter dog Lufra's Mark.
H. Holman's black, white and tan setter bitch Tempest.
A. M. Young's lemon and white setter bitch Hope.
West Tennessee Kennels' black, white and tan setter dog The Corsair.
West Tennessee Kennels' orange and white setter dog Tennessee Charlie.
West Tennessee Kennels' black, white and tan setter dog Tennessee Bob.
J. Shelly Hudson's black, white and tan setter dog Chickasaw.
J. Shelly Hudson's black, white and tan setter dog Dad Wilson's Boy.
J. Shelly Hudson's black, white and tan setter dog Dad Wilson, Jr.
Fred F. Myles's black, white and tan setter bitch Dimple.
Fred F. Myles's black, white and tan setter dog Ben Hur.
W. W. Titus's black, white and tan setter Rosebud.
H. S. Bevan's black, white and tan setter dog Rowey B.
L. B. McFarland's black, white and tan setter dog Startle, Jr.
L. B. McFarland's black and white setter dog Duke.
J. E. Dager's black, white and tan setter dog Toledo Blade.
J. E. Dager's black, white and tan setter dog Cincinnatus.
G. W. Ewing's blue belton setter dog King's Mark.
P. H. Bryson's setter dog Treadwell's Sam.
J. W. Renfroe's black, white and tan setter dog Dan Gladstone.

POINTERS.

P. T. Madison's liver and white dog Ossian.
J. G. F. Holston's liver, white and tan dog Count Fauster.
G. W. Amory's liver and white dog Bounce.
Graphic Kennels' liver and white pointer bitch Bloomo II.
Graphic Kennels' liver and white pointer dog Beppo III.
F. R. Hitchcock's liver and white pointer dog Duke of Hessen.
J. E. Gill's white and liver pointer bitch Lady Zeal.
J. E. Gill's white and liver pointer bitch Galatena.
B. M. Stephenson's liver and white pointer dog Tribulation.
G. W. Miller's liver and white pointer dog Count.
J. E. Link's liver and white pointer bitch Rod's Gal.
G. A. Castleman's liver and white pointer dog Reximus.

A CARD FROM MR. KREHL.

Editor Forest and Stream:

Sir, I should have preferred not to mention Mr. Mayhew again, but a few words I think are necessary. I think I ought to explain that the publication of my letter was due to an accident. It was written as a reply to Mr. Mayhew when he made his revengeful attack upon me; owing to an accident my letter was mislaid in the office of FOREST AND STREAM, and when I heard, long after, that it had been found and would be published, feeling that the subject was stale to everybody, I telegraphed not to publish, but my cable arrived when the letter was already in print. I regretted it, as I had also come to the conclusion that the affair was not worth noticing. Mr. Mayhew has given the text of his letter wherein he championed the cause of "trimming," and I may say that it is only here that one could read between the lines the covert sneers and insults leveled at Mr. Tinne, who, as recent decisions of our Kennel Club show, has triumphed over the party to which Mr. Mayhew lately belonged. Trimming, whether done in Mr. Mayhew's manner with finger and thumb, or otherwise, is now penalized by disqualification and suspension. I said that in this country Mr. Mayhew was a one-breed man, which is a fact in spite of the friendly letter of introduction he has published. He proves the limited sphere of his kennel knowledge by supposing that it was the only time I judged for the Kennel Club when I obliged the committee on the occasion he refers to. His account of once reporting for the *Stock-Keeper* may be true. I confess I do not recollect it, but it is certain he would have been paid had he followed the rule here and claimed it. Finally let me say that I should feel surprised if anybody who knows me thought I intended to enter into a controversy with Mr. Mayhew; it was only my intention in my letter to FOREST AND STREAM of Oct. 3 to knock the bottom out of his pretensions by showing who he was in his own country.

GEORGE R. KREHL.

LONDON, Nov. 7.

ROBINS ISLAND CLUB TRIALS.

CUTCHOGUE, L. I., Nov. 25.—*Editor Forest and Stream:* Once again has a year rolled by, and with the recurring month of November comes the field trials of the Robins Island Club. The same faces come to the front each year, for no club near New York is so strictly conservative as to membership as this same club of Suffolk county. Twenty-five was the number of its charter members, and the constitution was drafted so that that number should be the limit. No effort yet made has been successful in obtaining an amendment looking for a larger number. Thus the dog lovers of the club come together year after year to test the merits of their setters and pointers, each as against the other. No one but a member is allowed to run his dog, and if a member is absent, for any cause whatever, his dog cannot be run, even if entered, unless some other member comes to the front and takes charge of the absent man's dog in the trials. No outside handling has ever been permitted, and the idea of a professional handler going with a dog during the trials would not be entertained for a moment.

The start for the island on Wednesday morning, when many of the members departed for the shooting grounds from New York and Brooklyn, was made in weather which promised anything but success for these trials. At dawn it was raining furiously, with the wind blowing hard from the southward. As the morning wore on, however, the clouds dispersed, and the sun shone out in brilliant fashion.

The run to Cutchogue was made in the usual sleepy manner of the Long Island Railroad; the heavy amount of watered stock acts as a drag on everything, even the speed of the trains. Arriving about midday at Cutchogue, seats were taken in wagons, and the party was speedily transferred to New Suffolk over roads saturated with the frequent rains of this most extraordinary season. Reaching New Suffolk the club sloop, the Abbie and Mabel, moved to the dock, with the huge mainsail flapping in the wind. Men and luggage were soon aboard, lines cast off, and with a fair wind all were started for the enchanted land of Robins Island. The new club house gleamed a mass of glowing color in the rays of the sun, while the window panes gave back the reflected tints in vivid red and orange. The dock was soon reached and the yacht's nose run close to the landing place. Cat-rigged, there was nothing to prevent the yacht's stem hugging the wharf. All were placed speedily on shore, and exclamations of delight, as they looked toward the club house, escaped from the lips of all. Never did Robins Island look so well. Under the intelligent administration of Mr. Wellington, the club secretary, constant improvements have been going on. Not a trace of the old buildings of ten years ago is to be seen. Not a vestige of the conflagration of two years ago meets the eye. The old cellars of the burned buildings have been filled up. The mass of debris left from the fire has been buried, the surface leveled off; and where last season was a chaotic mass of dirt, lime and broken brick, is now a sward as rich in color and strength as if a lawn of 50 years care and growth.

Mr. Beach, the club's superintendent, deserves particular mention for the order and cleanliness of both house and lawns. It was the perfection of tidiness in each. Last year the slopes around the building were in an unfinished state, and the driving roads and foot paths simply marked out with the plowing of the sod. Now all is changed. The slopes from the bottom of the hillock upon which the house stands, to its top, are sodded, and being well done, the growth of grass has been wonderful. The paths have been finished. Filled in as they are with the pebbles of the beaches, their appearance is pleasing in the extreme. If the outside was pleasant to look at, what shall I say of the interior? The huge fireplace of the sitting-room glowed with fiery embers as they dropped from the huge burning logs upon the old-time andirons; and the agreeable warmth in all the rooms was delightful after the cold sail across the bay.

Luncheon was soon served and thoroughly enjoyed. After that an inspection of the kennels and the dogs. The canines never looked so well as they do now. I saw no case of disease, and the animals showed good feed and care. How different from last season when distemper had run rampant, and reduced many of the dogs to virtual skin and bone. Now they were fat and lusty. The small herd of Jerseys looked in good heart and in fine condition. For the first time since the writer has known the island, the barn was found full, to bursting doors, with hay and grain. As the huge doors swung open a dozen gray squirrels scampered in every direction along the beams and rafters. The cunning fellows were perfectly at home, and enjoying themselves in feasting upon the sheaves of unthrashed grain. The pigeon lofts had in them a couple of hundred birds. The poultry yard was full, while in the sty near by a lot of porkers ate and grew fat.

The old dog cooking house had been replaced by a new one, replete with every convenience. A huge boiler inclosed in brick with barrels of assorted food surrounding it occupied the first floor. The men's house, formerly a dilapidated shanty, had been so altered I did not know it. Thoroughly repaired and renovated these quarters for the men were all that could be asked or wished for. By this time it was necessary to dress for dinner, which at Robins Island is the feature of the day. The *cuisine* of the club is excellent, its wine cellar a capital one—who knows better how to live than the sportsman? Lots of exercise makes the appetite sharp and the taste keen. In possessing the wherewithal to purchase, why should there be denial? There is none at Robins Island.

THURSDAY.

This day was passed in examining the island. The land was explored from north to south, from east to west. Quail were put up in every part of the preserve. Not single birds, but bevies, large in number, and with the quail lusty and strong of wing. In size these birds reminded one of those found upon the island when the Eastern Field Trials Club first selected it for the location of their trials and before the importation of Southern birds. In fact no new supply has been purchased for two years, and the quail now there are native and "to the manor born." The most astounding feature, however, was the vast horde of rabbits (hares) that now infest the land. Some two years ago the members wishing a little diversity in their shooting, introduced a half dozen pairs of our familiar bunny. The idea was to have coursing with a pack of beagles. The genii of the boy in the Arabian tales has a counterpart at Robins Island. Imported solely for pleasure, he has grown to a pest. Never was shown greater prolificness than is seen here in the number bred. The place is simply overrun with them. One cannot travel a yard without putting up a cotton tail. In such swarms are they that the wheat fields are denuded of every blade, and the ground is as bare of vegetation as a summer fallow. The kitchen garden was a paradise for them. Watermelons as they ripened were denuded of their outside covering. Where at night was the promise of a melon, in the morning was a mass of red pulp and black seeds. The outer rind had been eaten to the core. Not a leaf showed above ground but what it was cut off as soon as grown. As a consequence the order has been issued to kill and kill again. Four hundred have been done to death since Nov. 1, yet there appears no diminution in their number. Swedenborg-like, the club has raised a spirit which will not down at their bidding.

The acreage sown to grains of different kinds is greater than ever before. The birds have feasted always. There never has been a scarcity of food this year. At least a thousand birds are now on the island, judging from the number of bevies put up during the walk. They were found everywhere. A few were shot and found to be as fat as a Delaware ortolan. Singular to say, each bird's craw was found half full of bay berries. In the olden times never a bird would touch them. Their taste has changed, as have their habits. Then not a bird was found save in the cover or in the woods. Now we start them from the sedge grass of the beaches, where a strong wind would cover them with the spray of the waves rolling up the sands. One is always sure of finding a bevy there.

After dinner was thoroughly discussed and enjoyed, the first business of the trials of the year was brought forward—the making of entries. Unfortunately, disease had made havoc with the dogs, and many members were deprived of the pleasure of competing for the valuable prizes offered by the club. The list is a light one, and seems lighter than it is, because the animals do not run one as against the other. Consequently there follows no series of heats, as at other trials.

JOOST (S. B. Duryea, Brooklyn), liver and white pointer dog, 2yrs. (pedigree not given).

RHEUMA (W. M. Van Anden, Brooklyn, N. Y.), red Irish dog, 2yrs (Dietrich's Tip—Spooner's Grace).

GOUT (W. M. Van Anden, Brooklyn, N. Y.), red Irish dog, 7yrs. (Massey's Duke—Pratt's Daisy).

GREY (William Stanley, Englewood, N. J.), blue belton setter dog, 3yrs. (pedigree not given).

BOB (William Hester, Brooklyn, N. Y.), blue belton setter dog, 9yrs. (Raybell—dam not given).

DAISY (S. Fleet Speir, Brooklyn, N. Y.), liver and white pointer bitch, 3yrs. (Don Donald—Nellie II.).

ST. ELMO V. (S. Fleet Speir, Brooklyn, N. Y.), black, white and tan English setter dog, 5yrs. (St. Elmo IV.—Countess Louise).

BERKELEY II. (Alden S. Swan, Brooklyn, N. Y.), red Irish setter dog, 10yrs. (Chief—Gussie).

JOLLY REX (Henry D. Polhemus, Brooklyn, N. Y.), black, white and tan setter dog, 2½yrs. (Rex Gladstone—Little Fraud).

BELLE (S. Fleet Speir, Brooklyn, N. Y.), blue belton setter bitch, 3yrs. (Count Rapier—Dell).

As soon as the entries closed, the names were placed in a hat and drawn to run as follows. It will be recalled the dogs are run in pairs simply to save time, as each animal's work is judged according to the scale of points adopted by the club in its running rules. While the work was going on the ominous patter, patter of the rain was heard on the outside as it beat against the window panes. The disgusted looks of the sportsmen as they heard it, were laughable to look at. In most lugubrious fashion did they start for bedrooms and sleep.

FRIDAY'S WORK.

The morning broke with a cloudy sky. At early dawn a rosy streak struck through a rift in the cloud banks. It was but momentary, and the clouds closed up again, making a solid, dull, leaden hue, gruesome in the extreme. Called to an early breakfast, it was quickly disposed of, and as soon as finished the men and dogs started for the work in hand.

BERKELEY II. AND ST. ELMO V.

The first named, handled by member Chauncey Marshall in the absence of his owner, the last by Dr. Speir. Cast off at the club house, they were hunted directly west to the bluff where it overlooks the 100-acre tract of flat salt meadow. At the very verge the red dog struck scent and pulled himself to a stiff point; this was backed by St. Elmo; the bird rose wild; shot at and missed. A turn to the left and along the edge of the bluff southerly, Berkely again got the birds, and was again backed by Sauk. Then followed a beautiful piece of canine work. The birds alternately ran and stopped, the dogs followed, fast or slow, as the occasion required; the time of the roading was at least 20 minutes, for the dogs were careful, and consequently slow. At the end of the bluff where another yard's distance saw it run down to the sand, both dogs stopped, Berkely pointing, Sauk backing. The birds got up wild, as the handlers came up, the Irish dog a little unsteady to wing, but as the guns were fired he dropped at once to shot. Ordered to retrieve Berkely brought in the dead bird in capital fashion and delivered it to Marshall. Sauk told to retrieve did so, but very slowly and in bad form. Dogs ordered up at 9.20.

JOLLY REX AND BELLE.

This brace, second in order of drawing, cast off ten minutes afterward, and hunted south toward the clay pit. Belle showed the greater speed, Rex was more stylish in his work. In quartering their ground they were about equal, in the briers Rex by far the more courageous. Before the race was over he was a mass of blood, where his head and neck had been torn by the thorns of the blackberry canes. At Black Oak Point, where the scrub oak nearly touched the waters of the bay, both dogs commenced roading, and after a few rods located the birds simultaneously. Rex more stylish on point than Belle. Birds put up, shot at and missed. Dr. Speir hunted Belle, Polhemus hunted Rex, the latter having purchased Rex only the night before simply to run him in these trials. Belle dropped to shot, Rex to command. After this a long hunt followed down the east side of the island. At the edge Belle roaded up a bird; she was steady to wing. A second time she roaded, but the quail got up wild. She was slightly unsteady, but came back to whistle. Rex followed suit in putting up a bird. The doctor immediately put up two more, fired and missed. Rex took a short chase after them, but stopped to order. Shortly after Rex got a good point, in front of which three birds got up wild as hawks; Rex this time steady as a clock, and dropping to wing as they rose. These birds were followed, and Belle got a capital point where they had been marked down; Rex refused to back; bird got up wild. Another point was had a moment after, Dr. Speir walking up to dogs started two half-grown rabbits. As they ran both dogs ran after them, but came back to whistle. The same thing happened a moment after, this second time, however, the dogs were steady as a clock when the bunnies jumped. Dogs taken up at 11 o'clock, and a quarter of an hour afterward the next brace brought up and cast off.

JOOST AND GREY.

Stanley hunted Grey, and Marshall the pointer Joost in the absence of her owner, S. B. Duryea. Through the brier lot southerly along the bluff, then a turn northerly back to Black Oak Point. Nothing was found save hares, which bounded out of the cover in every direction as the dogs quartered the ground. Grey the better dog in every respect; Joost showing a lack of both work and education. Naturally he is a good dog, but natural ability alone does not win at field trials. While running, Grey found and brought to his owner a quail which had evidently been shot the day before. The retrieve was made in good shape. Going on, a half dozen birds jumped in front of Judge Plummer. All hands shot, but not a bird dropped. Grey unsteady to both wing and shot, but steadied himself to order. Grey again unsteady as a rabbit jumped out from under his nose. Joost ran up a bird unconsciously, apparently not knowing the work required of him. Stanley tried to shoot, but the safety guard of his hammerless was down, and he could not pull a trigger. Moving on, Grey routed out a half-grown hare, and was at once off in a short spin after him, coming back to whistle; then Grey false-pointed, Joost failing to back. Both dogs capital rangers and good quarterers. Taken up at 12:35.

RHEUMA AND DAISY.

Van Anden handled the Irish dog, and Dr. Speir the pointer Daisy. They were started at edge of woods on the western side. Rheuma got up a bunny and bounced after it. A turn to the bluff, west, and again Rheuma broke after a hare, running head down like a wolf on trail. Called back, he worked at the edge of the bluff on the west side. Here he took scent, and roading a few rods came to a good staunch point. The birds got up wild before him. Again he found the scent where the quail had been marked down, and got in an excellent bit of work before he stopped on the bird for good. The bird flushed itself, and Rheuma indulged himself in a little canine racket, coming back to call. At this point Van Anden twisted a tendon in his left leg, and was at once placed *hors de combat*. He was transferred to the house in the club's ambulance. This put his dogs out of the race. Member Stanley ran them, and did well under the circumstances, but the Irish blood was ram pant and did as it pleased. Rabbit and quail were chased with equal indifference. Daisy did nothing good, bad or indifferent. She acted as if she had never been hunted. Dogs taken up at 1:05 P. M., and a walk to the house for luncheon was taken at once. The meal was soon disposed of.

GOUT AND BOB.

Stanley hunted Gout for Van Anden, Chauncey Marshall hunted Bob for his absent owner, William Nestor. With all his hunting skill, he couldn't land Bob a winner. The dog was too much for him. Leaving the club house at 2:37 a straight walk was had across the island to South Point, stopping on the way to hunt out the big gully which runs down to the east shore, cutting the high bluff in two parts. Nothing found in all its length. The point was reached at 3:15 and hunted out thoroughly. Not a bird, but lots of hares. Gout getting excited and unsteady. Then along the whole south beach to the high bluff at its western end, then a turn inland. Scarcely in when the dogs put up a big bevy. Gout at once made a rush for the flying quail. He was called in for punishment which he accepted as part of the play. The west shore was hunted in northerly direction. On the high rolling hills Gout found the birds, and after some good roading located them. It was a neat bit of dog work. Stanley walked up to shoot, the birds got up with a roar, Gout couldn't stand the racket, and away he rushed trying to catch them by the tail. Instead of catching the birds, he caught the lash. Did it cure him? Not a bit of it. He shook his hide to get the hair straight, and then chased a rabbit like a beagle as it jumped from cover in front of him. Bob pointed several times, each point being backed by Gout. Nothing was found, Bob simply thought, this man isn't my boss, see how I'll fool him. He did it, too. A few moments after this Gout again did some good work, roading the birds for a long distance, and then making a good point. This was the extent of his good behavior. As they were put up he jumped for them, and put out his chance of a win. Whistle and call he paid no attention to, until he had his run out. Taken up at 4:30 and a move made for the club house. After a clean up followed dinner. After dinner the judges, Messrs. Jacob Pentz, A. F. Plummer and E. B. Converse retired to make up the record of points to the credit of each animal as made. After due consultation the result was announced as given in the table below:

Name of Dog.	Merit Points.								Demerit.				
	Pointing	Pace	Backing	Style	Staunchness	Ranging	Quartering	Obedience and Disposition	Retrieving	False Pointing	Breaking In	Breaking Shot	Breaking Shot and Chasing	Totals
	35	20	7	6	6	6	6	4	10	1-7	3	5	10	
Berkley	35	15	7	5	6	5	5	4	10	....	2	....	....	90
Belle	28	17	7	4	6	6	6	4	6	....	....	....	....	84

* Not having a chance to win a place, dog not tried for a retrieve

Thus ended the eighth annual trial of the Robins Island Club. Among the gentlemen present at the meeting were Dr. S. Fleet Speir, President; H. D. Polhemus, Vice-President; W. I. Wellington, Secretary-Treasurer; William Stanley, Nels F. Carman, Col. S. Richards, Chauncey Marshall, E. B. Convers, W. M. Van Anden, A. F. Plummer, Shephard Homans and Jacob Pentz. Letters of regret were received from Judge Pratt, Supreme Court, Brooklyn, S. B. Duryea and William Hester. All these were detained in the city by illness, more or less severe. Judge Pratt's letter to Dr. Speir ran:

SUPREME COURT CHAMBERS, Brooklyn, Kings County, Nov. 22. —Dear Doctor: I do not dare to start for Robins Island this morning. I am too ailing to risk the changes of the weather at this season. I regret more than I can express the enforced absence. I fear the other judges will not drop to your skill in handling dogs, and that you will get away with all the prizes. It is not a fair thing for you to run against the other fellows without some judge who knows of your little tricks in hunting dogs. I repeat I never regretted anything so much as my not being able to be with you. Give my regrets to Pentz and tell him to keep an eye on you. Very truly yours, C. E. PRATT.

Judge Pratt's absence was especially regretted, for he has acted as judge at the trials for many years past. PECONIC.

EASTERN FIELD TRIALS CLUB.

THE regular annual meeting of the Eastern Field Trials Club was held at High Point, N. C., on Saturday evening, Nov. 23. Only thirteen of the members were present, two less than is required for a quorum, and the election of officers was postponed until the regular meeting in January. The meeting was a very important one nevertheless, and action was taken that will have a great influence upon the future of the club. The corresponding Monday in November was decided upon as the date for the beginning of the trials for 1890. A committee, consisting of Messrs. Duryea, Lorillard, Breese, Coster and Cochran, was appointed to select new grounds for future trials. It was also voted to abandon the Pointer Stake next year, and run but one All-Aged Stake, open to setters and pointers. It was also voted that it was the sense of the meeting that the spotting system of judging should be adopted, and Messrs. J. O. Donner, H. B. Duryea and F. R. Hitchcock were appointed a committee to revise the rules to conform with this system. The meeting then adjourned until the second Tuesday in January, at the office of Mr. Hitchcock, in New York.

LOTT.—Terre Haute, Ind., Nov. 20.—The prize bitch Lott, winner of the $1,000 Lott—Grousedale stakes several years ago, died here last week. She was owned by Herman Hulman of this city, and was valued at $700. She was due to whelp the latter part of this month.—H.

CHICAGO, Ill., Oct. 18.—Mr. L. F. Whitman, well known among dog men in this vicinity, has been appointed Western agent of the A. K. C., in which capacity he will doubtless act very acceptably.—E. H.

DAD WILSON GONE BACK.—Covington, Ky., Nov. 20.—You will remember about a year ago last April I sold the white, black and tan English setter dog Dad Wilson (Cambridge—champion Dido II.) to parties east. I had bred several bitches to him before I sold him, and his puppies have proved themselves such grand field dogs that I have come to the conclusion that I need more of that kind of puppies, and have repurchased Dad Wilson, and will use him in my kennel and in the public stud. He arrived yesterday in fine condition, and is now I think even better looking than when I sold him. As for a stud dog, I think he has but few equals and no superiors in this country. One of his puppies (Dad Wilson's Boy) you will remember took first in the puppy class at Chicago this spring, and was one of my kennel that took special for the best kennel of four English setters in the show, and for which I refused a long price at Chicago. This puppy is entered in this year's trials and will be heard from further along. I have quite a number of other excellent youngsters by Dad Wilson that I prize very highly. His royal breeding, together with his power to reproduce himself, has caused me to again own him, and he will hereafter make his home with me.—J. SHELLEY HUDSON.

"A TRANSACTION IN DOG FLESH."—Suspension Bridge, N. Y., Nov. 22.—*Editor Forest and Stream:* Generally speaking I think the readers of FOREST AND STREAM would not be interested in reading "A Transaction in Dog Flesh," but as Mr. S. C. Graff, of Cadiz, Ohio, promises to explain to readers of this paper how he once sold a dog, received his pay in full, acknowledged receipt of same, and then never shipped the dog nor refunded payment, it seems to me this would be very interesting to dog men at least. Mr. Graff no doubt felt a little sore on reading my article of two weeks ago; he says he believes I have been "written up" more than once for crooked dog dealings. If the editor of this paper has any knowledge of any such writings I would thank him to mention the fact.—CHARLES E. LEWIS. [We have no recollection of anything reflecting upon Mr. Lewis's fair dealing.]

DE BUCH—JEWESS.—*Editor Forest and Stream:* Will you kindly note that the mastiff bitch Jewess, owned by Mr. John W. Menely, then of Circleville, Ohio, visited my De Buch on March 23, 1884, and on June 25, 1885; that the first visit was noted on page 56, *A. K. R.*, Vol. II. (De Buch appearing under his then kennel name of Tiny). The second visit is noted on page 117, *A. K. R.*, Vol. III.; that De Buch is entered in *A. K. R.* number 1,502; that he has a pedigree verified by Mr. M. B. Wynn himself; and that he was the first dog ever owned in this country with a thoroughly complete pedigree running back to 1835. For some inscrutable reason I have been receiving inquiries as to this matter, and while I am always willing to oblige, there is such a thing as getting tired of answering the same question a dozen times. —W. WADE (Hulton, Pa., Nov. 21.)

BLACK AND TAN.—Buffalo, Nov. 16.—"Podgers" seems to think that my Queen is an exceptional black and tan terrier, and says that if I will acquire another one, and it pans out as creditably as this one, he will throw up the sponge and acknowledge himself mistaken. Had I owned but one I would not have presumed to speak of my experience with the breed. I have owned and bred them for years, and have four good specimens at my home now. I will admit that "Podgers's" experience was discouraging, but mine has been the opposite. I have always found them faithful friends, and have never had to advertise for a lost one. They love their home and show no disposition to scoot from it.—BLACK AND TAN.

A. K. C. QUARTERLY MEETING.—To the Delegates of the A. K. C.: You are hereby notified that the regular quarterly meeting of the Executive Committee of the American Kennel Club will be held at the club rooms, at No. 44 Broadway, New York, on Friday, Dec. 6, 1889, at 1 o'clock P. M. A full meeting is desired, as the proposed amendments to the bench show rules are to be acted upon at this meeting. By order of the President.—A. P. VREDENBURGH, Secretary.

LOST SETTER.—On Nov. 17 I lost my English setter pup, seven months old, well grown, not fat, weight 38lbs.; both sides of head and ears black, tan cheeks and spots over eyes, and tan ticked on nose and paws; body white and black ticked, and black spot about one inch round on left hind-leg.—G. A. COLMAN (123 Bartlett street, Charlestown, Mass.).

AN OPENING FOR DOG BREAKERS.—Portland, Oregon.—Should it chance that you hear of any one casting about for a locality where they can engage in the business of breaking dogs, I wish you would recommend such a party to come out here, as the right party could soon work up a good business and fill a long felt want.—B.

THE EASTERN COURSING CLUB MEET has been postponed to Saturday, Dec. 7, when the supply of the jacks will be ample for a successful meeting. Full particulars may be had from Mr. H. W. Huntington, 148 South Eighth street, Brooklyn, N. Y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Pequot Lad and Pequot Lass. By S. M. Crocker, New London, Conn., for black, white and tan English setter dog and black and white bitch, whelped June 12, 1889, by Ben Hill (Druid—Ruby) out of Tempest (Count Noble—Lit).

Don's Boy, Rhody, Rodney and Lulu's Boy. By Michael Flynn, Jr., Bristol, R. I., for red Irish setter dogs, whelped Nov. 2, 1889, by O'Donovan Rossa (Sarsfield—Nino) out of Lulu IV. (Shay's Dick—Lulu II.).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Tyzah II.—Gilderoy. C. C. Abbe's (Springfield, Mass.) collie bitch Tyzah II. (Ayrshire Laddie—Tyzah) to his Gilderoy (champion Charlemagne—Hasty), July 15.

Tyzah II.'s Daisy—Gilderoy. C. C. Abbe's (Springfield, Mass.) collie bitch Tyzah II.'s Daisy (imported Gaffa—Tyzah II.) to his Gilderoy (champion Charlemagne—Hasty), Oct. 9.

Nellie—Me Too. Rochelle Kennels' (New Rochelle, N. Y.) Mexican hairless bitch Nellie (A.K.R. 6076) to Mrs. H. T. Foote's Me Too (A.K.R. 6074), Nov. 5.

Empress—Sears' Monarch. S. R. Wiggin's (Lynn, Mass.) mastiff bitch Empress (Major—Nellie) to Wyoming Kennels' Sears' Monarch (Lord Raglan—Dido), Oct. 23.

Empress III.—Sears' Monarch. S. W. Crook's (Attleboro, Mass.) mastiff bitch Empress III. (Imperial Chancellor—Ruth) to Wyoming Kennels' Sears' Monarch (Lord Raglan—Dido), Aug. 12.

Ruth—Sears' Monarch. S. W. Crook's (Attleboro, Mass.) mastiff bitch Ruth to Wyoming Kennels' Sears' Monarch (Lord Raglan—Dido), Nov. 2.

Alpine Queen—Plinlimmon, Jr. Wyoming Kennels' (Melrose, Mass.) St. Bernard bitch Alpine Queen (champion Apollo—champion Miranda) to their Plinlimmon, Jr. (champion Plinlimmon—Princess Beatrice), Oct. 20.

Lady Catherine—Plinlimmon, Jr. Wyoming Kennels' (Melrose, Mass.) St. Bernard bitch Lady Catherine (Duke of Lancaster—Dorris) to their Plinlimmon, Jr. (champion Plinlimmon—Princess Beatrice), Oct. 9.

Belle of Stanton—Ben Hill. P. Lorillard, Jr.'s (Jersey City, N. J.) English setter bitch Belle of Stanton (Count Noble—Dido II.) to J. Shelley Hudson's Ben Hill (Druid—Ruby), Nov. 18.

Tough—Bob Obo. Corktown Kennels' (Ottawa, Ont.) cocker spaniel bitch Tough (Wildair—Belle) to P. G. Keyes's imported Bob Obo (champion Obo—Nellie), Nov. 19.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Tyzah II. C. C. Abbe's (Springfield, Mass.) collie bitch Tyzah II. (Ayrshire Laddie—Tyzah), Sept. 15, eight (two dogs), by his Gilderoy (champion Charlemagne—Hasty).

Meersbrook Girl. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Meersbrook Girl (Punch—Meersbrook Jessy), Nov. 21, seven (five dogs), by their Dick (Prince— ——).

Thora II. St. Bernard Kennels' (New Haven, Conn.) St. Bernard bitch Thora II. (A.K.R. 3585), Sept. 20, eight (seven dogs), by Stephens's Monarch (Merlin—Duchess IV.).

SALES.

☞ **Notes mustbe sent on the Prepared Blanks.**

Gilderoy—Tyzah II.'s Daisy whelps. Black and tan collies, whelped May 31, 1889, by C. C. Abbe, Springfield, Mass., a dog to Fred H. Smith and a bitch to Daniel Bixby, both of same place, and a bitch to Lowell Bickford, Palmer, Mass.

Sears' Monarch—Una whelp. Mastiff dog, whelped March 10, 1889, by Wyoming Kennels, Melrose, Mass., to Rev. R. Thomas, Brookline, Mass.

Sears' Monarch—Maid of Athens whelp. Mastiff dog, whelped Aug. 23, 1889, by Wyoming Kennels, Melrose, Mass., to H. D. Kendall, Lowell, Mass.

Plinlimmon, Jr.—Maude whelps. St. Bernards, whelped Aug. 13, 1889, by Wyoming Kennels, Melrose, Mass., a dog each to Chas. Meyer, Thomas Long, C. G. Boardman, Boston, Mass.; J. McD. Cromar, Edmundston, N. H.; F. W. Cowan, Oshawa, Ont.; Frank Clark, Randolph, Mass.; C. E. Tingley, Reading, Mass., and a bitch to F. W. Knoblauch, Jersey City, N. J.

Plinlimmon, Jr.—Mollie whelps. St. Bernards, whelped July 5, 1889, by Wyoming Kennels, Melrose, Mass., two dogs to W. H. Walbridge, Peterboro, N. H.; a dog to Rev. J. F. McDonough, Taunton, Mass., and a dog and bitch to Mrs. Kate McShane, Baltimore, Md.

Pequot Lad and Pequot Lass. Black, white and tan English setter dog and black and white bitch, whelped June 12, 1889, by Ben Hill out of Tempest, by J. Shelley Hudson, Covington, Ky., to S. M. Crocker, New London, Conn.

Dad Wilson. White, black and tan English setter dog, whelped Aug. 9, 1884, by Cambridge out of Dido II., by P. Lorillard, Jr., Jersey City, N. J., to J. Shelley Hudson, Covington, Ky.

Sykes. Black cocker spaniel bitch, whelped June 4, 1889, by Obo, Jr., out of Tough, by Corktown Cocker Kennels, Ottawa, Ont., to U. Bonneville, Danville, Que.

Vigil. White, with evenly marked tan head, fox-terrier bitch, age not given, by Venator out of Nellie, by Oxford Kennels, London, Ont., to E. C. Ray, Jr., Mamaroneck, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

SPORT, Brooklyn.—Cancrum oris—a disease of the mouth due to a decayed tooth or disease of jaw bone, or possibly some acrid poison. The disease is often fatal. The cause should have been removed and tonics and stimulats administered.

F. G. T., Pittsfield, Mass.—I wrote you some time ago about a bird dog I have which had canker in the ear. He is somewhat better, but the inside of the ear has grown almost full of what the doctor here says is proud flesh or something like that. He says the best way to get rid of it is to cut it out. The dog's hearing is all right, but he shakes and scratches his head. Would you advise having it cut out? Ans. Either have it cut out or burn it down with nitrate of silver stick (lunar caustic). If it is cut out the base must be touched each day with the silver until it heals.

J. R. F., Rochester, N. Y.—What shall I do for 8 months pointer pup? He has inflammation of the haw of both eyes. Some years ago I raised an English setter and he was troubled with the same. Finally had them removed but the remedy is a little too barbarous. What is the cause and the remedy? Ans. The cause may be local irritation or constitutional vice. To treat, drop a little solution of zinc sulphate 2 grains to the ounce in the eyes once or twice daily, and also wash the eyes with borax and camphor water, 10 grains of borax to the ounce. The operation of cutting with scissors may be made painless by the use of cocaine.

J. F. I., Philadelphia, Pa.—I own an English setter dog age 3yrs. For past three months his head has been out of order, and at times smells like stale dried beef, as near as I can describe the odor. Will you kindly inform me what I shall do for him? I think it is canker of the ear. Ans.:

℞ Bromo chloral.....3 ii
Tr. opii.....3 ii
Aq.....3 ii
Sig. Let a few drops fall in the ears night and morning. The ears may also be sponged out with a weak carbolic acid solution, one in fifty.

J. H. A., Saylesville, R. I.—My Irish setter bitch, 18 months old, was paralyzed in her hindquarters when she was 12 months old; she has not yet recovered perfect use of her hindlegs, being very awkward in her gait; the trouble seems to extend to her toes, which scrape the ground as she walks, and she cannot turn quickly when running. She is, however, able to do a hard day's work in the field, and never tires. This trouble came on her three months after she had recovered from distemper. Kindly tell me what are her chances for complete recovery, and what I can do for her. She is also troubled with incontinence of her urine. Ans. It is a sequel of distemper, quite common. The regular application of electricity to the hindquarters (lower segment of spinal cord) will benefit; also give a two-grain pill of the citrates of iron and strychnine, three times daily. The incontinence of urine is due to the same cause.

W. T. B., Washington, D. C.—I have a pointer dog eighteen months old which we have been compelled to nickname "Salvation." This dog is possessed of such a phenomenal appetite as to be the wonder of the community. He will eat six times as much as any other dog I have and yet retain a keen edge to his appetite, and, in fact, will gulp his food so fast and in such quantities, if allowed him, as to cause choking and suffocation. He is fed liberally on table scraps, corn bread, Spratts and Spalding's food, and has never been known since his return from the party who handled him to get enough. Although fed at one time three quarts of prepared food, at which time he was swelled out of all proportions, yet was hungry for more. He is under size, very thin in flesh, active and nervous. Ans. It would be well to try vermifuge remedies. Purge with castor oil, tablespoon doses, and in six hours give 30 grains of powdered areca nut made into a pill with lard. This can be forced down the throat. Only feed milk for two or three days. Give a 5-grain quinine pill night and morning.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CONLIN'S ANNIVERSARY.

ON Monday last Jas. S. Conlin threw his gallery open in gala attire. It was the twenty-fifth anniversary of his start as a gallery keeper in this city, and he had asked every one who had ever shot in his rooms to come up during the day and evening, enjoy a few words with the veteran bullet director, look over the fine records of shooting done under all manner of conditions, and enjoy a ball of the liquid rather than the leaden sort. There was a great gathering and reminiscences ran riot, while of shooting yarns there were enough to stock a history of firearms from long before the war. Mr. Conlin's formal gallery record stands as follows:

First established, Nov. 24, 1864. Barnum's old American Museum, Broadway and Ann street. Destroyed by fire July 13, 1865.

In Barnum's new American Museum, Broadway, between Spring and Prince streets. Opened Sept. 6, 1865. Destroyed by fire March 3, 1868.

Next in Wood's Museum (now Daly's Theatre). Opened Aug. 31, 1868. Gallery closed June 3, 1872.

Noted Shooting Gallery, 47 Nassau street. Opened Dec. 15, 1868; closed March 29, 1871.

Corner Broadway and Twenty-second street. Opened April 13, 1871; closed April 30, 1872.

No. 930 Broadway, next to the Park Theatre. Opened May 1, 1872. Destroyed by fire March 11, 1875.

The gallery No. 1,222 Broadway. Opened April 12, 1877; closed for the erection of Wallack's New Theatre (now Palmer's), May 4, 1881.

White Elephant Rifle Range, 1,241 to 1,247 Broadway. Opened Jan. 15, 1880. C. D. Shepard, proprietor; J. S. Conlin, manager.

Rifle, Pistol and Record Gallery, 1,255 and 1,257 Broadway. Opened May 18, 1881, and now open to the shooting world.

BOSTON, Nov. 23.—The regular shoot of the Massachusetts Rifle Association was held to-day at its range at Walnut Hill. The weather conditions were good, with a moderate wind blowing from 9 o'clock. Mr. Munroe won the gold medal in the 20-shot rest match, and Mr. Lee won the gold champion medal. Messrs. O. E. Pettman and W. M. Foster each won a silver military medal. Next Thursday—Thanksgiving Day—will be celebrated by holding an all-day rifle shoot at Walnut Hill for prize and practice shooting. Following are the best scores made yesterday:

20-Shot Rest Match.

J R Munroe	98 107	W Pomeroy	97 102
T Warren	100 98	C H Davis	101 105

Champion Medal Match.

H L Lee	85	C O Clarke	83
B Hemmingway	66		

Silver military medal, won on 10 scores of 42 or better:

W. M. Foster	42	45	43	42	42	42	42	43	45	43	
O. E. Pettman	42	42	43	44	42	42	42	44	43	42	

Victory Medal Match.

G F Ellsworth	86	A McBean	82
M B Adams	75	F S Gardner	83
A S Hunt	82		

Military Medal Match.

W M Foster	45 43	A S Hunt	40
G H Nason	39	F F Lowell	43 42
S Field	40	K B Hobbs	36
O E Pettman	42		

All-Comers' Rest Match.

J B Munroe	115	M F Ham	105
A Ballard	101	S Wilder	109
S W Warner	103	T P Williams	100
C H Davis	109	W Pomeroy	102
W D Reed	92	D F Worcester	108

All-Comers' Off-Hand Match.

H L Lee	82	F W Chester	76
S C Sydney	72	J B Fellows	82
A S Hunt	75	A Sharp (mil.)	70
A McBean	81	L C Dunbar	74
E K James	69	F Daniels	77
C Willard	73	A Newman	64
O Howard	77		

PHILADELPAIA, Nov. 19.—The attandance of the Gaiety Rifle and Pistol Club to-night was very slim (owing to the inclemency of the weather) at their regular weekly contest for gold and silver medals. Mr. E. Travis had no trouble to discount those present eligible to shoot for the gold badge, while Mr. J. Pollock had a picnic all to himself for the silver badge. Mr. Geo. W. Coulston and Mr. H. J. Mehard have joined the forces of the club. Official score stood as follows on standard American targets (reduced), 30yds, off-hand, Wurfflein rifles, plain open sights, 10 shots, possibly 100:

John J Mountjoy	9	10	9	9	10	9	9	9	10	10	96
Geo W Coulston	10	10	9	10	9	9	10	8	10	9	94
E Travis	8	9	8	10	8	10	9	10	10	9	91
G Atkinson	10	6	7	6	10	10	7	10	7	5	78
A F Wiggins	5	10	9	8	5	7	8	10	7	8	77
H J Mehard	10	6	9	8	6	10	6	6	8	6	75
J G R	8	10	7	5	10	6	7	5	8	7	73
A F Simpson	5	5	3	10	8	6	6	10	6	9	72
T F Shonert	8	7	8	6	9	3	7	6	6	8	68
A McManus	5	4	6	8	9	8	8	6	6	7	67
F Paul	6	5	6	7	7	6	8	6	6	8	65
J A Pollock	3	6	5	7	5	8	9	7	6	7	63
W Young	4	8	8	6	6	5	7	5	7	5	61
W Wurfflein	6	9	6	6	6	4	10	5	3	4	59

SMALL-BORE.

SYRACUSE, Nov. 18.—The Onondaga Rifle Club has won the match with the Antrim Rifle Team, fired to-day, by 26 points, the Antrim Team scoring 1031 to the Onondaga's 1057. These are the scores of the Antrim Rifle Team:

A H Baker	6	10	8	9	8	8	9	9	7	8—83
	9	8	10	11	12	11	9	8	9	11—98—181
J Penrose	8	9	6	11	10	8	0	5	10	10—86
	8	10	10	7	8	11	10	11	8	8—91—177
C E Burgess	7	8	9	9	9	12	6	8	9	9—86
	9	9	9	9	9	11	11	8	7	8—90—176
C Ceaflea	6	7	9	9	8	8	7	7	8	12—81
	9	9	9	9	9	10	8	8	8	11—94—175
J Brague	8	8	10	9	9	8	9	8	8	9—86
	8	9	5	12	8	8	5	8	9	8—80—166
M Peters	9	9	9	9	9	7	6	7	9	0—79
	10	3	9	4	8	7	8	6	9	9—77—156

Grand total.....1031

SMOKELESS POWDER.—A recent United Press dispatch from Washington says that a Captain Ledyard Ellsworth, of Hartford, Conn., who claims to be the inventor of the smokeless powder which has caused such a sensation in German army circles, is in the city armed with a letter to Secretary Proctor, asking that the powder be tested with a view to its purchase by the United States government. Captain Ellsworth has papers in his possession making over the formula for the manufacture of the powder to Carl von Anderlitch, of London, representing the German government, and according to these documents Von Anderlitch obtains for his government from the inventor the exclusive rights for all countries with the exception of the United States, Mexico and Central America. For these rights Von Anderlitch pays $500,000, and is to pay $10,000 per year in semi-annual payments for ninety-nine years. The contract further provides that if before Nov. 1, 1889, the purchasers should inform Captain Ellsworth by personal service, letter, cable or otherwise of their desire, they shall have the option of purchasing the remaining rights—that is, for the United States, Mexico and Central America—for a like sum—$500,000 down and $10,000 per year for ninety-nine years. At present the matter seems to be complicated. The German contracting parties claim to have sent a letter on Oct. 12 closing the option, but this, Captain Ellsworth says, he has not received.

BOSTON, Nov. 22.—The members of the Boston Press Rifle Association, all seated around the festive board at the Parker House to-night, received their friends, reviewed the past history of their exploits with the rifle, and received the trophies won at the recent annual match of the association at Walnut Hill. Among the guests were Col. Horace P. Rockwell, Henry S. Harris, Secretary of Massachusetts Rifle Association, Mr. W. S. Crown, Mr. Henry H. Faxon, of Quincy, Mr. Henry L. Lovell, of the Lovell Arms Company, Mr. N. C. Fowler, of the Pope Manufacturing Company, and Mr. A. L. Delesdernier. Mr. J. P. Whitcomb, of the *Transcript*, the president of the association, sat at the head of the table. At a large table at the end of the room were displayed the prizes won at the late matches, which were far ahead of any display ever made since the organization of the association, both as regards elegance and value. The prize distribution was conducted by President Whitcomb, assisted by Messrs. W. V. Alexander and S. J. Byrne of the prize committee, and was one of the pleasantest features of the evening. Over 50 gentlemen were present, and the affair was one of the most successful ever given under the auspices of the occasion.

CLINTON, Mass., Nov. 20.—At the last meet of the Stevens Rifle Club of this place, the totals made by the members present were as follows:

Chute	18 19 20 18 21—96	Wright	11 18 18 20 20—87
Martin	18 20 22 15 19—94	McMinn	19 17 16 17 17—86
Cox	19 20 20 19 17—92	Langdon	19 20 15 14 14—82
Taylor	16 16 18 19 19—88		

A PESSIMISTIC VIEW OF IT.—New York, Nov. 15.—*Editor Forest and Stream:* The American Shooting Association does not appear to enthuse the strictly amateur trap shooter with faith sufficient to induce him to part with his "dust," or "blow it in" for the benefit of the so-called "amateur," who should be justly classed first, last and for all time as a professional trap shooter. It seems to me I have somewhere read that "a fool and his money are soon parted." If one of the great majority of amateurs does happen to enter into a shoot in competition with such men as Siegler, Lindsley, Collins, Miller, VonLengerke and others, does he ever require a second dose to convince him that he is in the wrong puddle? Even if successful in being for a "place," does he ever "git there?" Mark the result—shot out in the ties, invariably, and the withdrawal of another so-called devotee. One experience generally suffices. Trap shooting as a pastime, pure and simple, is about "played out," in evidence of which witness the decadence of the many small local gun clubs, many of whom are entirely out of the race, and still others keeping up a vain struggle for existence. Tournaments are held with the object of inducing the unwary one to part with his "tin." That these tournaments do not meet with the desired object of enriching a few at the cost of many is very evident, from the fact that so few tournaments are held which are made to pay even expenses. Gentlemen, have you not killed the goose which laid the golden egg? Is it not about time to start on a different tack? All your classification rules, trips around the country *à la* base ball, cannot bring the dead to life again. They go for naught.—BLUEROCK.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Nov. 28, 29.—Lincoln, Neb., Gun Club Tournament. Open to all. C. H. Clarke, Secretary.

THE TRAP-SHOOTERS' TOUR.

THE United States Cartridge Company's scheme of touring the country in a private car, giving exhibitions in various cities, is now an assured fact, and the preliminary arrangement are being rapidly completed. The handsome and comfortable Pullman car Iolanthe has been engaged to carry the party. The Western team is now complete with C. E. Cahoon, of Freeport, Ill., as fifth man. That team now includes Al. Bandle, of Cincinnati, Rolla O. Heikes, of Dayton, Ohio, Chas. W. Budd, of Des Moines, Iowa, Jas. R. Stice, of Jacksonville, Ill., and C. E. Cahoon. Some uncertainty still exists as to the formation of the Eastern team, several desirable men being unable to leave their business for the trip. The team at present is H. B. Whitney, of Phelps, N. Y., H. McMurchy, of Syracuse, N. Y., W. H. Wolstencroft, of Philadelphia, and W. E. Perry, of Boston. In all probability Wm. Sigler, of Montclair, N. J., will fill out the quintet. A handsome souvenir score card and programme will be distributed among the spectators in each city. It will bear on its face a picture of the car Iolanthe with the teams grouped on the platforms at each end. The proposed trip has aroused considerable interest throughout the country, particularly in the cities along the route, and its effect will no doubt be a boom in shooting matters in all those places.

EUREKA GUN CLUB.—New York, Nov. 13.—The Eureka Gun Club held their November shoot on the 12th instant on the grounds of the Jersey City Heights Gun Club, at Marion, N. J. Club handicap prevailed in all the events. The Ficken brothers, Mehrtens, Strope and Semken shooting 10-bores at 18yds. rise; Diffley, Circle and Swindell, 12-bores at 18yds.; Schortemeier, a 12-bore at 22yds., and the rest 12-bores at 16yds. rise. First sweepstake at 10 bluerocks, 5 traps, all angles, one money: Diffley 8, Buthfer 6, Swindell 5. Second sweep, same conditions: Diffley 9, Buthfer 3, Swindell 8. Diffley wins both. Third sweep, same conditions: Diffley 7, Buthfer 9, Swindell 8. Chase 8. Buthfer wins. Fourth: Diffley 9, Buthfer 8, Swindell 9, Chase 8, Both 2, Schortemeier 7, Strope 7, Lutton 0, J. H. Ficken 4, Semken 6, Mehrtens 2. Three moneys. Diffley and Swindell divided first, Buthfer and Chase second, Strope and Schortemeier third.

Main event, prize and medal shoot, 15 bluerocks, 5 traps:

Diffley	110111110001011—10	Dr Sutton	001000100100000—3
D Buthfer	010110011111111—11	Swindell	110001101101010—8
Circle	001111010011110—10	J H Ficken	100011000100010—5
Chase	11100001l0w.	Semken	00001w.
Schortemeier	011111111100116—11	Mehrtens	00101w.
Booth	000100000010000— 2	H Ficken	100010001w.
Strope	101010010111011— 9		

Ties shot off at 5 birds: Buthfer, 00011—2; Schortemeier, 11110—4. Schortemeier wins medal for November.

Fifth sweep, same conditions as previous sweeps: Duffley 6, Butfer 7, Circle 6, Schortemeier 7, Strope 4, Swindell 6, J. H. Ficken 3, H. Ficken 1. Ties on 7 shot off, Schortemeier winning first, ties on 6 second, Strope third. Sixth sweep, same as previous: Schortemeier 9, Diffley 6, Buthfer 7, Strope 5, J. H. Fricken 6, Swindell 6. Schortemeier first, Buthfer second, ties on 6 and 7 third. Seventh sweep, 5 bluerocks: Schortemeier 5, Diffley 2, Buthfer 4, Strope 3, Ficken 2, Swindell 2. Schortemeier first, Buthfer second, Strope third. This closed the day. Our next and last shoot for 1889 takes place on the same grounds Dec. 10.—L. H. L.

PHILADELPHIA, Nov. 23.—The Parker Gun Club and Roxborough Gun Club met for friendly team contest on the grounds of the latter club. Eleven men to each team, 20 bluerocks per man, as follows:

Roxborough Gun Club.

F Hoagland	11101110101010110001—12
A Weir	10001001110001110010—10
F Willard	10111101001111110000—13

J Hey	00101011009010000001— 6—111

SMALL-BORE.

BUDD VS. ERB.—Davenport, Ia., Nov. 21.—The live-bird match between C. W. Budd, of Des Moines, and Fred Erb, of Lafayette, Ind., for the champion cup, was shot here to-day. The conditions called for 50 birds at 30yds. rise and 80yds. boundary from 5 ground traps. Erb killed 43 and Budd 42. It was an even race down to the 46th bird, though at one time, on the fourth string, Budd was two in the lead. This was overcome in the fifth string, Erb making a clean record and Budd losing 3. The pigeons were old ones and rather wicked flyers, which accounts for the low scores. Every bird, with but one exception, was hit, but several fell dead outside the bounds. The day was dark and gloomy, but fully 200 assembled at the Forester Gun Club's park to witness the exhibition. Both men used 12-gauge hammerless Smith guns and loaded with Schultze powder. George Ferrall, of this city, acted as official scorer, and S. A. Tucker, of the Parker Arms Co., as referee. The following is the full score:

Erb	1111111201— 9
	1120221211— 9
	1112122e01— 8
	1201210022— 7
	1122111211—10— 43
Budd	1112111002— 8
	1112122222—10
	2012222011— 8
	2122101112— 9
	o2o1110212— 7—42

o dead out of bounds.

CORRY, Pa., Nov. 21.—Corry Gun Club, Keystone targets, 5 Keystones traps, Keystone rules, wind north:

Penrose	01101111111111111111011—22
Mead	10111111111111101111011—22
Austin	11101011111010111101111—21
Blydenburg	00111011011111111101101—19
Starbird	10110011111011111101011—19
Wetmore	11111011101110101011011O—18
Lewis	01111111010011110001111O—17
Ward	11101103001110010111111—16
Berliner	00001000000010101000100—5

Penrose won on shoot off.

Blydenburg's Team.

Blydenburg	11111110010111111111111—22
Austin	10111111111111111111110—23

THOMPSON VS. CLASS.—A pigeon match will take place between James Thompson, of Yonkers, N. Y., and Frank Class, of Pine Brook, N. J., for $500 a side, Dec. 3. Strict Hurlingham rules, 100 live pigeons per man, on the White Plains Driving Park, at White Plains, N. Y. Take the N. Y. & N. R. R. to Elmford or the Harlem R. R. to White Plains. Ample hotel accommodations may be had at either place. Stage or carriage can be obtained at the depot to convey you to the grounds. There will also be on the following day, Dec. 4, a grand $500 guarantee event, put up by the owner of the park, Mr. W. P. Updergrove. Open to the world, 25 live birds per man, $25 entrance, divided 50, 30 and 20 per cent. American Shooting Association rules to govern. Address all entries to W. P. Updergrove, White Plains, N. Y.

TORONTO, Nov. 16.—The shooting at McDowall's grounds today brought out a good number, among whom were several old-time shooters, attracted no doubt by the announcement that a pigeon match was to be shot. The day was bright and clear, but rather cold. The shoot commenced with half blackbirds matches consisting of team sweeps. After the artificial birds a couple of pigeon matches between Messrs. W. Tracey and W. McDowall were shot. The birds were a fine strong lot, many of them getting out of bounds hard hit. The first was for $20, and was won by Mr. Tracey, and the second, for $5, was won by McDowall. Mr. Fred Emond was referee and puller. The score, 25 pigeons, 28yds. rise, T. G. C. rules:

Tracey	1101101111110101110111100—18
McDowall	1110101101111011001011101—17

Second match:

McDowall	1111—4 Tracey 1110—3

Nov. 20.—The first annual pigeon tournament of the Stanley Gun Club took place at the Woodbine to-day, and was in every way a grand success. The Saucer Club, as it is often called, turned out almost to a man, three members only being absent. The average per man throughout the entire match was 12 out of 15, which puts beyond all doubt that the Stanleys can shoot live birds as well as anything else. Mr. Briggs, of the Toronto Gun Club, made an excellent referee and gave entire satisfaction by all his decisions. Stanley Gun Club annual shoot, 15 birds, 26yds. rise, first barrel to count 1 and second barrel ½. The score:

First Class.

Heatherington	13	Charles	12½
J Drasey	12½	Creathures	12
J Rice	12½	N Dick	11½
T Sawdon, Sr	12½	F Emond	10½

Ties at 12½ won by Drasey.

W McDowall	9½		
F Moffatt	8		
C Kemp	8		

Second Class.

C Winchel	13	C Harrison	11½
Mitchell	12	K McClung	9½
G White	11½		

D Beatty	9
T S Bayles	6½

White wins ties at 11½.

Third Class.

T Sawdon, Jr	8	L J Congor	7½	R A McCready	6½

The merchandise shoot at 9 birds:

Charles	9	McDowall	8
Sawdon	9	Kemp	8
Mallet	9	Harrison	8
Dick	8		

Emond	7
Sawdon, Jr	7
Congor	7

On shoot-off, Charles first, Dick second, Emond third.

SPRINGFIELD, Mass., Nov. 23.—Harvard came to the front this morning when its team of five marksmen defeated the Yale five in a clay-pigeon shooting match on the Springfield Shooting Club's grounds by 103 to 97. Shooting was added to the college curriculum of sports last spring, when the Harvards defeated the Yales 121 to 98. Each team was composed of five men. Thirty shots were allowed each man, 15 at Keystones and 15 Ligowskys. The Yale team used 12-bore guns. Bacon and Dodge, of Harvard, also used the 12-bore, and the others used 10-bore. Keystone rules governed the contest. High and variable winds blew constantly over the field, bringing the "birds" to the ground on the right and increasing their velocity on the left. The sky was not favorable to good shooting. The shooting was in scores of fives and the traps were set at five angles. Harvard led in the Keystones, with aggregate scores of 45, against Yale's 40. Both teams had better luck with the clays, each scoring 57 points with these birds. Luce, of Harvard, took chief honors, with a total of 24; Farwell and Burdell, of Yale, made 23 each; Captain Quintar, of Harvard, scored 14 of 15 Ligowskys, and Captain Sage 13 out of 15. But for Locke's poor work Yale might have won. The teams and scores follow:

Harvard.	Keystones.	Ligowskys.

CHICAGO, Ill., Nov. 20.—In the shoot off, B class, on ties for the Park Ridge lot offered in Mr. Stephens' shoot, Mr. C. B. Dicks last Saturday killed 88 out of 100, to Mr. Henry Sloan's 79, thus winning the lot. At Mak-saw-ba Club last Saturday Mr. G. W. Randall won the Shepard suit of hunting clothes. This suit has now been won by Mr. R. B. Organ, by Mr. Wm. Mussey and by Mr. Randall. It takes one more win to hold it. Mr. Organ won the Leiter blackbird medal on the same day with the poor score of 15 out of 20. Following are the totals in the hunting suit shoot:

Organ	13	Sloan	12	Holden	11
Mussey	13	Watson	11	Waldron	11
Randall	14	Dicks	12	Sharp	6
Read	14				

The programme is out for Crown Point Club's Thanksgiving shoot. Seven shoots, A, B and C classes, Keystone system, Keystones at two cents, professionals barred, no handicap on gun or on winners.—E. HOUGH.

RED BANK, N. J., Nov. 22.—A large number of people were on the grounds of the Riverside Gun and Rifle Club at Red Bank, N. J., this afternoon, the occasion being the regular weekly clay-pigeon shoot of the club. The targets were bluerocks, and the marksmen made good scores. In the first event, sweepstakes, 10 singles, the scores were: Edward M. Cooper 10, Edmund W. Throckmorton and John Cooper 9 each, Wm. L. Conover 6, Chas. Minton 3. There were three moneys and the second was divided. Four took part in the next shoot, which was also a sweepstakes at 10 singles, and they made the following scores: John Cooper 8, Throckmorton 7, Conover 6, Edward Cooper 4. The third event was a sweepstakes at 5 doubles. The scores follow: Edward Cooper 10, Throckmorton 7, John Cooper 6, Conover 4. The concluding event was a sweepstakes shoot at 9 singles. John Cooper broke 9, and Conover, Throckmorton and Edward Cooper each broke 8. In the shoot off for second money Edward Cooper won. Throckmorton and Conover shot for third money until dark without missing, and they divided. The next shoot of the club will take place on Thanksgiving Day, and arrangements will be made for the reception of a large crowd. The club has prepared an interesting schedule of events, which comprises shooting at bluerocks, Keystones and other clay-birds and live pigeons, the entire day being given up to shooting.

GRAND CROSSING, Ill., Nov. 21.—The Gun Club shoot for medal at 10 live pigeons, 5 ground traps, 30yds. rise, 80yds. boundary, Illinois State rules:

B Dicks	1121222112—10	Hamline	2111102200—7
Dr Hutch	2101110211— 8	B Rock	1221110111—9
Price	1211012121— 9	W P Mussey	2112012221—9

Medal shoot same day at 20 Peoria blackbirds: B. Dicks 13, Dr. Hutch 8, Price 11, Hamline 13, B. Rock 18, wins.—RAVELRIGG.

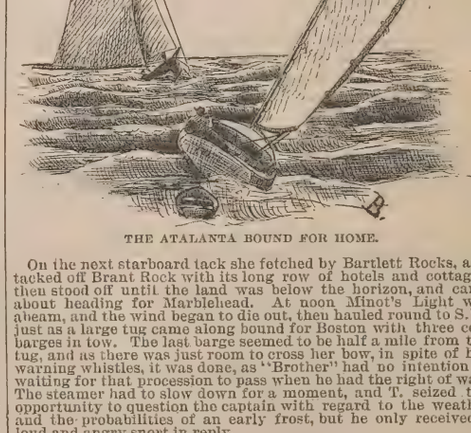
WELLINGTON, Mass., Nov. 23.—To-day's sport at the traps of the Wellington Gun Club was quite interesting, Perry again coming to the front, his score of 14 giving him his third first. The other scores in the pitcher match were as follows: Bond 10, Warren 13, Dill 12, Porter and Lee 9 each, Bradbury 7, Edwards and Cowee 10 each, Melcher and Conant 11 each, Bradstreet 8. The first winners in the matches were: Five pigeons, Smith; 5 bluerocks, Smith; 6 bluerocks, Dill, Bond and Bradbury; six tin birds, Dill and Bond; 5 bluerocks, Dill; 8 bluerocks, Warren; 6 tin birds, Warren and Smith; 10 bluerocks, Perry and Bradbury; 6 tin birds, Warren; 8 pigeons, Perry, Melcher and Warren; 7 bluerocks, Perry; 5 pigeons, Bond and Perry; 5 pairs bluerocks, Melcher and Warren; 6 bluerocks, Porter, Perry and Warren; 5 pigeons, Bradstreet and Perry; 5 bluerocks, Bond; 3 pairs pgeons, Bradbury; 5 bluerocks, Bond; 5 bluerocks, Hurlingham rules, Perry. The club holds a turkey shoot Thanksgiving Day.

THE KEYSTONE SCORE BOOK, which takes its name from and is made by, the Keystone Manufacturing Co., of Corry, Pa., is the handiest score book yet devised. It is handsomely gotten up and substantially made. It is so arranged that by the use of carbon paper, five copies of a score may be made simultaneously, the original being retained in the book and the duplicates detached for publication, or any other desired use. At the top of the sheet are head lines for noting all conditions of each event, the weather, directions of wind, etc., etc. This book is an invaluable aid to club secretaries and managers of tournaments. Several sheets of carbon paper and a stylus pencil are sent with each book.

THE NORWOOD GUN CLUB, of Florence, Mass., will gather a Thanksgiving dinner to-day.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.



A CRUISE TO MARBLEHEAD IN '86.

THE Guinevere is not the ideal cruiser which the FOREST AND STREAM has been working so hard to introduce for the past few years, but a common everyday catboat of Cape Cod, whose lines appeared in the FOREST AND STREAM of Aug. 11, 1887. She is 23ft. 5in. over all, 21ft. waterline, and 9ft. 0in. beam, carrying a jib set flying on a 10ft. bowsprit. The cabin contained two 7ft. berths, table, lockers, lamp, etc., with stowage room forward for oilskins, spare line, etc. There were two ice chests under the seats in cockpit, besides a large boatswain's locker aft.

About the middle of June her owner proposed a cruise to Marblehead to witness the Eastern Y. C. annual regatta, and after much persuasion he was induced to go, and the "Captain" and a certain fat man of the village were prevailed upon to get the 24ft. sloop Atalanta into cruising trim and accompany them. So on Saturday, June 26, all the stores were gotten on board, and on Sunday morning the ice chests and water jugs were filled and the "Captain" appeared with a large canvas bag containing grub, clothes, compass, charts, etc., etc.

At 1 o'clock both boats were running down the harbor and were soon outside, heading for Manomet Point, with sheets well aft, to a light N.E. wind, jumping into the long head swell. The wind all died out at sunset, leaving them some twelve miles from the Gurnet Lights, but about 9 o'clock it pulled around due east, and with booms well off they headed for the lights. The wind freshened until the lee rails were awash, and as the Guinevere passed the Atalanta to leeward, the "Captain's" voice called out, "Stick by us, 'Brother,' we're half full of water;" so the jib was taken in and the "Captain" ranged up alongside. A terrible swell was rolling in and pounding itself out on Brown's Bank to leeward, and a good lookout was kept for the buoy on Bass Rock, which was nearly run down in the darkness, but the anchors were finally dropped under the Gurnet Lights in about two fathoms of still water. The Atalanta, being a very ancient craft, had opened an old leak in the port deck just outside the cockpit rail, and on account of the darkness she was nearly half full before it was discovered. She was pumped out and then her crew was invited on board the Guinevere to sup on beefsteak and hot chocolate. The fat man fairly outdid himself, and that supper he remembered to his sorrow on the following day.

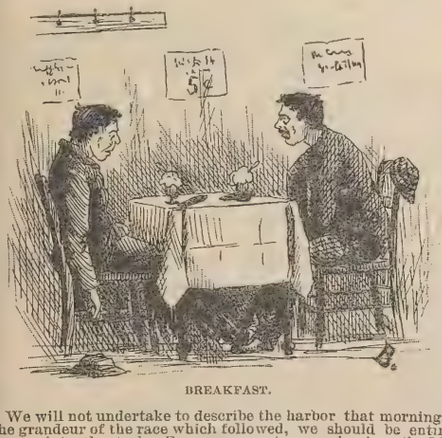
The next morning (Monday) brought a dead calm with occasional showers and a tremendous swell rolling in by the point, but the "Captain" was on deck at the first streak of dawn, nailing a strip of canvas over the leak, and was continually getting under way and coming to anchor again as the light air came and went. He had called "Brother" some dozen times, until he finally crawled out, just as a light air from the N.N.W. sprung up, which made it a dead beat to Marblehead. These conditions were very favorable to the Atalanta with her narrow beam, and she went out to windward, leaving Guinevere bobbing helplessly up and down in the seaway near the whistling buoy. The boat was slowly drifting toward Pine Ledge, so the oil stove was started, breakfast prepared, and as T. finished wiping the last dish the breeze freshened. The Atalanta had a long lead, being off Brant Rock, and was seen to take a reef in the mainsail. A small steam yacht came out of Plymouth and ran by, headed for Boston. T. twirled a rope's end and looked at her wistfully, but it was of no use, so he straightened himself out with a pull on the mainsheet, took a large drink of water, and called "Brother's" attention to the fact that the Atalanta had come to grief. She had lowered all sail and had a man aloft, but soon came running back with a close-reefed mainsail, saying they had parted their starboard shroud, could not repair it, and were bound for home, so the Guinevere was left to complete the cruise by herself.

THE ATALANTA BOUND FOR HOME.

On the next starboard tack she fetched by Bartlett Rocks, and tacked off Brant Rock with its long row of hotels and cottages, then stood off until the land was below the horizon, and came about heading for Marblehead. At noon Minot's Light was abeam, and the wind began to die out, then hauled round to S.W. just as a large tug came along bound for Boston with three coal barges in tow. The last barge seemed to be half a mile from the tug, and as there was just room to cross her bow, in spite of her warning whistles, it was done, as "Brother" had no intention of waiting for that procession to pass when he had the right of way. The steamer had to slow down for a moment, and T. seized the opportunity to question the captain with regard to the weather and the probabilities of an early frost, but he only received a loud and angry snort in reply.

With a light breeze over the quarter Marblehead was reached about sunset and the anchor dropped near the ferry landing on the town side of the harbor, and half an hour was spent in looking at the yachts at anchor. The boat was new and all her faults had not been discovered, the cabin house had leaked considerably during the day (it has since been covered with canvas), and all the bedding and spare clothes were wet through; so it was deemed advisable to sleep on shore if possible. "Brother" and T. have always wondered if every cruiser visiting Marblehead without the luxury of a brilliant and extensive wardrobe, which only a large boat can accommodate, has been subjected to the treatment

they received that evening. They had no sooner reached the long street running down the hill to the railroad station before they found a perfect cavalcade of small boys following in their wake, with loud cries of "sneakers," "sneakers." It was finally discov-



"SNEAKERS."

ered that the appellation referred to their rubber-soled shoes; but rather than discard such useful articles for the satisfaction of the Marblehead small boy, they hurried on with ill-concealed terror. "Brother" was kept very busy dodging torpedoes which had been carefully placed in obscure places for him to step on, and as they passed a high board fence T. was thrown violently against it by a little girl of some eight or ten summers. She had caught his swinging hand, laid back on it with both feet placed firmly on the ground, and whirled him into the fence with a crash. They finally accosted a citizen and inquired the way to the hotel; he had heard of such a place in town, but did not know where it was. The next man told them to retrace their steps and take the first street to their right, which they did, and passed a large building on a hill, brilliantly lighted, and upon asking a small boy what it was, he replied, "Oh, that's where they have the nigger show." "When, to-night?" exclaimed "Brother" and T. in one voice. "No," replied the urchin in accents of the deepest scorn, "durin' the winter, of course," It was afterward ascertained to be Abbott Hall.

The hotel was finally discovered, but the proprietor being unable to procure a liquor license had closed up, finding it an unprofitable investment. They were then directed to several boarding houses, but could not gain admittance, and finally wound up at an ice cream saloon, the proprietor saying he could put them up for the night. They were piloted up several flights of stairs to the attic, where a small room had been boarded off with box covers and old boards. It contained a cot bed, a couch, a brush and comb, and a skylight, and they proceeded to make themselves comfortable for the night.

They were awakened at daylight by the proprietor, who took a seat upon the foot of T.'s couch for a good long talk. He talked on steadily for half an hour, said he had made several gallons of ice cream that morning, and finally went down to see how it was getting on, but returned immediately, evidently being afraid his guests would take French leave during his absence. The morning sun streamed into the skylight, shedding its rays upon T., who lay blinking his eyes in the strong light. At last the proprietor missed stays on some yarn he was spinning of the past glories of Marblehead, and T. seized the opportunity to mention breakfast. The proprietor thought for a moment and then asked how they would like a little ice cream. T. looked at him, then at "Brother," then at the skylight, and seemingly asked if it considered ice cream a solid repast. The host immediately entered upon a discourse on the ingredients of said breakfast, winding up with "and there's a pint of milk, a pound of sugar and three eggs in every quart of my ice cream, now what could you have more solid than that?" That settled the question, and the morning meal consisted of "ice cream and cigars," the entire bill amounting to one silver dollar.

BREAKFAST.

We will not undertake to describe the harbor that morning, or the grandeur of the race which followed, we should be entirely unequal to the task. Every one must remember it as the Mayflower's maiden effort. The two cruisers reached their boat safely and found an old chum of "Brother," Billy by name, quietly seated in the cockpit with several friends from a small sloop anchored near by. After several bottles of beer, and a great deal of yachting gossip, the winning yachts for the day being picked out, the visitors departed, but Billy decided to ship on the Guinevere for the day. The mainsail was double reefed, the anchor shode thrown into the tender, and Guinevere headed for the mouth of the harbor in company with numberless craft of all sizes, from boats of her own length and even smaller to the stately Mayflower, Puritan and Priscilla. It may have been imagination, or the ice cream, but the crew were astonished at the way their craft with her beam and light draft walked away from catboats and small sloops as soon as the open was reached. In sailing round before the start, some friends were discovered on a tugboat laying too well out into the triangle and as "Brother" wished to speak them the catboat was laid alongside. Immediately another tug appeared and came up on the other side, the captains yelling the pleasantries of the day to each other from their pilot houses. There they lay rolling in the seaway and gradually drawing together with the poor Guinevere becalmed between them. There seemed no escape for the smaller boat, but just at the critical moment the last comer sheered off, after being commended to all the bad places the crew could think of, concertedly and individually.

At last the racing yachts crossed the line, and a splendid view of the race was had by sailing a small triangle inside of the course. As they came up for the second round the catboat was hove to just to leeward of the first leg and about a quarter of a mile from the line. What a sight those big yachts made as they crossed the line, squared away and set all their light canvas! They all passed within two or three hundred yards of the boat, and it was worth sailing a hundred miles to see—yes, even a thousand.

After the finish the Guinevere was headed for the harbor and had an exciting race with a fishing schooner of some forty feet, and rather got the best of her in the short tacks working in under the land. The tender was picked up about dark, and after supper "Brother" visited Hera. During the evening a very sharp squall came up from the N. W., and on returning he found his noble craft in a disabled condition, a white sloop with no one on board having gone adrift, taking the Guinevere's bowsprit as she passed, being unable to keep her off after paying out all the anchor shode.

On the following morning Billy shipped for the run home and the anchor was broken out about 8 o'clock, to a S.S.E. breeze dead ahead and very light. At three o'clock in the afternoon it was a dead calm, and as the boat lay directly off Nantasket, only a short distance from shore, a landing was proposed and accomplished in spite of the surf. A game of pool and tintypes were the only attractions held out to them by Boston's Coney Island. At six o'clock the W. S. W. breeze sprung up and the crew returned on board, and at sunset they passed Minot's Light. When about N. W. of the light and some 300yds. distant, the bell was tolled and a man on the turret called to them several times, but his meaning could not be distinguished. Finally the words "Go ahead" were made out, and his advice was taken. What he was trying to communicate has never been discovered.

The wind had freshened until it had become a good wholesail breeze, and being right abeam it was decided to make an all-night run, and soon the Gurnets were sighted. The crew were divided into three watches of two hours each, "Brother" taking the first

THE HAIL FROM MINOT'S LEDGE.

at ten o'clock, and passed the Gurnets just as he called Billy at midnight. Sandy Neck Light was sighted during the last hour of T.'s watch, and when he called "Brother" at eight bells they were off the outside harbor buoys, and the moorings were on deck just after sunrise. B.

A RUN OUTSIDE IN LIRIS IN NOVEMBER.

Editor Forest and Stream:

Thinking that a short account of a recent run "down the beach" in one of the flying forties might interest some of your readers, I send the following particulars of the trip of Liris from New York to the James River in Virginia.

Sunday, Nov. 3.—At noon boarded the Liris off Tompkinsville, S. I. Stood over to Bay Ridge to land the owner and another club member who came to see the start and then made our way down the Bay, weather thick and wind variable. Besides myself there were left on board the sailing master and two Scandinavian sailors. The steward was not able to reach Bay Ridge in time to join and as there was a warranty in the policy of marine insurance upon the vessel, that she should not start unless favorable weather was anticipated by the naval officer in charge of the Branch Hydrographic Office in the Maritime Exchange, it was thought better not to wait for him but to get along, as best we might, with such cooking as one of the sailors might be able to manage. Subsequent events showed the soundness of this conclusion, as we carried a fair wind down to the coast of Virginia and yet managed to spread a good table, including such luxuries as hot pancakes for breakfast, during his absence, partly owing to our being provided with a gasoline range which worked perfectly even with the fore hatch and ventilator closed; thereby demonstrating the correctness of the claim which I have made ever since my catboat days, that, for small vessels, the only practicable or useful range is one burning naphtha or gasoline as vapor. At 4:50 P. M. we took departure from Scotland Lightship, it bearing E. distance ½mile, wind fresh from the west, weather clearing, barometer 29.85, course S. by W., boat under mainsail, staysail, jib and gafftopsail. Hove over patent taffrail log. At 10:15 P. M. Barnegat Light bore N. W. distant about 2¾ miles, barometer 30, wind N.W., fresh, course S.W. by S. At 12 midnight, Tucker's Island Light bore W. by N.

Nov. 4.—At 4:20 A. M. the N E. lightship bore S.E., distant about two miles, wind N.W., course S.W. by S.¼S. At 5:20 A. M. the Five Fathom Bank lightship bore S.E., distant about two miles, wind and course as before. At 8:45 A. M. Fenwick's Island lightship bore W. by N., distant about 2½ miles. At noon took a meridian observation of the sun, using the owner's sextant, the sailing master using a quadrant. Upon reducing the observations, found that they gave our position as 38° 05′ 59″ north latitude, which must have been very nearly correct. At 12:50 P. M., Winter Quarter Shoal lightship bore E., distant about 1¼ miles, wind N.N.E., course S.W. by S.¼S. The wind had been gradually hauling to the eastward and growing lighter, and at 2:30 P. M. it had gone to N.E., and we jibed over. At 5:30 P. M. the wind was E. and light. In the early morning we searched for the lightship off Cape Charles without finding it, but being reasonably sure of our position we concluded that it had gone astray, and kept our course; we afterward met it coming out under tow near the Rip Raps.

Nov. 5.—At 4:15 A. M., whistling buoy off Shark Shoal bore N., distant about ½ mile, wind N. W., course W. by S.¼S. At 6 A. M. Cape Henry light bore S., wind N.W., light. At 8:45 A. M. anchored in Hampton Roads off Hygeia Hotel at Old Point Comfort.

Before starting Liris was given a cruising rig, main boom plumb with the taffrail, and her gaff, topmast and bowsprit about two-thirds of the length of the correspondiny spars of her summer rig. Under this rig she was exceedingly handy, and although we met with no bad weather during the cruise, yet her behavior in a fresh N. W. breeze, raising big white caps against a swell rolling up from E., and S., leads me to believe that when she does encounter such she will do well. Like all boats with considerable outside lead she answers quickly to the least motion of the water in which she floats, but the motion is easy and gentle at all times. The chief point of interest in her behavior to me, however, was that she was guiltless of the two faults which make living on one of the deep and narrow cutters when on the wind in a seaway so uncomfortable, she did not heel to an angle that made walking on deck out of the question, and, above all, she did not drop her nose deep into the water as each sea left the bows, in the manner so well known to every one who has sailed in or even watched a cutter under way. She moreover carries a good weather helm, which I like, as one of the things I detest and against which I "lift up a fervid (sailor's) prayer" is a boat with a lee helm, and she is the only wooden boat I ever was on that literally did not leak a drop.

I have noticed a tendency recently to describe as "brutes" a class of boats having very heavy lead keels and large or "excessive" sail areas. While I do not for a moment wish to be understood as advocating boats of such a build, for I consider them undesirable to own, I do wish to protest against the use of such a term in connection with so great a triumph of naval architecture (for such I consider her) as Liris. I cannot help thinking that the application of the term must have first been made by some one who wished to express his disapproval of their general design but was ignorant of the proper use of the word among seamen, and that he was thoughtlessly imitated by others who might be better informed, as I am persuaded that no seaman would ever apply the term to a boat that answered her helm smartly and behaves as well as does Liris. A seaman would, I think, reserve the term for a boat that refused to do her proper share of the work after those on board had done their share.

I may add that nothing under sail evertook us on the trip down, and that we beat to the Rip Raps, by some hours, a large four-masted schooner that passed down the Narrows ahead of us and chased us all Monday. SIDNEY CHUBB.

NEW YORK, Nov 20.

[Liris was surveyed by the insurers before leaving New York, and her construction was fully approved by the surveyor.]

Canoeing.

A FIFTEEN HUNDRED MILE CRUISE.

With the new year we will begin the publication of the log of a solitary cruise of 1,500 miles, made in a 14-foot Adirondack boat, on the Erie Canal, Lake Ontario, the St. Lawrence River, and other waters. The cruise began at Albany, finishing nearly two months later at Philadelphia, and the narrative includes exciting and dangerous episodes. The chapters will run through several issues. Cruisers should not miss this serial.

A. C. A. EXECUTIVE COMMITTEE MEETING.

THE ninth annual meeting of the Executive Committee of the American Canoe Association was held at Clark's restaurant, New York, on Nov. 23, with Com. Stanton in the chair. There were present from the Central Division Messrs. Huntington and Wardwell; from the Eastern Division, Messrs. Gage, Brazier, Purnam and Knappe; and from the Atlantic Division Messrs. Brokaw, Dorland, Haviland and Kitchell. The Northern Division was not represented. Sec.-Treas. Dunnell and Messrs. Oliver and Goddard of the new regatta committee were also present. The minutes of the last meeting were read and approved, after which the following letter from Com. Rogers was read:

To the Commodore and Officers-Elect of the A. C. A.:

GENTLEMEN—I regret very much not being able to join you on the 23d. On retiring from the head of the A. C. A., a position I have had the honor of holding for the past year, I have to congratulate the Association on its continued prosperity, and on its good selection of officers for the ensuing year, guaranteeing further progress. My term has been on the whole a pleasant one, thanks to the assistance I have received from my brother officers in general and the various committees in particular. I am especially indebted to my secretary, G. W. Hatton, Esq., to whose untiring exertions and thorough business capacity is due to a large extent whatever success has been achieved during our term of office, his accounts herewith submitted will of course speak for themselves. The meet did not quite realize my expectations, owing to the fact that for the first week the elements were against us, and prevented our carrying out a full programme of unannounced events, which could only be accomplished in fine weather during the first week, as during the last week the races very properly absorb all other amusement. In this connection I must enter my appreciation of Mr. Seavey's exertions to promote the enjoyment of the camp; he has, I know, for years employed his time in camp with that end in view, and this year he quite eclipsed all former acts by his unrivalled circus. I hear him spoken of in comparison with Barnum, but in my opinion Seavey outdid Barnum, inasmuch as Barnum had the world to draw from, and Seavey only the A. C. A. camp. At the same time Seavey can claim a much more select and appreciative audience. In conclusion, I have to thank all the members with whom I came in contact for their invariable courtesy to me as their chief, and their loyalty to the organization, showing that we are what we profess to be—an association of gentlemen, bound together by love of recreation in all true manly sport, and I would strongly impress upon my successors in office, as well as the members at large, to cherish and perpetuate the unique position the A. C. A. holds to-day, viz., an athletic association without any of the degrading influences that, I regret to say, accompany so many of the sporting institutions of our age. Bidding you an official farewell, I am, brother canoeists, your obedient servant,

PETERBORO, Nov. 1. H. C. ROGERS.

The accompanying reports were then presented:

Auditors' Certificate.

We, the undersigned, hereby certify that we have this day examined the books, papers and accounts of the Atlantic Division of the American Canoe Association, together with the above financial statement, and find the same correct.

BROOKLYN, Nov. 4. H. C. WARD, Chairman, B. H. NADAL. } Auditors.

Nothing could be learned of the whereabouts of the "Special Committee of the Brooklyn C. C. on Huntington Bay," nor was any report from it forthcoming; so the following report of the regular Site Committee was read and approved, the site named being selected:

REPORT OF THE SITE COMMITTEE.

To the Executive Committee American Canoe Association:

GENTLEMEN—The Committee on Camp Site and Arrangements beg leave to report as follows:

Before the formation of this committee, Commodore Stanton, with the assistance of Messrs. Brown, Gibson, Stephens, General Oliver and other members of the Association, made a careful and personal examination of various sites along both shores of the Sound which had been suggested and talked over informally at the last meet and subsequently. The results of this work were accepted by the committee and investigations continued under the direction of the Commodore, and so thoroughly has the subject been canvassed that we feel confident that we are prepared to submit a satisfactory report. During the investigations of the committee both sides of Long Island Sound have been carefully gone over and considered. Flushing Bay, Huntington Bay, Oyster Bay, Greenwich Harbor, the Norwalk Islands, Port Jefferson Harbor, Peconic Bay, Shinnecock Bay have been recently visited by the committe with this object solely in view. The Great South Bay, the Thames River near New London, the Thimble Islands and numerous other places have not been neglected in the consideration, although some of these were without the territory of the Atlantic Division. The points in favor of various inlets along the New Jersey coast have also been considered. The object of the committee has been to suggest a site on salt water, and if possible, on or very near to the ocean.

Shinnecock Bay was originally suggested by Mr. Shedd, of the Springfield Club, in a letter to FOREST AND STREAM. The place suggested by him was visited and the visit confirmed Mr. Shedd's report in every particular; the difficulty, however, arose in the fact that sundry brick and palatial residences had been built since Mr. Shedd's visit directly on the site suggested by him, and the whole bay, most eligible as it is for a canoe meet after you get there, cannot be approached from either direction by a boat large enough to transport our canoes. The railroad does not offer satisfactory means of transportation to this place, and with the greatest reluctance the committee were compelled to abandon this beautiful bay for A. C. A camp purposes.

The Norwalk Islands were suggested and kindly offered for our use by the commodore of the Corinthian Mosquito Fleet. These islands would constitute a most eligible site, and are not reported favorably simply for the reason that on each one of the number of points we think that the site which we report has a little the advantage. The committee, however, must not neglect to acknowledge the courtesy of the commodore of the Mosquito Fleet and his generous offer to the Association. The Norwalk Islands, it may be mentioned, are not within the territory of the Atlantic Division.

Huntington Bay was suggested by a letter from the Brooklyn C. C. This ground has been carefully gone over both by the Commodore and the committee and no site which was entirely satisfactory could be found.

Your committee presents this preliminary and negative report as an assurance to you that your work and the interests of the whole Association have not been neglected.

We suggest as the result of our labor and as the best salt-water site that could be found a locality in Peconic Bay known as Jessup's Neck.

Jessup's Neck is situated southwest of Shelter Island, about five miles west of Sag Harbor.

It may be approached by water either from Greenport or Sag Harbor, being less than an hour's run from either in a steam launch.

Its advantages for our purposes are as follows:

1. Transportation from New York by steamboat to Shelter Island, a night boat three times a week from foot of Beekman street.

From New England by way of steamboat from New London to Shelter Island or Sag Harbor, and probably stopping at the camp.

By means of these two steamboat routes all members can get directly to the camp without trucking and with very little trouble in transportation. Those south of New York alone will encounter the difficulty of bringing a canoe through New York city. The Canadians and members from western New York and the West may come by Poughkeepsie or Albany, and the various New England railroads to New London.

Canoeists in the vicinity of New York Bay have only to paddle their boats and ship their luggage to the boat at Beekman street.

2. Terms of Occupancy.—Jessup's Neck is the property of Mr. Scoville, a member of the Noyac Cottage Association, who propose selling land for cottages immediately in the vicinity of the Neck. There is no question but that the locating of the A. C. A. camp in that vicinity will be a valuable advertisement for the owners of this property, and Mr. Scoville offers us fair terms for the use of his land.

We will be allowed the ground for our exclusive use free during the term of the camp.

Mr. Scoville agrees to clear off all the objectionable underbrush during the early spring and have the grass burned in time to have a fresh crop before August. He agrees to fill in a certain objectionable pool, to clear the shore of seaweed and riff-raff and to erect a substantial dock running out into water deep enough for the Shelter Island steamboat to land at the dock and at a place which he has designated and which is acceptable to the committee.

3. Race Course.—We cannot conceive of a more satisfactory race course than is here laid out, for the sailing races a three or six mile triangle may be laid out directly in the view of every portion of the camp and in water in which there is practically no tide, and which, while protected from the ocean, is large enough to afford steady wind.

The paddling course may be laid out directly in the view of a bluff about thirty feet high, on which the ladies' camp will probably be located, and also in view of every part of the camp.

4. Attractiveness. As to natural beauty and surroundings this site certainly equals any that the Association has ever occupied. The point projects far out into the water, the shape of a long sand reef, which is frequently the resort of picturesque flocks of gulls. From here the ground slopes gradually up to such altitude, that the whole camp is laid out before one's view when approaching from the water, and offers a sight of all parts of the surrounding water from the camp. Directly back of the beach at the point is a small grove of beech cedars, then a large open plateau for the camp, then a small gully leading to the dock and separating the main camp from the ladies' camp, which could be located on the higher ground beyond.

There is ample shade and pleasant groves surrounding the camp. The turf is hard and rich and grass of the character not usually found directly adjacent to a sand beach.

5. We have it on good authority that water may be struck anywhere on this Neck within 20ft. from the surface. Wells will have to be dug either at the expense of the owner or the Association.

The beach is hard white sand and small pebbles, the tide rising on it not more than 8 or 10ft., the vertical fall of tide being 2ft. in Peconic Bay.

It will be necessary for the Association to provide a meal tent or shelter, and for the proper supply of really good and well-served table board. This matter will receive the earnest attention of the commodore and the committee, and probably an energetic party can be found who will build dining-room and store and supply these essentials. In these and other points the needs of the Association do not differ from those of previous years, and can be more readily arranged for on account of the proximity of the town. It may be mentioned in this connection, however, that there are no towns on this portion of Peconic Bay, and the surroundings of the camp are as attractive in this particular as any one could desire. The water is clear and free from seaweed, and this vicinity is a favorite bluefishing resort.

All of which is respectfully submitted.

R. B. BURCHARD, Chairman of Camp Site Committee.

NEW YORK, Nov. 23, 1889.

The date was fixed for Aug. 8 to 23 inclusive. Purser-elect Shiras, of the Central Division, tendered his resignation owing to other duties, and Mr. F. F. Andrews, of Rochester, was elected in his stead. The outgoing regatta committee was not represented and sent no report, so the work of amending the rules was taken up by the new committee. A part of the present rules has become obsolete through changes in canoeing, and Rule 1 was considerably shortened, the class limits being simply not over 16ft. for any canoe, not under 28in. for both paddling and sailing canoes, and not over 30in. for a 16ft. sailing canoe, an increase of beam for a reduction of length being allowed as before. This removes all distinction between Classes A and B, which has not existed in practice for some years. Canoes to enter paddling races must not weigh less than 40lbs. The clause relating to the old Childs centerboard was stricken out. The limit of beam of 28in. is made to apply only to canoes built after this date, as there are one or two now in the racing that are not quite 28in. wide. A rule that was once adopted but omitted by mistake from the book, relating to fouling buoys, was reinserted, and the rule governing the right to luff was amended in accordance with the rules of the Seawanhaka Corinthian Y. C. Some important changes were made in the record and the prizes, the text of which are still in the hands of the committee. We will publish the full amendments as soon as the report of the committee is completed.

Mr. W. L. Alden was elected an honorary member, and also Misses Ethel Rogers, Flora A. Farr and Edith Draper. A proposal was made by Dr. Gage to change the date of taking office to the end of the meet, instead of the annual meeting, but no immediate action was taken. The decision of Com. Rogers in the case of an appeal from the decision of the vice-commodore of the Atlantic Division in rejecting an application for membership was read and ordered on the minutes, but after discussion the committee decided that the commodore's interpretation of one point of precedure was not as intended in the constitution, and ordered a note to that effect ordered on the minutes. A discussion concerning the publication of the Year Book then followed, some members being in favor of a book without advertisements. As the case was stated the book could be furnished to members entirely free of expense for publishing or mailing if the advertisements were retained; while without them the printing would cost the Association $200 and probably more, as it is proposed to add other matter to the future books. The opinion of the majority was in favor of publishing the book with advertisements provided the latter were only in the back of the book. An amendment was offered to Art. V. of the By-Laws, providing that ex-officers of the Association should be allowed a special flag and device. On discussion it was shown that as, in addition to the already large number of ex-officers, they are being added at the rate of sixteen per year, there was a strong probability that in a few years every one in camp would fly a commodore's or purser's flag. The amendment was not passed. Article X. was amended to add a cap device in place of the sleeve and collar ornaments. The following amendments were passed:

ARTICLE VII.

ASSOCIATION BOOK.—The Secretary shall publish, after each annual meeting of the Executive Committee "The Association Book," containing the Constitution, By-Laws and Sailing Regulations, lists of officers, members and their canoes, [Treasurer's report, financial reports of the division pursers for the previous fiscal year, a condensed regatta report,] and shall send a copy to each member.

ARTICLE IX.

DUTIES OF REGATTA COMMITTEE.—It shall be the duty of each [Division] Regatta Committee to prepare and publish, not later than June 1, an order of races for their respective regattas; to superintend the laying out and buoying of courses; to provide the prizes; to appoint judges, starters and timekeepers, and to decide all protests. They shall post the course and conditions of each race in some prominent place at least one hour before the race is called, and shall have entire control of the races at their respective meetings, except that the Regatta Committee of the Division in which the A. C. A. meet is to be held shall act as a local subcommittee to the A. C. A. Regatta Committee.

[It shall be the duty of the A. C. A. Regatta Committee (1) to prepare and publish, not later than June 1, an order of races, including the Sailing and Paddling Trophy races, the three Record races for each class of canoe (except Class 1) and such other events as they deem advisable; (2) to superintend the laying out and buoying of courses; (3) to provide the prizes (having first obtained the commodore's approval of their estimate of cost, if the A. C. A. is to pay for the prizes); (4) to secure such assistance as is needed to run the regatta, (5) and to decide all protests. (6) They shall post the course and conditions of each race on the bulletin board at least one hour before the race is called, and shall have entire control of all the races at the camp. (7) They shall take charge of all the A. C. A.'s regatta property when they assume office, and shall turn the same over to their successors when appointed. (8) They shall submit a full report to the commodore, before the Executive Committee meeting, and a condensed report to the secretary for publication in the Year Book. The chairman shall act as judge and start all races. One member shall act as clerk of the course, receive all entries and keep the official record of the races, and the third member shall act as official measurer—of the winning canoes.]

Mr. W. P. Stephens was appointed librarian, with permission to store at his own expense the huge box of books and old records belonging to the Association, and which has hitherto been sent about the country to each successive sec.-treas.; the appointment to hold good during the good behavior of the incumbent, no salary attached.

The meeting adjourned at 4 P. M., after which the commodore escorted the visitors to the model room of the New York Yacht Club. In the evening a dinner was given to the visitors at Clark's restaurant, sixty canoeists being present.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

BEAR DOGS.—An inquirer asks for information about the best breeds of dogs for bear hunting, and the way to train them. Perhaps "Bruin," who wrote in our issue of Nov. 14, will enlighten him.

S. D. N., Newton, N. J.—1. You do not give size of bird, and your description is rather vague, but we presume that the bird is the red-bellied woodpecker (*Melanerpes carolinus*). 2. By patiently following out the directions given in Hammond's "Training vs. Breaking" you can probably cure your dog of gunshyness, unless he is too old.

T. G., Savannah, Ga.—1. Is the common upland hare of Georgia a hare or a rabbit? My impression is that naturalists generally agree that it is a hare. 2. Have you any knowledge of the aquatic or swimming hare of the South and, I believe, the West? I know the animal well, but have only found it described in the works of Parker Gilmore (Ubique), an Englishman. Ans. 1. It is a hare, but the name rabbit has been so firmly fixed that only pedantry will insist upon the name of hare in common every day usage. 2. We know of no distinct variety that takes to the water readily; the common variety will occasionally do this when pursued; we have recorded a number of instances.

F. S. J. C., New Jersey.—What is the southern limit of the Atlantic tomcod (*Microzadus tomcod*)? The "Fishing Industries" gives it as New York, but I have caught what I believe to be this fish on the 25-fathom banks below Cape Henlopen (Delaware) and the 5-fathom banks off Cape May (New Jersey). The color was a dull, yellowish brown, it had the filament under the jaw and corresponded with the portrait given in the "Fishing Industries." Ans. There is no reasonable doubt that the tomcod is to be found off the Virginia coast, although we have not seen a specimen so far south. The cod, the pollock and the hake, which are associates of the tomcod, all are found off the coast of Virginia. This is recorded as the southern limit of the species in "Synopsis Fishes N. A.," by Jordan & Gilbert.

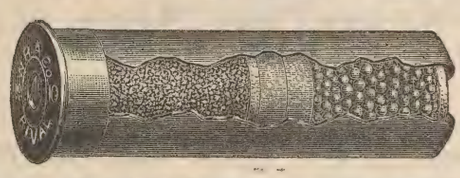
H. C., Boston.—Kindly answer a few questions about the freshwater eel, or inform me where I could find out what their habits are: 1. How often they breed. 2. How many eggs a female contains. 3. How old an eel would have to be to weigh three pounds. 4. If they eat their young. Ans. 1. It is claimed by several reliable authorities that eels spawn only once and both sexes die after spawning. 2. A female eel of average adult size contains several millions of eggs. 3. The rate of growth of the eel is not definitely known, but it is said to mature in three years, when its weight will depend on the amount of food it can obtain. 4. According to accepted theories of eel migrations the young eels come up alone from the sea in the early spring and their numbers are so enormous that the loss by the ravages of the adults must be small. Eels have been known to descend streams every fall for hundreds of years, and during the fall migration they do not feed. Only a few male eels, certainly recognized as such, have been caught on our shores, and these were taken in brackish or salt water, chiefly in Great South Bay and Vineyard Sound. It is believed that male eels do not go into fresh water. The belief is pretty general that spawning takes place in mud banks at sea some distance from the mouths of the rivers. FOREST AND STREAM of Nov. 14 contains a figure and description of a male eel. It is necessary to say that some authorities do not agree with the sea-spawning theory, among them Hon. Robert. B. Roosevelt. There is a well-informed gentleman in Pennsylvania who has experimented with fish breeding for a score of years, and who is of the opinion that he can propagate eels according to a new system. The experience of people everywhere who have kept eels in fresh water is that they increase greatly in size, but always diminish in numbers. The best account of the habits of the eel is contained in the "Fishery Industries of the United States," published by the U. S. Fish Commission, but now, unfortunately, out of print.

The manumea, in the London Zoölogical Gardens, has an interesting history. The home of the manumea is in Samoa, where originally there were no cats. Where these were introduced, they made short work with the manumea, killing not only the adult bird but the chicks in the nest. Owing to its habit of nesting upon the ground, the bird nearly became extinct; suddenly, however, it took to building its nest upon the treetops, where it could bring up its young ones in peace; and since that time it has again become fairly plentiful.

About two tons of frogs' legs have been shipped from the bay district to New York during the past four months, says the Picton *Times*. How will these exports be classified in the trade returns? As "produce of the fisheries," as "field products," or under "animals and their produce"?—*Toronto Monetary Times.*

"Twelve y'ars ago 3,000,000 dogs owned by cull'd pussons war allowed to sleep under de bed. To-day the number is estimated at less dan 100."—*Lime Kiln Club's Review of Work.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 200 pages, price $2.50. For sale by FOREST AND STREAM.



FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

GURDON TRUMBULL'S
Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understanded of the people.
Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, of books of which the need is felt in every department of natural history.—*Troy Press.*
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*
I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

The Celebrated Smith & Wesson Revolvers

HAVE BROKEN ALL RECORDS FOR REVOLVER SHOOTING.

The Most Perfect Small Arms

EVER MANUFACTURED.

Unrivalled in Beauty of Finish, Durability and Accuracy.

Manufactured in calibers .32, .38 and .44-100. Single and Double Action Hammerless Safety and Target Models, with all latest mprovements——Automatic Shell Extractor, Rebounding Lock and Patented Safety Device.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel,** carefully inspected for workmanship and stock, and GUARANTEED. Do not be deceived by IMITATIONS largely manufactured of **malleable cast iron,** and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

SMITH & WESSON,

SPRINGFIELD, MASS.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abija Jarvis. The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY NEW YORK.

Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

The Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls, Etc., Etc. With 96 illustrations.

By C. P. KUNHARDT.

This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth. 240 pages. Price, postpaid, $3.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
SAMPSON, LOW & CO., London, England.

CANOE HANDLING.

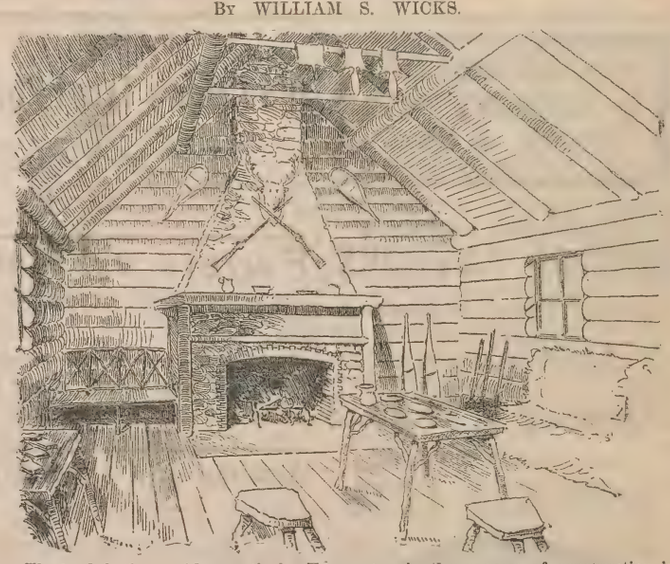
By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

DOG TRAINING:

BY



S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM,

For sale at this office. Price $1.00.

LOG CABINS;

How to Build and Furnish Them.

By WILLIAM S. WICKS.

The book is thoroughly practical. Every step in the process of construction is explained. The author is an architect who has himself built log cabins, and very handsome ones, too, as shown in the plates. The designs are numerous and varied. Plans are given for cabins, large and small, with details of exterior and interior finish; and there are also some very useful directions for constructing temporary shelters—the Indian camp, brush house and bark camp. The furnishing consists of tables, chairs, bedsteads and other articles, all made of the material at hand, and all in keeping with the style of the house. The illustrations are numerous and helpful. Price $1.50.

OUR CHRISTMAS NUMBER.

THE issue of the FOREST AND STREAM for Dec. 19 will be the Christmas Number. Many good things are in store for that occasion. Here is a list of some of them:

IN FOREIGN LANDS.

On the Trombetas. An account of a daring expedition on the Trombetas River, North Brazil. By "NESSMUK." The story is in the author's best vein, and we need not add that it is intensely interesting.

Dogs, Dingoes and Kuris. An intelligent description of the native wild and domestic dogs of New Zealand. By EDWARD WAKEFIELD.

The Reporter. A sketch of partridge shooting with a "reporter" dog in Sweden. By "MARSTRAND."

Fishing a la Mode. An amusing description by "PODGERS" of one of the dude anglers of Paris.

Big Game in Boer-land. A letter descriptive of hunting in the wilds of South Africa.

First Spear. An account of a novice's first experience in pig-sticking in Scinde. By C. F. AMERY.

A Run after the Long Tails. Kangaroo hunting in Australia. By W. H. LIMOND.

Three Days in Jamaica. A short account of a recent visit to the island. By "F. J. M."

Notes from the Ten Thousand Years House. A letter from Tokio, Japan. By HENRY MACDONALD. A vivid and picturesque description of the phases of life that impress the American traveler in Japan.

DAYS WITH THE ELK.

Running Down an Elk. An account of the pursuit on snowshoes, and the tiring out and capture alive of one of the last elk in the wilds of Pennsylvania. By "ANTLER."

An Elk Hunt. A story of Rocky Mountain adventure. By "Yo."

The Trail of It. A mountaineer's story of a scuffle with a bull elk. By JEROME BURNETT.

The Elk in Harness. An account of personal experience in capturing and taming elk and breaking them to harness. By CHARLES M. DONNELLY.

Old Joe. Notes on a semi-civilized bull elk, which belongs to a Wyoming horse ranch. By MILLARD.

Illustrations. There will also be a double-sheet supplement with careful drawings of elk. By A. S. HIGGINS, JR. With its double supplement the Christmas Number will contain thirty-six pages.

The issue of Jan. 9 will be a special Florida number, illustrated. See announcement next week.

SNAP SHOTS.

THE Jekyl Island Club's game preserve has recently been recruited by the receipt from the West of a female elk and a calf, which were shipped from Cheyenne and landed in Brunswick, Ga., in excellent order and condition. When they were transferred from cars to boat they entered a protest, as if in their opinion that sort of thing had been going on long enough, and they positively refused to be bundled aboard; but by the united efforts of half a hundred darkies they were carried bodily on to the boat. When it came to landing them at the island the same process had to be gone through, requiring the whole force to persuade them to go ashore. At last accounts they had thought better of their sulks and were consuming their rations with great complacency. The club is in the market for a gentleman elk, intending to stock their preserves with that interesting specimen of zoölogy.

Mr. Austin Corbin, whose attempts to keep in confinement deer, elk and antelope have been regarded with interest by those acquainted with their progress, has met with a serious misfortune. A shipment of 21 animals, all in good condition, left Dakota Nov. 16 for his farm in New Hampshire. On the way East, while passing over the Nickel Plate road, the train carrying these animals collided with another, and the car on which Mr. Corbin's collection were was wrecked. Four deer escaped to the woods, an elk was so badly hurt that it had to be killed, and one moose died from injuries received. Out of the 21 animals, including 11 deer, 6 antelopes and 3 elk and 2 moose, there are left alive only 1 elk, 1 moose, 1 antelope and 2 deer. These are all badly cut up and lame. These are "hard lines."

On Sunday, Dec. 1, there was born at the Zoölogical Gardens in the Central Park a young hippopotamus. The parents of the new arrival, known as Caliph and Fatima, are eight and six years old respectively. The male weighs nearly three tons, while the female is only about two-thirds that weight. The young one is a male. At birth it weighed but forty pounds; its length is about thirty inches, and it stands fourteen inches in height. Although there have been several cases of the birth of a young hippopotamus in Europe, this is the first for America, and the progress of the youngster will be watched with interest. Of the three born in the London Zoo two died. Our specimen has made his appearance at a bad season of the year, but it is to be hoped that he may survive.

Senator Vest will at once bring up before the Senate his bill for the enlargement and protection of the National Park. This bill, it will be remembered, has passed the Senate three times and the House once. It is now more than ever needed, and there is nothing to be said against it. The bill has been so thoroughly discussed in the Senate, that all members of that branch of Congress must be familiar with its provisions, and it ought to pass that body without delay, so that it may reach the House in time to be acted on at this session. As soon as introduced the bill will probably be referred to the Senate Committee on Territories. Senator Manderson of this committee has in the past struggles over this bill always been an ardent supporter of the measure, dividing the honors in the Senate with Mr. Vest. He will no doubt again do all in his power to hurry the bill through the committee, and bring it to a vote in the Senate.

For shooting, the weather of the autumn of 1889 has been in this latitude simply execrable. There were surprisingly few October and November days when the air was crisp and outdoor scenes exhilarating. Rainy, foggy and dismal days have been the rule. The only consolation to be found in such a condition of affairs is that it suits the Can't-get-away Club members who profess to care nothing about weather conditions.

The Long Island duck netters are putting in their fine work. Thousands of broadbills are coming to the markets without a shot mark on them; mostly from the vicinity of Good Ground. The game warden of that district promised to give this matter his immediate attention; but those who shoot there ought to lend a helping hand.

Thanksgiving was a great day for the dogs. Thousands of them were out galloping over fields and through brush, and every one of them had in tow a man or two or three men with guns.

THE YELLOWSTONE PARK.

THE report of the Superintendent of the Yellowstone National Park for the year ending June 30, 1889, has just been issued. As the Park for eleven months of this year was under the charge of Captain Moses Harris, who was relieved by Captain Boutelle on June 1, the document consists of two parts covering these periods.

Captain Harris mentions the expulsion from the Park of three persons, two for trapping beaver and one for drunkenness and disorder. One of the men expelled is believed to have returned to the Park after being ejected, and to have maliciously started a forest fire. The scouts made by Ed. Wilson and Corporal Boyce, noticed at the time in these columns, are described. Forest fires were numerous, owing to carelessness of campers and other causes, but all were extinguished by the troops before they had caused any great damage. A list is given of leases and business permits granted during the year. The hotel accommodations and transportation facilities toward the close of the season of 1888 were inadequate, and many travelers suffered inconvenience from this cause. Owing to the lack of any appropriation no work was done on roads. Captain Harris again calls attention to the fact that there is no government in the National Park, and alludes to the impossibility of enforcing rules and regulations laid down for the care and management of the Park, since legislation provides no effective method for such enforcement. The law passed by the Legislature of Wyoming Territory, and its failure to work, is referred to; the visit of the Congressional committee in 1885 mentioned and its report quoted, and the significant fact is noticed that Congress, notwithstanding this report, has failed to provide any legislation for the Park. Captain Harris, as in previous reports, recommends an appropriation for a civil force to protect the Park. His list calls for one superintendent, one chief game keeper, ten assistant game keepers, one chief of police, thirty policemen and one clerk, the pay and equipment of this force to be, according to his estimates, about $49,000. Captain Harris urges that it is high time that the question of the government of the Park should be settled one way or the other; either that it should be turned over to the civil authorities or else definitely assigned to the military to look after. Attention is called to the depredations of Indians along the southern border of the Park, and papers on this subject which were printed some months since in FOREST AND STREAM form an appendix to the report.

Captain Boutelle's report covering but one month is very brief. He alludes to the danger of fire in the Park, and to the entire absence of any proper fire equipment for the use of the force at the command of the Superintendent. If Captain Boutelle's request for such equipment had been granted when it was first made, many square miles of green timber burned over this summer and autumn might have been saved. As it was, the Department delayed a long time before acting on his request, and a gentleman traveling through the Park, who had heard of the entire absence of buckets, axes, shovels, etc., offered to put his hand in his pocket and give the Superintendent a sum of money, with which to purchase these necessary articles. Had such an offer been accepted, we should have had the spectacle of the Yellowstone National Park belonging to the U. S. Government, depending in part for its protection on the charity of a private individual.

Captain Boutelle's report refers briefly to the good work done on the roads by Mr. Craighill, to needed work on the trails, to a possible pasture for elk, deer and antelope to be inclosed along the road, where they may be seen by tourists, and to the supposed destruction of game by the carnivora in the Park. He also refers to the work of stocking the barren waters of the Park with fish, in which so good a beginning has been made by Col. McDonald. He calls attention to the fact that the boundary line of the Park is nowhere marked, and recommends a survey. A suitable residence for the Superintendent is needed. He refers to the fact that there is a scheme on foot looking to the cutting off of a portion of the northwestern portion of the Park and remarks that such an attempt should be opposed, as it would thrown open to the hunter some of the principal winter ranges of the elk and buffalo.

Captain Boutelle states that the building operations of the Yellowstone Park Association have been delayed by the regulation prohibiting the cutting of green timber in the Park, and this regulation has been revoked. The

syndicate want to cut timber where it will be the least trouble and expense to them, and in order to get permission to do this, they have made the excuse that they were delayed because they could not cut green timber. The permission to cut living timber may, unless the cutting is carefully looked after, open the way for a great destruction of the forests of the Park, and we should be very glad to see it revoked.

In the annual report of the Secretary of the Interior, Mr. Noble refers at considerable length to the difficulties met with in caring for the Park, and which are due to the entire absence of law on this reservation. He speaks of the Vest bill, notes the fact that it has passed the Senate three times and the House once, and earnestly recommends its enactment as a law. On the whole he takes a broad view of the subject and urges the carrying out of the recommendations made in the reports of Captains Harris and Boutelle.

The closing paragraphs of Mr. Noble's report are as follows:

So long as this tract of country shall remain a national preserve for science, curiosity, and pleasure, it will of course be an object of cupidity to the covetous, who will see or imagine countless ways in which its exhaustless wonders and resources can be turned into private advantage, and who will invent many artifices to beguile and circumvent the guardians of this national treasure into granting them foot-holds of one kind or another, whereby they can make personal gain out of this great public benefit. If it is not to be thus frittered away, deprived of its most attractive features and measurably lost to science and wonder, if not to pleasure, the best and surest way to protect it is to permit no trimming down, no incursions, and no privileges except such as may be deemed absolutely necessary for its protection and regulation and for the proper accommodation and comfort of visitors.

It seems important that there should be an appropriation for a residence for the Superintendent, whether he is to be a military or civil officer. If the Park is to remain under the surveillance of the military, the suggestion of Captain Boutelle that it should be recognized as a military post and provided with permanent accommodations for the officers, men, and their animals seems very pertinent. If it should be the policy of Congress to restore civil superintendence, attention is called to the recommendation of Captain Harris, in whose judgment I have great confidence, as to the number of employees and amount of appropriation necessary, which he places at forty-four men, all told, with salaries and equipments amounting in the aggregate to $48,800.

The Sportsman Tourist.

A SAND-SPIT.

BY K. H.

A LONELY, dreary stretch of beach,
Whether by storms of winter beat,
Or throbbing 'neath the summer's heat;
Whether the cedars upward reach
Their threadbare arms in mute despair,
Or whispered hoarsely on the air
Wild tales the sea-winds teach

Of gruesome deeds done long ago,
In "good old times" when any breeze
That sported with the laughing seas,
Before its salted breath might blow
A rakish rig, with black ensign,
'Cross the horizon's silver line
In the soft twilight glow.

And some poor skipper's heart would sink
With the last ling'ring flush of light
Into despair's fear-haunted night;
And when the stars like owls would blink,
Then draw their shade of silver gray
Against the glare and heat of day,
The sun fresh blood would drink;

That smeared the splintered, heel-marked deck—
Strewn with waste spoil, and here and there
A clot of loose, bedraggled hair—
Of a dismantled, battered wreck;
Listlessly drifting, as each swell
Would toll anon the foredeck bell,
Toward some rock-bound neck.

And sterner fate for skipper bold,
Who perished not before the horde
Of human fiends that swarmed aboard;
Perhaps bound in the scuttled hold
He watched the creeping water hide
Each plank upon the vessel's side,
Until the end was told.

Or fed the gaunt waves grizzly jaws,
As stumbling from the dreaded plank
He like a leaden plummet sank
Into their ever satoless maws;
Or even now some sand-scoured bone
May tell more plain than graveyard stone
Of savage pirate laws.

Such tales as these you seem to hear,
As hidden by the rustling sedge
That lines the broad bar's inner edge—
Past which a salt creek, deep and clear,
Glides swiftly to the falling tide—
You wait until, first circling wide,
A flock of ducks at last draws near.

The gray flock settles on the stream,
That sweeps them gently down to view;
And now the past is lost to you,
Flown all your noon-day dream
As swiftly as the whirring wings,
(Your gun's report so quickly brings)
On which the sunbeams gleam,
As fortune's favored ones arise
And melt into the distant skies.

JAMES FENIMORE COOPER.

THE COOPER NOVELS.

ON Sept. 15, 1889, occurred the centennial anniversary of the birth of Cooper, the earliest, most prolific, and the most original of American novelists. The earliest, because before the publication of "The Spy," in 1821, the only readable American novels were those of Charles Brockden Brown, and those seemed to be imitations of English works. The most prolific, as the published works of Mr. Cooper reach nearly one hundred volumes, according to Professor Lounsbury. And the most original, the Leatherstocking tales and the sea stories being wholly new in literature, and Cooper is one of the few writers of the world who has made a new creation. Such is Natty Bumpo the Leatherstocking, as original a creation as Hamlet or Falstaff. Such is Chingachgook the Delaware Chief, the first and best of the ideal Indians of romance. And such is Long Tom Coffin, of whom Miss Mitford wrote "that he appeared to her to be the best thing since Parson Adams." Like all prolific writers, Cooper was unequal, and he had his limitations. In the forest or on the prairie he was at home, and stands unrivaled and supreme. Said Balzac of the "Pathfinder," "I know no one in the world save Walter Scott, who has risen to that grandeur and serenity of colors." When Cooper attempted to describe the manners and conversation of social or fashionable life he failed. "If Cooper," said Balzac, "had succeeded in the painting of character to the same extent that he did in the painting of the phenomena of nature, he would have uttered the last word of our art." In his sea tales Cooper seems to the present writer to be as unrivaled as in those of the forest. Before him no one except Smollet had introduced seamen or the sea into fiction, and Smollet was not himself a seaman. Cooper, like Dana, had served two years before the mast, and afterward three years in the U. S. Navy as a midshipman, and had acquired a thorough knowledge of seamanship.

A recent critic has said that W. C. Russell is a better sailor than Cooper, but this is not the opinion of those who are familiar with ships and their management. It is curious that the United States, which fifty years ago led all the world in the excellence of her ships and sailors, and has furnished in Cooper, Dana and Melville the best writers on naval topics, should now be so far in the rear. But neglect and unwise legislation have accomplished it.

These works of Cooper have a peculiar value as depicting scenes and events that are fast passing away. The unbroken forest wilderness, with its savage inhabitants; the boundless prairie, a waving sea of grass and flowers, dotted with herds of bison, elk and deer; now covered with grain fields and farms, and where the scream of the locomotive has succeeded to the howl of the wolf. So also with the sea tales; they were written in the days of sailing vessels, which are giving place to steamers, and the maneuvers of a ship under canvas, so admirably described by Cooper, will in a few years perhaps be a lost art. The Tom Coffins and Ben Bolts, who carried the Stars and Stripes all over the world, will be succeeded by engineers and mechanics, who will handle valves and levers instead of cordage and canvas. Whether a future Cooper will evolve romance from steam boilers and donkey engines may be doubted, but we shall still have these sea tales to remind us of the men of 1780 and 1812.

In the admirable biography by Professor Lounsbury, from which much of this paper is taken, Cooper appears as a kind-hearted and generous man, wholly truthful and of undaunted courage, somewhat prejudiced and pugnacious, and a most patriotic American, who was misunderstood and abused—one of the most interesting figures in American literature. S. C. C.

COOPER'S WOODCRAFT.

BY ROWLAND E. ROBINSON.

THE recent celebration of the hundredth birthday of the earliest American novelist, suggests to FOREST AND STREAM readers a consideration of the woodcraft of the creator of Leatherstocking, the typical backwoods hunter that is still a unique figure in fiction, for all the futile imitations which have so often been attempted. That Cooper intended to impersonate in Natty Bumpo the highest type of woodcraft attainable by a white man is evident enough, for in all the series of tales to which his name has been given, no other white man at all approaches him in the science that is not learned of books, though naturally, as should be, some of the Indian characters surpass him in rapid reading of the forest's faintly traced records.

One wonders in what degree the author possessed the peculiar gifts which he bestowed upon his favorite creation, who holds the chief place in the five volumes on which the writer's fame most securely rests. How much of this had he gained by actual experience, how much from intercourse with the old hunter Shipman, who as Miss Cooper tells us in her introduction to the "Pioneers," "came frequently to offer his game at Judge Cooper's door, and whose rude equipments, dogs and rifle had much attraction for the lads of the home," or how much from the story of his father's adventures in the wilds where the scenes of some of the Leatherstocking tales were laid, when "there existed not an inhabitant nor any trace of a road. I was alone," he says, "three hundred miles from home, without bread, meat or food of any kind; fire and fishing tackle were my only means of subsistence. I caught trout in the brook and roasted them in the ashes. I laid me down to sleep in my watch coat, nothing but the melancholy wilderness about me."

The father possessed that faculty of ready adaptation of slender means to suddenly arising needs which is so essential a part of woodcraft. This was exhibited when in a season of great scarcity of food among the settlers he contrived a net of twigs into which great quantities of herring ascending the Susquehanna were taken, and starving people relieved. This is related by Judge Cooper in his letters to an Irish exile, and in them he further exhibits his woodcraft in describing what soils shall be found where different kinds of trees flourish.

In the first written of the Leatherstocking tales, "The Pioneers," there is not the opportunity that the others afford in their wilder scenes for the display of woodcraft. But there are vivid descriptions of the wilderness in it from first to last, and the movements of the old backwoods hunter are well described in Natty's gait and in his attitude in the brief but certain aiming of the long-barreled, ill-balanced rifle of old times. Shipman, stealing up for a "pot shot" at a partridge or squirrel, was no doubt the unconscious lay figure from which the artist drew this picture.

Perhaps the panther scene that thrilled us with delightful horror when we read it in our "Town's Fourth Reader" forty years or more ago, does not seem so real now as then, and we may offer the criticism that Natty would not have called out to the wooden "female" to "stoop lower, gal, your bunit hides the creature's head," but would have swerved a little to one side for a better shot in that supreme moment, but yet we must own that it is well done, and so in spite of the stilted, unnatural conversation of the actors, is the escape from the forest fire.

He was a woods haunter and a true woods lover who put in Natty's mouth the words so often echoed by so many a one of us who has beheld the ruthless sweeping away of loved landmarks. "There be scarcely a tree standing that I know, and it's hard to find a place that I was acquainted with in my younger days."

What knowledge of woodcraft, or rather plaincraft, is shown in "The Prairie," we know was not gained from actual observation, for the author had not seen the prairies, then more distant than Europe was from the Atlantic States. Yet the scenes are perhaps as accurately depicted as those in the tales whose actors played their part in the forests that had not lost their primitive wildness when Cooper saw them.

In his best work, "The Last of the Mohicans," whose rapidly-shifting dramatic scenes are all set in the shadows of the forest, the author has imparted to us the most that he had gained, by whatever means, of woods lore, and if it is not always perfect, it serves well its use in the weaving of a romance that must ever delight the lovers of wholesome and purely American fiction. If his eye might not detect the displaced fallen leaf, the broken twig, the frayed moss on a tree trunk or the light imprint of a stealthy footstep on the forest floor, he could comprehend what these might mean to men so wise in woodcraft as the Sagamore, Chingachgook, and the "man without a cross."

It would be hard to give in so few words a better description than this of the forest in July, "The vast canopy of woods spreads itself to the margin of the river, overhanging the water and shadowing its dark current with a deeper hue. The rays of the sun were beginning to grow less fierce and the intense heat of the day was lessened, as the cooler vapors of the springs and fountains rose above their leafy beds and rested in the atmosphere. Still that breathing silence, which marks the drowsy sultriness of an American landscape in July, pervaded the secluded spot, interrupted only by the low voices of the men [Leatherstocking and Chingachgook], the occasional and lazy tap of a woodpecker, the discordant cry of some gaudy jay, or a swelling on the ear from the dull roar of a distant waterfall." One feels the sultriness of the woods and hears the voices of its lesser denizens that oftenest and almost unnoticeably break its silence, yet one can but think near the close of the same chapter that Hawkeye's ears were a little dull that such a trained woodsman should be so slow to hear the unaccustomed sound of horses' hoof-beats, and in the next that the hunter must have been a little careless in his statement to say, "Nor have the geese done their flight to the Canada waters altogether." Wild geese flying northward in July?

Except for occasional slips, Cooper's favorite character is wonderfully well drawn and consistent from his first appearance as the Deerslayer to the last pathetic scene in "The Prairie." The love of nature which such a close observer must feel, his simple faith in an over-ruling Power, his honesty and unaffected simplicity, his cautious bravery, his pride in the skill with "the long-barreled, true-grooved, soft-metaled rifle," are all consistent traits in a man who had spent his life in the woods.

His figurative manner of expression is natural in one who had so long been the constant companion of the Sagamore, and in brief words he often gives many maxims of wood lore, as in his reply to Major Heywood, who with the treacherous guide Magna was lost in the wilderness between Ft. Edward and Ft. William Henry:

"An Indian lost in the woods!" said the scout, shaking his head doubtingly; "when the sun is scorching the tree-tops, and the watercourses are full; when the moss on every beech he sees will tell him in which quarter the north star will shine at night! The woods are full of deer paths, which run to the streams and licks, places well known to everybody."

His contempt for the singing master, "the weak soul who passes his days in singing," is a natural touch. "'Tis a strange calling," muttered Hawkeye, "to go through life like a catbird, mocking all the ups and downs that may happen to come out of other men's throats." Just as natural is his poor opinion of the men of the towns, of books and the writers of books.

"Book! What have such as I, who am a warrior of the wilderness, though a man without a cross, to do with books? I never read but in one, and the words that are written there are too simple and too plain to need much schooling. 'Tis open before your eyes," said the scout, "and he who owns it is not a niggard of its use. I have heard it said that there are men who read in books to convince themselves there is a God. I know not but man may so deform his works in the settlement as to leave that which is so clear in the wilderness a matter of doubt among traders and priests. If any such there be and he will follow me from sun to sun, through the windings of the forest, he shall see enough to teach him that he is a fool, and that the greatest of his folly lies in striving to rise to the level of One he can never equal, be it in goodness or be it in power."

Cooper's Indians do not hit the popular idea of the present day: his good Indians are too good, his bad ones not bad enough. Yet Chingachgook, Uncas and Hard-heart are such as we read of in truthful histories of olden times, no more faithful to their friends nor with kindlier traits than Massasoit or Soyengahratah; and as for Magna, treacherous, revengeful, bloodthirsty and cruel as a tiger, and a drunkard withal, it would be hard to outdo him in wickedness with any modern instance. In expert use of the rifle, none of them equal the incomparable marksman Hawkeye, which is true to life, for Indians rarely or never excel in marksmanship with firearms, while in turn and as naturally they surpass him in the finer subtleties of woodcraft. But he exhibits great skill in the art when he detects the difference in the twig bent by

the captive girl's hand and those broken by the Hurons. "The outer branch, near the prints of one of the horses, was bent upward, as a lady breaks a flower from its stem; but all the rest were ragged and broken down, as if the strong hand of a man had been tearing them! So I concluded that the cunning varments had seen the twig bent and had torn the rest, to make us believe a buck had been feeling the boughs with his antlers."

One would imagine though that Uncas or his father would have been likelier than the scout to detect this, and he, more accustomed to civilized warfare and the effect of ordnance, likelier than Uncas to hit upon this ingenious method of finding the way through the fog to the fort. "This shot that you see," added the scout (translating the earnest advice of Uncas for Heyward's benefit), kicking the harmless iron, "has plowed the 'arth in its road from the fort, and we shall hunt for the furrow it has made, when all other signs may fail."

An old camper who knows what a comfortable couch the twigs of cedar and the various firs afford, wonders why Cooper should bed his forest wayfarers on sassafras boughs as in the cavern at Glenn's and on "sweet shrubs and dried leaves" as in the decayed block house. But one forgets such trival matters in the vivid description of the wild turmoil of waters with their constant and all-pervading roar swelling and falling with every waft or lull of the light breeze or of the sombre quietude of the ruined stronghold whose sole surviving defenders now revisit it or that which presently follows the last of the "bloody pond," and the sudden and mysterious taking off there of the French sentinel when the departing fugitives "looked in vain for the form they had so recently seen stalking along its silent shores, while a low and regular wash of little waves, by announcing that the waters were not yet subsided, furnished a frightful memorial of the deed of blood they had just witnessed."

In the "Pathfinder" are frequent instances of the hero's wood-wisdom, as for example this, "Only the risk of being shot from a cover, as he forced his canoe up a swift rift, or turned an elbow of the stream, with his eyes fastened on the eddies; of all the risky journeys, that on an ambushed river is the most risky." Or this, "I hope Eaudouce will have the wit to bethink him of the damp wood now." This would give forth more smoke, betokening a fire made by careless whites, while the comparatively smokeless fire of dry fuel would be taken for that of an Indian camp.

The Pathfinder says, "A true woodsman never quits his piece while he has any powder in his horn, or a bullet in his pouch." Of this most of us have had personal proof, when the gun has been carelessly laid aside out of reach for a moment and the shot of a lifetime lost thereby.

The author endows Eaudouce with more ingenuity than this master of woodcraft in one instance, when he directs the branch of a tree to be cast "into the river to try the current, which sets from the point above in the direction of the rock," in the river on which the Pathfinder is exposed to the fire of the Hurons. Finding it reaches him, a canoe is sent to him in the same way and he escapes to cover. The Pathfinder commends this in characterstic fashion, "This has been done with a frontierman's judgment."

Here Cooper speaks for himself, when the guide's ear has caught the sound of a branch broken by a footstep. "All who are accustomed to that particular sound will understand how readily the ear receives it, and how easy it is to distinguish the tread which breaks the branch from every other noise of the forest." "Silence is a double virtue on a trail," says Pathfinder, and "patience is the greatest of virtues in a woodsman."

But it is needless to multiply instances from the Leatherstocking Tales, to prove that Cooper was possessed of skill in woodcraft, and a fertility of invention and keenness of observation, which if he had been placed under conditions similar to those in which Natty Bumpo, or as he is variously called, the Pathfinder, Deerslayer, Hawkeye and Leatherstocking, received his training, might have made him, in this respect, a living embodiment of the immortal creation of his imagination.

Only by years of study and practice of this unwritten science, can one learn to read the signs so faintly traced that mark the passage of man or beast through the puzzling sameness of the forest, where to the ordinary eyes one great tree is as like to another as the unnamed stars to each other, and where to such untrained vision nothing but the place of the sun in the sky or the pointing of the magnetic needle tells where is north or south.

Much of Cooper's knowledge of woodcraft was no doubt acquired when in 1808 he made the journey to Oswego in company with other naval officers, and was for a time stationed at that port.

"Wild animals still prowled through the adjoining forests," Miss Cooper tells us in her introduction to the "Pathfinder," "bears, wolves and panthers were not wanting. Of deer there was an abundant supply, and one or two fresh beaver dams were only a short distance from the banks of the river." The young midshipman threw himself with all his usual spirit into the hunting and fishing expeditions. Here, too, he must have received those impressions of the beauty and grandeur and solemnity of the primeval forest, which enabled him in after years to describe so well its varied moods and aspect, and to express through Hawkeye's lips such emotions as these, "In the forest I seem to stand face to face with my Master; all around me is fresh and beautiful, as it came from his hand, and there is no nicety of doctrine to chill the feelin's. No, no, the woods are the true temple, a'ter all, for there the thoughts are free to mount higher even than the clouds;" and again, "I want no thunder and lightning to remind me of my God, nor am I as apt to bethink me most of all His goodness in trouble and tribulations, as on a calm, solemn, quiet day in the forest, when His voice is heard in the creaking of a dead branch or in the song of a bird."

Some such simple-minded, faithful and honest ranger of the woods he may have met on the frontier, a worthier example of the class than the old hunter, the shiftless hanger-on of the settlements, whom he knew in his boyhood.

Yet it is hardly likely that he ever found, perhaps no one ever did find, in real life such an one as he describes the Pathfinder to have been.

"Ever the same, utterly without fear, and yet prudent, foremost in all warrantable enterprises," "His feelings appeared to possess the freshness and nature of the forest in which he passed so much of his time, and no casuist could have made clearer decisions in matters relating to right and wrong."

He was not without prejudices that were deep rooted. His "beautiful and unerring sense of justice" influenced all around him. "His fidelity was like the immovable rock." "Treachery in him was classed among the things that are impossible, and as he seldom retired before his enemies so was he never known under any circumstances that admitted of an alternative to abandon a friend."

A nobly-conceived character and truly as Thackeray said of him, "One of the prize men of fiction." It is easier to criticise than to create. Cooper created that which will last as long as American literature endures, and it becomes us better to be thankful for this than to be critical over any shortcomings.

Thackeray was a warm admirer of Cooper. It is thought by some that he fashioned the death scene of Colonel Newcome after that of Leatherstocking, and their similarity is certainly striking.

Leatherstocking, feeble with age and life slowly ebbing, had been placed by his Indian friends in an easy posture on a rude seat, his rifle on his knee. "Between his feet lay the figure of a hound." "The aged men of the tribe had drawn near to observe the manner in which a just and fearless warrior would depart on the greatest of his journeys." "The light of the setting sun fell upon his solemn features." "His gaze seemed fastened on the clouds, glorious with the tints of sunset." "Suddenly the old man, supported on either side by his friends, rose upright to his feet. For a moment he looked about him as if to invite all in presence to listen, and then with a fine military elevation of the head and with a voice that might be heard in every part of that numerous assembly, he pronounced the word,

"'Here!'

"When Middleton and Hardheart turned to him they found he was forever beyond the necessity of their care."

SLIDE ROCK FROM MANY MOUNTAINS.

Editor Forest and Stream:

The Poet and the Philosopher have again been in the mountains together; H. G. Dulog and "Yo" have made their annual hunting trip. During this trip, as a result of several conversations held about the camp fire at night after a hard day's work after deer, sheep or goats, it was determined to send in to you a series of letters for publication, if you should deem them worthy a place in the columns of FOREST AND STREAM.

Each one of these sketches is complete in itself, and each one is true—that is to say, is an uncolored narration of fact, so far as the writers are concerned. Names of actors in the events related have sometimes been changed, but in all cases where the writer tells of what he himself did, the account is exact.

While it is, perhaps, not customary in newspaper offices for a contributor to "put a head on" his matter, still it is suggested that an appropriate heading for these papers would be "Slide Rock from Many Mountains," the events narrated having taken place in the Rocky Mountains in several Territories, as well as in the Cascade Mountains of British Columbia.

The letters are inclosed with this. Yours very truly,

H. G. DULOG.
YO.

Natural History.

NAMES OF THE WHITE GOAT.

A GLANCE at the list of names which have been applied by systematists to the white goat-antelope, as given below, will serve to show the uncertainty which existed in the minds of the earlier writers as to the systematic place which this animal should occupy. The reason for this ignorance is not far to seek when we consider the very slight material which was at their disposal.

Lewis and Clark, who brought home from their expedition a hunter's skin, speak of the animal as a sheep. Ord, who described it from this same meagre material, followed them, and placed it in the genus *Ovis*, perhaps for no better reason than that the pelage of his specimen was in part woolly.

M. de Blainville, however, who saw the complete specimen in the Museum of the Linnean Society recognized its true affinities, and in his description assigned it to the genus *Antilope*, and to the sub-genus *Rupicapra*, thus placing it near the chamois. A year or two later Rafinesque characterized very imperfectly the genus *Mazama*, in which he seems to have intended to group this antelope, the prong horn, and one or two species of deer which can probably never be identified. He stated that the white antelope and another species in this genus would probably be found to represent a new group, which he called *Oreamnos*,* and announced that this group would be fully described in a forthcoming work, which, however, was never given to the world.

A little later, in 1822, came Hamilton Smith's excellent description in the Linnean Transactions, accompanied by a figure which, so far as I know, is to-day much the most lifelike and the best that has been published. Smith had before him a complete specimen of *Mazama montana*, and thus avoided some of the mistakes committed by American writers. He regarded the animal as an antelope.

Misled by the fact that the white antelope lives among the rocks and has a tuft of hair on its chin, Harlan and Godman called it a goat (*Capra*), as did also Richardson in 1829, Baird in 1852, Audubon and Bachman in 1853, and the Prince of Wied in 1862, while Fischer, who in 1829 quoted from Desmoulins (Dictionnaire Classique d'Histoire Naturelle), throws doubt upon this generic reference by writing *Capra (?) columbiana*.

It is not strange that Lüben should have remarked in his Säugethiere, that it is difficult from the descriptions to know whether this is an antelope or a goat.

In 1827 Hamilton Smith formed the sub-genus *Aplocerus*, which was adopted by Turner in 1850, by Richardson in 1852, and in this country by Baird in 1857, by Coues and Yarrow in their excellent Report of the Zoölogy of the Surveys West of the 100th Meridian, and generally in the Government reports. Rafinesque's name *Mazama* was revived in 1850 by J. E. Gray in the Knowsley Menagerie, in his paper in the Proceedings of the Zoölogical Society, and in his various catalogues down to 1873, and was then laid aside until brought up by Dr. Gill in his catalogue of the "Collection to Illustrate the Animal Resources of the United States," which is a "List of the Principal Useful or Injurious Mammals," a paper published in connection with the Centennial Exhibition in 1876.

The generic name *Oplacerus*, proposed by Haldeman in 1842 (Proc. Phil. Acad. Sci., pp. 187-188), to take the place of *Mazama*, only needs to be alluded to, to say that it evidently has no connection with the species under consideration. To what use of the term *Mazama* he referred seems uncertain, but that it was not to the white antelope is made evident by the reason advanced for the adoption of the name *Oplacerus* instead of *Mazama*, "this [latter] name having been preapplied to *Ovis* or *Capra montana*, Ord, by Rafinesque."

Almost as many specific as generic names have been given to this animal. Ord, translating the English name given it by the explorers who reported it to him, called it *montana*, and this name having priority, must stand.

There seems to be no doubt that Rafinesque's genus *Mazama* should be adopted for this animal. It is true that no less an authority than the late lamented Baird expressed in most unmistakable terms the opinion that this name "is utterly inadmissible as a genus of mammals," but this was written more than thirty years ago, and we may doubt if he would look at the matter in the same way if he were alive to-day. In his article (Pacific R. R. Reports, 1857, p. 665) on the genus *Antilocapra* he write as follows: "The generic name of *Mazama*, as established by Rafinesque, II., 1817, 44, has been quoted by some authors for the American antelope, as well as for the mountain goat and the smaller deer. An examination of his diagnosis will show very satisfactorily that the name cannot be used at all, on account of its embracing too many incongruous elements, as follows:

MAZAMA.—Eight front teeth on the lower jaw, none in the upper, no canine teeth, grinders truncated; head with solid, simple, straight round and permanent horns, uncovered by a skin; neck and legs not very long, cloven hoof. Tail short. Obs. This genus differs from *Cervus* by having simple permanent horns, from the genus *Giraffa* by not having a skin over the horns, nor a long neck, and from the genus *Gazella* by its horns not being hollow. It belongs to the family *Ruminalia*, sub-family *Stereoceria*, next to the genus *Giraffa*. It appears to be peculiar to America, and contains many species which had been taken for deer, sheep, antelopes, etc.

Mazama lema, Raf.—Yellow-brown above, white beneath. Horns cylindrical, straight and smooth. This is the *Temamazame* of Mexico.

Mazama dorsata, Raf.—Entirely white and woolly, a mane along the neck and back; horns conical, subulate, acute, slightly curved backward, base rough. Obs. This animal has been called *Ovis montana* by Ord, but the genus *Ovis*, or rather *Aries*, has hollow and flat horns, etc.

Mazama sericea, Raf.—White with long silky hair, no mane, etc. This is the *Rupicapra americana* of Blainville, but he has not ascertained the horns to be hollow.

"Were the genus *Mazama* less decided in its expressions, it might be taken for either the antelope or mountain goat (better the latter), but when we are positively assured that it differs from the antelope in having solid horns, and from the deer merely in the horns being simple and permanent, instead of branched and deciduous, there is no alternative but to expunge the name from the systems until we find an animal with horns like the giraffe, only much longer, and not covered by a skin."

Except in respect to its so-called solid horns, Rafinesque's diagnosis of the genus *Mazama* agrees sufficiently well with the characters of the white antelope to be applied to it, and the whole question as to whether this generic name should or should not be employed seems to turn on what that author intended to imply by the use of the term solid horns.

It has been suggested to me in conversation by that eminent naturalist Dr. Theo. Gill, that Rafinesque's idea of what constitutes solid horns was not what we understand by the same term to-day, and that the agreement of the other characters given with those of the white antelope and the doubt as to the sense in which Rafinesque used the term solid justify us in employing this generic name.

It is perfectly clear that Rafinesque intended his description of *Mazama dorsata* and *sericea* to apply to the white antelope and to no other animal. Of this there is no shadow of doubt. The animal is identified beyond a peradventure. This being the case, and *Mazama* being the earliest generic name applied to it, it should be retained, and the white antelope becomes *Mazama montana* (Ord.) Gill.

The local names in use for this species and those applied to it by various authors are numerous. The older writers called it mountain sheep, Rocky Mountain goat and white goat, and these names still obtain in various localities where it is found. On the eastern flanks of the Rocky Mountains and generally in the United States it is commonly called "goat" or "white goat;" but among the Canadian Indians, who speak a little English, it is more often spoken of as "sheep," and this term is universal among the Indians, and nearly so among the white population, of the northwest coast through Washington and British Columbia to Alaska. In southwestern Montana, in parts of Idaho, in eastern California, and perhaps in other places, it is sometimes known as "ibex," a name which is also often applied to the two or three-year-old male of the mountain sheep (*Ovis canadensis*). Lewis and Clark state that the Indians spoke of the white antelope as "white buffalo." Mackenzie, according to Richardson, says that his Indians designated *Ovis canadensis* by the same name, but it seems likely that the reference may have really been to *Mazama*, to which such a name would be especially applicable, as will be recognized by any one who has had ample opportunity of observing these high-shouldered rock climbers.

Most of the Indian names for *Mazama montana*, so far as I have been able to gather them and to learn their significance, have reference to its color; thus the Blackfoot name *Apoh'-mah-kee-kinna* appears to mean "white head," the Cree name is *Wa-pa-tik*, which signifies "white deer." The Indians of British Columbia, as stated, call it "sheep," and where the bighorn (*Ovis canadensis*) also occurs, the former is known as *Taculp* sheep (white sheep), and the latter as *Klale* sheep (black or dark sheep). Both these adjectives are from the Chinook jargon. The Squawmisht Indians of Washington and British Columbia call the white antelope *Hohh-solken*. The meaning of this name is unknown to me. The name *Kwhait-lit* given this species by the Comox

* Am. Month. Mag., Vol. II., 1817, p. 44.

Indians of Vancouver Island, signifies "very white," while *Mullukhtlaw*, as it is called by those of Seymour Narrows, means "white beast."

As the local names are all misleading, for the reason that the animal is neither a sheep nor a goat, nor an ibex, it is a pity that some one of those employed in the books could not come into general use, for two or three of them are very striking and characteristic. Schreber's name, "wool antelope," is one of these, so is "white antelope," "mountain antelope," and others. Brehm calls it "snow goat," "white goat" and "mountain goat."

In the synonomy set down below I cannot hope to have given all the references to this remarkable animal. My opportunities for consulting any satisfactory zoölogical library have been very limited, confined in fact to a very few hours spent in Washington libraries during two brief visits within the last year, and while I have turned over many books in my efforts to get all the references possible, yet I have been wholly unable to go into the bibliography of this species with that thoroughness which the subject deserves. I am especially conscious that I have failed to record any considerable part of the references to this antelope which are scattered through the fugitive literature of sport. If those who see this paper and who notice these omissions will kindly call my attention to them, I shall be greatly indebted, and such references will be supplied if this and the succeeding papers on this subject should appear worthy later to be published in more permanent form.

I wish here to express my indebtedness to Dr. C. Hart Merriam, the accomplished chief of the Bureau of Economic Ornithology of the Department of Agriculture, who has kindly looked over my synonymy, and has verified a number of references which I have been unable to see myself.

Synonymy of Mazama montana.

Ovis montana, Ord, Guthrie's Geography (2d Am. ed.) II., 1815, pp. 292 and 309.—Journ. Acad. Nat. Sci., Phil., I., i, 1817, pp. 8-12.—Journ. de Phys., lxxxv., 1817, p. 333.—Tilloch's Phil. Mag., lii, 1818, pp. 8–11, fig. of horn.

Antilope (Rupicapra) americana, Blainville, Nouv. Bull. Soc. Philom., 1816, pp. 73 and 80.

Mazama sericea and *dorsata*, Raf. Am. Monthly Mag., II., 1817, p. 44.

Rupicapra americana, Ord. Journ. de Phys., lxxxvii., pp. 146–155, Paris, 1818.

Antilope americana, Desmarest Mamm., II., 1822, p. 478.

Antilope lanigera, C. Ham. Smith, Linn. Trans., XIII., 1822, p. 38, pl. IV.—Boston Journal Philos. and Arts. Vol. I., 1824, pp. 338–40 (Reprint from Linn. But there is no reference to the Rocky Mountain Goat in the text.] Geo. Bird Grinnell.

NOTES ON THE SNOWY OWL.

Editor Forest and Stream:

In your issue of Nov. 28 mention is made of the snowy owl, and one of your correspondents asks for information in regard to winter home of this bird. I will give data concerning three birds taken in this vicinity during the present month.

A female shot with a rifle Nov. 7, near Martinsburgh, Lewis county, N. Y. A male shot with rifle Nov. 14, near Denmark, Lewis county, N. Y. Pellets in stomach of both, ready to be disgorged, consisted of mouse fur and bones.

Another female was wounded and captured alive Nov. 26 in town of Watson, Lewis county, and is now in possession of C. P. Kirby, M.D., of Lowville, N. Y. (Lewis county). I may state on good authority that this is their first appearance since 1886 in this section. But during the late fall and early winter of that year as many as ten or a dozen of these birds were taken in this vicinity. Dr. Kirby, before referred to, tells me that he has a bird of this species mounted, which is so white that when C. Hart Merriam, M.D., saw it, he ventured the conjecture that it is an albino. Osceola.

Northern New York, Nov. 30.

Death from Skunk Bite.—Hot Sulphur Springs, Col., Nov. 12.—*Editor Forest and Stream:* Attached I send a clipping giving account of death from skunk bite: "A special from Baldwin, Kansas, says: About two weeks ago Joseph Drury, while out hunting, ran his hand into a hole in a stump after what he thought was a rabbit, when he was severely bitten by a skunk. The hand and arm became very painful and swelled considerably. Day before yesterday he became delirious and showed symptoms of hydrophobia. He rapidly grew worse, and yesterday went from one convulsion to another ,until 10 o'clock last night, when he died in great agony." About a week earlier I saw a similar paragraph giving account of death by hydrophobia from the bite of a wildcat. A fine cow elk was led through here a few days ago.—Wm. N. Byers.

The Washington Zoological Park Site has been selected by Secretary Noble, Com. Douglass and Prof. Longley. The land comprises a tract of 166 acres, lying along Rock Creek. The prices asked by the present holders aggregate $106,486. It is probable that the President will approve the report of the Commission, and that the work of preparing the park will be undertaken in the near future.

Snowy Owls in Maine.—Millbridge, Me., Dec.—Since Nov. 16 I have shot five snowy owls on Petit Manan Island, and one black-backed gull. I have seen nine owls this fall; they are very wild. A black duck is tame compared to them.—W. D. U.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents.

GOOD LUCK ON A FRIDAY.

FOREST AND STREAM is always a welcome visitor with me, for through it I get many useful hints and become acquainted with some of my fellow men who, like myself, find great pleasure in the use of the rifle. My business did not allow me to spend much time out on the mountains this fall, but I have, however, taken time enough to bag seven fine deer since the last week in September. The last day's hunt was on the 23d of November, and although it was on a Friday (which some people superstitiously call an unlucky day) I had such complete success that I am tempted to let you know of it.

A little after nine o'clock I saddled my favorite horse, and with a small lunch (which my good wife put up for me) in my pocket, I took my favorite for big game, the Martini-Henry .45-85-480 Government rifle, which I have used for several years. Twelve o'clock found me on a part of the mountains where I have killed dozens of deer, but there was no sign of deer except tracks about three days old. I decided that if I was to have fresh venison that day I must go about two miles further back, on to and back of another spur of the mountains, where the deer in this particular locality seem to resort whenever there are a few days of mild weather through the fall and winter months, and especially when the wind prevails from the south and west. A brisk ride over rocky ridges, across gullies, through occasional brush and some fallen timber, and in some cases good although very crooked traveling (all of which my horse is very well used to and able for), soon found me where I was looking at the tracks of three deer, comparatively fresh. These I followed some little distance on horseback when I dismounted, and after securely tying the horse to a tree, unlimbered my rifle, and with eyes and ears as sharp, and step about as light and careful, as any Indian in the country, I followed the tracks of the deer, expecting to see their hair on the sunny side of the mountain spur, but I must have been about an hour too late to find them.

The snow was off in many places, and I began to wonder where the deer could have gone to to lie down (which I felt sure they had done), when, going along very carefully and looking everywhere in the gully beneath and on the mountain slope beyond the gully, as well as on the spur which I was on among the rocks, my eyes suddenly caught an object in a small clear place under a fir tree in the bottom of the gully. It resembled a deer lying down with its head up. It was too far to distinguish hair, being all of 300ft. lower than I was, and as near as I could judge all of 275yds. from where I stood. I quickly decided to shoot and find out if it was a deer or not. So I shoved the sight up to something over 200yds., knowing that the rifle would be likely to carry a little high, as I was all of 300ft. above the level the deer was on, if it was a deer. So dropping on one knee (my favorite position when I want to make a careful shot at game) I took as fine a bead at the middle of what proved to be the neck of a deer, expecting that with the sights where I had them the bullet would be more apt to fly low a little and hit the body than to go higher than my aim. The sun was shining nicely on me, but the mark was in the shade of the opposite mountain, and I pressed the trigger with as fine and careful a bead on the middle of what I took for the neck as I ever did over the same sights. When the smoke cleared away (which was very quickly, I looked and the object was there just the same, with the exception of the upright stem (that I had aimed at) which was gone, and presently I saw a motion which was one hindleg kicking. Then I knew it was a deer.

While I was looking I had slipped in another cartridge and was about to rise off of my knee, when a larger animal than the other one ran up among some willow brush a few feet from the deer I had shot, with his head from me. I quickly took another fine bead a little high up on this one and fired again, when he dropped right down in his bed and made the willows around him shake with his kicking. I could see that this one had horns, which were turned from me as he had stood when I fired; and almost before I thought what I was doing I had another bead high up on him as he lay kicking and let drive another bullet. The kicking stopped then and I rose up and commenced looking about as to the best way down to my meat, when my eyes caught sight of the other doe (a few yards lower down the gully from where my venison lay) walking off rather stiff-legged, with head up, looking all around, and sometimes stopping to look back, evidently not understanding what it all meant. I stood and admiringly watched her movements for some time before I started down, but I did not attempt to shoot at her, as I was sure that I had a little more meat already in that ravine than was necessary.

When I got down to my game, I found that the first bullet had crashed through the middle of the slender neck of the doe exactly where I had aimed; and she lay right in her bed and had not so much as straightened her front legs. And, strange as it may appear, my other two bullets hit the buck in the neck less than six inches apart, the one went square through and the other one came out of his left eye.

These were the only three shots that I fired that day, and I call them three lucky hits. I have killed many a deer, but I never before killed two within a few feet of each other without either of them knowing of my presence beforehand, or taking one step to walk or run. But now that the shooting was over, the day's work was not yet done. I dressed the two deer, a task which did not take long, but to get back up to my faithful horse and get him down to the meat; and to skin the doe a little down on each side of the middle, and cut the meat across and back or break the backbone across the middle, so that it would hang good across the saddle; and to get it on to the horse and firmly tied with baling rope; and to put the loose fat and hearts and livers of both deer into the barrel or between the ribs; and to cut off the buck's head and lay it on top, with the horns lying horizontally and the fore part of head and nose down in the barrel of the doe and firmly tied on—this was work that took me until the evening shades were about me. I gathered the buck's feet up under him as well as I could, and piled a

few sticks and chunks on top of him to keep the coyotes off (for hanging him up was out of the question), and then carrying my rifle and starting my horse (who was sharp shod) up the steep mountain side, which is pretty well timbered with fir and balsam, we finally got to the top (after resting several times), with me hanging on to the horse's tail and he picking his own way. He is good at this, as I have trained him to the work, and he has packed many a deer after dark (with me holding on to his tail) out of these mountains.

The doe weighed about 175lbs., and the buck, which I gave an Indian half of for helping me to pack it in on the following Monday, would weigh about 100lbs. heavier with the horns, which are the finest that I have seen of this specimen of deer. I have mounted the entire head. I think he was eleven years old; and the head is really a very fine specimen. The coyotes had not touched the meat of the buck, although he had lain there two nights and two and a half days, but they had tracked all around him at a little distance.

Now, I would not have any one think that I want to convey an idea that I always do as good work as this with the rifle, but to the contrary, I have often done very poor shooting, but when I do I always try if possible to find out the cause.

In all my hunting there are two things I am always anxious to avoid, and they are wounding game without killing it, and wasting any of the game that I get. I have had a good many successful days out on the mountains, and always regard them as free gifts from Him who owns all nature. I. LEHMAN.

BRITISH COLUMBIA.

THE STORY OF A BUCK.

I SAW a most beautiful game picture this season while hunting with A. H. Maynard, Esq., on Vancouver Island. As I reached the summit of a mountain I saw within 50yds. from me a flat, oval rock, some 10ft. across, covered with bright green moss. In the center of this mossy couch a two-year-old buck lay with his left side toward me, his head erect, his large eye glistening. I instantly covered him with my rifle; then the true sportsman part of my nature came up and prevented me from pressing the trigger. I held the rifle in position and studied the picture, which was one that even a Landseer or Vogt could not faithfully portray—the combination of shades of the dark evergreens in the background and the brilliant coloring of the mossy carpet that covered the rocks, then the deer as it lay there a model of symmetry and alertness, all combined to make one of nature's perfect pictures, one that will never in this life be forgotten.

But once before did I ever see a scene that would rival this one. Many years ago, at the junction of two mountain streams, in Belvidere, Vt., there was a deep round pool of transparent water, bordered by a low fringe of alders. One day in June, I approached this pool and peered through the tops of the bushes into the water. Not a fish was in sight. With a gentle cast, I dropped my fly on to the surface of the water, when a large trout darted out from under the opposite bank at the fly. I struck too quick and missed him, and there in the very center of the pool—as though suspended in transparent ether—that fish remained, its every fin quivering with excitement and expectation, and his brilliant colors glowing with a metallic luster. I drank in the beauty of the picture for a few moments, then with a slight wrist action the fly was dropped out over the fish, which jumped in its eagerness clean out of the water to seize it; a brief struggle and it was over, the trout lay with a broken neck in my creel. I left that pool, possessed with a mixture of feelings—shame and regret—that I had spoiled so pretty a picture, and a feeling of exultation, that I had secured so fine a fish. We will leave it for our brother sportsmen to draw their own conclusions, as to which set of feelings have gained the supremacy.

To return to my deer. As my arm began to tire in holding out the gun, the old Norse feeling took possession of me. A quick glance along the sights, a pressure of the trigger, then the report and the air was full of saltpeter smoke, and the beautiful deer lay on its side motionless. I approached it and saw that the bullet had gone true to its aim and entered the neck near the shoulder. I laid my rifle down, stepped on the rock and took it by the hindlegs to turn it, so that its head would hang over the edge of the rock as I bled it. The next moment I was where?—no matter where. It's nobody's business but my own—and the deer's—where I was, whether reclining or erect, head or heels up. Whew! but talk about a mule's kicking, no double team of mules could kick out as that dead deer did. I picked myself up and also picked up my gun hastily. There lay the deer apparently dead. I cautiously approached it again and punched its head with my rifle. Not a move. Then I touched his shoulder, which caused a slight quivering of the muscles of the shoulder and forward. I touched his hindquarters, then how his heels flew out. There it lay without further motion. I stooped over and placed my hand over its heart, and felt it beat; and came near getting my head kicked off, which caused that kind of nonsense to be summarily stopped.

Did I afterward regret that I had so ruthlessly destroyed that picture? Yes; before I had packed that deer a mile down the mountain I wished him a hundred times over back on his moss-covered couch or anywhere else but on my back. And Maynard? O yes, he came up and carried my rifle and acted as guide—went zigzag through the woods, crawled under fallen trees, made comments about my style and general make up, told yarns how Jack Knight could trot away with two deer on his shoulders, which of course was very comforting to my aching back.

When you are packing a medium-sized deer, and have had a few sprawls over sharp-edged rocks and have stumbed cross-legged over hidden logs, sat down not gently on the short knots of the said logs, and wrestled for half a mile in tangle brush, it is really astonishing how the weight of your deer increases and what gigantic proportions it assumes. It is then the proper thing to do, to lay your burden down and satisfy yourself that it is not an elk instead of a 150lb. buck. I did it several times.

Did Maynard help pack? Well, yes, when I at last threw that ticky, mangy, scrub of a blacktail deer down, declaring emphatically that it might lie there and rot before I would carry it another yards. He then took it up and packed it a short hundred yards to the railway track and triumphantly placed it on a hand-car, and felt himself a conqueror—a big Indian. Long may his tomahawk wave! STANSTEAD.

AIM WITH THE SHOTGUN.

Editor Forest and Stream:

I think this subject has been extensively discussed in every volume of the FOREST AND STREAM yet published. Though often tempted to do so, I have never taken part in the discussions, for the simple reasons given by Dr. Robt. T. Morris in last week's issue. His article is the most sensible one I have ever read upon the subject. I know, by an experience of over forty years, that no rules can be successfully formulated for aiming ahead. Success can only be acquired by long practice. I have killed large numbers of ruffed grouse on the wing, and during the latter years of my shooting did not fail to kill at least five out of six shots. It would be impossible to explain just how I aim, as it depends on too great a variety of circumstances. I remember going out one October morning with a young merchant along the banks of the Minnesota River for ducks. As we approached a bluff just back of a large slough, a flock of seven mallards in a line, perhaps two feet apart, passed within 200ft. of us. As the young man had but little experience in wing-shooting, I told him to fire both barrels at them when they were just abreast of us, and then I would fire at what were left. He fired but one barrel and then told me to fire. He killed the last duck in the line, and I killed the first and last of the remaining six. He said he aimed at the leading duck when killing the last, but I do not think I aimed two feet ahead of those I killed, though at a greater distance. MILTON P. PEIRCE.

COLUMBUS, Ohio.

Editor Forest and Stream:

Dr. Robt. T. Morris, in your issue of the 27th ult., hits the nail squarely on the head with his timely and practical remarks. My own experience in the open, in the brush and at the trap fully bears out his statement, that if aspiring beginners "do not learn to use the gun as they do the baseball bat their ambition to become wing-shots in the brush will lead to disappointment." And he might have added, "in the open and at the trap," as well as in the "brush."

When a youngster I was (mis)taught to use the shotgun pretty much as a rifle, *i. e.*, to close the left eye, squint along the barrel with the right, bring the sight the "proper" distance ahead of the bird, and then trust to providence and pull away. I did so, and while at times I brought the game to bag, my misses were far more numerous than my hits, and when I did hit it was probably by chance. In following out this precept at the trap I met with even worse success, and it was not until I adopted Dr. Morris's style that I commenced to score anything but "lost bird." Since I began to shoot with both eyes open, looking at the bird only, I find that the gun (always provided that it is of proper balance, weight and fit) "comes up" and falls into place intuitively for a good shot, and I find that I can at last make fair scores, which compare favorably with other amateurs.

I had, and who has not? received lots of well-meant advice from brother sportsmen and trap-shooters how to hold, estimate distance, calculate the parabolic (or diabolic) flight of a clay pigeon, etc., etc.; but somehow or other I never found time between the moment the bird was on the wing and the trigger pulled to carry my mathematics into practice. But when I ignored mathematics altogether and adopted the intuitive or "baseball bat" style I commenced to do well at once, and sometimes at least got a chance at the "pot." I feel that I have adopted the only correct style at last, and with a little more practice see no reason why I should not attain the front rank.

Let me advise all beginners, young or old, to adopt the intuitive style of shooting on the wing advocated by Dr. Morris, and to relegate the mathematical calculate-beforehand-and-squint-along-your-gun plan to those who do their shooting with their mind in their armchair at home instead of with a gun in the field. LOUIS BAGGER.

WASHINGTON, D. C.

Editor Forest and Stream:

In your issue of the 21st, Dr. Morris advises beginners not to aim at all, to look at the bird only. This plan may be necessary in the woods of Pennsylvania and central New York, where Dr. Morris does his shooting, but from my own experience I think it a most difficult way of learning to shoot, and one totally unnecessary in our southern quail grounds. When I was learning to shoot, for more than a year I tried it, and I was no more near to being able to kill a flying quail at the end of that time than I was in the beginning. Improvement, however, began as soon as I tried "sighting" my birds, when, after becoming in this way a fair wing-shot, I returned to my old plan and found I could kill my birds without sighting. SETTER.

ALABAMA.

Editor Forest and Stream:

Dr. Robt. T. Morris hit the nail on the head pretty squarely, and that reminds me to say that shooting is very like driving a nail. Does a carpenter ever take aim with his hammer, or a spikeman on a railroad with his long, swinging stroke at arm's length watch his maul as it goes around over his head to see if it is coming down in the right place? If he did would he be apt to hit the spike?

When I commenced trap-shooting I thought it was necessary to lay my cheek down on the gun stock and screw around until I got my eye and the sight in a line with a glass ball. That was before the day of clay-pigeons and bluerocks. Consequently I was more often at the foot of the class than the head. One time, after so many misses that I became ashamed of myself, I got reckless and didn't care whether I scored or not. I called "pull," drew up the gun, watching the ball, fired and was as much surprised as were my companions to see the ball go to pieces. It took me some time to get the idea, but I finally got it, and thereafter I seldom saw the sight or even the gun when I pulled the trigger, and my success was surprising. I applied the same rule to field shooting, and without boasting my hunting companions sometimes tell me to my face that I can shoot. Of course allowance must be made for birds crossing, rising or falling, but that is intuitive and seldom thought of by our most successful shots. Indeed, thinking has little to do with it. If it had, one's bird would be out of range before he could collect his thoughts.

Doctor Carver never aims at flying objects in his rifle shooting. He looks at the object and when he fires he scores. Once, when Bogardus was giving an exhibition shoot at double clay-pigeons, I imagined I saw him looking at the second bird while firing at the first, breaking both.

Much depends on the fit of the gun. One cannot shoot if his gun does not fit him any more than he can feel comfortable in an ill-fitting suit of clothes. But that is an old story to old shooters. J. H. B.

MANSFIELD VALLEY, Pa.

ADIRONDACK DEER.

Editor Forest and Stream:

I am glad to hear from those whose boyhood, perhaps like my own, was spent in the Adirondack woods, who early learned to commune with nature in her sacred temple, and whose playmates were the timid deer, and whose tender hearts and consciences will not allow them to remain silent while those beautiful creatures are being slaughtered as they have been the past fall. For it is only slaughter to murder deer deprived of all means of escape in the water.

Your correspondent "Law" confirms my own observation. I had previously come to the conclusion that if deer were hunted as persistently in all parts of the Adirondacks as they were within scope of my own observations, the number killed in the Adirondacks would not fall much below 1,000 deer, and that nine-tenths of them were killed by driving them into the water with dogs. "Law's" statement of his locality is true of this. Every lake, pond and river has been watched, and Sunday has been the biggest day with the hounders. Many of the watchers had no hounds in the woods, but were there to kill what escaped those who had. Must this slaughter be repeated? Will the great State of New York, that is fostering a great forest preserve, allow it to be denuded of its noble game, which without it will not be half so attractive? I hope it will not be so stupid, but that it will heed the warning ere it is too late by passing such game laws as will insure plenty of game so long as the cover remains.

I am heartily in concert with "Law" in his endeavor to get a game law that will better protect the deer of the Adirondacks. I am in favor of the best protective law, whatever it may be. My views do not fully accord with "Law's" in this respect: The best possible law would prohibit hounding altogether. But as this is not likely to be done at present (but it will eventually be done when there is nothing left to protect) we will leave that out of the question. I will give my views of a law as stringent as could probably be passed at present, and my reason therefor. Open season to commence Aug. 1. More sportsmen visit the woods during the month of August than later in the season, and feel that they are as much entitled to venison as those that can come to the woods later. And if allowed by law to have it, they would kill only enough for camp use; in fact all respectable guides would not allow more than this. My observation has been that nine-tenths of the parties that go into the woods before the open season will have their venison to eat in camp; and of course have to keep it secreted; and if they change their locality it is all thrown away, and another deer is killed in their new locality. Whereas if they were allowed to have it they would be much more likely to respect the law and not to kill before the open season, and then only enough for camp use; and they would have more interest in preventing the June jacking. Thus I think it would be a protective measure and would give better satisfaction to the better class of sportsmen who are only permitted to have their vacation during the month of August.

I would have the open season for hounding in September, of whatever duration it might be. During September the hair of the deer is short and has but little buoyancy; deer do not like to swim, but will try to throw the hound off the track by skirting along the shore of the lake or by running along in small streams, and thus escape the hunter. During October and the later it is the quicker will they take to the water before the hound, and most every deer started will be killed. It seems to me that this would satisfy the greatest number of sportsmen who wish to hunt in this way while they would not be able to kill so many. Later than September few sportsmen visit the woods except for the sole purpose of hounding deer. Pot-hunters take advantage of the late hounding when deer take to water readily, and so does most every man and most boys who can command a dog that will follow a deer, and many who cannot but go in to watch before others' dogs, and kill all they can regardless of the three-deer limit or the one carcass transportation law. They evade the law by jerking the venison and often by keeping some one transporting one at a time for each person. There are so many that go into the woods because they can kill deer in this way as easily as the most experienced hunter, that if they only kill three deer each the number would be enormous. Therefore I think it would be better to have the open season for hounding in September. Of course, the shorter the better. But I do not think as many deer would be killed if the whole month of September were allowed as there would be during fifteen days in October.

I think the open season should continue until Nov. 15, especially if dogs are allowed to run up to Oct. 20. Much complaint and dissatisfaction has been expressed by those that wish to still-hunt because they are allowed but ten days immediately after the dogs have scoured the woods and killed and driven everything away. I should be willing to give every one a chance to hunt in their favorite way consistent with keeping up the full supply of deer. Hounding being the easier and most destructive method should be accorded the shortest time. Hounding is more destructive than crusting, because practiced more extensively. But who would think of giving the cruster an open season?

I believe a conservative law relative to the deer in the Adirondacks, one sufficiently stringent to fully insure the full supply or increase of the deer, should be passed by our next Legislature; and to this end I am ready to cooperate with "Law" and every one else interested in the preservation of the almost only game left in the Adirondacks, and which is fast disappearing under the present law legalizing a method of hunting for fifty days in each year, more easy, more sure, and more destructive than crusting or early jacking. MUSSET.

NUMBER FOUR, N. Y., Nov. 4.

PATTERN AND PENETRATION.

REMINGTON 12-GAUGE.

RESPONSIVE to the invitation of FOREST AND STREAM, Messrs. Hartley & Graham, the new proprietors of the Remington works, at Ilion, and the makers of the present model of the shotgun bearing the Remington name, submitted three guns, two of them were of 12-gauge, and the third of a 10-gauge size. The two 12-gauges differed in weight and were intended to represent two popular sizes adapted to different demands of work. The weapons were of the low hammer type, with top snap, and very creditable samples of workmanship, especially when considered in connection with their cost price. With the arms were sent cartridges. Those for the 12-gauges were loaded with 3¼drs. of Hazard FG, behind 1¼oz. of Tatham chilled No. 8. This was presumably the charge which the testing monitor at the Ilion works thought best adapted to the guns sent. The first gun put to the test happened to be the heavier of the two 12-gauge arms, and Supt. Moss did the actual trigger pulling of the trial. In order to make the trial of the arm as complete as possible, an order was sent to Von Lengerke & Detmold to load cartridges with 1¼oz. Tatham No. 8 chilled, and use wood and Schultze powder of quantity sufficient to make the efficiency of the cartridge equal to that of the black powder, as stated in the Remington invoice accompanying the arms to the office. How nearly 1¼oz. of shot as measured in New York correspond with 1¼oz. as measured at Ilion, a glance at our analysis will show.

The day was a good one for the test, a cool morning, with not as much dampness in the air as might be wished for powder lubrication, but just such a morn as thousands of gunners are enjoying in the brush and afield. The black powder cartridge was first fired, then the wood and finally the Schultze, and upon falling back to 60yds. the same order was observed, and all through without cleaning.

This direct comparative test of the three powders now upon this market in the same gun of good make is a very instructive one, and the advocate of each of the makes of powder will find data to his taste. The black powder does not make the best average, but it is quite uniform in action. The wood powder redeems itself after the display it made in the L. C. Smith gun test, and leaves it an open question whether after all it was the gun or the charge which was to blame in that trial. With the coming of the Schultze powder came those fluke shots, where there was a sudden dropping away of the pattern 50 per cent. or more. How is this? The gun was the same, the powder of course was uniform with the shot, and the only explanation is to be found in the fashion of loading, so far as the wads was concerned and their relation to the bore of the gun. The higher the rate of expansion of the propulsive gas or the rate of its generation, the greater the chance of magnifying any error which may be traced back to irregular wadding as related to the gun's bore.

But we are not called upon to discuss the why and wherefore of these irregularities. The fact is that they exist, and some of our many correspondents may feel impelled to argue from the facts as we state them to the cause as it exists. It was plain that the left barrel was the closer shooting of the two, and every charge showed this in its averages. So far as penetration is concerned there would seem to be little difference, with the slight odds in favor of the white powder. It should always be borne in mind that there is a difference between penetration and killing power; a light missile or shot moving rapidly has great killing power, while a heavier missile moving slowly may have much less, yet the latter will no doubt show better results in penetration upon the compactly placed sheets of paper used for measuring this factor of a gun's work. The velocimeter would give accurately the rate of travel of the flying pellets, and give, perhaps, a better notion of the killing power, yet it would be valueless in noting the penetrative force since it takes no note in its measurement of travel of the weight of the flying object. Besides, in our series of tests, it has been our aim to point out rather how each man may test his own gun and give him a series of figures by which to gauge it, rather than pile up a lot of tables or to reach that other *ignis-fatuus*, a perfect load. There does indeed exist a perfect load, but it is for each gun only, and it is for each gun holder to work out the effective capabilities of his own weapon. Having reached this, he may then note whether the arm he possesses shot at its best is as good as another arm similarly used. This is the value of our series of trials. Gunnery in all its branches is essentially an art of experiment, and in its own field the FOREST AND STREAM has taken up the task of so heaping up facts that if we cannot actually reach the point of saying this or that charge is the absolutely best one, we can at least point out certain avenues of effort which are sure to lead to disappointment. There is as much in knowing what to avoid as in finding out what is best to cling to. But again we are drifting into casuistry and will stop off short and leave the facts to stand for themselves as presented in the formal trial of this arm:

CLAREMONT, N. J., Nov. 15, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Remington Hammer Gun. Cost, $40. No. of gun, 31,553. Weight, 8 9-16lbs. Length of barrels, 30in. Gauge, 12. Right barrel, full choke. Left barrel, full choke.

Weather—Clear. Direction of wind, 3 o'clock. Force of wind, 7 miles per hour. Thermometer, dry, 45°. Do., wet, 39°. Humidity, 57°. Barometer, 30.1in.

Charge, as given by holder of gun:

BOTH BARRELS.

Shell—Winchester.
Powder, Brand—Hazard FG.
Powder, Quantity—3¼ drs.
Shot—*Make*—Tatham. *Quantity*—1¼ oz. *Size*—No. 8 Chilled.

CARTRIDGE ANALYSIS.

Three Cartridges Taken at Random.

BOTH BARRELS.

Loading.		Powder.	Shot.

MAINE LARGE GAME.

THE situation of Maine's large game is, on the whole, rather hopeful. But little has been heard about the moose this year, and yet it is the hope of the best friends of the game that they are not exterminated, or that they have suffered any great depletion of numbers. Perhaps it is too much to hope that there has been an increase, as in past seasons since the law for their protection began to be enforced; but it is gratifying to learn from good authority that there are still many moose in Maine. They have been seen this fall in various parts of the State—in some cases where they could hardly have been expected. One came down among a farmer's cattle at Eddington and remained with the cattle till the farmer had time to get his gun and shoot him. Quite a number have been seen in the eastern part of the State. They have not been seen in their usual haunts in the northern parts of Oxford and Somerset counties, and there is one very good reason why. A great railroad has been building through the forests in the northern part of these counties, and even forward to the railroads already in operation in the eastern part of the State. Gangs of Italians and other laborers have inhabited these woods all summer long, and with their legitimate blasting and other noises on week days and poaching on Sundays, it is no wonder that the moose have been frightened away. It is the hope of the Commissioners of Fisheries and Game that so soon as the construction of this road is done the moose may return to their old haunts. It is true that the road opens up a new territory to the hunters and poachers both, and hence the chances for the moose are lessened; but the existing game laws should be the better enforced, and new and better laws should be enacted at the next session of the Legislature of that State in 1890-91. A better statute was never proposed than that of Commissioner Stilwell at the last session of the Legislature there, that of making it a crime to kill a cow moose at any time. The enactment of some such a law will again be tried for when that Legislature again convenes, and it is hoped that the composition of the two houses may not include such a volume of the lumber interest as to kill everything in the form of wholesome fish and game protective legislation.

But turning from the chances of the moose to the deer in Maine, the theme is much more pleasing to the true lovers of the forests and the still-hunt. The increase of deer has been wonderful, even the past year. Hunters who go to Maine after deer are still returning much pleased. Deer are plenty, and they are able to get them. A gentleman from Lowell, with his boy, has killed six—the full quota that the law allows, even with the boy counted in. But let us say right here that he ought to be ashamed of his success, rather than proud of it. One deer in a season is enough for anybody but a selfish hunter. Jonathan Darling has at last been brought to grief, and it looks as though dog-hunting deer had received its death blow. Darling has been tried before the municipal court and fined for killing several deer, his fines amounting in all to some $250 or $300. He has appealed, but the cases are so plain that the chances are that they will never be pressed before the superior courts. I have this from good authority, and I also understand from the same authority that his threats about testing the constitutionality of the law before the full bench are only brag and bluster. There are already too many more cases against him. His poaching, cruel dog-hunting and open defiance of the law are too well understood, and the attempt of some of his friends to create a feeling of sympathy for what they are pleased to term "a sturdy backwoodsman of the old school, who believes in his inherent right to kill game when and where he pleased," will fall before the fact of his stepping up and paying his fines in due season. Letters intended to intimidate wardens, whom he supposed might be on the watch for him, are in the possession of the proper authorities, and unless Darling does fight and beat the game laws, he can pose in no other light than that of a dishonest dog-hunting poacher.

Personally I have no ill will toward Darling, but he has already been convicted before the lower court of a crime, which as a writer in a leading publication, devoted to the protection of fish and game, I cannot do otherwise than condemn in the strongest terms. His crimes are known to me, he himself is not. He is also condemned by many others, lovers of fish and game, who never saw him personally. They know him as a student of the notorious Brown, who first established the camps at Nicatous. But there has been terrible scattering at these camps—the camps where the letters of warning say "there are partyes"—the exact spelling of two instances—"who would make it hot for any game warden." Then the threat that "all game wardens must keep away," who did not want to go the way of the poor fellows that fell before the assassins while trying to do their duty at Fletcher Brook, in the fall of 1886, is not yet forgotten. Jock Darling may pose as a poet, but he may consider himself fortunate if his attempts at letters have not led him into a crime. It will hardly be the thing not to pay those sportsmen a compliment who have, in response to Darling's invitations, gone down to Nicatous, and had deer dogged into the water for them to shoot. That they are cruel is hardly a fitting term in which to clothe them, for already I know of one or two of them that are ashamed of their cruelty. They are more. They are as bad as Darling himself, and they may rest assured that if ever Darling or any of his guides should turn against them, and lay their crime before the Commissioners, it will only require their presence within the State of Maine to lead to their arrest. An officer, with authority to arrest these "gentlemen sportsmen," was in Boston the other day, desirous of working up a chain of evidence, already in his hands, that may lead to the detention of certain gentlemen for killing deer at Nicatous, if they ever set foot on Maine soil again. The chances are that some "honest, sturdy guide" of former shooting scrapes at Nicatous has "leaked," in order to save his own body from fines and imprisonment. It is a cowardly act to dog a deer into the water and there take its life, and if Darling and some of his "noble guides" should add treachery to their cowardice, by turning State's evidence, those who have employed them will meet no more than they deserve.

SPECIAL.

CALIFORNIA DEER.

SACRAMENTO, Cal.—*Editor Forest and Stream:* Game exterminators have been operating quite successfully in some of our adjoining counties this fall; and a young gentleman, who has just returned from a trip in El Dorado and Placer counties, reports a wholesale slaughter of deer in that locality.

Deputy Fish Commissioner Smith, of Placerville, El Dorado county, made a raid upon a camp of the game destroyers last week, and captured two of the offenders. Forty-one deer skins were found in their possession, thirty-three of which were doe skins, and they are supposed to have slaughtered over one hundred deer. The men were taken to Placerville, where Justice Carpenter fined them $30 each, which they promptly paid and departed. This was in direct violation of the game law, as $50 is the minimum fine prescribed for the killing of does and spotted fawns. But as it was their first offense the parties were let off rather too easy. Many of the carcasses of these deer were left upon the ground to be devoured by wild beasts.

Nearly two thousand deer skins are lying at the freight office in this city awaiting a claimant. They were consigned to prominent firms doing business here, but said firms do not seem at all anxious to receive them. One party has already been arrested and found to have several hundred hides in his possession; and he is now waiting the action of the court in the matter.

The Game Commissioners have at last awakened to a realizing sense of the deplorable state of affairs, and it is to be hoped that the nefarious business may be stopped ere deer in our State have become extinct. M.

ALL-AROUND GAUGE.

Editor Forest and Stream:

Probably the gun is yet to be invented that will be found to answer all purposes equally well, but I believe that the brass-case gun is the nearest approach to a perfect all-around weapon. For the uninstructed let me explain that this is a gun specially bored and chambered for a very thin brass cartridge case called the "Perfect," made by Messrs. Kynoch, Limited. The internal diameter of these cases is greater than that of paper cases of the same nominal gauge, thus permitting the use of larger charges; and in a gun specially bored for them the internal diameter of the barrel is made to correspond with the internal diameter of the case, the effect of which is to practically abolish the chamber cone and to increase the caliber of the barrel about two sizes beyond its nominal bore. The result is a wonderful increase of power in the weapon when used with the cases for which it is specially adapted.

Mr. Greener has published some very interesting results of experiments made with these guns, and he says: "A comparison of the tables shows that guns using 'Perfect' give patterns of unsurpassed regularity; the force is greater and the average higher than in the paper-case guns of two sizes larger in the gauge." He also says that "a 12-bore brass-case gun weighing only 7¼lbs. is superior to a 10-bore paper-case gun weighing 9½lbs."—"*The Gun and its Development*," *pp. 524 et seq.*

Those accomplished wildfowlers, Lord Walsingham and Sir Ralph Payne Gallway, writing in the Badminton Library, say: "A shore gunner will do far better with a powerful 12-bore, bored for Kynoch's brass cases, than with any other kind of weapon."—*Badminton Library*, "*Moor and Marsh*," *pp. 232.* "A double 12-bore gun of 7¼lbs., carrying a charge of 3¼drs. of powder and 1⅛oz. No. 4 shot, is as useful a gun as any shore shooter can want, and powerful enough for anything from a sandpiper to a swan. With such a gun we have often killed a dozen and more ducks and widgeons at a shot, and at other times fired at a single plover when with a larger gun we should have grudged the charge."—*Id. pp. 234.*

The gun is likewise admirably adapted to the field because of its light weight, and should the shooter object to a full choke for that work, he has but to substitute paper for brass cases. To again quote Mr. Greener, "A brass case gun of fullest possible choke, will fire well paper cases, and the shooting (providing a waterproof pink-faced, a thick felt, and a card wad are placed between powder and shot) will perform fully equal to a modified chokebore gun of the same size cartridge chamber."

If something more than a modified choke is desirable with paper cases, it can be obtained at a slight diminution of pattern with the brass, for, according to this authority, a middle course is possible and a 12-bore can be made to average 260 with brass and 240 with paper cases, the charge being 1¼oz. No. 6 shot, English standard of 270 pellets to the ounce.

I cannot conceive of a weapon better adapted to the requirements of one who wishes to shoot all kinds of game with one gun. In conclusion I advise "W. S. K." to procure such a work as I have quoted from. The information there obtained will be far more reliable than anything likely to be contributed to a sporting newspaper; and should he then be in doubt, he will do well to go to some reputable gun-maker, state his requirements and depend on the experience of the maker to furnish the weapon best adapted to his needs. Even then he may not be suited, but the chances are not against him. A.

NOVEMBER 22.

Editor Forest and Stream:

I had some notion to tell "W. S. K." my ideal of an all-around gun; but time is fleeting and if the question brings out as many ideas as I think it will, "W. S. K." will have enough to do in making a choice from the bewildering mass to occupy his time for one hunting season at least. For if there is any one thing that a sportsman wants others to know he knows, it's what he knows about a gun.

J. H. B.

MANSFIELD VALLEY, Pa.

Editor Forest and Stream:

In reply to "W. S. K." in your issue of Nov. 21, I would say that I have used 10, 12 and 16-bore guns, weighing from 6 to 9½lbs., and find that for an "all-around" gun a 12-bore weighing 8lbs., is the best for such uses as he mentions.

DRIFT.

PHILADELPHIA, Nov. 22.

WILD CELERY.

WOODVILLE, N. Y., Nov. 25.—*Editor Forest and Stream:* I see in your paper of Nov. 21, an article on wild celery. I do not understand what your correspondent means by bulbs, as I saw nothing but pods in the barrel or half barrel we received. The pods are from 2 to 6in. in length and about the size of a clay pipe stem and each pod contains hundreds of seeds, and when ripe or nearly so have a small white blossom on the end of the pod. The vine that the pod is attached to is about the size of a knitting needle and grows until the pod reaches the surface and there it stays until the pod and seeds get ripe, generally in September, and then it sinks to seed for another year. My belief is, although I may be wrong, that wild celery roots live but one year and the pods that sink seed for the next year.

Gathering the seeds or pods must be done in the last of August or the first days of September, while the pods are still on the surface.

We took the pods and broke them up into pieces ½in. long, and sowed them broadcast. We found that they would not sink while whole, but after being broken up they sank readily.

This seed was sown in Big Sandy Pond, which is one mile long, and a half-mile wide; and the water is from 4 to 10ft. deep. The bottom is soft mud in the center of the pond, the shores are sandy and gravelly. It caught splendid, and we have had a big crop of wild celery ever since it was sowed in 1885.

To make a sure thing, as we supposed, we took some of the seed to a wild rice marsh on the edge of the pond, where the water was from 1 to 2ft. deep, cleared two or three places of rice, and planted some celery; but to our surprise the wild rice completely killed it out.

G. M. W.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 24.—The Eustis-Donald special car is back from the trip to Alliance, Neb., mention of which was made in an earlier issue. It is probable that the party was too late for the wildfowl, at any rate they report but poor sport in that line, the most notable day at that sort of shooting netting twenty-six geese. A move was then made further east after quail, and at Hazard, near Broken Bowl, and near Mason, on Elk Creek, elegant shooting was had at the latter bird. Another move was then made to Oxford Junction, on the Republican, and then they went to Cambridge, on the Medicine Creek, in the extreme southwestern part of the State. Here the quail shooting was found to be all that any one could ask. It was mostly creek shooting, and the bevies were everywhere. The party of five guns, Mr. Eustis, Mr. Donald, Major Wells, Dr. Williams and Mr. Griffith, made bags of 60, 70, 80 and 90 quail a day, bagging in all 600 or 700 birds. The trip, therefore, though not so varied and uniformly successful as it was expected to be, was extremely pleasant as it was. Here seems another instance of the story which has everywhere been common this fall, the ducks are scarcer and the quail more abundant than known before in a long time.

Another one of these luxurious special car trips is recently finished, having been participated in by Mr. W. L. Pierce, his brother, and a third gentleman whose name I do not get. Mr. Pierce will be remembered as president of the Grand Calumet Heights Club. This party went to Arkansas, and they struck it rich. They killed two deer, several turkeys and all the quail they wanted. They brought home 160 quail with them, over and above what they ate and shipped.

More quail. The country seems full of them. Word comes to me from Indiana again that the quail are very numerous, and want to be killed. Mr. Hank Smith and Mr. Frank Arrowsmith, conductor on the Chicago and Atlantic, are lately back from a run down that line into Ohio. I expect they shot 'em a flock at a time.

Nov. 23.—Not less than six different parties wrote or called on me, asking advice where to go on Thanksgiving Day for such and such a kind of shooting, and I sent them off, all over the country, with the devout hope that they might be fortunate. It is mighty risky business directing anybody where to go shooting, because if a bag is not made the director is held responsible. Mr. H. S. Smith wanted some squirrel shooting, and I thought he might find it near Bureau Junction, this State. Later I talked with Mr. G. W. Marshall, who was this fall up at Lake Wauconda, Wis., after ducks. He said they got but few ducks, but had all the squirrel shooting they could ask. The squirrels at Wauconda are the fox squirrels, and they are noted for being the largest of that variety found anywhere near here. A wagon ride of several miles is necessary to get to Wauconda. If Mr. Smith or other friends will go to Barrington, I think that good squirrel and rabbit shooting can be had from that point, though I cannot give the name of any local guide to the best localities.

It is probable, however, that all the Thanksgiving hunters of this whole region had a cold, unsuccessful time. The day was marked by one of the worst storms known here on the lake, and it was hardly possible to be comfortable while hunting. We found this the case at Grand Calumet Heights Club, down on the bleak shore of Lake Michigan, where a little party gathered to put in the day becomingly. Among this number were Mr. Alex. T. Loyd, Mr. J. E. Baggott, Mr. McCauley, Mr. Stevenson, Mr. Young and wife and Miss Birdie, Mr. Wilde, Mr. Pittaway, Mr. Lauterbach, Mr. J. Gillespie and wife, Mr. E. Gillespie, Miss Hattie and Miss Mabel, Dr. Harlan and three children, Dr. Davis and Mr. Marshall. Mr. W. T. Best, inventor and maker of the Chicago tin pigeon, also came down by invitation to give the boys a shoot, but the wind was so cutting that only a few dared face the traps. Some idea of the force of the wind may be had when it is stated that we gathered many of the birds 80, 85, and even 95yds. from the traps. It was hard shooting, but good fun, for when the birds fell open to the shot—which they did very nicely—they went fluttering off into the pine trees for all the world like so many winged cripples.

This sport was watched by the feminine and effeminate portion of the crowd from the club house windows, from which points also were watched the futile efforts of some of the shooters to scratch down a gull or a bluebill from the flocks which quite frequently passed close along the beach. There were numbers of ducks flying over the lake, but none were found on the river. Mr. Lauterbach had bagged five ducks on the river the day before. Two or three rabbits were also brought in. The telegraph operators at Wilson Station are poaching on our Grand Calumet rabbits, and this must be stopped. After dinner, the weather being too wild and rough for outdoor shooting, a rifle range was cleared along the generous extent of the club house interior, the target back being put up in the locker room, while the firing was done from the foot of the staircase in the gun room. This made a very decent range for the .22-calibers, and the boys fell very amiably to shooting for turkeys, twelve of which Mr. Harns, the club superintendent, had on hand. We could not go into this sport as FOREST AND STREAM described it last week, but our unique method afforded a lot of fun. We shot at one-inch discs of tin, to hit one of which counted a turkey, all ties shot miss and out. At 15 cents a shot, the turkeys sold at a very good figure, after all. In this way Mr. Baggott won two turkeys, Mr. Loyd won two, and Messrs. Stevenson, Wilde, McCauley, Marshall and Hough won one each. In one tie Mr. Loyd shot three of us out. I never did like Alex. Loyd very much, anyhow. He can't let a fellow win a paltry turkey to take home and feed his dog, but he must come in and shoot him out of the tie. Wears glasses, too!

When we bid Mr. and Mrs. Harns good-bye at the club house, it was generally understood that the season was ended for the year. This morning was very cold and there was a good deal of snow. On the beach there was some lumber washed ashore, possibly the deck load of some lake schooner. Last night was a woeful one on the lake, and the morning papers were full of accounts of wreck and fatality.

The whole Calumet country noted as a region, of sport, is also known to a few of its old frequenters as a region of death and disaster. To-day I talked with a gentleman who formerly shot at the old Florence Benner box on Lake Calumet. He said that he personally knew of over 100 deaths by drowning in that shallow but treacherous lake and the marshes near it. The lake is only about 5 or 6ft. deep, but when it gets a sea on, the waves run high enough to drown the boldest swimmer. On one day there drowned in Lake Calumet nine persons, also two in the main Calumet River and one in Fox Lake. All these lower marshes are treacherous, and even when one cannot push a boat it is often unsafe to step out and try to wade. Once George Kleinman broke through the rushes, into a new pondhole where we had marked a flight. He found his spot apparently already occupied by a man who was standing above his middle in the marsh. Seeing him motionless, George pushed over to him. The man was dead, having doubtless perished of exhaustion attendant upon a struggle of no one knows what duration. His boat was not found, and to-day this remains one of the unknown tragedies of the marsh.

On another day a Chicago barber was shooting near my informant's blind. He disappeared, and his body was found next spring. Some talk was made over this, and it was reported he had run away and left his family, until the finding of the body settled it all. Another time, three boys in a boat stood up and shot at a flock of teal. One was drowned. The others got out and informed the Chittenden family, who marked the spot with a stake. A shooter shot teal there all the afternoon, and the two boys went on home. The poor boy drowned was not found until long afterward. At another time three men crossed the ice when it was not safe, and one broke in and was abandoned to a slow death by exhaustion. He could have been saved. A fool on the bank had a boat, but was afraid to go out on the ice with it. "I wouldn't have gone out there for fifty dollars!" was his reply when reproached for his cowardice. He would have run no risk. Some cowards are pitiful cowards. On yet another occasion a man was lost on the marsh at night and was found dead in his boat the next morning, it being cold weather. Yet again, two men lost the channel, of a dark night, within sight and hearing of the "bum-boat," where their companions were camped. They spent the night trying to go 200yds., and by morning were barely alive. I could tell numberless other instances, and could repeat some of the accidents of the lake shore and of the Grand Calumet, but this is enough to show why nearly all the lower country clubs have in their house rules a certain code of signals to be used by any one lost or in distress upon the marsh.

The high wind of yesterday blew sand in our eyes. Acting on the advice of a wise friend we all found that the best way to detach a grain of sand from the lid of the eye was to draw that lid out and entirely over the other lid. This was usually effective and is much better than persistent rubbing. Does every shooter and traveler know that?

Lately I saw a gun rod, said to be invented by Billy Mussey. At the upper end it is pierced to admit the cleaning rags. The whole rod is of round iron, and the lower end is sharpened and jabbed down into the floor. The gun cleaning citizen rubs his barrels up and down the rod. I don't think much of that. A good straight hickory stick is good enough. A pointed rod with a little screw-head sticking out to make just such a long scratch as I recently put full length in one of my barrels strikes me as being the worst sort of cleaning rod there is. Mr. Loyd, always busy fixing up some scheme in the art of gunnery, on State occasions uses an iron rod fitted into a carpenter's brace at one end. He screws the barrels, well wrapped, in a vise and then everlastingly bores away with his brace and rod. In this way he can force a rag through his barrels which he could not budge by hand. To protect the breech of the barrels he has a brass shell cut out for the rod to pass through. This shell he slips into the breech of the barrel, and the rod is thus kept from touching the barrel at all, the rags holding it at one end and the brass guide at the other. This is a good way to polish a gun, if the work is done carefully.

I have found the fibers of a frayed bit of twine, or small rope, good to take the leading out of a gun. So is a piece of shot-sack. A bit of very fine wire gauze is good, but it must be very fine. Some will not use this, but prefer a rag with a little "crocus powder," or metal polish. The latter sometimes contains a bad acid. I have known a shooter to use vinegar to cut the lead out of his barrels, but don't know much about the advisability of that. As to the mere cleaning of a gun, the shooting world is divided into two parties, the wet and the dry. Personally, I rarely find it necessary to use water in cleaning a gun; but plenty of people will tell you you can't clean a gun without water.

I saw a handy game-carrier, the other day, which was the property and invention of Mr. C. E. Gordon, of Koshkonong Place, Lake Koshkonong, of whom I shall have more to say later. This carrier was a strap arranged to be passed over the shoulder and held in position by another strap. Dependent from the shoulder, and hanging under the arm out of the way, were the two ends of the solid bit of leather 14in. long, into which ends were let thongs of stout lace leather. The opposite ends of these thongs were split so that a running noose could easily be formed. Into such a noose the head or foot of the bird to be carried is thrust and caught, and it is held firmly without danger of losing out. For those who like any carrier but a pocket, this is a good one.

Mr. Gordon had also another invention for the sportsman's ease and comfort, in the form of a combination carrying-strap, dog leash, gun sling and hitching strap. This strap is composed of two sections, each 30in. long, which buckle in a flat buckle, which latter lies upon the top of the shoulder when the strap is used in carrying a valise or the like. At each end of the strap is a common harness snap, easily slipped on to any hook or loop. Above the snap, a distance of 16in., or just far enough to make a good dog collar, there is let into each leg of the strap an iron ring, or rather an oblong, into which the snap can be caught, thus instantly forming a dog collar at each end of the strap, so that the latter can be used as a lead for a brace of dogs; or it could be used as a collar and chain for a single dog. But this is not all. Into the harness snaps at the ends of the strap are let two little leather rings, which open with buckles. One of these rings is just big enough to buckle around your gun barrels, and the other fits the grip of the gun stock. Thus adjusted you can sling the strap diagonally across the shoulders and so carry your gun much more easily at the close of a long day than you could if you had no strap. "I might go off on a trip without my dog, or perhaps without my gun," said Mr. Gordon, "but I would never go without my strap. You can pretty near keep house with that strap, and there are dozens of ways in which it comes handy. It is not a patented article, and any sportsman who wishes can make and use one."

Nov. 29.—Mr. Dan Merritt, a well-to-do citizen of Marquette, Mich., on the south coast of Lake Superior, and a hearty sportsman with a special leaning toward big trout, was in town last week. Mr. Merritt owns a mile of splendid trout fishing on the south shore, to which he does not direct the general public, although one or two friends of this city have been out with him and can testify to the excellence of the sport. Mr. Merritt during a talk said that he this year completed his record kept since his stay in the Superior country, and that he had now caught just an even ton of brook trout!

Mr. Ruthven Deane and Mr. Stafford, of the West Side, had a rather strange experience near English Lake one day this last fall. They found splendid snipe shooting on a dry upland which had no water about it. They took off their rubber boots and walked in the sheepskin "moccasins" worn inside the rubber boots. Thus shod, they had good fun and good success at snipe shooting with dry feet. The snipe were everywhere in this country this fall. Mr. G. W. Marshall complains that this column "gave away" his private snipe grounds near Englewood, and that on the following week there were seventy-five shooters on the ground which he and a friend or two were trying to keep quiet. There are several readers, if not more, of FOREST AND STREAM in this city, it seems.

By request of several sportsmen of this city, I offer for publication the following list of officers of the Illinois State Sportsmen's Association for 1889: F. C. Donald, President, Chicago; Thos. Laflin, Vice-President, Milan, Ill.; J. M. Hutchinson, Second Vice-President, Chicago; W. L. Shepard, Secretary-Treasurer, Chicago. Board of Directors—Abner Price, chairman; Chas. S. Burton, W. W. McFarland, A. M. Hoffman, H. C. Buechner, all of Chicago. Law Committee—Wolfred N. Low, chairman, Chicago; Hon. John Lyle King, Chicago; Hon. Lucius B. Crooker, Mendota, Ill. The regular directors' meeting was held at the Sherman House last Tuesday night, and preliminary arrangements made for the annual trap shoot.

Reports from the English Lake Club state that thousands of mallards were on the marsh last Wednesday, doubtless driven down by the great storm. Mr. Ab. Price went down to the club, but his success is not yet known. This storm must have made shooting somewhere.

Dec. 1.—It is probable that another strong organization will be added to the many shooting clubs which are reaching further and further out from this city. The name of the proposed new club will probably be the Partridge Lake Club, and its membership will doubtless be made up in this city and in Milwaukee. The projector of this club is Mr. C. E. Rollins, a prominent insurance man of this city, who has come back from the territory in question much impressed with its beauties and its desirability as a location for a sportsman's club. He thinks Gill's Landing or the Wolf River the best spot for the location of the club house, and he has already done some preliminary work looking toward an organization. In regard to this the Milwaukee *Morning Sentinel* has the following to say:

"This point is on the line of the Wisconsin Central road, and Mr. Rollins has enlisted the services of First Assistant General Passenger Agent Louis Eckstein to assist him in agitating the question among sportsmen of Milwaukee and the State. Mr. Rollins promises that he can secure at least fifty members in Chicago who are anxious to effect the organization, and more if necessary, but it is desirable that a fair proportion of the members be residents of this State. Mr. Rollins went out to Gill's Landing a week ago and spent several days looking over the ground and getting figures relative to the enterprise. He says that there is a tract of land comprising about 2,000 acres, which takes in nearly all of Partridge Lake and the marsh adjoining, as well as on both sides of Wolf River for some distance up and down, and what is known as the Big Bayou, which was formerly the bed of the Wolf River. This land is mostly low and marshy, with the exception of 150 acres of high ground on the banks of the stream and the Big Bayou. The owner of this land will lease to the club about 1,500 acres, which will take in all the most desirable portions of the tract with the exception of a small strip on the south side of Partridge Lake, containing about 250 acres, which can probably be leased at a very reasonable figure. The owner of the large tract wants $200 a year for it, and will make a lease for as long a period as is required. On the banks of the Big Bayou, on a bluff, there is a very fine mineral spring, and a fine location for a club house. All Milwaukee hunters are probably familiar with the place described, as it is one of the best known hunting spots in the State. Mr. Rollins states that while he was there he saw thousands of ducks of all kinds except canvasbacks. Partridge Lake and Wolf River furnish about the best fishing in the State. The natives of Fremont, Mr. Rollins says, take large quantities of black bass every winter through the ice with the spear, which is clearly illegal. Last winter one man speared 178 bass in one day. If the club was organized it would see that this illegal method of taking fish was stopped. Partridges are to be found in great plenty and a hunter for jacksnipe generally bags twenty-five or thirty of them a day. Steps will be taken to push the project in this city, and if the Wisconsin sportsmen do not take kindly to the idea the organization will probably be completed in Chicago. All the local sportsmen who have heard of it so far express themselves much pleased with the plan and promise to assist in helping it along."

The above is a good move, and the Milwaukee paper never was more correct than when it said Chicago would finish this club if Milwaukee couldn't. Are there any readers of FOREST AND STREAM interested in this? These organizations of sportsmen all help. They show the trend of modern sportsmanship, and presently the shooter who does not belong to a club will be out of luck at least. Chicago men realize this, and they are all the time getting hold of good sporting preserves, of which this one is doubtless a good sample. It is to be hoped we may have later good news from this club. E. HOUGH.

THE ADIRONDACK SHOOTING LODGE, which is advertised in this week's issue, is known to us to be in a most desirable location. It is a rare opportunity to secure excellent sporting headquarters.

DROP A DOLLAR IN THE SLOT.

Editor Forest and Stream:

The article under the above caption and signed "A." in last week's issue is certainly amusing. "A." says he "called the attention of the Connecticut Fish and Game Protective Association to the subject" of sending game from this State through your columns last fall. "A." probably did not fully understand that "last fall" we could not search freight consigned to New York—this year we can. Now, the fact that a person did take 2,500 game birds to New Haven is not conclusive evidence that said birds were shipped to New York. New Haven has a population of about 70,000, and those 2,500 quail could have been eaten in 90 days, less than 30 birds a day for 70,000 persons to eat each day.

During September I was informed by a person (who no doubt meant well) that his friend "picked up two partridge feathers in a market"; but he added that his friend would not testify to this remarkable evidence in court. I was instructed that the case ought to be pushed. Just think of the absurdity of such evidence. "A." should remember that the "owner or occupant under lease," or "a member of the family of such owner or occupant," can snare on their land. Of course this most seriously handicaps those who wish to enforce the game laws by working—not by simply writing to the press. Give us evidence, Mr. "A.," something tangible, and the same will be acted on quickly.

Those of your readers who think that we get any pay from the State of Connecticut for enforcing their game laws should distinctly understand we do not. We have expended $700 of our own money to make the showing we have. That the showing is a good one is generally conceded. "A." says: "Mr. Editor, please encourage the game wardens and all game protective associations in rigidly enforcing the law." Now, I will suggest another plan, Mr. Editor. Get a good well-tested baseball bat (or club) and pound into the frame of some of the sportsmen a little enthusiasm—say enough to produce a dollar. There are several "nerve foods" on the market, and by their use for a few months, perhaps some of them instead of proffering advice, might give a dollar. I am of the opinion that a machine of the order drop-a-nickel-in-the-slot can be so improved that to drop-a-dollar-in-the-slot would mean that a game or fish law violator would get fined. We have one of those machines. Let those of your readers who are so very solicitous about Connecticut game and her game laws try the machine. I can safely recommend the machine, having tested it myself, as have also many of my friends.

Dr. N. W. Holcombe, Treasurer, Pratt Street House, Hartford, or the writer will drop your dollar into the machine at any time, and either will duly acknowledge the same. For further particulars as to the workings of the machine watch the papers, especially the FOREST AND STREAM.

The first year the machine was run, all those who had the courage to drop a dollar in the slot saw twenty fish and game law violators fined—twenty for a dollar. The machine will receive dollar bills, silver dollars, gold dollars, checks for a dollar, or money orders for a dollar. They all go to pay detectives. The managers do not ask anything for their services.

The machine has one peculiar piece of mechanism. If a piece of paper is dropped in with the words, "You are doing good work, keep at it," if this is not accompanied with a dollar the machine has to be closely watched for several hours; and it's dangerous to be around it, especially to the party who tried to beat the machine. The drop-your-dollar-in-the-slot game protecting machine is in position now, try it.

A. C. COLLINS,
Pres. Conn. Association of Farmers and Sportsmen for the Protection of Game and Fish.

HARTFORD, Conn., Nov. 19.

A QUAIL BANQUET.—Beardstown, Ill., Nov. 26.—*Editor Forest and Stream:* Last evening a very pleasant event occurred at the Park House, the occasion being a quail banquet given by Messrs. F. H. Peck, of Des Moines, Iowa, and A. A. Rogers, of this city. The banquet was the result of a match quail shoot between Messrs. Peck and Rogers vs. H. H. Cole and C. E. Jones, the losers to furnish the banquet. Messrs. Cole and Jones won by 14 quail. The score stood: Cole and Jones 30 quail, Peck and Rogers 16 quail. The following principals and invited guests sat down to a most elegant spread of quail on toast and numerous other viands: Messrs. H. H. Cole, C. E. Jones, F. H. Peck, A. A. Rogers, Judge C. R. Cummings, Dr. H. H. Ehrhardt, Dr. Geo. Bley, E. S. Horton, A. A. Greene, C. F. Derr. During the banquet many toasts were passed between the victors and vanquished; notwithstanding they were very tired from their long day's tramp the very best of spirits and repartee prevailed. Altogether it was a very happy affair and will long be remembered by the entire party, all of whom are great lovers of the rod and gun.—A. A. GREENE.

ST. LOUIS, Mo., Nov. 30.—Where are the ducks? Certainly they have not infested this locality very numerously; in fact there have never been at any time this fall enough to furnish fair sport, and the field sportsmen are all broken up. During the early part of the season the prospects were most favorable. Now the season is so far advanced that all hope of a duck shoot has vanished and shooters have nothing left them but to be patient until the break up of winter. Sportsmen who have turned their attention to quail have been more fortunate, for as a general rule the birds are plentiful and quite a number of good bags have been made. On Thanksgiving day there was a genuine exodus in quest of quail, and with few exceptions all secured satisfactory bags. No snow to speak of has fallen as yet in this locality, consequently the pot-hunter has not had an opportunity to get in his work on the birds, and they are abundant enough to furnish excellent sport to the end of the season.—UNSER FRITZ.

MR. L. C. SMITH has sold out a controlling interest in his gun business to a new company, the Hunter & Comstock Arms Co., of Fulton, N Y., to which point the machinery will be moved. Mr. Smith retains an interest in the business. It is stated that the new typewriter made by Mr. Smith has proved such a success that its manufacture will require all his time and care. Mr. McMurchy has been appointed agent of the typewriter.

A GAME COMMISSIONER CAUGHT IN THE ACT.—The Bangor, Me., *News* of Nov. 28 reports that on Nov. 18 Messrs. James Johnson, a constable, Walter Dresser, a game warden, and George Miller, a man in the employ of the Maine Central Railroad, were in the woods near Simquash Lake, a small sheet of water about ten miles south of Vanceboro, Me., and its eastern shore not more than two or three miles from the St. Croix River, which here forms the boundary between the two countries, so that a better place for law breakers to dodge across the line could hardly be found. They discovered here a party of three New Brunswick men hunting deer. They had a valuable dog with them, which the Vanceboro men shot. The unlawful hunters were Frank H. Todd, one of the firm of F. H. Todd & Son, the heaviest lumber concern in St. Stephen, and one of the three commissioners of fish and game for the province of New Brunswick. Peter Morrison, a man employed by the Todds and their head man in the woods, and Captain John Taylor, a New Brunswick steamboat engineer. On the return of the Vanceboro people to their home, they went before E. T. Holbrook, Esq., a trial justice, and made oath to what they had seen. Justice E. T. Holbrook issued a warrant for the arrest of Todd, Morrison and Taylor. When Constable Johnson and Game Warden Dresser got back with the warrant and approached the poachers, Mr. Todd told them in an engaging way that there was no need of arresting them; it would only be a bother, and everybody knew that he was perfectly responsible. They would come up to Vanceboro and appear before Justice Holbrook the next Tuesday and answer to the charge, or any day the officer might name. This was promptly agreed to and Tuesday afternoon at 2 o'clock was fixed upon. When 1 o'clock Tuesday afternoon arrived a telegram was received saying in effect: "Do not summon witnesses. Letter by mail." The letter said that it was impossible for them to be at Vanceboro that day, and that they would be there some other day, any other day, in fact, that might be suggested. There the matter rested at last accounts. It is hardly correct to remark, as might at first blush appear to some, that now that Mr. Todd and his fellow lawbreakers have got back to their own side of the line, the case against them is defeated. Mr. Todd is a man who spends his time as much in Calais as in St. Stephen, and a man of such means and with such business interests that he could not afford to let the matter which two or three hundred dollars would settle keep him in banishment on his own side of the line.

MEXICAN GAME NOTES.—San Luis Potosi, Nov. 22.—Ducks are fairly abundant, though in this section water is scarce on account of a dry year. Recently on a foggy morning I saw a wedge of geese (Hutchins, I think) flying over. A conductor on the National Railroad said there are great numbers of them in a marshy section about an hour from here southward. *Voy á ver.* Quail shooting would be fair if you didn't have to run your legs off to make the little pests take wing, and if the sun did not come down with such unmerciful force. The whole country is full of cotton-tails and jack rabbits, the biggest and fattest I ever saw anywhere. They are favorite shooting with the Mexicans, and to please one of these a friend and I went with him recently and fairly loaded down his coach. It is a pleasure to give them away to the poor half-starved peons, as they are really palatable. —AZTEC.

SOUTHAMPTON (L. I.) SPORTSMAN'S CLUB.—At the annual meeting of the Southampton Sportsman's Club, held at Southampton, L. I., Nov. 1, at the headquarters, the house of Mr. Daniel G. Phillips, the following officers were elected: Edward H. Moeran, President; David T. Kennedy, Vice-President; Lawrence W. Clark, Secretary and Treasurer. Messrs. Moeran and Clark were appointed a committee on legislation to watch the action of the Assembly at Albany. They would be glad to communicate with similar committees from other clubs of the State, so that all may work together to influence legislation for good. The club is in a thriving condition. The membership is full, there is no debt and a handsome surplus in the treasury. The shooting has been fair; no great abundance of quail, but enough to give good sport to hard workers.

VIRGINIA DUCKING GROUNDS.—Suffolk, Va., Nov. 28.—In a late issue "M. R." wanted information about good duck shooting. If he wants fun, let him go to Cobb's Island, Va., or anywhere in that vicinity. No better place anywhere in this country. Go to Philadelphia by N. Y., P. & N. R. R.; get off at Cheriton Station, near Cape Charles city, the terminus of the road. From that point he can work ten miles either way. Plenty of people to post him. Good places to stop on mainland if he prefers that to Cobb's Island; nice people and not very expensive. I was at Cobb's in July, also in August, and had some good shooting with the birds. I am behind with my reading, and am just in Oct. 24th issue of FOREST AND STREAM.—A. S. E.

CŒUR D'ALENE CLUB.—A number of sportsmen from Cœur d'Alene and Fort Sherman, Idaho, have organized themselves into the Cœur d'Alene City Rod and Gun Club, with the following officers: President, R. E. McFarland; Vice-President, Capt. J. W. Bubb; Treasurer, F. G. Pettibone; Secreteary, Wm. E. Carlin. The main object of the club is to protect the game and enforce the laws, which, by the way, are very lax. There is a great deal of deer hounding going on at present, and the game is rapidly disappearing. Trap-shooting and rifle and pistol shooting will be indulged in two days each week, and from the present outlook good scores will be rolled up.—CHELAN.

A GAME HEN.—I had a queer thing happen yesterday while exercising my setter, showing how the old instinct still lingers in our common barnyard fowls. I was passing an old cornfield, very bare of any grass or weeds, when my dog made game. Thinking there might be a stray bevy of quail, I walked in. He worked up carefully, and finally stood stiff, but seemed a little puzzled. I saw something in front of his nose that looked like a dead owl at first, but I soon saw it was a hen. She lay as flat as a flounder, head on the ground. As I stepped up close, she went off with a mighty flurry and cackling.—M. HOLBERTON.

NORTH CAROLINA.—A correspondent who has been shooting at Newbern, N. C., reports that the quail suffered in the low grounds last fall, the bevies being about half the usual size; those of the young the hen bird could not cover of course had to suffer from the weather and perished from wet and cold. The hares are almost entirely exterminated. The most comfortable way to get there, especially with dogs, is to take the Saturday steamer on the Old Dominion Line to Newbern. There is only one change, and that is at Portsmouth or Norfolk —Portsmouth is to Norfolk what Brooklyn is to New York. The other game there comprises wildfowl, deer, wild turkeys and snipe.

TOLEDO, O.—Squirrel shots report game abundant in Waterville and Sylvania.

TAXING GUNS—PERSONALITIES.

Editor Forest and Stream:

When I read the article of "Cohannet" in this week's FOREST AND STREAM, I was both surprised and amused, that he should characterize my article in your issue of the 7th as "an attack entirely personal." I do not apprehend that any other reader thought of it in that light. I certainly did not. Upon looking it over, I find that I called direct attention to him but twice, whereas he has named me thirteen times in his alleged reply. I have been a frequent contributor to the columns of FOREST AND STREAM almost from the time of its establishment, and I believe this is the first time that any one has accused me of being personal. As between "Cohannet" and myself, I will be content to let the readers of FOREST AND STREAM decide which of us has descended to personality, and which has the best of the argument, to say nothing of courtesy; for all through his article he charges me as directly as he can, by inuendo, of falsehood. Referring to his Plymouth stock allusions, I will incidentally remark that my family claim that our emigrant ancestor commanded the good ship Mayflower, upon the occasion of her second trip to Plymouth Rock, in 1624, that he bought a homestead in Plymouth county, Mass., and that this property has to the present time continued in the family. This ought to be a satisfactory pedigree with any of the genuine stock. Notwithstanding this evidence of "blood," I do not assume to speak as a representative of the "broad domain of New England," as "Cohannet" charges, but in my younger days was generally called a pretty fair representative of the shooting element. There are still living quite a number of white-headed old fellows, at different points between the Atlantic and the Pacific, who would not hesitate to accommodate "Cohannet" by wagering small amounts upon my marksmanship, although I am past 64, with impaired eye-sight, seriously paralyzed, and confined to the house most of the time. Still, if I could get my muzzleloader out of the window, and bearing upon any of the usual ranges, I would not hesitate to try tilts with "Cohannet," though I have never been a "professional" in the remotest degree, as he broadly intimates, unless attending the country turkey shoots forty years ago constitutes me one; nor did I ever sell a dollar's worth of game, though I have given away large quantities to those who were even poorer than myself. Disabled by an army injury, I have not been hunting for years, but I wish to see all who enjoy it have the same opportunity that I have had. The desire and intent of "Cohannet" and those who, like him, wish to have the gun taxed, even up to $10 per year, is too glaringly apparent to require explanation, and is the most audacious and monumental exhibition of shamelessness yet displayed by the "game-hog" element, who would thus endeavor to deprive forty-nine out of every fifty persons from using fire-arms.

"Cohannet" seems to think that the city boy and himself are strangers. In this he is as correct as in his other conclusions. I have spent the larger portion of my adult years in large cities, including New York and Philadelphia, for in their immediate suburbs, and have taught the use of the rifle to hundreds of boys, many low down in their teens, and some who had become gray-headed, and many of these were city boys too. But I referred to this point in my former article sufficiently. The best material in the armies, North and South, during the late war, were those who had used the rifle from childhood.

I am now living in a large city, and when the weather and my physical condition will permit (as has of late been frequent), I take a street car at the door and step off at the door of the leading gun store in the city; which for some weeks past has been crowded with gunners, between 9 A. M. to 8 P. M., from the city and country for 30 miles around. The FOREST AND STREAM is read in this gun store and by numbers of its patrons. Not a person except the proprietor of the store knows that I am the author of the article complained of by "Cohannet," and this fact gives me a rare opportunity to learn the unbiassed opinion of the gunners upon the subject generally and my article in particular. In every instance, the gunners have expressed sympathy with my view of the case. I would like to see a vote of those who own guns recorded upon this subject. I believe that 49 of every 50 would vote against the unrepublican proposition.

"Cohannet" is anxious to know how the use of the gun is to be restricted. In my first article I answered that question, before he asked it. And in conclusion, I will add further, that within three weeks I have read more notices and accounts of farmers' game protective societies than I ever before saw in an entire season. The game-hogs are steering clear of these societies, and the farmers and their legitimate gunner friends in all older States where game exists are enjoying the best gunning season for many years. The game-hog societies, of which many exist, will have to seek unsettled regions, as I stated in my former article, while those who take an occasional day's outing during the gunning season will, with their farmer friends, enjoy legitimate sport for long years to come. WACAUTAH.

Editor Forest and Stream:

By all means let the boys have their rifle and shotgun, furnish them a reasonable amount of ammunition and pay their license to shoot, if we ever come to that protective measure. How else can the boy learn to shoot? If I had my way every boy and every girl should learn to shoot even though they never killed alone a single head of game. It is not the extinguishing of the vital principle of either bird or beast for which men go afield, and the game butcher should never be classed as a sportsman. The rifle and revolver are weapons, the use of which demands physical conditions never found in the indolent, the effeminate or the dissolute. They are weapons for men and women, not for dolls of either sex. If every boy and girl were early taught the use and the abuse of fire-arms, the death rate from accidents caused by carelessness would be reduced to the minimum; the number of corner loafers, cigarette-smoking, round-shouldered, delicate boys, and girls afflicted with corsets, nerve tire and headaches, would decrease in direct proportion to the increase of recruits to the army of those now enjoying such sport.

And what is to hinder? Any one of a half dozen American manufacturers makes rifles sufficiently light for ladies or boys to use; prices are such that any one of moderate means can own the very best; accuracy is unsurpassed; and ammunition, that is, the .22cal. cartridges, which are plenty large enough for all ordinary ranges, is very cheap. But alas! fickle fashion has decreed that the girl child shall be a woman before reaching womanhood, and must never condescend to mingle in manly sports unless the thin veneer of fashionable polish should be marred. Fathers forget they were ever boys and wanted a gun; or being without desires that way, compel their boys to think as they do, or to use weapons surreptitiously. No! give the boys a chance, and the girls too. Let those parents who are not sportsmen, and are blessed with children imbued with such instincts, take the time and trouble to learn the art themselves and instruct their boys and girls. My word for it, such children will love you with a still deeper intensity, will spring to obey your commands with a better grace, for has not their father, their ideal of all that is good and great, associated himself with them in their play? and where is there a normal child who would not rather associate with his father than with any other companion?

You who yourselves love the gun, do not, I beg you, think it a bore to guide the youngster in the paths you love so well or think it tiresome to initiate him in the mysteries of an art fascinating alike to young and old. Bear in mind your own youth, and your heart would have gone out to any one who would have taken time and trouble to help you become a good shot.

Our boys and girls are to be the fathers and mothers of other boys and girls, and how can we mould the generations of those who shall take our places unless we now stand sponsors to the sports as well as to other educational advantages, and where is there to be found a cleaner, more scientific, more manly sport than rifle shooting? PICUS.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Camp-Fire Flickerings.

"That reminds me."

289.

I HAVE a beagle that is first-class at hunting rabbits, his experience having been entirely confined to cottontails, until the other day, I happened to be with him when he struck a hot scent and went off in full cry. The devious track led him into a thicket; but almost immediately after his joyous bay was changed into a terrified yelling. The poor beast seemed frantic with pain or fear, and at once I concluded he had run into a nest of hornets or skunks, or both. As poor Tippler rushed out of the thicket with his tail between his legs and every indication of terror on his countenance, a pure white bunny of the domestic kind bounded out of the other side equally frightened, and the mystery was explained. But never since have I been able to induce this superstitious dog to hunt in the thicket where he met the ghostly apparition of a rabbit. ERNEST E. THOMPSON.

Sea and River Fishing.

MAINE ANGLING INTERESTS.

THERE is still hope for trout and salmon fishing in the future, in spite of all that poaching and the march of mill dams and sawmills can do. At the same time there is still a hard struggle to be fought out by those interested in these sports, and who are aware that the only salvation of their favorite fish lies in propagation and the enforcement of wholesome fish laws. About the greatest menace that has lately stared the propagation and protection of fish in the waters of northern New England in the face is the pulp mill with its adjacent dam; but worst of all, the turning of all the waste chemicals from these mills into the waters. The advent of manufacturing paper from wood has suddenly made a lot of second-growth wood in Maine of considerable value, and streams that were safe from the incursion of sawmills have recently been dotted with mills for the manufacture of wood pulp. In some cases the Maine Fish Commissioners have had a hard fight to make the proprietors of these mills put in the proper fishways, even when the entire salmon interest of some of the best streams in the country were threatened, if such fishways were not provided. Indeed, it may startle the ordinary reader to know that the entire salmon supply of the Penobscot, the last river left to the salmon on the Atlantic coast, has lately been threatened by these pulp mills. A single pulp manufacturing concern on the upper Penobscot waters has recently ordered twenty thousand barrels of lime in a single order, and all of this lime is to be turned into the waters of that river. Will it poison the salmon to extermination? The best authority to be had on the subject says that the salmon could not live in such waters for any length of time, but it has been observed by the Commissioners, and others who have watched their progress, that the spawning salmon have this fall taken the opposite side of the river from the stream of spent lime from the pulp mills. Nature has evidently been teaching them to seek purer waters. But at the same time it is suggested by good judges that one reason for the lack of a run of salmon in the Penobscot at Bangor last spring was the presence of such a great quantity of impurity in the waters of the river. Why, in the case of almost an epidemic of typhoid fever in Bangor this year, an eminent physician testified, when the question of impure water was being argued as the cause of the fever, that there was "sulphuric acid enough in the waters of the Penobscot to completely kill all the germs of typhoid fever." This sulphuric acid comes from the pulp mills. The wood and lumber interest is predominant in the State of Maine. The Legislature is always under the control of that interest. If any relief comes, it will come through the interference of the United States Fish Commission. I understand that that Commission will be applied to for relief of some sort.

The Maine Fish Commissioners are having good success with the landlocked salmon this fall. The full quota of eggs will be obtained at Edes Falls, on the upper Sebago waters. It is a very interesting fact that the poachers who, two or three years ago in the night time, armed with guns and with blackened faces, drove away those in care of the hatching works at Edes Falls and tore away the pens, letting loose the salmon that they did not want to take away, have been caught. One of their number cautiously mentioned recently that he was concerned in the robbery. He was watched and finally induced to tell still more about the matter. The Commissioners ordered his immediate arrest, and frightened, as he was expected to be, he has turned State's evidence and implicated all that were concerned in the business. At the January term of court in that county they will be brought to trial.

Another very interesting fact to sportsmen, who for so many years visited the Androscoggin waters, is that there is at last a good fish hatchery at Rangeley. The enterprise of the citizens of that town, with the assistance of several sporting gentlemen who annually visit the lake, has done the work. Prominent among these gentlemen is Gen. Harmon, of Connecticut, the owner of Lake Point Cottage. And best of all, the Maine Commissioners have been applied to for permission to locate the hatchery and take trout and landlocked salmon for propagation, and the Commissioners have been up to Rangeley and have shaken hands with Gen. Harmon and Gen. Harmon with them, just as honorable gentlemen are sure to shake hands some time or other when each is engaged in the same grand object, though there may have been at one time a misunderstanding as to methods. The Commissioners have sanctioned the efforts of the citizens and visiting sportsmen, have sent the hatchery a large number of trays, and will give the enterprise 60,000 landlocked salmon fry in the spring.

It is also understood that the hatchery is having good success with trout this fall. At last Rangeley waters have a trout hatchery that promises to be a success. The turning in of a large number of trout and landlocked salmon into the upper waters of those lakes is bound to be of great advantage to the fishing in every lake of the chain. Sportsmen who go there should bear this in mind and should be willing to contribute toward the enterprise. The question may arise as to why the Commission does not take up the entire work of stocking these waters, and the answer is that the liberality of the lumber interest in the Legislature of that State has allowed them no money with which to do the work. Sportsmen who visit Maine will readily understand the situation, if they take into account the fact that, if there was no fish and game interest in the State, no fishways would have to be built at the mills, and there would be no restrictions as to the turning of spent chemicals and mill waste into the streams. Hence the feeling of the lumber interest toward the fish and game laws and the lack of appropriation for their enforcement. SPECIAL.

SUNAPEE TROUT FROM DAN'S HOLE POND.

"IT is the unexpected that always happens," according to the proverb: but in the case about to be stated it is the foretold, searched for and confidently expected which has suddenly materialized. Col. Elliott B. Hodge, of the New Hampshire Fish and Game Commission, who first brought the Sunapee trout to the notice of ichthyologists, is now the first to recognize the same handsome trout in a pair obtained, after many disappointments, from Dan's Hole Pond, in New Hampshire. These specimens were forwarded to the writer about the middle of November and they are now in the National Museum at Washington.

Readers of FOREST AND STREAM who followed its accounts of the new trout of Sunapee Lake will recall the fact that the describer of the species refrained from applying to it a local or geographical name because its range was undetermined and might prove to be very extensive. In this course of action he was sustained by Col. Hodge and others. The wisdom of that procedure is now established.

In order that due credit may be given to Col. Hodge for his praiseworthy efforts to bring out facts about the New Hampshire trout it should be stated that he has long suspected that the Dan's Hole Pond trout is identical with the Sunapee, and has been determined to obtain the means of settling the question. On March 20, 1889, he wrote me as follows: [A well known ichthyologist] "had specimens of the Dan's Hole Pond trout some years ago and then called it a variety of the brook trout. I understand he now says that it is identical with the Sunapee form. I have sent a permit to a fisherman in that part of the State and promised him ten dollars for specimens of the Dan's Hole Pond trout, whether they are identical or not. I have for some time believed that they are very much like the Sunapee trout. If I get them I will send them to you as soon as they come."

In a recent letter Col. Hodge assured me that he had been trying to obtain a specimen from this pond for three years, and had at last got these at a great deal of expense. The letter accompanying the trout is quoted herewith:

"PLYMOUTH, N. H., Nov. 14.—*My Dear Dr. Bean:* I send you by express to-day two trout from Dan's Hole Pond, in the eastern part of the State. I made only a hasty examination of them, but find them identical with the Sunapee form. The male is a deformed fish, but the other is a perfect specimen. As these two bodies of water are in different watersheds, and as the Dan's Hole trout have been known to exist for seventy-five years and perhaps longer, I think I am justified in claiming that this must settle the question and that I have been correct in my claim that this fish is a native of Sunapee." Col. Hodge again, in a letter of Nov. 24, assures me that there are at least two other lakes in New Hampshire which contain Sunapee trout and there is a lake in Quebec inhabited by a trout which he has every reason to believe the same as the Sunapee species. The Quebec form spawns in the lake and is said by the natives to attain to a weight of 6 to 8lbs. "I, as well as others, have whipped the lake in May and June; but not a fin could I raise, although I have seen large fish breaking water the same as the Sunapee trout do. The trout taken by the [Quebec] natives mentioned above were taken from the spawning beds."

Col. Hodge very appropriately continues as follows: "I feel a good deal of satisfaction in being able to produce this fish [Sunapee trout] from waters in which there can be no question that they have been caught ever since the town was settled. I have labored patiently to get at the truth—not so much to establish my theories as to get at the facts." This is the proper frame of mind in which to undertake all problems relating to the salmon family, and will save students from many errors and disappointments.

The Sunapee trout is represented in FOREST AND STREAM of April 4, 1889, and it is not necessary to repeat the illustration, because there is no difference between the Dan's Hole Pond specimens and the types from Sunapee Lake. The female is 21in. long and her abdominal cavity is pretty well filled with free eggs, which have a pale lemon yellow color and measure nearly one-fifth of an inch in diameter. The coloration in both sexes is exactly the same as in types of *Salvelinus aureolus* from Sunapee Lake, for an account of which see FOREST AND STREAM, Aug. 5, 1886, p.26, and Proceedings U S. National Museum, 1887, page 630. The peculiar curling of the tips of the gill-rakers is very noticeable. The male had his back broken and was, consequently, deformed; yet he was sexually mature and up to the standard of destructiveness in males, for in his stomach I found about two dozen ripe eggs. There was in it also a mass of slender worms. The length of the male is 18in. T. H. BEAN.

A BROOK TROUT FOR A CENT.—Washington, D. C.—In Pocahontas, Webster and Nicolas counties, W. Va., trout have been very abundant during the past season. Elk River is a favorite fishing stream. In the waters of the Gauley, trout weighing about 1lb. were taken with the fly. Black bass were caught in the same stream and in the same way. May, June and July are the best months. The mountaineers claim that worms are the best bait, and that a piece of bacon or ham is also good for trout. In the counties named above the people sold us trout by the hundreds for a cent a piece. The best time to catch trout is during the rain, just as the stream begins to rise. —C. E. C.

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this coming winter will find it to their advantage to inspect the superior tackle for tarpon and other fishes manufactured by Thomas J. Conroy, 65 Fulton street, New York.—*Adv.*

DESTRUCTIVE FISH WEIRS.

Editor Forest and Stream:

Official duties have taken me to Cape Cod, Massachusetts, for several successive summers, and I have often been astonished and not a little grieved by the relation of the commercial shore fisheries to the protection and increase of the fishes. I spent last summer at and near Provincetown, and became more than ever convinced that the fish weirs are among the greatest engines of fish destruction on the coast. Men who had been employed at the weirs confessed to me that they killed great quantities of young fish of all kinds. The only people who deny the injury accomplished by these traps are those who have a pecuniary interest in them; the rest of the community is firm in the belief that legislation is necessary to modify the influence of the nets, and that speedy measures must be taken to enforce protective laws. The mackerel fishery out of Provincetown this year was a flat failure, and yet not many years ago mackerel spawned in Provincetown Bay, and hook and line fishing for them was very profitable. Sea bass and bluefish were much scarcer this season than last year.

After traveling along the coast and learning that every available point from Provincetown to Plymouth, a distance of more than fifty miles, has its labyrinth of netting of small mesh extending from near the shore out to an average depth of six fathoms, I ceased to wonder why fish were scarce and felt surprised that they were not altogether swept out of existence. Some of the leaders of these weirs are nearly a mile in length. The tide rises and falls 9 or 10ft., and large portions of the netting exposed at low water often contain young fish resembling herring, which have been tangled in the meshes and cannot free themselves. At one time in the month of August a weir company near Provincetown captured about 200bbls. of young fish in a single day, chiefly bluefish, mackerel and scup. The owners sold all they could for bait in Provincetown and elsewhere, and the balance were dumped overboard. Shortly afterward the beach was strewn with the fish destroyed and wasted in this shocking manner. Large quantities of young cod are killed in the same way.

It is time that the people who desire to protect and increase our food and game fishes make their influence felt in preventing such wanton destruction which no one can justify by any interpretation of law or application of common sense. E. E. HASKELL.

WASHINGTON, D. C.

SALT-WATER FISH IN FRESH WATER.

THE possibility suggested by Mr. W. P. Seal, in FOREST AND STREAM recently, of extensive transfers of marine fishes to fresh water, reminded me of an experiment made by Prof. A. E. Verrill, of Yale College, about ten years ago. As Prof. Verrill's experience harmonized very well with that of Mr. Seal, I wrote to the Professor for information about it, and received the following in reply:

"DEAR DOCTOR BEAN—The experiment that you refer to was made some ten years ago. Seeing some very fresh-looking tomcod in the fish market here, but frozen very hard and stiff on a cold winter day, I got permission to put a dozen or more into a large aquarium in the market, supplied with a constant current of city water. My object was to see if they would revive after being frozen. They all revived perfectly in an hour or less. As they seemed to feel satisfied with their quarters in the aquarium, we allowed them to remain, and there they lived all winter—probably three months or more—till turned out in the spring to make room for other things. Sincerely yours, A. E. VERRILL (New Haven, Nov. 24, 1889)."

Here we have a marine fish suddenly transferred from salt water to air below a freezing temperature and then into fresh water without loss of health and vigor. This was a remarkable case, and the result could not have been anticipated. There are many anadromous fishes which ascend rivers from the sea far into the interior for the purpose of spawning. Among these the shad, alewife and salmon will be recalled by every one. The alewife will even endure perpetual landlocking and continue to multiply; the same is true of the smelt and white perch. Doubtless numerous other illustrations of a similar nature will occur to some of our readers. Some of the flounders run into the rivers above tidal waters: the bluefish and the silver gar ascend far from the sea. Even the halibut has come up the Potomac to the vicinity of Colonial Beach, where the water is brackish. Examples of marine species domiciled in fresh water can be cited indefinitely, and we should not be surprised by any new developments. T. H. B.

FLORIDA FISHES UNDER GROUND.

WE have been told by Mr. H. S. Farquhar, of Washington, D. C., that when the sewers of Pensacola, Fla., were being constructed a great centrifugal pump was frequently used to pump out water mixed with loose sand which was encountered in the course of excavations. The elevation of the surface above the bay was about 15ft. and the bottom of the sewer was 8 or 10ft. above the sea level. On a certain occasion the pump brought up some crawfish, a couple of small catfish and some eels about one foot in length. This goes to show what a wonderful fish country Florida is, for not content with filling the water and appropriating everything in sight that resembles a hook, the fishes worm their way into the vulnerable soil and are liable to be turned up by a hoe or a spade.

Who can tell us what animal Mr. Farquhar has in mind in the following description? Living in swamps there is a creature reputed to be blind and popularly supposed to be a fish called the conk, or conch. It is a stout animal about a foot long, and, according to negro superstition, it has a fatal sting. None of the negroes could be induced to bring Mr. Farquhar a specimen and he cannot give a detailed account of the species.

THE BRISTLY BASS.—In some recent comparisons between trout and black bass and pickerel as game fishes I did not mean to be quite so hard on the bass. I intended to say "the bristly bass" and not "the beastly bass" as the types made me. I had in mind the spiny dorsal fin and rough scales of the bass compared to the smooth-backed and practically scaleless trout with never a spine about him.—C. H. AMES.

POND FISHING IN CONNECTICUT.

Editor Forest and Stream:

We have a number of ponds, reservoirs and lakes in this locality, in which bass, yellow perch, pickerel, bullpout or bullheads, sunfish and fish of other kinds abound. The bullpout is thought by many superior eating to the trout, and I am surprised at the number to be found; they spawn in May and immense numbers are taken in that month. I have caught them of one pound weight, and a few are taken of greater size. Bass and perch are taken mostly at this time in the season with live bait, although I took two bass and a number of perch last week with worms, but I find large perch can only be taken with live bait. I have taken some quite large. Very few, however, acquire a weight of over two pounds. I use what we call shiners—not the minnow—of which few are to be found except in the Connecticut River and the coves that put up from the same. The shiners also make good bait for pickerel, as do tadpoles and small frogs. A landlocked salmon was taken in one of our ponds this week which weighed 7½lbs.; the pond is celebrated for pickerel and perch, but this is the first salmon that I have known caught there. Several have been taken in a lake not a great distance from the pond. In fishing from the shore I find considerable difficulty in preventing the shiner breaking from the hook, being a very tender fish. I have used small roach or, as you call them, sunfish; but perch will not take them as readily as the shiner. Carp are being introduced in some of our waters, but I do not value the fish highly; yet they multiply very fast, and may prove a valuable food fish. Trout in this State run small. Many streams are posted and fishing forbidden, but in most cases from purely selfish motives. I am in favor of proper laws to preserve fish and game, but I also am in favor of cheap fish for the people, and hope to see many more waters stocked with fish, and proper laws enforced to prevent taking them out of season. There should, however, be no favored few to have all the benefits.

MANCHESTER GREEN, Conn. W. H. E.

ANGLING NOTES.

FISH, flesh and fowl show a peculiar fondness for certain colors, particularly for bright red. Many a woman has discovered to her sorrow, that her red gown has brought her in entirely too prominent notice when passing near cattle, and a turkey will gobble himself into a fit over a red shawl. It is a well-known fact to hunters that antelope show a strange curiosity for this color and are often coaxed to their death by the waving of a bit of red rag, while ever boy knows that a small piece of red flannel is the best bait in the world for bullfrogs.

When we come to fish, most varieties that are taken by artificial lures, show that same fondness for bright colors, and red seems more attractive than any other. The majority of artificial flies have red in their composition; for instance the Abbey, Montreal, royal-coachman, grizzly-king, professor, red-hackle, red-spinner, Howard, soldier, scarlet-ibis, and many others too numerous to mention. In fact this color is so attractive to chub, pickerel, perch and rock bass, that anglers often have to use flies dressed with more sober colors, when fishing for better fish. The trout and bass that are found in the wilder districts, seem to have this fondness for red more fully developed—or perhaps in much fished waters they become better educated and more refined in their tastes.

Black bass have a great weakness for black and yellow. Professor Mayer's "Lord Baltimore" and W. Holberton's "Lottie" are instances of this. In the early part of the season these two flies will kill more black bass than all the others, and are the most deadly flies that the angler can use.

A strange fact is the partiality that Maine trout seem to show for the "Jenny Lind" fly, a combination of bright red, yellow and blue—as unlike any natural fly as one can possibly imagine. Bluefish and Spanish mackerel are attracted by red squid, and striped bass, shad and weakfish are often taken on bright colored flies. In waters where pollock abound, the principal lure used is a big red and white fly.

We believe it is generally understood that salmon do not rise to flies in tide water, but from the following statement made by a very excellent Canadian angler, we are forced to believe that there are exceptions to this rule. This gentleman states that he tried to kill salmon on the St. Croix River, New Brunswick, in tide water for several seasons, with no more success than a feeble rise or two, until one day he managed to get fast to a fine salmon in a tide-water pool. The fish was only on the hook for a moment when he lost him. As there were a number of persons in plain sight, he concluded to let the matter drop, as he did not wish the fact to become public. The next morning early he was again at the pool, and in a very little while got fast to a salmon. There was a mill near by, from which he could easily be seen; so he dropped down stream a few hundred yards and landed his fish safely behind a clump of pines, and was back to his house in time for breakfast. Since then he has obtained a lease of that part of the river and killed many a good salmon there.

At Newbern, North Carolina, they are having splendid fishing. The weakfish are being taken by hook and line by the thousands. We are surprised that more anglers do not visit this place. The big-mouth bass will take the spinner yet. They call the bass chub there. There is good shooting there too; see note in our Game Bag and Gun column.

"Come off the perch," said the fisherman, as he removed the scales from a specimen of the finny tribe.—*Kearney (Neb.) Enterprise.*

If only for the sake of wood for base ball bats, the American forests ought to be preserved.—*Philadelphia Times.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Fisheulture.

VON BEHR TROUT.

(*Salmo fario.*)

IN 1883 the U. S. Fish Commission began a systematic importation from Europe of a species of river trout into waters of the Eastern United States in which none of this group are indigenous. This was not the first attempt to acclimatize the species, but the work by the Government was inaugurated in that year, and was brought about chiefly through the successful experiments and favorable reports of Messrs. Frank N. Clark and Fred Mather. One of the common names heretofore associated with the fish in question is "brown trout," an English name of limited application. The German translation, "braun trout," came here with some of the shipments received from Von Behr, and was restored to its original English and passed around with the distribution of eggs and fry in the United States. The Commissioner of Fish and Fisheries, Col. Marshall McDonald, now proposes to give to this trout a name which is intended to perpetuate in America the memory of the man to whom we are much indebted for this valuable addition to our list of noble fishes. He recalls to mind the generous recognition by the Deutsche Fischerei Verein of the priceless services of our first Commissioner of Fisheries, Professor Spencer F. Baird, "the foremost fishculturist of the world," and takes pleasure in sending forth the new acquisition under the name of the old friend and supporter of fishculture in the United States—Herr von Behr.

In England the species has many names, none of them distinctive and only one of them known on the continent of Europe. The name of most general application is simply "trout." Another name of wide range is "brook trout." Sweden has the species in stony brooks as "stone trout." Germany uses the terms "gold trout," "white trout" and "black trout." If we desire to use a name which is really well distributed in countries wherein *Salmo fario* is indigenous we must call it "brook trout." We already have, however, a widely known brook trout in our *Salvelinus fontinalis.*

A name then for *Salmo fario* in the United States seems to be necessary, and we hope that all the people who delight in the species, will associate with it the name of Von Behr, to whose kind offices the Government is indebted for its opportunity to distribute it over a wide range of territory. It will not be difficult to introduce this new name, as all the eggs and fry of the species sent out in future from the Government establishments will be shipped as Von Behr trout (*Salmo fario*).

NEW HAMPSHIRE WOODS AND WATERS.

CHARLESTOWN, N. H., Dec. 3.—*Editor Forest and Stream:* I fully sympathize with your correspondent, Mr. C. H. Ames, in his "Protest," in FOREST AND STREAM for Nov. 21, but I am happy to be able to say that so far as the waters of New Hampshire are concerned, the invasion of undesirable "scaly immigrants" is pretty well stopped. During the years from 1869-75 the Chairman of the Fish Commission was the late Dr. Fletcher, of Concord, who was a "black bass maniac," and who devoted his chief energies to introducing this fish from Lake Champlain, where he was very fond of taking them in a legitimate manner, by hook and line. He placed bass in many of the lakes in the lower end of the State, among others in Winnepesaukee and Sunapee, both natural trout waters, but Winnepesaukee being the home of the *namaycush*, while Sunapee had none of them, but was supplied with the genuine *Salvelinus.*

Dr. Quackenbos thinks the bass have not done any harm in Sunapee, but I am inclined to the opinion that our later efforts to restore the trout would have been more successful if the bass had not been there. I have little doubt as to the ability of the *namaycush* to take care of himself if he is not speared on the spawning beds, as was the common custom in Winnepesaukee.

In 1875, a political change in the State government put in a board of Democratic commissioners, who followed up the introduction of bass, but very wisely only placed them in such ponds as had always been inhabited by perch and pickerel, with their colleagues in the shape of sunfish and pond shiners.

In 1876, the State turned over again politically, and a new board of commissioners was appointed, two of whom, Messrs. Webber and Powers, were old and enthusiastic trout anglers, and under their regime a new policy was inaugurated. The introduction of bass into any possible trout waters was immediately stopped and all requests to place them in such waters refused.

The first hatching house in the State was built at Plymouth, primarily and ostensibly for the purpose of hatching and restoring the migratory salmon to the Merrimac River, but provided at the outset with breeding ponds for trout, and a stock of breeders laid in from the neighboring streams.

In 1877, with the aid of Com. Brackett, of Massachusetts, the first "winninish" were procured and placed in Sunapee and Squam lakes. In 1878 the aid of Prof. Baird and Commissioner Atkins was secured, and since then the introduction of these fish has been regular, until now we are getting a good supply for ourselves from Sunapee and New Found lakes. Of the introduction of the Loch Leven trout into Sunapee, by Dr. Quackenbos, the public are already informed, as well as of the plant of German saibling, given by the U. S. Fish Commission, in New Found Lake, and the introduction from the same source of Lake Superior trout and whitefish in Lake Winnepesaukee.

A few years since the writer was informed by Commissioner Stilwell, of Maine, that a certain Massachusetts man, a writer of "guide books" to the Maine waters, had requested him to put black bass into the Rangeley or Androscoggin lakes, and on Mr. Stilwell's refusal had threatened to put them in any way in Lake Umbagog, at the lower end of the chain, which reaches into New Hampshire.

The matter was at once reported to the New Hampshire Legislature, who immediately passed an act prohibiting the introduction of pike or pickerel into any waters of the State now containing trout, or of black bass into any waters, without the permission of the Fish Commissioners, under a penalty of $100 for each offense. Since then I have not heard of the matter again, and I think Mr. Ames may feel sure that the influx of these coarse fish has been stopped in New Hampshire.

The present Board of Commissioners, Messrs. Riddle, Hodge and Kimball, are working on the same lines and with great success. They have established trout hatcheries at Sunapee and New Found lakes, and propose to locate another one somewhere in the southwest section of the State, possibly at Monadnock Lake, in Dublin. It is safe to say that the whole attention of the New Hampshire Fish Commission is devoted to the cultivation and extension of the *Salmonidæ.*

There is another immigration question just now occupying the public attention, on which I wish to say a word: and that is the introduction of Scandinavian emigrants to cultivate the abandoned farms of New Hampshire! These, I believe, are estimated at about 800, out of 32,000, and I wish to suggest that a far more profitable and available use of them is to restore their original tenants, the forest trees! So far as I know them, and I know many of them, they are out of the way "hill farms," once covered with heavy forest, cleared 100 or 150 years ago, and furnishing a good living for a couple of generations, from the soil left by the old forest and as sheep and cattle pastures. Sheep husbandry has gone West, where the sheep do not have to be housed and fed for six months in the year, and almost all our beef now comes from the same quarter. The grandsons of the old farmers have followed the same current, and many of my old comrades went with it; one commanded a Wisconsin regiment and one a Michigan brigade in the late war; and the schoolmates of my sons are settling in Oregon and Washington. Providence never intended New Hampshire for an agricultural region, although her valleys will always pay for cultivation, and the sooner we can re-forest her rugged hills the better.

The State has already appointed a Forestry Commission, to see what can be done to preserve the forests in the White Mountain region, whose waters, flowing down the Merrimac River, support with their power 150,000 people at Manchester, Lowell and Lawrence, certainly a hundred fold more than could ever get a living from her salmon fisheries could they be restored. There are many thousand acres more, all over the State, now unused and useless, which might well be clothed with oak and chestnut, beech and birch, if some one would take the initiative and show the owners of the lands how to plant them. Some of these deserted farms are being successfully cultivated again by the sons of the Irish immigrants who came into the State to build her railroads forty years ago, but there are many of them which would be far more valuable could their original forest be restored, and the sooner it is done the better. VON W.

The Kennel.

EASTERN COURSING MEET.

Editor Forest and Stream:

The inaugural meet of the Eastern Coursing Club will be held on the farm of Mr. England, at Hicksville, Long Island, Saturday, Dec. 7. The first brace will be ordered in the slips at 10 A. M. sharp. Trains leave Thirty-fourth street ferry at 8:20 and 8:50 A. M. Time one hour.

H. W. HUNTINGTON, Sec.

The Eastern Coursing Club reports that everything is in readiness for its meet next Saturday. The jacks are being well cared for and are fit to run. The last consignment of jacks was due at the preserve Dec. 1. In addition to the thirty jacks, there is also a supply of wild Maine hares to be used as a reserve.

A unanimous vote of thanks has been tendered the FOREST AND STREAM for its liberal donation, thus materially aiding the club to increase the value of its cash prizes. The winner of second prize will have the privilege of substituting the money prize for a handsome solid silver cup. The members at a late meeting also adopted a vote of thanks to Mr. H. L. Liebfried, of Garden City, Kas., for the eminent services he had rendered the club in trapping thirty strong jacks and shipping them in first-class order. Mr. Liebfried, seeing the club's dilemma, volunteered to trap the jacks, and his true sportsmanlike character was shown in his not taking advantage of its predicament, but simply charging for actual expenses. It is, therefore, with pleasure that the Eastern Coursing Club heartily recommends Mr. Liebfried to any club or gentlemen desiring Kansas jacks trapped for them.

In the enforced absence of Mr. Graham, the judging will be by Dr. M. H. Cryer, of Philadelphia, who is an old hand at coursing and at home on the back of a horse.

Mr. Peshall has called our attention to Section 352, Chapter IX. of Laws of 1881, and expresses the opinion that if the Hempstead Coursing Club or the Eastern Coursing Club attempt to hold a meeting, it is clearly the duty the of S. P. C. A. to seize both rabbits and dogs, which, under the law, are forfeited to the State. Chapter IX. relates to gambling and Section 352 prohibits trials of speed between animals for a stake, or wager, or bet. Strictly construed the law might cover coursing with greyhounds, but we do not believe that the statute was intended to apply to such friendly contests between gentlemen who own dogs.

If Section 352 forbids coursing, it must also forbid field trials; if the greyhounds at Hicksville next Saturday shall be forfeited, it will next be in order to prosecute the Robins Island Club and to seize their pointers and setters. If the S. F. P. C. A. shall be induced by Mr. Peshall to prosecute the coursing men and the field trial men under this law, their recourse to a statute relating to gambling will virtually be an acknowledgment that they cannot reach coursing and field trials by the cruelty to animals statutes.

THE FOX HUNTS OF AMERICA.

BEING engaged in a throughout systematic "documentary historic account of fox hunting of America," from time of the colonial trencher packs of Maryland, the North Riding of York, Long Island, New Jersey, Virginia, Massachusetts and Pennsylvania, to the present season, we therefore seek the assistance of your hunt to forward such data under cover to 168 Willis avenue, New York city, or this office.

All items as follows, viz.:

1. When your hunt was organized.
2. A full list of hunts since organization.
3. Names of persons participating and distance covered.
4. A list of its hounds (with names), from first hunt to present time.
5. A copy of its by-laws, etc., with full list of members from inception.
6. If convenient, a likeness of M. F. H. and whippers-in.
7. A list of its horses, with name and breeding; if imported or bred in the States; color, etc.

With any and all information you may consider of importance as to your hunt.

To the masters and members of the following named hunts, viz.:

1. Queens County Hunt, Long Island, N. Y.
2. Huntington Hunt, Long Island, N. Y.
3. Union Pack Hunt, Long Island, N. Y.
4. Richmond County Hunt Club, Staten Island, N. Y.
5. Meadow Brook Hunt, Westbury, Long Island, N. Y.
6. Rockaway Hunt, Long Island, N. Y.
7. Livingston County Hunt, Wadsworth House Farm, N.Y.
8. Genesee County Hunt, N. Y.
9. Dutchess County Hunt, N. Y.
10. Rose Tree Hunt Club, Chester county, Pa.
11. Suffolk Park Hunt Club, Pennsylvania.
12. Marshalton Hunt, Pennsylvania.
13. Westchester Fox Hunt Club, Pennsylvania.
14. Delaware Fox Hunt Club, Delaware.
15. Clarksburg Fox Hunting Club, Maryland.
16. Elk Ridge Fox Hunting Club, Maryland.
17. Annapolis Riding Hunt Club, Maryland.
18. T. G. Tucker Hound and Hunt Club.
19. Appleton Hound and Hunt Club, Station 1½, Ga.
20. Essex County Hunt Club, Essex county, N. J.
21. Washington, D. C., Hunt Club, Alexandria, Va., and all private hunt clubs South.
22. Westchester County Club Hunt, New York.
23. Pelham Hunt Club, Westchester county, N. Y.
24. Dragon Hunt Club, Delaware.

N. B.—There are numerous private packs in the South, and, mayhap, some hunt packs likewise, hence we invite communication. COL. F. G. SKINNER.

WILLIAM T. EVERS.

THANKSGIVING DAY, Nov. 28.

EASTERN FIELD TRIALS.

(Concluded from Page 373.)

ALL-AGED SETTER STAKE.

Third Series.

IN the third series Cassio and Nora were the first brace. Cassio won, beating Nora in searching for birds and doing some grand work in roading out a bevy that had run away from his point. On singles no satisfactory work was done, as they were wild, and Nora had no chance to get even with him.

The next brace was Chance and Toledo Blade. The heat was one-sided. Chance out-classed his competitor and won the heat hands down.

Cincinnatus had a bye, and this ended the series. Following is the result:

Cassio beat Nora.
Chance beat Toledo Blade.
Cincinnatus a bye.

Cincinnatus and Cassio were the only brace to run in the fourth series, Chance having a bye. They were put down in sedge at 11:22. In the actual work done there was not much to choose between them. Cassio had the better range and stayed out looking for birds better than Cincinnatus. In speed and style they were about equal. Considerable work was done, and some of it, especially that on some running birds, was very pretty. At 12:15 they were ordered up with Cassio the winner. This left only Chance and Cassio in for first money. Both are owned by the Memphis and Avent Kennels, and the judges, without running them, selected Chance as the better dog, and he was declared winner of first prize.

Orlando and Toledo Blade were selected by the judges as the best of the dogs previously beaten by the winner, and they were ordered to run to decide which should compete with Cassio for second place. They ran rather a poor heat, which was won by Toledo Blade, who outranged and outworked Orlando. Under the rules Cassio could not be called upon to run the deciding heat until the next day, and the Pointer Stake was begun, and after running two heats the work for the day was finished. On Saturday the weather was clear and cool with a light breeze from the northwest, just the day for man and dog to range the fields with comfort. At 8:48 Cassio and Toledo Blade were put down in a large open field to decide second money. Both dogs started off well and each did good work, Blade having slightly the best of it, and at the end of the heat the flag went up for him and he was declared winner of second place. This ended the running for the stake, the judges selecting Cassio for third place, and deciding fourth place equally between Nora and Cincinnatus.

It was unfortunate that under the rules some of the best dogs in the stake were snowed under, and consequently dogs of lesser merit were placed over them. There is no question that the best dog in the stake was the winner, but there is also no question that at least two of the dogs that were unnoticed were much higher class animals than either of the last four. Both Rowdy Rod and Bettye S. in natural ability and hunting qualities are far superior to them, but under the rules they were thrown out. The same difficulty has been found in previous years and much thought has been given to the subject by thinking men, but no practical remedy has as yet been applied. The imperfection in the rules was never more apparent than in this stake, and nearly every practical man who watched the running was thoroughly convinced that a radical change must be made, and we are pleased to note that at the annual business meeting of the club measures were adopted to remedy the evil by voting to adopt the spotting system, and a committee consisting of Messrs. Donner, Hitchcock and Duryea was appointed to revise the rules in conformity with the system. It is to be hoped that something more practical and just than the present system will result from their labors. The stake was finished at 9:35. Following is a complete summary:

First Series.

Bettye S. beat Desmond II.
Dick Tate beat Whitie.
Nora beat Rowdy Rod.
Toledo Blade beat King Leo.
King's Mark beat Polly II.
Chance beat Orlando.
Nannie B. beat Nora.
Cincinnatus beat Guy.
Roi d'Or beat Rapid Ann.
Cassio a bye.

Second Series.

Cassio beat Dick Tate.
Nora beat Bettye S.
Toledo Blade beat King's Mark.
Chance beat Nannie B.
Cincinnatus beat Roi d'Or.

Third Series.

Cassio beat Nora.
Chance beat Toledo Blade.
Cincinnatus a bye.

Fourth Series.

Cassio beat Cincinnatus.
Chance a bye.

Final for First Place.

Chance was placed first.

Ties for Second Place.

Toledo Blade beat Orlando.

Final for Second Place.

Toledo Blade beat Cassio and won second place.

Cassio was placed third, and Nora and Cincinatus equal fourth.

THE POINTER STAKE.

There were 23 nominations for the Pointer Stake and 16 of them filled. They were drawn to run in the following order:

LAD OF BOW (Westminster Kennel Club, Babylon, N. Y.), liver and white dog, March, 1884 (Graphic—Climax),
against
RIP RAP (E. Dexter, Boston, Mass.), black and white dog, May, 1888 (King of Kent—Hops).

FAN FAN (J. B. Wallace, Ansonia, Conn.), liver and white bitch, July, 1887 (Graphic—Lady Belle),
against
CONSOLATION (C. H. Odell, Yonkers, N. Y.), orange and white dog, June, 1885 (Bang Bang—Grace III.).

FRED (Bayard Thayer, Boston, Mass.), liver and white dog, 2yrs. (Robert le Diable—Trick),
against
COUNT FAUSTER (Dr. J. G. F. Holston, Zanesville, O.), liver and white dog, March, 1887 (Mainspring—Dolly Fauster).

SELDOM (N. Simpkins, New York), liver and white bitch, 4½yrs. (Booth—Tuck),
against
LEBANON (Lebanon Kennels, Lebanon, Pa.), lemon and white dog (Trim—Peg).

DUKE OF HESSEN (F. R. Hitchcock, New York), liver and white dog, 4½yrs. (Luck of Hessen—Blarney),
against
PONTIAC (E. Dexter, Boston, Mass.), liver and white dog, 3yrs. (Milton Bang II.—Climax).

TAMMANY'S BOY (Miss H. Wooster, Ansonia, Conn.), liver and white dog, 2yrs. (Tammany—Juno),
against
ROGER WILLIAMS (C. H. Odell, Yonkers, N. Y.), orange and white dog, May, 1886 (Bang Bang—Lalla Rookh).

MIRANDA (J. T. Richards, New York), liver and white bitch, January, 1887 (Mainspring—Beauty),
against
WOOLTON GAME (F. R. Hitchcock, New York), liver and white bitch, February, 1887 (Gough—Larkspur).

DALGAROUKI (C. H. Odell, Yonkers, N. Y.), orange and white bitch, August, 1886 (Bang Bang—Lalla Rookh),
against
BOUNCE (G. W. Amory, Boston, Mass.), liver and white dog, Feb. 26, 1887 (Bob—Sal).

First Series.

Lad of Bow and Rip Rap were the first brace in the Pointer Stake. They were put down on Friday after the heat between Toledo Blade and Orlando was decided. Lad of Bow was handled by John White and Rip Rap by Captain McMurdo. A gale of wind was blowing, making it difficult for the dogs to locate their birds. Rip outclassed Lad in searching for birds and also had the best of it on singles, and won the heat. Lad went at a fair rate of speed and ranged well, but he could not compete with Rap, and toward the finish he let down somewhat, while Rap kept up to the end.

The next brace was Fan Fan, handled by Bradley, and Consolation, handled by Luke White. Con started at speed, and outpaced and outranged Fan from start to finish. He was not in good condition and was tired at the end, but he is very game and did not let down. Both did some good work on game, with the advantage in favor of Consolation, and he was awarded the heat. This ended the work for the day.

On Saturday, shortly after the finish of the Setter Stake at 9:49, Fred, handled by Height, and Count Fauster, handled by Tucker, were put down on the Snow farm. Both moved fairly well and at a fair rate of speed at the start, but they slowed down near the finish and went at moderate speed. Count won the heat, having a slight advantage in the work done, although neither of them did any very satisfactory work when on game.

At 10:48 Seldom, handled by Height, and Lebanon, handled by Luke White, were put down in sedge grass near a cornfield. Both did much better than the previous brace, showing up well on game and doing some good work. Seldom was too fat, and although she went at a fair rate and ranged well, she was not the equal of Lebanon in these respects; he also showed the better style both in going and when on game, and won the heat. He ran here last year and divided fourth prize with Consolation.

Considerable interest was manifested in this heat. Both dogs ran last year unplaced, but they were said to have improved, and a good heat was expected. Duke of Hessen was handled by John White, and Pontiac by Buckle. Both have greatly improved on their form of last year, and ran a capital heat so far as pace and range are concerned. The heat was run in the middle of the day, and not many birds were found. Duke had a little the best of it in speed and ranged wider, working out the ground more systematically. After working nearly an hour no decision could be reached, and they were taken up during lunch, and at 1:52 they were again put down, and at the expiration of twenty minutes Duke found a bevy, which he pointed in good style and retrieved a bird nicely, and was declared the winner.

At 2:19 Tammany Boy, handled by John White, and Roger Williams, handled by Luke White, were put down in the large stubble field west of the Model Farm barn. Boy is a big, rather awkward-looking dog, but he goes very level and moves well, and although he started very slow, he soon woke up and showed considerable speed and range, and hunted out his ground fairly well. He was not rigid on some of his points, but two or three of them were made in good style. Roger has not improved on his Derby form, and does not get to his birds in as good style as he then did. At the start he clearly had the best of it at all points, but when Boy got agoing he gained rapidly on him, and was soon working outside. Roger dwelt too much on old scent, and although he did some very pretty work to look at, it was not of the character to win at a field trial. At the end of an hour and twenty minutes the judges awarded the heat to Tammany Boy. Although the heat was very close, there is no doubt that, taking everything into consideration, he was a trifle ahead. Luke thought otherwise, and expressed his opinion rather too freely, an occurrence that, we feel sure, he will regret as much as any one after he has thought the matter over.

The next brace was Miranda, handled by John Lewis, and Woolton Game, handled by John White. The latter is a noted English field trial winner in both the Derby and All-Aged Stakes, and a great deal of interest was manifested as to how she would behave on our game. She acquitted herself with honor and won the heat very easily. She is a fairly good moving bitch with a long stride that carries her over the ground much faster than is apparent at first glance. The character of her work on game is of a high order, and when she has had sufficient experience on the festive quail she will undoubtedly be a first-class performer. She evidently has a good nose and considerable bird sense. Miranda is an easy-moving bitch with a bit more speed and range than her competitor, but she was evidently off in nose, as she bungled on her birds.

The last brace of the series, Dalgarouki, handled by Luke White, and Bounce, handled by Poindexter, were put down at 4:35 and worked till a few minutes past five, when they were taken up for the day to go down again on Monday. No work on birds was done and but little speed or range was shown by either.

Monday the weather was delightful, but too warm for shooting, and some of the work on birds was not quite up to the mark. Previous to starting Luke White offered the judges an apology for the hasty words of Saturday, which was accepted. Dalgarouki and Bounce were cast off at 8:45 near the Glass house to finish their undecided heat of Saturday. Both went better than they did on Saturday, but neither showed much pace or range, Bounce having the advantage in these respects as well as in the work on birds, and at the expiration of an hour and two minutes he was declared the winner. Both dogs are said to be good workers, but from some cause neither showed much ability. This ended the first series with the result as follows:

Rip Rap beat Lad of Bow.
Consolation beat Fan Fan.
Count Fauster beat Fred.
Lebanon beat Seldom.
Duke of Hessen beat Pontiac.
Tammany Boy beat Roger Williams.
Woolton Game beat Miranda.
Bounce beat Dalgarouki.

Second Series.

The first heat in the second series brought Rip Rap and Consolation together. Although it was decidedly hot some very pretty work was done by both dogs. At the expiration of an hour and ten minutes Rip Rap was declared the winner. He had the best of it in pace and range and way of going, and the character of his work on game was of a higher order than that of his competitor. The greater experience of Con gave him the advantage so far as finding goes. The little fellow showing up well in this respect, he is also a busy worker and kept up well notwithstanding his evident lack of condition for hard work.

Count Fauster and Duke of Hessen were next put down at 11:11 in an open field near the Holton school house. Count started off much better than in his previous heat and did very creditable work, going at a fair rate of speed, and although his range was limited he kept up to his work very well. Duke went at a great pace, ranging wide and hunting out his ground in first-class style, showing up in these respects much better than any dog in the stake. He also proved a stayer and was going in capital form at the finish; his nose, however, was not right, and Count had much the best of it, both in finding bevies and in the work on singles. After running an hour and five minutes they were taken up for lunch, which was awaiting us at the Holton school house. After lunch they were again put down, and after 18 minutes the heat was decided in favor of Count Fauster. Although Duke showed the greater natural ability his lack of nose was too great a handicap to overcome.

The next brace was Lebanon and Tammany Boy. Lebanon started off well and beat out his ground in a workmanlike manner. Boy was inclined to loaf, and did not show up so well as in his previous heat, and at the end of the allotted 45 minutes Lebanon was declared the winner. He ran his heat well and displayed considerable bird sense, and near the finish he worked out a running bevy very nicely, beating his competitor, who had an equal chance, as they alternately roaded and cast for the birds.

Woolton Game made short work of Bounce in the next heat, beating him easily at all points. She ranged better in this heat than she had previously done, and at the finish she did some excellent work on a running bevy. Bounce appeared to be off in nose, and he was unsteady to wing and unreliable on back. This ended the second series, with the result as follows:

Rip Rap beat Consolation.
Count Fauster beat Duke of Hessen.
Lebanon beat Tammany Boy.
Woolton Game beat Bounce.

After a wait of more than an hour for the dogs which had gone in the direction ordered, but which had not been taken by the judges, we again started. The interval of waiting was not lost, however, as Col. Merriman wishing to test the field qualities of Mr. Bradley, cast him off in a thicket among the scattered birds of the last bevy. Bradley had no dogs to bother him and started off at a fair rate of speed, but the Col. did not handle with his usual admirable skill, choosing rather to test the natural finding ability of Bradley by allowing him to take his own course, which he did, but erred in judgment by making a cast in the wrong direction. The Colonel, however, with rare good bird sense drew straight to a single which he jumped and cutting loose grassed it in a brier patch in capital style. Bradley came in at the report of the gun and redeemed himself by scoring a first class retrieve. The Colonel is not a "meat hunter," and as he had enough for his breakfast he stopped the slaughter, but went on and gave us an excellent exhibition of his finding qualities by going straight to some of the remaining birds, kicking them up and giving a shot, just for fun, at each rise.

Third Series.

The dogs arrived soon after, and at 4:23 Rip Rap and Count Fauster were cast off in a stubble field to run the first heat of the third series. We worked over considerable ground, Count getting in a point to a bevy and one to a single, while Rip Rap was beating out the ground in another direction, going at a good rate of speed and ranging wide. Finally the dogs were brought together, and we took a long tramp to a large stubble field, where they were started upon even terms, and the spectators were given a capital exhibition of the great difference between high-class and ordinary work. At the word, Rip took the right hand side of the field and went at speed to the upper end, when he made a short cast toward the center and came back with his head well up, with the wind blowing across him until within 100yds. of us, when he caught the scent of a bevy and whirled on a beautiful point. Count at the start took a few strides and struck the trail of the same bevy and slowly and carefully worked out every bit of the foot scent, but before he got near enough to locate them Rip had got in his work in an artistic manner that completely threw in the shade the good but less meritorious work of Count in nosing out the trail. It was now nearly night, and although both dogs did some good work a portion of it was unsatisfactory, and at dark they were ordered up to go down again in the morning.

Tuesday morning it was cloudy, with a cold, raw wind from the northeast. Scent appeared to be good, and some excellent work was done. Rip Rap and Count Fauster were put down at 8:50 to finish their undecided heat. At the expiration of 17m. the heat was decided in favor of Rip Rap. He had decidedly the best of it at all points and scored an easy win.

At 9:28 Lebanon and Woolton Game were put down. For some time there was not much difference in their speed or range, but near the finish Game let down a little and Lebanon had the best of it in these respects. In the character of the work done Game was ahead in point of merit, and had she not made a mistake in working a bevy at the finish, the decision possibly would have been reversed, as it was a very close heat and some capital work was done by both dogs. The heat was a long one and the merit of the dogs was well tested. At the expiration of 1h. 47m. the heat was decided in favor of Lebanon. This finished the third series with the result as follows:

Rip Rap beat Count Fauster.
Lebanon beat Woolton Game.

After lunch, which was taken at the Model Farm, Rip Rap and Lebanon were put down in the large stubble field at 12:55. This was the deciding heat for first place, and it proved to be the best one in the stake. At the end of the heat the flag went up for Rip Rap, and he was declared the winner of first prize. Both dogs went better than in any of the previous heats, and although Lebanon fairly outdid himself, the result was never in doubt, as the high character of the work done by Rip, together with his better pace, range and style, kept him well ahead, and showed him to be the best pointer that has ever run at American trials. Should he train on he will, if nothing befall him, make it exceedingly warm for the long-haired fraternity, and we shall look to see him in the front rank. Lebanon also showed up quite a pointer, and although defeated he was far from being disgraced.

Count Fauster and Consolation were put down at 2:11 to decide which should compete with Lebanon for second place. Con clearly had the legs of Count and outranged him, and although he gamely kept going to the end, his lack of condition had evidently affected his nose, and his work on birds was not nearly up to his form in previous years. Count showed up better in this heat than he had done before, and at the expiration of an hour and nineteen minutes he was awarded the heat.

At 3:52 Lebanon and Count Fauster were put down to run the deciding heat for second place. Lebanon was still going his best, and outclassed his opponent in quality and beat him in quantity of work, and at the finish he was awarded the heat and declared the winner of second prize.

The judges then selected Count Fauster for third place and Woolton Game for fourth, and the stake was finished. In placing Count and Game in the order named, we imagine that the judges followed precedent instead of their own convictions. In previous years it has generally been the prac-

tice to place the runner up in the last heat next in order of merit, notwithstanding the fact that the rules allow the judges to select for the position any dog in the stake. There is no question that the character of the work done by Game when on birds is greatly superior to that done by Count, and in other respects he has no advantage, except that his greater experience gives him a little the best of it in working out the ground. With this exception the stake was most excellently judged, and the dogs that possessed the most natural ability were in front at the finish and properly graded according to their merit. The work of the dogs throughout the stake was a great improvement upon that of last year, and the best, taken all round, that has been seen since the inauguration of the stake. Following is a complete summary:

First Series.

Rip Rap beat Lad of Bow.
Consolation beat Fan Fan.
Count Fauster beat Fred.
Lebanon beat Seldom.
Duke of Hessen beat Pontiac.
Tammany Boy beat Roger Williams.
Woolton Game beat Miranda.
Bounce beat Dalgarouki.

Second Series.

Rip Rap beat Consolation.
Count Fauster beat Duke of Hessen.
Lebanon beat Tammany Boy.
Woolton Game beat Bounce.

Third Series.

Rip Rap beat Count Fauster.
Lebanon beat Woolton Game.

Final for First Place.

Rip Rap beat Lebanon and won first prize.

Ties for Second Place.

Count Fauster beat Consolation.

Final for Second Place.

Lebanon beat Count Fauster and won second.
Count Fauster placed third.
Woolton Game placed fourth.

First, Rip Rap, $300; second, Lebanon, $150; third, Count Fauster, $50; fourth, Woolton Game, $50.

THE CHAMPION STAKE.

Chance had a walkover for the Champion Stake. Roderigo was lamed three weeks ago and Gath's Mark did not start. Chance was put down on Wednesday morning under Judges Hitchcock, Duryea and Coster, who unanimously decided that he was entitled to the prize, and the Eastern field trials of 1889 were finished.

Taking everything into consideration, the meeting has been perhaps as notable as any in the history of the club. A nearer approach was made than has ever been done before toward judging the work of the dogs upon the right principle, and in most cases the decisions were rendered in favor of the animal that showed the best qualities that go to make a good dog, irrespective of the luck of the birds or the advantage of handling, and it is sincerely to be hoped that in the future this step in the right direction will be followed by others until judging at field trials shall become an exact science and nothing be more sure than a win for the best dogs. The club is to be heartily congratulated for inaugurating this course as well as upon the success of its annual meeting. In closing we wish to sincerely thank the officers of the club and the judges for the many courtesies extended as well as for their uniform kindness in imparting desired information. We are also greatly indebted to Mr. H. B. Duryea for his kindness in giving valuable assistance in taking notes of the work of the dogs.

CENTRAL FIELD TRIALS.

LEXINGTON, N. C., Dec. 1.—The drawing for the Setter Derby of the Central Field Trial Club took place this evening at 9 o'clock. There were 42 nominations for the stake, 7 of which filled their entry. They were drawn in the following order:

ROD'S LADY (Roderigo—Gay Gladstone), A. M. Hilderbrandt,

against

ROYAL C. (Roderigo—Countess House), Memphis & Avent Kennels.

ROWDY ROD (Roderigo—Juno A.), Memphis & Avent Kennels,

against

NANNIE B. (King Noble—Queen Vashti), J. I. Case, Jr.

SAM C. (King Noble—Cricket), J. I. Case, Jr.,

against

LETTY LYNN (Roderigo—Countess House), Memphis & Avent Kennels.

HARRY C. (Roderigo—Countess House) Memphis & Avent Kennels, *a bye.*

The judges are Messrs. Davidson, N. Wallace and W. Tallman.

[*Special to Forest and Stream.*]

LEXINGTON, N. C., Dec. 2.—The weather to-day has been delightful. There was a heavy frost and scent was poor, and the work was not very satisfactory. In the preliminary series, Rod's Lady and Marquis N. were thrown out. In the second series, Royal C. beat Nannie B., and Rowdy Rod beat Sam C. This ended the work for the day.

There were fifty-three nominations for the Pointer Derby, sixteen of which filled. They were drawn as follows: Joy, Jr. against Lou. Carlgrave against Nye. F. F. V. against Sally P. Miss Mealy against Convex. Tough Nut against Naso Peshall. Lady Hessen against Mamie Bang. Flirt against Heineken. Rip Rap against Met.

LEXINGTON, N. C., Dec. 3.—The weather to-day has been good, and birds were found in abundance. Harry C. beat Letty Lynn. In the third series Rowdy Rod beat Royal C. Harry C. a bye. In the final for first Rowdy Rod beat Harry C. and won first prize. Second place will be decided to-morrow. Four braces were run in the Pointer Derby, but not much good work was done, the most of it being very ordinary.

THE ALL-DAY FIELD TRIALS.

THE All-Day field trials have been abandoned for lack of support. Children have been crying for such a stake for years, but the entries failed to come in, and it is to be hoped that we have heard the last of the stay-at-homes that would not enter for anything short of a race that would test the staying qualities of their world beaters.

PATSY AFIELD.—Des Moines, Iowa.—I am pleased to say that I have some very fine puppies out of Nino, by Patsy, several of which will be prize winners. I shall show some of them next year if I have no bad luck. Patsy has been hunted almost continually this fall. He is as fine an Irish field dog as I have ever seen. He has wonderful energy and endurance, a good nose and fine bird sense. I could not ask for a better field dog than Patsy, barring the fact that he was broken not to retrieve, but to point dead. As to Patsy's worth as a sire, I am sure his puppies will prove him a good one.—F. H. PERRY.

THE WESTMINSTER JUDGES.

BABYLON, L. I., Nov. 27.—*Editor Forest and Stream:* Herewith I beg to hand you a list of judges who have kindly consented to act at our coming show.—JAMES MORTIMER, Supt.

LIST OF JUDGES.

Mastiffs, Mr. Chas. C. Marshall, New York.
St. Bernards and pugs, Miss A. H. Whitney, Lancaster, Mass.
Great Danes, Newfoundlands, all terriers (except smooth fox-terriers and bull-terriers), toy spaniels, Italian greyhounds and Mexican hairless dogs, Mr. R. F. Maghew, New York.
Bloodhounds, foxhounds, deerhounds, greyhounds, English and Irish setters, English retrievers, Mr. John Davidson, Monroe, Mich.
Pointers, Mr. John S. Wise, New York.
Gordon setters, Dr. H. Clay Glover, New York.
Irish water spaniels, Clumber, field and cocker spaniels, Mr. A. C. Wilmerding, New York.
Chesapeake Bay dogs, Mr. Isaac Townsend.
Poodles, Mr. John J. Hecksher, New York.
Collies, Mr. J. D. Shotwell, Rahway, N. J.
Smooth fox-terriers, Mr. Fred Hoey, Long Branch, N. J.
Bulldogs, bull-terriers, basset hounds, dachshunde, Mr. E. S. Porter, New Haven, Conn.
Beagles, Mr. H. F. Schellhass, Brooklyn, N. Y.
Miscellaneous, Messrs. Davidson and Mayhew.

DOG TALK.

MR. CHARLES N. SYMONDS, proprietor of the North Fields Yorkshire Kennels, Salem, Mass., has recently imported several fine specimens of his favorite breed. They were selected by Richard Toon, a Sheffield breeder of repute, who appears to have done his best for his employer. The gem of the selection is Fishpool Gem, only 4lbs. weight; has been shown once and took second to Model, and was regarded as the possible coming champion of England. The others are Prince A I, weight 6½lbs., a two-year-old with an exceptionally fine coat, Venus, a beautifully colored and coated bitch, 5½lbs., and Boon's Bright, a 4lb. yearling, which Mr. Symonds is willing to match against anything in his class. Fishpool Model, another of the lot, died *en route.* Mr. Symonds proposes exhibiting his string of nine or ten dogs at the coming Westminster Kennel Club's show in February next, sending them under the care of Mr. Geo. S. Thomas who brought them across the Atlantic; and we are requested to announce that in the meantime his kennels are always open for inspection by any lovers of the breed who may favor him with a visit.

Mr. Pierre Lorillard, Jr., has engaged the services of Mr. Chas. S. Tucker, of Stanton Depot, Tenn., to take charge of his kennel for the coming year. Mr. Tucker will devote his time entirely to the dogs and will train none for other parties.

A. K. C. QUARTERLY MEETING.—*To the Delegates of the A. K. C.:* You are hereby notified that the regular quarterly meeting of the Executive Committee of the American Kennel Club will be held at the club rooms, at No. 44 Broadway, New York, on Thursday, Dec. 19, 1889, at one o'clock P. M. A full meeting is desired, as the proposed amendments to the bench show rules are to be acted upon at this meeting. By order of the President, A. P. VREDENBURGH, Sec'y. [Note.—Owing to a miscalculation of time, during the absence of the secretary on his vacation, the notice of meeting, originally called for Dec. 6, has been changed to Dec. 19, in order to conform with Article XIII., Sec. 4, which provides that twenty days' notice shall be given.]

COLLIE STAKES AT NEW YORK.—Rahway, N. J., Nov. 29.—*Editor Forest and Stream:* Please announce that the following Collie Club Stakes and prize cups will be competed for at the bench show of the Westminster Kennel Club, Feb. 11 to 14, 1890: The Collie Club trophy, the president's cup, annual collie sweepstakes, produce, futurity and stud dog stakes. For further particulars address J. D. SHOTWELL, Lock Box 36, Rahway, N. J.

ST. BERNARD CLUB OF AMERICA.—The monthly meeting of the Board of Governors will be held Monday evening, Dec. 9, at 8 o'clock, at the Hoffman House, New York city.—LORENZO DANIELS, Secretary.

"OUR PRIZE DOGS."—The price of "Our Prize Dogs" has been reduced to $5 in cloth; $7.50 in leather. The album of Typical Dogs to $5. The portraits 50 cents each, $12.50 per set.

THE CHICAGO SHOW, given by the Mascoutah Kennel Club, will be held Feb. 19 to 22. John L. Lincoln, Jr., is the Secretary.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Hayes's Brave. By F. H. Hayes, Dexter, Me., for black, white and tan foxhound dog, whelped May 30, 1889, by champion Brave out of Bernhardt.

Madge E. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug bitch, whelped Oct. 3, 1889, by Hayseed (Douglass II.—Rose) out of Ruby F. (champion Bradford Ruby—Flossy).

Rancho, Frisco Boy, Dawn, Servian, Paula, Claremont Rose, Claremont Heather and Claremont Noreen. By F. H. Perry, Des Moines, Ia., for red Irish setters, four dogs and four bitches, whelped July 23, 1889, by Claremont Patsy (Frisco—Nellie IX.) out of Nino (champion Elcho—champion Noreen).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lady Thora—Boycott. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Thora (Santa Claus—Almah) to their Boycott (Duke—Bonnie), Nov. 19.

Fanny McBeth—Rollick B. McBeth Kennels' (North Lawrence, O.) English setter bitch Fanny McBeth (McBeth—Vick) to M. H. Wise's Rollick B. (Royal Ranger—Kit Killbird), Nov. 16.

Belle of Stanton—Ben Hill. P. Lorillard, Jr.'s (Jersey City, N. J.) English setter bitch Belle of Stanton (Count Noble—Dido II.) to J. Shelley Hudson's Ben Hill (Druid—Ruby), Nov. 18.

Nino—Claremont Patsy. F. H. Perry's (Des Moines, Ia.) Irish setter bitch Nino (champion Elcho—champion Noreen) to his Claremont Patsy (Frisco—Nellie IX.), Nov. 19.

Hillis Nora—Claremont Patsy. J. W. Hillis's (Des Moines, Ia.) Irish setter bitch Hillis Nora (Sarsfield—Nino) to F. H. Perry's Claremont Patsy (Frisco—Nellie IX.), Nov. 21.

Bessie Ober—Toby. McBeth Kennels' (North Lawrence, O.) cocker spaniel bitch Bessie Ober (Prince Ober—Bessie Belle) to their Toby, Nov. 10.

My Lady Betty—Black Prince. Dr. F. W. Kitchel's (Perth Amboy, N. J.) spaniel bitch My Lady Betty to A. C. Wilmerding's champion Black Prince, Oct. 6.

Miss Bend Or—Black Prince. Kitchel & Wilmerding's spaniel bitch Miss Bend Or (Young Obo—champion Newton Abbot Lady) to A. C. Wilmerding's champion Black Prince, Oct. 9.

Tyne—Duffer. Kitchel & Wilmerding's Clumber spaniel bitch Tyne to H. J. Hardenburgh's Duffer (Trimbush—Gill), Oct. 15.

Hazel Obo—Doc. Wm. Barnes's (Manayunk, Pa.) spaniel bitch Hazel Obo to A. C. Wilmerding's champion Doc, Oct. 22.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Mollie. McBeth Kennels' (North Lawrence, O.) pointer bitch Mollie (Rod—Nan), Nov. 20, six (three dogs), by G. E. Wilson's Don Croxteth (Count Croxteth—Lo Faust); three bitches since dead.

New Forest Russet. T. J. Tyrrell's (Philadelphia, Pa.) fox-terrier bitch New Forrest Russet (New Forest Rustic—Gay), Nov. 15, six (four dogs), by H. Canor's Tenbrook (Raby Mixer—Temptation).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Hayes's Brave. Black, white and tan foxhound dog, whelped May 30, 1889, by champion Brave out of Bernhardt, by The Cook Kennels, Detroit, Mich., to F. H. Hayes, Dexter, Me.

Madge E. Silver fawn pug bitch, whelped Oct. 31, 1889, by Hayseed out of Ruby F., by Eberhart Pug Kennels, Cincinnati, O., to A. Gittleson, Augusta, Ga.

Ben Hill—Tempest whelp. Black and white English setter bitch, whelped June 12, 1889, by J. Shelley Hudson, Covington, Ky., to Chas. K. Harrison, Delaplane, Va.

Sportsman—Dixie whelps. Black, white and tan English setter dog and bitch, whelped Aug. 18, 1889, by J. Shelley Hudson, Covington, Ky., to G. D. Jay, Kokomo, Ind.

Queen Bessie and Lula Wilkes. Blue and fawn and white Italian greyhound bitches, whelped Sept. 1, 1889, by imported Nero out of imported Daisy, by R. Kostka, Baltimore, Md., to Harry W. Doll, Frederick, Md.

List. Orange and white English setter bitch, whelped March 11, 1888, by Count Noble out of Fate Gladstone, by J. W. Gross, Harrisburg, Pa., to Dr. G. G. Davis, Philadelphia, Pa.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

ROCHESTER.—I have a seven months setter bitch who ever since she was three months old has passed blood from her bladder. After she urinates naturally she will strain and pass from a few drops to a teaspoonful of bright red blood; her appetite is not good and she is thin in flesh. Will you kindly tell me what is best to do? Ans. Give small doses of ergot and iron in pill form. Also 5 grains of quinine daily and put acetate of potassium in the milk you give in order to render the urine bland and less irritating.

G. L. V. T., West Newton, Mass.—A cocker eight weeks old is all right every way excepting that he has very little use of his hindlegs. At times he will walk several feet, then over his hindlegs will go and he will drag them after him. He has been so ever since he started to walk. He is perfectly well otherwise. Ans. The trouble is due to paralysis. The paralysis may be functional, in which case the outlook for recovery is good, or it may be organic, *i. e.*, due to some structural change or lesion in the spinal cord. In the latter case the outlook is bad. If functional, small doses of strychnine or nux vomica will help, also electricity and rubbing and blister over spine. It may be due to worms. Purge with oil and give 5 or 10 grains of powdered areca nut in pill form. Give 5 grains of quinine in a pill every day for a week. You can conceal the pill in a bit of meat.

W. D. G., Boyce P. O., Va.—Pointer bitch has been sick since Nov. 1. Her case is viz.: Her fæces come in small quantities, and often have a bloody appearance. She is very weak and don't want to move about much. I consulted a doctor, he recommended Dover's powders and calomel, but she don't seem to improve much. Any favors will be highly appreciated. Will remit charges as soon as bill received. Ans. Have the following pill made up:

℞ Ext. ergotæ.....grs. 3 ss
Ext. opii.....grs. iii
Ferri sulphat.....grs. xii

Mix. Fit pil No. 12. Sig. Give one three times daily concealed in a morsel of meat. If she is very weak, give teaspoonful of brandy in water 3 or 4 times daily.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

G. M. H., Troy, O.—You can get sample tube bullets from Mr. A. Weed, Tarrytown, N. Y.

J. Y. M., Moor.—Please tell me the best breed of dogs for running rabbits. Ans. The beagle.

DRIVE.—If you will send us your name we will be glad to publish your story of Pike County Shooting.

H. W. S., Tom's River.—1. We consider the rifles of the two makes practically equal in accuracy. 2. A .38cal. would do for Maine big game, but a larger caliber would be preferable.

P. G., Philadelphia.—Can you please inform me where I can purchase a metal scratch brush for cleaning a .22cal. rifle? I have inquired several places here, but nobody seems to keep them. Ans. Apply to Henry C. Squires, 178 Broadway, New York.

C. D.—1. How should 12-gauge shells be loaded for duck shooting? 2. Also for deer? Ans. 1. Use 3¼drs. powder, 1⅛oz. No. 6 shot. 2. See method mentioned in "Kentucky Deer Chat," page 366, last issue.

J. M. B., Newport, R. I.—A letter sent to you has been returned. The trouble with the dog was probably that it was not quite the right time, and he knew this. Had you waited it would probably have been all right.

W. S. B., Jamaica Plain, Mass.—Which is the more fashionable of these two breeds, the bulldog or the bull-terrier, and also what is the most fashionable color? Ans. 1. Bull-terrier. 2. White is the only color for bull-terriers recognized by judges. 2. Brindle is about the best color for a bulldog.

C. E. K., Bridgeport.—Suppose that a man should take a black and tan bitch and breed her to a fox-terrier, take the bitch pup and breed her to a black and tan, and take one of her pups and breed her to a black and tan, would he have a full blood black and tan or not? Ans. The last progeny would be seven-eighths black and tan and one-eighth fox-terrier.

J. A. L., Oswego, N. Y.—1. I recently read that there are no more copies of Coues's "Key to North American Birds" to be had; is that so? 2. Is it lawful in New York State to shoot ducks from a small open yacht? 3. Does chilled shot in any way injure the barrels of a gun? Ans. 1. We can supply it. 2. No, except on Long Island Sound, Gardiner's and Peconic Bays, Lake Ontario and the Hudson River below Iona Island. 3. No.

C. F. L., Cambridge.—1. Will you tell me whether it would be advisable to clip or shave a Caniche poodle at this time of the year? The poodle is now seven months old and has never been shown. 2. Why is it that the first litter of pups are considered to be inferior to subsequent litters? Is it true that they are inferior? 3. Where can I find the best article on the Great Dane? On the Caniche poodle. Ans. 1. You had better wait until spring. 2. No. 3. Good articles on both these breeds in "The Book of the Dog," by Vero Shaw, for sale at this office.

G. H. H., Yamaska, Canada.—1. Is the Canadian partridge called a pheasant in some parts of the United States? 2. Is what we call a quail what you call a partridge? 3. Is what all sportsmen here admit and know to be a snipe anywhere in the States called a "woodcock" by sportsmen? Ans. 1. The "Canada partridge" is, we presume, *Dendragapus canadensis,* known as Canada grouse, spruce grouse, spruce partridge, cedar partridge, swamp partridge, wood partridge, wood grouse, black grouse and spotted grouse. In some parts of Maine it is called heath-hen. (See Trumbull's "Names and Portraits of Birds which Interest Gunners.") The term "pheasant" is in some parts applied to the ruffed grouse (*Bonasa umbellus*). 2. The term "partridge" is by some applied to the quail (*Colinus virginianus*). 3. We do not know that the term woodcock is anywhere applied by sportsmen to the snipe.

T. M. P., Silver Creek, Nebraska.—Please name the best trout flies for the months of September and October in the headwaters of the Snake River, Idaho and Wyoming. Also the best leader to use with the same, and the best line and number of yards necessary. I would be pleased to read in your paper some accounts from parties who have visited the above country hunting and fishing. I expect to take the trip myself in the fall of 1890, and would like all the information necessary to make the trip a success. What I need most is details as to fishing tackle, arms, camp outfit, etc. Will some one answer through FOREST AND STREAM and perhaps enlighten a large portion of the readers of this valuable paper? Ans. The best flies for the Snake River in September and October will vary with the angler; the black and brown hackles are recommended by many persons. October is an uncertain month as to weather. Write to any reliable dealer for a selection of general flies for trout averaging a pound to 1½lbs. Persons who have fished in the region mentioned have used grasshoppers, crickets and natural flies on which the fish were seen to be feeding. Try to match these flies out of your collection, use 30 or 40yds. of tapered waterproof line of braided silk, No. 3 or E or No. 4 or F. The leader should be 3 or 4ft. long, depending upon the number of flies in your cast, and should be about equal in diameter to the line. See FOREST AND STREAM of April 4, July 4 and Oct. 10, 1889.

Rifle and Trap Shooting.

HOW TO SHOOT.

THE value of winter instruction in the matter of rifle practice is coming more and more to be understood by those in charge of troops, and in a recent order the Adjutant-General of the State of New York goes over this matter with such detail, that his instructions are of value to every one having a rifle. He directs: Commanding officers of companies will see that the enlisted men of their respective commands receive the necessary preliminary instruction in rifle practice, and, where possible, that they have gallery practice, before they are sent to the ranges.

The following instructions prepared by the General Inspector of Rifle Practice (Gen. Robbins) are prescribed:

Sighting.—1. A sand bag for each squad will be placed on a rest, which may be a table, a tripod, or a stack of arms, and so arranged that the bag will be about 4½ft. from the ground.

The men will be formed in single rank, and in squads not to exceed ten men in each.

The instructor will then flatten the sand bag with the back of his hand, lay a full cocked rifle on it, aim at some small object at as great a distance from it as the drill room will permit (a wafer on the wall, for instance), and explain to the men the following simple rules:

The sight should not incline to the right or left.

The line of sight should be taken along the center of the notch of the rear sight and the top of the front sight, which should cover the middle of the mark aimed at.

The eye should be fixed on the mark, and not on the front sight. Particular attention should be paid to this rule, as beginners are apt to fix the eye on the front sight and not on the mark, which prevents the latter from being distinctly seen and greatly increases the difficulty in aiming.

2. The instructor will also explain the different kinds of sights, viz:

Fine Sight—When the point of the front sight is just seen through the notch of the rear right, the effect of which is to shoot low.

Full Sight—When the whole of the wedged shaped portion of the front sight is displayed through the notch on the rear sight, the effect of which is to shoot high.

Half-Sight—When but half the front sight is seen.

3. At times during this drill the leaf of the rear sight should be required to be raised.

Aiming—(One.) Come to the position of ready and raise the leaf of the rear sight.

(Two.) Raise the rifle smartly in front of the right shoulder to the full extent of the left arm, without moving the body, head or eye; the arms to move close to the body; barrel nearly horizontal and pointing a few inches below the mark; the eyes fixed upon the forefinger inside the trigger guard; both elbows inclined downward.

(Three.) Press the piece smartly with both hands against the hollow of the shoulder, which must neither be allowed to give way nor pressed forward or raised to meet it; the left elbow at the same time being brought as far under the rifle as is possible without assuming an unnatural position; the right elbow slightly raised, being nearly squarely with the right shoulder; the center (or rather the upper than lower) part of the butt to be pressed firmly against the shoulder with the left hand without touching the collar bone, the top of the butt being as nearly as possible even with the top of the shoulder, the forefinger will be placed around the trigger like a hook, but without pressing it; the head and body will be kept perfectly perpendicular the whole time, no attempt being made to look through the sights.

(Four.) Close the left eye and incline the head to the right over the small of the stock so that the right eye may quickly perceive the coincidence of the rear and front sights, and the object aimed at.

(Five.) Raise the head, look squarely to the front and bring the piece smartly to the first position.

Practice in aiming will be continued until the men aim quickly and correctly from the shoulder, after which they should be taught how to discharge the arm by pressing or squeezing the trigging, and especially to avoid a pull or jerk in so doing.

RANGE AND GALLERY.

NEWARK, N. J.—The Association matches during the week ending Nov. 23 resulted as follows: Monday, Nov. 22, Puritan range—Puritan 1,022, Lakeside 1,016. Annie Oakley range—Monroe 1,010. Annie Oakley 1,004. Essex range—Essex 1,048, North Ward 1,024. Friday, Nov. 22, Newark Range—Howard 1,071, Newark 985. Electric range—Oakland 965, Electric 947. Essex range Essex 1,083, Lakeside 1,056. Excelsior range—Excelsior 992, Sheppard 982.

The standing of the clubs in the Association tournament to date is as follows:

	Won.	Lost.	Tied.	Average.
Howard	5	0	0	1,060⅘
Excelsior	4	1	0	1,032⅘
Monroe	4	1	0	1,007
Essex	3	1	0	1,044¾
Oakland	3	1	1	1,005⅕
North Ward	3	2	0	1,014⅖
Puritan	3	2	1	1,008⅕
Lakeside	2	3	0	1,016⅘
Newark	1	4	0	969⅖
Sheppard	1	4	0	914⅖
Electric	0	5	0	931⅕
Annie Oakley	0	5	0	941⅘

ST. LOUIS, Mo., Nov. 23.—Seven members of the St. Louis Pistol Club took part in its last shoot. The scores are again very low. Alexander made 83 and took the medal. The score, 20yds., standard American target:

G Alexander	10	8	5	9	7	10	9	6	9	10—83
W Bauer	9	5	10	6	10	5	10	10	8	9—82
M Summerfield	9	6	8	10	6	9	7	10	7	8—80
M Billmeyer	8	5	6	9	7	8	10	8	7	8—76
W Mackwitz	6	9	6	7	8	8	5	9	7	9—74
W Hettel	8	6	7	7	10	5	8	9	7	9—74
A E Bengel	6	8	9	7	5	8	5	6	7	5—64

Nov. 30.—The disagreeable weather last Wednesday night was no doubt the cause of a very light attendance at the St. Louis Pistol Club's regular weekly shoot. Only five members put in an appearance. What was lacking in number was fortunately made up by a really pretty 92 by Mr. Alexander. The balance of the scores are only ordinary. Standard American 20yds. target is used by the club. The scores:

G Alexander	9	10	8	10	10	10	8	9	9	9—92
W Bauer	8	9	7	7	9	10	9	8	10	7—84
W Mackwitz	9	7	9	10	5	8	9	10	5	7—79
M Billmeyer	7	6	8	8	9	8	9	10	6	7—78
O Wallace	9	9	10	7	7	5	9	7	6	9—78

UNSER FRITZ.

MILITIA PRACTICE.—Rifle practice by the militia hereabouts has been well pushed during the past season and the second classes with the following showing which gives the numbers qualifying, by organizations, in the Qualification and Marksman's Badge matches and as sharpshooters during the 1889 shooting season:

	At 100-200 Yards.	At 200-500 Yards.	Both Classes Individ's.	Remaining in 2d Class.	Sharpshooters.
7th Regiment	248	622	638	16	61
23d Regiment	127	294	329	35	52
9th Regiment	26	76	87	11	7
22d Regiment	27	57	64	7	9
71st Regiment	19	50	55	5	4
13th Regiment	10	31	37	6	8
12th Regiment	9	31	32	1	11
47th Regiment	4	26	29	3	1
14th Regiment	2	11	12	1	4
69th Regiment	3	11	11	...	4
8th Regiment	2	4	5	1	...
32d Regiment	...	2	2	...	...
State Staff	...	2	2	...	1
1st Brig Staff	2	3	3	...	1
2d Brig Staff	1	1	1	...	1
3d Brig Staff	...	1	1	...	1
Sapernum'y Officers	1	5	5	...	3
11th Separate Com	1	1	1	...	...
14th Separate Com	...	1	1	...	...
37th Separate Com	3	5	5	...	1
2d Gatling Battery	...	1	1	...	...
2d Brig Signal Corps	...	1	1	...	...
Total	485	1,236	1,322	86	150

The foregoing can be better understood by reference to the table which follows, giving the number of entries and competitors at the regular match of the Nrtional Rifle Association:

	Qualification Match.		Marksmans Badge.		Sharpshooters' Match.	
	Competitors.	Entries.	Competitors.	Entries.	Competitors.	Entries.
June 8	40	49	118	467	59	103
June 15	36	44	112	464	57	91
July 4	45	59	115	491	58	112
July 13	17	20	32	93	38	69
July 27	5	5	14	40	22	42
Aug. 3	10	11	40	193	54	88
Aug. 10	14	21	54	170	48	75
Aug. 17	29	37	110	360	64	96
Aug. 24	20	24	78	221	60	98
Sept. 7	91	118	198	693	84	136
Oct. 5	39	67	110	300	75	138
Oct. 12	25	55	110	265	73	142
Oct. 26	50	82	91	444	47	88
Nov. 5	150	233	410	1054	110	156
Total	571	825	1592	5195	849	1434

In calculating the actual extent of the practice indicated in the foregoing it should be remembered that each entry in the sharpshooters' competition represents three "strings," the qualification and marksman's badge matches being single-entry contests. From this statement may be figured the amount of money expended by each individual in securing the marksman's badge, *pro rata*, which in the case of the Seventh Regiment amounts to a considerable sum, and showing the extent to which enthusiasm and personal pride will carry the individual.

BOSTON, Nov. 30.—The Massachusetts Rifle Association held its regular weekly shoot to-day. The scores of Lee and Ellsworth were very fine. Munroe won the gold medal in the 20-shot rest match and Lee won the champion medal. Following are the scores made to-day:

20-Shot Rest Match.

J R Munroe	98	106	214	N E Norman	90	101	191			
T Warren	93	105	198							

Champion Medal Match.

H L Lee	10	10	9	10	10	9	9	10	6	8—91

Victory Medal Match.

G F Ellsworth	10	10	9	9	9	8	9	8	8	9—89
S O Gardner	8	3	A S Hunt							80

Military Medal Match.

J N Frye	44	D T Wigglesworth	41	A S Hunt	38	
G F Hall	41	H Garfield	39	S Field	37	

All Comers' Rest Match.

S Wilder	108	F W Chester	100	T B Williams	98	
H H Ballard	101	T Wynan	99	N E Norman	94	
F S Ham	100	F C Towne	98	M B Martin	91	

All Comers' Off-Hand Match.

H L Lee	83	S C Sydney	77	F W Chester	74	
J B Fellows	78	A S Hunt	75	D Bayley	66	
M B Martin	60					

Military Practice Match.

W Murphy	43	S Field	38	H Garfield	35	
O T Moore	42	A S Hunt	37	C Corney	35	
D T Wigglesworth	41					

BALTIMORE, Nov. 28.—Company K, Fifth Regiment, Captain Robert Riddell Brown, went to Darley Park for target shooting. The prize winners were Private N. B. Hutchinson, first prize, a gold medal, won by a score of 27 out of a possible 35; second prize, a gold medal, Private James W. McCuen; third prize, a silver medal, Corporal C. C. Anderson, Jr. Company F, of the Fifth Regiment, Capt. J. Frank Supplee, had target practice at Govanstown. The shooting was at 100yds. range, for a gold medal, offered as a first prize by Capt. Supplee, and a silver medal, offered by First Lieutenant Moulton, for the second prize. The scores, out of a possible 25 points, were:

Corp P H Daley	22	Sergt Adams	9	Pvt Mixter	13
Pvt G W Byrd	20	Corp Putsche	3	Pvt Orndorff	18
Capt Supplee	16	Pvt Burrough	20	Pvt Taylor	20
1st Lieut Moulton	14	Pvt Billmire	16	Pvt Thompson	19
2d Lieut Irving	17	Pvt Durrell	14	Pvt Gumbrecht	11
Sergt Kiefer	19	Pvt Gehrman	11	Pvt Zimmerman	15

A turkey feast followed at Ritter's Hotel, and the medals were presented to the winners, Corporal Daley and Private Byrd.

WILMINGTON, Nov. 25.—Owing to the incessant rains and high tides Healdmoor Rifle Range, Wilmington, Del., became badly flooded and was too wet for rifle practice on Nov. 25, so that the marksmen were obliged to devote the time to pistol practice. Some very fine shooting was done and in the excitement of competition the riflemen forgot the privation of losing their week's feast of rifle practice. The shooting resulted in the following score, Standard American targets, off-hand:

E J Darlington (Gould model)*	10	9	10	8	8	9	10	9	10	10—93
	9	10	8	10	9	8	10	9	9	10—92
E Jackson (Gould model)	8	10	10	9	8	10	8	9	7	9—88
H Simpson (Gould model)	9	6	7	10	10	9	10	10	6	10—87
W H Johnson (Gould model)	10	9	7	8	8	9	8	6	8	8—81
O E Garmany (Gould model)	6	10	10	8	6	9	8	8	6	9—80
J W Geyer (Gould model)	10	6	8	4	8	7	7	7	10	5—72
E Darlington (Lord model)	9	8	6	8	7	7	7	8	8	6—74
W Floyd (Gould model)	6	8	5	4	6	3	5	7	9	8—61
W S Darlington (Lord model)	8	7	0	5	6	8	5	8	6	8—61
Mr McGinty	3	5	0	7	7	5	4	4	5	0—40

*Clean scores.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

THE NEBRASKA TOURNAMENT.

THE Lincoln Gun Club held a three days' tournament on the Fair Grounds, at Lincoln, Neb., Nov. 28, 29 and 30. Despite the weather, which was very cold, with high winds, the attendance was good and a very enjoyable time repaid all the visitors. A fine hot dinner was served each day on the grounds and did much to aid in keeping out the cold. Some remarkly good scores were made, the winners receiving merchandise prizes in addition to a division of the purses. The scores in full follow, all ties div. unless otherwise stated:

Nov. 28.—First event, 15 single bluerocks, open to members of Lincoln Gun Club only, five traps, four prizes in addition to club badge:

Burr	000000101001010—4	Turner	001101100011010—7
Noble	000001011001110—6	Bush	000000101100111—6
Hutchins	000101000010000—3	Mockett	000011001000011—5
Kelley	010000101000010—5	Stout	111111110110111—13
Riser	001101000000000—3	Spears	010111001011111—10
Stevens	110011000111101—9	St John	100101001011100—7
Rudge	000011000000000—2	Clark	000001100010000—3

Second event, prize match, 7 single live birds, 21yds., 5 traps, use of one barrel, 6 prizes:

Parmalee	1110101—5	Hutchins	0110101—4
Cox	1100110—4	Kelley	1001010—3
Phillips	1111111—7	Stout	0111111—6
Hathaway	0101000—2	Mockett	0111111—6
Harrison	1111111—7	Palmer	1111110—6
Houtz	1010111—5	Reynard	1111111—7
Applegate	0110111—5	Spears	1100101—4
Walker	0100110—3	Lowe	1111111—7
Hallett	1100111—5	Rudge	0001000—1
Smith	0111111—6	Turner	0110101—5
Carruthers	1111111—7	Noble	0111000—3
Bush	0001111—4	St. John	0110011—4
Clarke	0110011—4	Stevens	1111110—6
Burr	1110100—4		

Harrison won first on shoot off for tie, Smith second, Applegate third, Spears fourth, Kelley fifth, Rudge lowest.

Third event, prize match, 10 single bluerocks, 5 traps, 18yds., seven prizes:

Smith	0100110101—5	Turner	0010000011—3
Parmalee	1111111111—10	Noble	0010101110—5
Raynerd	1111111111—10	Bush	1100110000—4
Cox	1101101111—8	S P Stevens	1111111111—10
Clarke	1110111101—8	Hallett	1000110010—4
Walker	1101011101—7	Lowe	1111010110—8
Phillips	1111111101—9	Riser	1010101011—6
Applegate	1110101101—7	J A Stevens	1111110111—9
Palmer	1001111111—8	Mockett	0001010000—2
Harrison	0101000110—4	Rudge	1001001011—5
Burr	0110110101—6	Spear	0001000100—2
Caruthers	0101011011—6	Hutchins	0101110100—5
Kelly	1111101000—6	Houtz	000
Stout	1001101011—6	Hathaway	1011010000—5

First div., second Phillips, third Palmer, fifth Burr, sixth Rudge; lowest score by Spear.

Fourth event, 3 pair live birds and 3 singles, 7 prizes:

Parmalee	11 10 01—4	011—2—6	Burr 11 01 00—3 110—2—5
Raynerd	11 11 11—6	111—3—9	S P Stevens 11 11 01—5 111—3—8
Palmer	10 11 10—4	111—3—7	Noble 00 10 10—2 011—2—4
Phillips	11 10 11—5	111—3—8	Cox 10 11 01—4 111—3—7
Stout	10 10 10—3	110—2—5	Hutchins 01 01 01—3 111—3—6
Clark	10 10 00—2	110—2—4	Houtz 01 11 11—5 101—2—7
Smith	00 11 11—4	111—3—7	Carruthers 10 01 11—4 011—2—6
J A Stevens	10 10 10—3	000—0—3	Walter 00 10 11—3 011—2—5
Harrison	10 11 11—5	111—3—8	Mockett 11 01 11—5 101—2—7
Lowe	10 11 11—5	111—3—8	Turner 01 11 11—5 110—2—7
Hallett	11 10 11—4	111—3—7	Riser 10 11 00—3 010—1—4
Hathaway	11 00 11—4	111—3—7	Applegate 10 11 10—4 111—3—7
Spears	11 10 11—5	101—2—7	St John 10 00 10—2 100—1—3
Bush	10 10 01—3	100—1—4	Kelly 00 10 00—1 110—2—3
Rudge	10 11 11—5	101—2—7	

Raynerd first, Harrison second, Palmer third, Hutchins fourth, Walker fifth, Bush sixth, Kelly lowest.

Fifth event, prize match, 5 singles and 5 pairs bluerocks, 7 prizes:

Parmalee	11111 11 11 10 10—12	Cox	01101 11 10 10 10 10—9
Palmer	11111 10 11 00 11—11	Hutchins	01100 00 10 00 00 11—5
Stout	11111 10 11 10 11—13	Walter	11010 11 11 11 11—12
Phillips	11110 11 10 10 11—11	Bush	11100 11 10 10 10 01—9
Raynerd	11111 10 11 10 11—13	Noble	01101 10 11 10 10 10—9
J Stevens	11101 10 11 11 10—10	Mockett	10100 01 10 11 10 01—9

Parmalee	111111111111111—15	Stevens	011111101101011—13
Lowe	100111111111001—11	Sid Stevens	111111100101111—11
Stevens	011100101101101—9	Smith	110101111111101—12
Kelly	001111010111110—10	Carruthers	111111111111110—14
Harrison	101101001111111—12		

Parmalee first, Carruthers second, Reynard third, J. B. Smith fourth, S. P. Stevens fifth.

Fifth match, 5 pairs and 5 single bluerocks, entrance $3, five prizes:

Kelly	01 00 10 01 00 00000—3	Parmalee	11 11 11 11 11 11111—15
Reynard	11 10 11 11 11 01111—13	Clark	10 10 01 01 01 11111—10
Palmer	10 11 11 11 11 01011—12	Carothers	11 11 11 10 11 11101—13
Harrison	11 11 11 01 10 11111—13		

Parmalee first, Reynard second, Palmer third, C. H. Clarke fourth, Kelly fifth.

Nov. 30.—First match, 10 single bluerocks, entrance fee $1, two moneys:

Carothers	1111111111—10	H F Clarke	0001100010— 3
Smith	1101111111— 9	Burgess	1111111111—10
C H Clarke	1101001001— 5	Parmalee	1111111111—10

Ties on 10:

Carothers	111110w — 5	Parmalee	1111111111—10
Burgess	1111111111—10		

Burgess and Parmalee div. first, Smith second.

Second match, 9 live birds, 30yds., entrance $7:

Carothers	111110111—8	Burgess	1111111110—8
Parmelee	1111111111—9	C H Clarke	0101010001—4
J B Smith	1111111111—9	Kelly	1001111111—7

Tie for second:

Carothers	11111	Burgess	11110

Parmelee and Smith div. first money, Carothers second, Kelly third and C. H. Clarke fourth.

Third match, special for merchandise prize, 15 single bluerocks:

Parmelee	111111111111111—15	Smith	111111110
Burgess	111111101001111—12	Stevens	111111111111111—15
Carothers	000111111110111—11	Clarke	1110
Burr	111111101010001—10	Kelly	110

Parmelee won.

Fourth match, 25 live birds, entrance $6, 6 prizes; Parmelee, Carruthers, Burgess and Smith stood at 30yds., all other shooters allowed 4yds.:

Kelly	16	C H Clarke	18 H F Clarke 16
Palmelee	20	S P Stevens	21 Burgess 17
Carruthers	18	Burr	19 Smith 19

Stevens first, Parmelee second, Burr third, Carruthers shot off the tie and won fourth, Burgess fifth.

Fifth match, 15 single bluerocks, entrance $1, two moneys:

Parmelee	111111111111111—15	H F Clarke	0100001111111110 — 9
Stevens	111111101101101—12	Carothers	101011101111011—11
Burr	011111101111111—13		

Pamelee first and Burr second.

Sixth match, 25 live birds, entrance $6, one money:

H F Clarke	21	C H Clarke	18
Carothers	21	Burr	20

Score on tie: H. F. Clarke 14, Carothers 13.

The club is very much pleased with the success of their tournament. They extend their thanks to the sportsmen from other towns who participated in the tournament and remained notwithstanding the unpleasant weather. C. H. C., Sec'y.

THE SHOOTING TOUR.

AT latest advices the United States Cartridge Co. had completed their Eastern team for the grand trap-shooting exhibition series by the addition of W. S. Perry, of Worcester, Mass., and now the Western team is upset by a doubt of Al Bandle's ability to go. This is to be a most desirable trip, and every one who has been invited to go would be glad to accept, but unfortunately business interests conspire to prevent some of the best shots from leaving home for the three months as proposed. It is to be hoped that Bandle will be able to go, as he will prove a valuable addition to the party, both socially and professionally.

Later—A despatch just received states that J. A. Ruble, of Beloit, Wis., will complete the Western team in place of Al. Bandle, who is unable to go.

NEWARK, N. J.—On Thursday, Dec 12, the members of the Amersfort Gun Club of Long Island shoot a team race against the members of the South Side Gun Club of Newark, N. J. The last-named club won the American Field diamond badge, in a contest in which eleven clubs were engaged all parts of the United States. The terms of the present match are: Teams of 15 men each club, 52 blue rock (artifical targets) each man, American Association rules to govern, and the match to be shot on the grounds of the South Side Club.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 29.—On last Tuesday, Nov. 26, Mr. R. B Organ (Wadsworth), of this city, shot Mr. James Riley, of Kansas City, at the latter place, a 50 bird match for $50 a side. The score was 46 birds each. This race will probably not be renewed.

On last Wednesday, at the same city, Messrs. R. B. Organ and C. W. Budd shot a 50 bird race, $50 a corner, with Messrs. James Riley and J. A. R. Elliott, of Kansas City. The score was:

Organ.....45	Riley.....46
Budd.....47—92	Elliott.....46—92

This race will probably be shot over at Davenport, Thursday, Dec. 5, the stakes being doubled.

Messrs. Organ and Budd will shoot a similar race with Messrs. Frank Parmalee, of Omaha, and J. A. R. Elliott, of Kansas City, at Omaha, Tuesday, Dec. 3. The shooting so far has been under American Association rules, with a dead line. In the four cornered shoot Mr. Organ, under these rules, lost four birds dead out of bounds, and Mr. Budd two; Mr. Riley lost two dead out and Mr. Elliott one.

A cracking sweep was shot at Grand Crossing Thanksgiving Day, in spite of the terrible weather, participants being Mr. Eich, the Kleinman boys, the Reeves brothers, Mr. Watson, Mr. Shepard and his son. They shot five 5-bird sweeps, and each killed 5 straight, except in one sweep, each killed 4. Thus they made 96 out of 100 and had to divide after all. The birds were a fine lot of John Watson's best brand, and he traps the best birds it was ever this writer's fortune to see in this country.

Mr. John Kleinman is back from San Antonio, Texas, where he shot quail and fraternized with Frank and Luther James, of the somewhat celebrated James family of Missouri. While at San Antonio Mr. Kleinman got on a 50-bird pigeon match at $250 a side with a Mr. Sullivan. The latter forfeited for some reason or other. On the day following he and John went out quail shooting together and Mr. Sullivan got about all the quail.

"Well, now how many pigeons is your average?" asked John. "If you can kill pigeons the way you do quail I don't want to shoot with you."

"Oh, I only got 47 out of my 50 in my last match," replied Mr. Sullivan, "and I ought to have been beaten. I shot 48 and 49 in the last two races before that. I know I can't shoot along with you."

"The —— you can't," said John, "Well, I'm mighty glad you thought so before we shot. You'd have beaten me easy." "Say, fellows," John adds up here, "that fellow came awful near taking my $250. I'm pale yet, every time I think about it." E. HOUGH.

STANDARD GUN CLUB.—Baltimore, Nov. 28.—The Standard Gun Club's tournament, held at Stowman's Park, was one of the best ever held in this part of the State. A large number of shooters participated. The weather was fine and everything passed off to the intense satisfaction of all participants. The main event of the day was a gold medal contest, which was won by Messrs. Pilson and Wroton tying on 19 out of 20. There were several other sweepstakes. Standard traps and targets were used throughout and Keystone system, which gave entire satisfaction. Shooting commenced at 8:30 and lasted until dark. There were 5 regular events and a good many sweepstakes.

First event, 20 singles, 5 traps, entrance 40 cents, 3 moneys:

C. W.

EMERALD GUN CLUB.—Regular shoot of the Emerald Gun Club of New York city, held at New Dorp, Staten Island, Nov. 20. Terms, 10 live birds from 5 ground traps, handicap rise, 80yds. boundary, use of both barrels, use of second barrel in ties to count as a bird. Eighteen club members faced the traps and enjoyed themselves like boys on a holiday. The day was a perfect one for pigeon shooting, there being wind enough to blow away the smoke and make the birds fly rapidly. The birds were a first-class lot and took to wing readily, and as G. Remsen said, "they had on a chest protector in the rear." F. Shrader was referee, and was both efficient and fortunate, as he had only one close decision to make during the shoot. P. J. Keenan was scorer, and as usual was distinguished by his extreme modesty. Dr. Leveridge won the second prize for the third time, and it is now his personal property. G. Remsen and F. Shrader tied for first prize, and in the shoot-off Remsen missed twice, and Shrader, killing his second, won by a bird. T. J. Brady wins third for first time, Chrystal and Codey had hard luck in their birds, as they got the sort that whole families are said to miss. P. J. Keenan's gun broke down and he had to shoot a strange howitzer, which accounts for his small score, and even a new leather patch could not save him. By the way, T. J. Brady is our newly elected Assemblyman, and is much respected by those who know him.

JESSUPS, Md.—The following are the scores of a well-attended shoot, at Jessups, Md., held by Wm. H. Linthicum, of Baltimore, assisted by the writer. The majority of those present were members of the Patuxent Gun Club, recently organized, which birds fair to rank high among the good clubs of the State. Messrs. Franklin, Cantler, Colton and Dr. Brown, of the Baltimore Gun Club were among the visitors, my friend Brown bringing out his new Winchester repeating shotgun for the first time at the traps with much satisfaction and some success. Keystone traps and targets were used in all events. First event, 5 singles, sweepstakes, 25cts. entrance:

Bond	11111—5	Willey	01011—3
Linthicum	11101—4	Brown	11100—3

Second event, 5 singles, for game cock, won by Bond:

Bond	11101—4	Linthicum	01101—3
Brown	10111—4	Willey	10101—3
Ridge	11011—4		

Third event, 5 singles, $1 entrance, 2 moneys:

Bond	11111—5	Oldfield	10111—4
Brown	11111—5	Smith	00111—3
Willey	11011—4	Murray	01101—3

Ties on 4 and 5 div.

Fourth event, 10 singles, $1.50 entrance, 3 moneys:

Bond	1101110111—8	Murray	0110111011—7
Brown	0111111110—8	Willey	1110011001—6
Linthicum	1111011010—7	Oldfield	0001111100—5

Ties div.

Fifth event, 5 singles, 25cts. entrance, sweepstake:

Willey	01111—4	Linthicum	01101—3
Brown	11110—4	Elliott	11100—3
Bond	11001—3	Warfield	01110—3

Brown and Willey div.

Sixth event, 5 singles, 3 live turkeys:

Linthicum	11111—5	Willey	11100—3
Warfield	10111—4	Murray	01111—3
Cantler	01111—4	Elliott	10010—2
Brown	11110—4	Oldfield	11000—2
Franklin	01110—3	Denmead	10001—2
Bond	11001—3		

Linthicum, Brown and Bond won.

Seventh event, 5 singles, 4 live turkeys:

Bond	11111—5	Franklin	10100—2
Linthicum	10111—4	Murray	10010—2
Warfield	11110—4	Willey	10000—1
Brown	11101—4	Elliott	00100—1
Cantler	10.01—3	Bond, Sr.	00001—1

Bond, Brown, Cantler and Franklin won.

Eighth event, $2 entrance, 5 singles, 3 moneys:

Cantler	11111—5	Linthicum	10111—4
Franklin	11111—5	Bond	10110—3
Brown	11111—5	Willey	01110—3
Oldfield	11011—4	Elliott	11000—2
Murray	01111—4		

Ties on 5 div., Linthicum and Bond won in ties on 4 and 3.

Ninth event, 5 singles, $1 entrance, 2 moneys:

Linthicum	11111—5	Brown	01111—4
Franklin	11111—4	Bond	01110—3
Cantler	11110—4	Willey	000w—0

Ties on 4: Franklin, 1111010101111011; Brown, 1111010101111100; Cantler, 011; Franklin won.—PICUS.

RED BANK, N. J., Nov. 28.—About five hundred people were on the grounds of the Riverside Gun and Rifle Club this afternoon, the occasion being the largest and most interesting shoot ever held by the club. A number of prominent gunners were included in the crowd, among them being "Hank" White, Thomas Compton, Fred Beard and Leander Campbell. American Association rules governed the shooting, 12-gauge guns, 28yds. rise, and 10-gauge guns, 30yds. for live birds, and 12-gauge 16yds. and 10-gauge 18yds. for clay-pigeons. Robert Clayton, of Leedsville, was referee. The purses were divided as follows: Less than 12 entries, 50, 30, and 20 per cent. of the stake to first, second and third; 12 entries or more, 40, 30, 20 and 10 per cent. to first, second, third and fourth. During the morning the shooting was anything but pleasant, a heavy rain, accompanied by a strong wind, making it difficult to sight the birds. In the afternoon the sun came out, the wind ceased, and better scores were made. Following is a summary of the events, the ties in the clay contests being divided: First event, 6 singles:

James Cooper	6	Edward Cooper	4	John Bergon	3
Wm Conover	6	Wm Conover	4		

Second event, 9 singles, clays:

Edward Cooper	7	Wm Conover	5	James Cooper	3
John Cooper	6	John Bergen	4		

Third event, 9 singles and 3 pairs of bluerocks:

John Cooper	9	James Cooper	6	M Cornwell	5
Wm Conover	8	Asa Whymer	6		
Edward Cooper	8	Ed Throckmorton	6		

Fourth event, 5 pairs clays:

Throckmorton	9	Conover	6	Harry Payne	4
Edward Cooper	7	John Cooper	6	Albert Ivins	3
William Little	7	James Cooper	6	Whymer	2
Edward Bussell	7				

Fifth event, 10 single Keystones:

Ivins	9	Conover	6	Edward Cooper	5
James Cooper	8	Whymer	6	Bussell	4
John Cooper	8	William Knapp	5	Andy Coleman	4
Throckmorton	7				

Sixth event, 5 live birds:

John Cooper	5	Edward Cooper	4	Thomas Compton	3
Little	5	Cornwell	3	Throckmorton	2
Conover	5	Bergen	3	Knapp	1
Bussell	5	Coleman	3	James Cooper	1
Ivins	4	Whymer	3		

First and second money div.; Coleman won in shoot-off for third.

Seventh event, 8 live birds:

Edward Cooper	8	Coleman	6	Throckmorton	4
Ivins	7	James Cooper	5	Cornwell	4
John Cooper	7	Little	5	Sam'l Hendrickson	4
Fred Beale	7	Charles Noble	5	Bussell	3
J Campbell	6				

Second and third money div.; Noble won in shoot-off for third.

Eighth event, 5 live birds:

Beale	5	Throckmorton	3	James Cooper	3
Coleman	5	Hendrickson	3	Ivins	2
Davis	4	John Cooper	3	Charles Littlefield	2
Edward Cooper	4	Payne	3	White	2
Conover	4	Bussell	3		

First, second and fourth money div.; John and James Cooper won and div. in shoot-off for third.

PHILADELPHIA, Nov. 28.—The following is the score in the third of a series of three friendly shoots between the Wayne Gun Club and the Frankford Gun Club, the fir-t of which was won by the Wayne and the last two by Frankford. Much interest was felt in this shoot, it being the deciding one of the series. The best feeling prevailed, and both clubs with numerous friends enjoyed a splendid day's sport. The shoot took place at the Frankford Gun Club's grounds, Frankford, Pa. The Frankford Club contemplates a series of matches during the coming year with the various amateur clubs about the city.

	166		131

Referree, Mr. Merchant, Wayne G. C.; judges, W. Hester for Wayne, H. Carter for Frankford; scorer, T. F. Redings. Weather, high wind.

TORONTO, Nov. 23.—W. Tracey and W. McDowall, both of this city, shot a friendly match for a small stake, at Woodbine Park, this afternoon. A large number of friends of the contestants witnessed the shooting, which was very even from start to finish, resulting finally in a tie, both men grassing 50 out of 25 good average birds. McDowall started well, bringing down 9 straight, while Tracy missed his first and third, and also had hard luck, the second barrel of his gun missed fire twice. He, however, took another gun, and did better. At the first tie bird McDowall broke the lock of his gun, and the match was declared a draw, much to the disappointment of those present. A sweep at 10 birds was also shot. W. Hetherington and J. Mitchell killing 9 each and divided first and second P. Wakefield and C. Henry dropped 8, and divided third.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

HUTCHINSON, Kan., Nov. 29.—Yesterday morning opened clear and cold with a biting north wind, which "blew in the teeth" of the shooters all day. The wind blew across the traps from northwest to southeast and made the shooting difficult. Chas. Smythe of Wichita made the best general average, and he was closely followed by several members of the home club. The visitors were Wm. Stancer and C. H. Smythe, of Wichita, Andy Swiggett of Towanda, John Baer of White City, J. F. Smythe of Wichita, Messrs. Bavington, Swisher, Wright, Densmore and Merritt of Lyons, and J. A. Rawlings of St. Louis. The tournament was managed by Will Allen, secretary of the home club, and right well did he perform his duty as master of ceremonies. He is well up on rules and regulations and possesses the happy faculty of keeping things moving. There was not a hitch nor a kick to mar the pleasure of the day. The visitors were entertained in a suitabe manner and expressed themselves as having had a grand time. The live birds were a fine lot. They were strong flyers and many of them proved too swift for the shooters. The shooting at the bluerocks was difficult and few straight scores were made. Dinsmore, of the Lyons club, covered himself with glory and sustained his reputation by breaking in good shape nine singles and six pair. His double birds were twisters but he powdered them in fine style.

Twelve single bluerocks, entrance $1:

George	111011111110—10	Allen	011101011000— 7

W Stancer	0110000111—5		

WALNUT HILL, Nov. 27.—The fornightly shotgun meeting of the Massachusets Rifle Association was held on this range to-day under the most unfavorable conditions in the matter of weather. In spite of all difficulties, however, the marksmen present put up good scores. In the gold coin match Messrs. Bowker and Perry led the field, while Mr. Rule was the winner in the match for the gold medal offered by the Standard Target Company. An interesting feature of the meeting was the challenge match between Messrs. H. G. Wheeler and O. R. Dickey, a detailed score of which will be found in the following summary: Gold coin match, 15 clay birds and 15 standard targets, Keystone system of squad firing:

	Clays.	Standards.
Bowker	111111111110111—14	110111111111111—14—28
Perry	111111101111111—13	111111111111111—15—28
Stanton	111111011111111—14	111111011110111—13—27
Wheeler	111111111111101—14	101111101111111—13—27
Gale	111101011011111—13	110111111000111—11—24
Rule	010111110110111—10	111111111111011—14—24
Nichols	111110101111011—12	110111101101011—11—23
Swift	111111111000111—11	011110111110110—11—22
Black	011101111101110—11	111011100011100— 9— 2
Lee	100101111101001— 9	111101101110110—11— 20
Piper	101111010101111—11	111100110011100— 9— 20
Winer	010110001010000— 5	011000111010001— 7—12

Standard medal match, 20 standard targets, handicap by classes: Rule (B) 20, Gale (C) 19, Nichols (C) 16, Perry (A) 16, Stanton (A) 16, Wheeler (A) 16, Bowker (B) 15, Swift (A) 15, Black (A) 13, Winter (C) 10.

Challenge match, H. G. Wheeler vs. O. R. Dickey, 25 standard targets:

Wheeler	0111111111111111111101—23
Dickey	1111011111111111011111—23

The shoot-off of the tie in this match was very exciting, resulting as follows:

Dickey	1111111101111115—15
Wheeler	0111111111110111—14

The next meeting for shotgun practice at Walnut Hill is scheduled for Wednesday, Dec. 11. The present series of matches will then be continued, and the usual number of sweepstake events will be contested.

RIDGEWOOD, N. J., Nov. 28.—Match at 10 Keystones, 3 traps, 16yds. rise, American Association rules, 50, 30 and 20 per cent., $2 entrance, ties div. Event No. 1:

Rouse	1111101111— 9	M Smith	1010011100— 5

L Maser	1101111—6	J W Howard	1111111—7
Aug Schmidt	1111111—7	G H Young	1011111—6
G C Branigan	1101101—5		

CONEY ISLAND GUN CLUB.—The Coney Island Road and Gun Club's special shoot on Thanksgiving was well attended, a large number of marksmen and their friends assembling at the Woodlawn Park grounds. The shooting for the prize was open to members only, while the additional sweepstakes were open to all who wished to compete. First-class birds had been provided, and this, together with a strong wind blowing across the grounds, taxed the skill of the marksmen considerably. C. A. Siddons won the first special club prize, a splendid water color, with a score of 6 out of 7, killing three more on the shoot off and defeating Blattmacher and Dettlefsen. D. Monsees carried off second honors, outshooting Voorhees and Eppig. The winners of the two sweepstakes which followed were D. Cowenhoven, G. Eppig, W. Webber, D. Dettlefsen and A. Nason.

BROOKLYN, Nov. 27.—The Diana Sportsman's Club held its regular monthly shoot at Bay View Park this afternoon. Six members of the club represented the first class and five the second in both events. The targets were glass balls and clay-pigeons. Although the wind interfered very little with the shooting, the result was below the usually high standard of the competing marksmen. In the shooting at glass balls Tony Botty won the first class medal for the second time, and J. Brortmann came off winner in the second class, the prize being a silver medal. First prize on the clay-pigeon score went to M. Brown in the first, and to C. Medler, Jr., in the second class. A sweepstakes at 3 bluerocks, miss and out, C. Medler, Jr., won first money, T. Botty second, and C. Koch third. The handicaps of the marksmen and the number of targets broken were as follows:

Glass Balls, 5 each—First Class.

J Scharff (20)	3	J Koch (18)	3
M Brown (20)	2	C Koch (18)	2
T Botty (22)	3		
Brower (20)	2		

On the shoot-off Botty won with 3 straight, Scharff breaking 2 and J. Koch 1 out of 3.

Second Class.

A Myer (20)	0	Hartmann (20)	3
C Ring (18)	3	C Medler, Jr (20)	3
B Boell (18)	2		

On the shoot-off Hartmann was victorious with 3 straight, Ring breaking 1 and Medler 2 out of 3.

Clay-Pigeons, 10 each—First Class.

J Scharff (18)	1	J Kock (18)	7
M Brown (18)	8	C Koch (18)	6
T Botty (20)	6		
Brower (20)	5		

Second Class.

A Myer (20)	3	J Hartmann (18)	3
C Ring (20)	5	C Medler, Jr (20)	4
P Stein (18)	1		

Nov. 27.—To-day at Louis Miller's Dexter Park the members of the Glenmore Rod and Gun Club of the Eastern District met for their usual monthly contest at the traps. The weather was simply horrible. Early in the afternoon the rain began to fall heavily, and it came down harder and harder as the day wore on. The shooting fever must be strong indeed when men go to the traps on such a day as that. Ten members faced the storm, but not all of these could be induced to shoot after they got to the park. Regular club match, Glenmore Rod and Gun Club, 7 birds each, H and T trap, modified Hurlingham rules to govern. Not a man made a clean score, neither did a single shooter get even six to his credit. T. T. Edgerton, Elias Helgans and P. Van Breele tied for the badge, with 5 killed each. They shot out the tie, 3 birds each man. Van Breele missed his first and dropped out. Helgans and Edgerton each got their 3 scored dead. Then the tie was shot, miss and out, each killing a bird after birds until the sixth round. In this Edgerton slipped up on a rapid flying towerer, and Helgans, killing his, captured both the badge and first money. These men are both in Class A. In Class B, Van Breele took the prize with a score of 4 killed out of 7 shot at. In Class C, R. May took the prize with the same score. Selover got 4, McGill 3, and Lerens not one out of 3 shot at. It was the meanest day and the poorest contest the club has ever had.

Nov. 29.—A young blizzard greeted the members of the Crescent Gun Club when they assembled at Louis Miller's Dexter Park to-day for a shoot at live birds. The birds were nearly all strong flyers, and aided by the wind they gave the marksmen lots of trouble, but the scores were creditable, nevertheless, and the novel sweepstakes at clay birds were shot at live birds instead. The feature of the shooting was the marked improvement in form of T. C. Hopkins. The principal competition was at 10 live birds per man, handicap rises, for the gold badge of the club. The following were the prominent scores:

Hilmer (26)	10	Hopkins (28)	6
Gilman (28)	5		
Simmons (25)	8	Matthews (25)	5
Hopkins (25)	5		

A sweep at 3 live birds per man followed, each shooting at 25yds. rise. Gilman and Simmons both killed their birds, and in the shoot-off again made a clean score and agreed to divide. A sweepstakes at 3 birds followed, in which Hopkins made a clean score of 3 killed and took first money, while Hilmer, Gilman and Simmons tied for the second money, each killing 2. The three ties were then shot off, miss and out, Simmons securing the money.

CLEVELAND, O., Nov. 29.—The regular badge shoot of the Cleveland Gun Club was held Thanksgiving afternoon on its grounds in East Cleveland. The day was very windy, but nevertheless some good shooting was done. Upson broke 24 of his 25 targets and won the Class A badge. Blick, by breaking 20 birds, won the Class B badge. After the regular shoot there was a sweepstake, in which 11 shooters entered. Upson won first money, $4.50, Storey second, $2.70, and Williams third, $1.80. Then came a live-bird shoot by two teams, composed of Upson and Roberts and Calhoun and Forester. The shoot was at 5 birds apiece. The first team won by killing 9 birds. The second team killed 6 out of the 10. The individual scores were: Upson 5, Roberts 4, Calhoun 4, Forester 2. The scores in the badge shoot were as follows:

Rudolph	23
Williams	18
Calhoun	
L O Jones	16
F D Wells	16
J E Jones	15
M F Silsby	16
Wm Weaver	18
W Harris	11
W M Tambiyn	21
Roberts	17
Upson	24
Flick	20
*Wherry	14
*Bear	16

*Visitors.—C.

KLEINTZ DEFEATS CLASS.—Newark, N. J., Nov. 29.—The match between Frank Class and Frank Kleintz came off at Erb's Park this afternoon. The match was an outcome of the Pennsylvania Kleintz-Irwin and New Jersey Frank Class-P. Daly, Jr., match of ten days ago, which match ended in a tie. As was stated then neither man was satisfied, and to-day they are as far apart as ever. The following is the result of the contest. Match for $150 a side, 50 birds each man, Hurlingham rules to govern except that while each used 7½lb. guns the rise was 30yds.:

Frank Kleintz..2221121111021212221211212111211211212222021221112—47
Frank Class.....1212121112112122121012111112102212201011101102—43

Betting was in favor of Kleintz all through the contest, except when Class had two birds to the good, then it was even. On the 34th bird Class killed, but it fell dead out of bounds. This seemed to rattle him, for he missed his next pigeon, an easy-flying incomer. From that out Kleintz had it all his own way. Class missing no less than 4 birds out of the last 14 shot at. The birds were an excellent lot of flyers, many of them fighting like tigers to top the fences, flying until dead in the air and then dropping like stones. In the first half of the match Class had the more difficult birds to grass, but in the second half these birds fell to his opponent, evening up things. Each man killed the best and most rapid flyers, the poor ones being the ones the shooters slipped up on, with few exceptions. Kleintz shot an up-hill race with great nerve, Class being behind, as he was at the start, was a fearful handicap as a send off, but he killed through a winner at the end. The match was witnessed by at least 200 persons, all interested in a game pigeon contest. The following sweepstakes were also decided:

First sweepstakes, 4 birds each, $5 entrance, three moneys, $30, $20 and $10, respectively. Irwin, Class and Kleintz killed all their birds and div. first money. Ties for second money, Winans, Goff, Jones and Collins killed 3 each. The ties were shot off on the next sweep, the best score to take the cash. Third money was won by Eddy, Leddy and Wheaton. This was shot off in next sweep, Eddy drawing out his pro rata share.

Second sweepstakes, same conditions exactly as first: Class, Winans and Goff killed all their birds, but could not agree on a division, and shot the tie miss and out. Winans missed his second bird. The others then divided first money. For second money Irwin, Kleintz, Jones, Collins and Wheaton tied with 3 kills each, and also shot the tie miss and out. Winans dropped out on second shot with the hardest of luck. Lem, the retrieving dog, jumped at the bird, which was hard hit, but got only a tail feather or two. The bird was still flying, and as the bird had not been in the dog's mouth the referee decided it a lost bird. Wheaton went out on his first shot, Jones on sixth, Kleintz on his ninth, Irwin on his tenth. Collins, killing his tenth, shot out all the Pennsylvanians and took the second money himself. The shooting off this tie was a magnificent exhibition of trap-shooting skill. Erb and Leddy divided third money.

NEW YORK, Nov. 30.—The Bronx River Gun Club held their monthly shoot to-day at 25 bluerocks, on their grounds, West Farms, on the Harlem River branch of the Hartford & New Haven Road. Mr. T. N. Jaques won the gold medal.

E P Miller	17
F Pringle	18
A Ditmar	12
T N Jaques	19
O T Mackey	12
J Duane	16
W Pringle	17
Chas Zorn	17

J. M.

CORRY, Pa., Nov. 28.—The last shoot of the Corry Gun Club took place on their grounds Thanksgiving Day, and although the weather was the worst imaginable, everything went off pleasantly and all present had a jolly good time. The main event of the day was a 100-bird race for the medalf of the club, which for the past season have been held in trust from week to week; but in this event the medals were to become the personal property of the winners. The scores made were below the average of the club, but, when taking the weather into consideration, they are very good, as during the entire time of the shoot there was a driving snow storm and some of the targets did not look larger than a silver dollar, and the way they were jerked and tossed around was a caution and kept the boys guessing where to hold to break them. Following is the score:

Penrose	90
H Arnold	89
Blydenburg	81
Austin	79
Nichols	78
Edwards	72
Laurie	69
Wetmore	64
Mead	64
M Arnold	54
Ward	35
Howard	31
Berliner	19

Our next shoot of this season will be a team race of the entire club for a supper, 50 targets per man. I wish some of the old-time sportsmen would drop in and take supper with us. We would give them a good time and supper, with less work and no slaughter of game, as is usual at annual hunts. I will send you a copy of the scores in full and a description of our banquet when it takes place.—H. A. PENROSE.

WELLINGTON, Mass., Nov. 30.—In the silver pitcher match some wind prevailed, yet Perry held his own, and felt certain of his second third of the prize. Unfortunately for him the wind died away as the last on the list came to the scratch, and Cady swooped in with 14 broken birds. The other scores of 8 and over were: Lee and Perry 11. Bond 10, Warren, Merrill and Hubbard 9, Chase, Bradbury and Bradstreet 8. In the sweepstakes the winners of first were: Five pigeons: Short, Cowee and Cady; five bluerocks: Cady; six bluerocks: Cowee; six tin birds: Chase; five pigeons: Brooks; five bluerocks: Cady; five bluerocks: Bradbury; five bluerocks: Lee and Perry; six bluerocks: Bond and Lee; six tin birds: Cowee, Bond and Bradbury; Eight pigeons: Lee, Warren, Cady and Hubbard; seven bluerocks: Cady; three pair bluerocks: Perry, Chase and Lee; three pair pigeons: Brooks; six bluerocks: Bradbury; ten bluerocks (Keystone target): Chase, Cowee, Perry and Cady; six bluerocks: Perry; ten pigeons: Bond, Perry and Lee; five pigeons: Bond and Short.

PELHAM, N. Y., Nov. 28.—The Country Club of Baychester had a most successful shooting event on their grounds in that village to-day. Most of the lot were good lively birds, and favored by a westerly breeze, which blew directly on the backs of the marksman, had a good chance for their lives. All crippled birds both in and out of bounds were covered, and were instantly killed by attendants. The grounds were very fast, and were highly praised by all the competitors, the water boundary being particularly satisfactory. The threatening weather and Mr. Watson's luncheon interfered with the attendance, but there was a good showing of club members and guests, among whom were many ladies. Mr. N. D. Thorne and C. Oliver Iselin were in charge. The first event was won by Mr. Morse, who killed 16 birds straight and won over 15 competitors at 26yds. He did not have to use any of the three extra birds allowed him, not having made a miss. In the second event Mr. James took the first place, killing 18 birds at 31yds. rise without a miss. There were 25 competitors in this event. The prizes in each event were silver cups. The third event was not finished, only four birds having risen to each marksman, and was postponed until Saturday, with eight men tied for first place. The final arrangements for a match between Mr. James and Mr. Natje were also concluded.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

REPORT OF THE N. Y. Y. C. COMMITTEE ON MEASUREMENT.

WHEN your committee entered upon the work of considering what amendments could be made in the club's existing scale of allowances and in the rules for the measurement of racing yachts, it found many matters to engage its attention, each seem to have an important influence upon the interest and prosperity of yacht racing.

It was considered that the true light in which to view all rules to be framed for the regulation and government of the sport should be such as would put aside or keep out of the way wherever practicable all needless and undesirable features and conditions; should favor no especial type or dimensions, should concern itself solely with elements of advantage for speed, or with such features as would be representative of these elements, and should make these features or factors as few and simple as possible. That your committee should give to these as nearly a just value as it could, and in this way give to the owner and designer the only real discretion practicable for them, as to the use they would make of the features which enter as factors into the measurement.

If any of these be given too high a value it can readily be seen that it will be used only in small proportion, and in some degree with the result of producing something different from that which the owner would have preferred. If, however, any factor he given a value less than its proper one for purposes of speed, it can be seen with little reflection that the owner will, to avoid disadvantage in competition, be no less compelled to use this feature in excess of his convenience and wishes. These remarks apply most especially to the amount of sail which can be carried and to the number of feet in length which can be associated with it for any given rating in the measurement for allowance, and to this part of its work your committee has given much time, thought and discussion.

It has besides this to consider the following subjects: The sufficiency of the allowance by the present table for differences in size, and the question whether this table, or any other which might be recommended, could be so adjusted as to make the use of it by regatta committees or others more ready and convenient. Also the question whether the mode of measuring spars could be improved in detail so as to secure greater accuracy in results, prevent possible evasions, and remove the pressure toward undesirable developments and tendencies. In other words your committee has considered the method of measuring according to the present rule to see what, if any, were its defects and insufficiencies.

In the consideration of all these matters, and of others connected with them or involved by them, your committee has uniformly been governed by an earnest desire to proceed carefully and conservatively. It has also, however, recognized a fact which must be the perception of every member of the club, that if there are in matters of this kind affecting as they do vested interests, evils to be considered or changes to be made, these reforms should be made sufficiently ample to preclude the necessity of further changes within a brief period.

When the last report upon this subject was made to this club by a committee on May 9, 1883, the introduction of sail area into its rule of measurement was almost an experiment. It has since then been taken into the formula of every important club in this country and in Europe. Every style of yacht has been brought under its influence. In every case where sail area has been a factor in the measurement it has by the method of its use been given an importance very much greater, and in some cases nearly double that which it has had in our rule; yet to such an extent has a large sail spread been relied upon for the production of speed, that it appears to be uniformly true of this club, and of all others having racing yachts upon their lists, that the winning yachts have much larger rigs in proportion to their waterline lengths than those existing when the present rule of the club was adopted in May, 1889.

It has not appeared to your committee that it is necessary, or even desirable, to prevent the production of largely rigged yachts by making successful racing with them impossible, nor does it believe that this would be the effect of any rule which it has considered. Your committee believes that the utmost that can be looked for as a result of the changes which it has to propose, or which it feels warranted in proposing, would be, in the case of the middle and upper classes, to somewhat reduce the practical handicap from which the moderately rigged yacht now suffers. In the 40ft. class, where rigs have been carried to an exaggerated relation to length not seen in any other, the changes proposed would provide a strong inducement to more moderate sail plans; while in large vessels, of 80 or 90ft., the advantage, your committee thinks, though less pronounced, would still be with the large rigs; and the check upon their extension remain as at present chiefly in their unhandiness, and in the difficulty of getting them to stand. In illustration of the difference which exists in the proportion of sail carried between the most moderately canvassed of the 40ft. class and a large rigged vessel of 86ft., it may be stated that it would require an addition of 3,385 sq.ft. to the sail spread of Volunteer to make it equal in proportion to load waterline to that carried by Pappoose or Minerva; and conversely it would require a reduction in Pappoose's canvas of 626ft. to bring it down to the proportion in respect to waterline to that carried by Volunteer.

In the report upon measurement made to you by the committee in 1883 there may be found the following passage which it may be well to explain has reference to the relative values given in the present rule of measurement to the two factors representative of length and sail area: "In recommending these indicated repective proportions your committee were the more satisfied from the feeling that the nature of the principle they were recommending was so elastic and so adaptable that after an experience of its working it would be a very simple matter to alter any of its proportions which were found to require readjusting." The recommendation which your present committee would make is precisely in line with the suggestion contained in the passage which has been quoted from the former report. It is that the measurement for allowance shall be obtained by taking the square root of sail area once and length of waterline once, and dividing the sum of these measurements by two, instead of taking the length of waterline twice, adding this to the square root of sail area, and dividing the total by three. The effect of the alteration proposed would of course be to give an increased value to the factor representing sail area. Your committee, however, does not think that this change would be of itself sufficient to provide opportunity and encouragement for the production for racing purposes of more moderately rigged vessels; they therefore propose that the classification, which is now made by waterline length, shall in future be made by the same measure which governs the allowance. This measure, being the product of two factors, will admit of either of them being increased at will to suit the purposes of an owner or designer, without change in the measurement or class, providing the remaining factor be diminished in proportional degree. It will be seen that this method gives great liberty of design and opportunity to suit the varying proportions and requirements of owners.

It also affords that room for change and experiment, the absence of which has formed one of the worst characteristics of most measurement rules, and which characteristic has in some cases been the means of perpetuating crudities of form and development which have at once commenced to disappear upon the adoption of less restrictive rules.

Being desirous of looking at every promising or interesting aspect of this question, and having had it brought to their attention that possibly the present rule of measurement of the club might give good and adequate results if aided by a classification such as has been proposed, which would admit of sail being reduced and increased length of waterline accepted in lieu thereof, your committee made calculations to ascertain whether under the existing rule such an amount of length could be obtained for a reduction of sail as in most of the classes would be likely to prove acceptable and take practical effect. It was found that an average 40ft. yacht to gain 2ft. of length would need to sacrifice 448ft. of sail; that a 70ft. yacht to gain 2ft. in length would need to reduce her sail by 648ft., and that a 90ft. yacht to gain 2ft. in length would need to dispense with 736sq. ft. of canvas. It does not appear at all likely to your committee that the moderate gain in length of waterline offered by this rule would be accepted as an equivalent for the large reductions of sail spread which would be required by it. The change which has been recommended would require for any given quantity added to the length of load waterline a very little more than half the reduction of area in the sail plan which has been instanced as the effect of the present rule if used to classify by. By the change proposed a 40ft. yacht could gain 2ft. in length by losing 228ft. of canvas in place of 448; a yacht of 70ft. waterline could gain 2ft. by a loss of 328ft. of canvas instead of 648ft; a yacht like Sea Fox could gain 2ft. in length by a loss of 372sq. ft. instead of 736sq. ft.

The next matter which engaged your committee's attention was the need of taking spinakers into account in the measurement when their dimensions exceed a certain limit. So long as this sail can be made of any size without affecting a yacht's rating, the zealous yachtsman will feel compelled, in self-protection against his competitors to carry a sail of the largest practical dimensions, only to find that the limits of the practicable are in this matter capable under the influence of racing zeal of an indefinite extent of expansion. Your committee, therefore, think that it will be acceptable to owners and others, and conduce to the equity and prosperity of yacht racing, that spinakers shall escape measurement only when within certain well defined limits, and that such part as is beyond these shall become measurable. It is proposed, therefore, that a spinaker boom which measures no longer than the distance between the fore side of the foremast of a schooner or the mainmast of a single-masted vessel to the forward point of measurement of the baseline, shall remain out of account; but that any spinaker boom exceeding this limit shall be taken into account for the length in excess, and this amount added to the baseline used for spar measurement. Incidentally this rule is calculated to have a good effect by giving some inducement for the mast to be kept a sufficient distance abaft the stem of the vessel.

Another matter which received your committee's attention was the method of working in detail of the present rule for spar measurement. It is well known by those who have had any practical experience in such matters that any attempt to measure sails themselves has many serious practical objections and difficulties in the way and must necessarily yield varying results under common conditions. The present mode will ordinarily give results very closely approximate to strict accuracy. Since, however, the rule was first formulated it has been found into other clubs where occasions have arisen to supplement one of its provisions in order to secure greater accuracy where a long gaff was used with a short topmast. In such a case the extension of the baseline by adding to the outer end of the mainboom one-quarter of the length of the main gaff does not fully compensate for the area gained by the use of the long gaff. A supplementary rule to meet this case could be introduced here as it has been elsewhere, but a close examination of the subject shows that the proportion of gaff added to the baseline by the existing rule can be advantageously substituted in the formula by subtracting from the gaff length 80 per cent. of the topmast from hounds to lower side of topsail halliard block and adding the remainder to the baseline. This simple rule appears to give good results with all practical variations in length of topmast and gaff, or with no topmast at all, if in such case the throat halliard block of mainsail be used as the top of the perpendicular. This change, therefore, is recommended by your committee.

An amendment of a similar character has appeared to your committee to be desirable for reasons of equity and to prevent evasion in the measurement of headsail. At present the forward point of measurement is to the jibstay on bowsprit or flying jibstay on jibboom. Within the last few seasons it has become more than ever before the practice to make effective use of the jibtopsail in windward work, and your committee think that the rule as it stands at present offers some inducement to an evasion of its purpose, and to correct this it recommends that the forward point for the measurement of spars should be half-way between the jibstay and the jibtopsail stay.

The next matter which your committee had to consider was the allowance table. The present scale gives about 46 per cent. of the theoretical allowance based upon the principle that opportunities for speed vary as do the square roots of the varying lengths. These allowances are in the judgment of your committee less liberal than they should be, and recognizing that the effect of the present rule to place the yachts higher up upon the scale where the allowances are lessened than they would be placed by waterline length, and seeing also that the proposed changes will, if carried out, still further remove them from the position on the scale for which their allowances are calculated; your committee recommends that the scale of allowances be increased from the present 46 per cent. to 50 per cent. of the theoretical scale. It is very doubtful if this increase is as much as it

should be, but your committee recognizes the fact that this scale can at any time be increased or changed without that disturbing effect upon yacht building, or that need of preparation involved in most other changes.

The use of the table of allowances can in the opinion of your committee be greatly facilitated by having the table calculated throughout the range of the scale for every interval of a tenth of a foot, and by establishing the rule that no smaller interval shall be used, but that every yacht's corrected time shall be reckoned to the nearest tenth. This provision will greatly diminish and make less complicated the work of the regatta committee; with advantage to this committee and also to the yachtsmen interested in its work; while the greatest deviation from strict accuracy that can occur by this provision will be due to a possible error of something less than six-tenths of an inch or one-twentieth of a foot.

In concluding this report your committee feels that it cannot too earnestly ask for the club's serious attention to this subject, and to the close connection which there may be between its action and the success of future regattas. Upon the measurement rule more than anything else depends the style of yacht that can successfully be built to compete in races; and the more this style of vessel differs from that which suits the wants and conveniences of owners, the fewer will be built or appear in the regattas of the club. A review of the experience of the last few seasons, while it will not perhaps show fully what may be looked for in the future, nevertheless cannot fail to be suggestive in this matter, and among the members of the club who have expressed themselves to your committee in favor of an increased charge being put upon large sail plans, none have spoken so strongly or unmistakeably as its representative racing men who have experienced the disadvantage of an ever increasing pressure in this direction; to the fullest development of which no limit can apparently be fixed. In a class of small vessels like that of 40ft., a class unknown to this club previous to last season, any extravagance of rig or proportion may be of little moment, and a sailing machine carrying no more than one of these, may to a person able to afford it be regarded as a harmless and even interesting means of amusement. Some yachtsmen have seen in the success of one or two of the smaller rigged of these vessels over others more extreme an answer to the question of other yachtsmen as to where the enlargement of sail plans would find its check; and they would lead us to infer that these rigs are of sufficiently moderate proportions to furnish a standard of what may be properly and advantageously used in relating sail area to length.

It also appears to your committee by no means certain that the limit to which large sail plans can be used with advantage to speed has been conclusively shown, even in this class; or that the superiority of any of the smaller-rigged vessels was properly referable to the size of rig carried. It appears, however, to your committee self-evident that the more extreme is the sail plan the smaller must necessarily be the limits of whatever advantage remains to a large rig; and that the 40ft. class has more nearly approached this limit than any other class. If, however, the most moderately rigged of these small vessels is to furnish the index of that area of canvas in relation to waterline length which may be carried with success, the case becomes at once an inducement of the strongest kind for a very large addition to the rigs of those larger vessels that have always furnished the chief element of interest in this club's fleet and regattas. It has already been stated that if it were practicable to enlarge the sails and spars of Volunteer to the proportions found in Pappoose and Minerva, such a change would require an addition of 3,385sq. ft. to her present sail plan of 9,271sq. ft. Of course it would be found impracticable to carry out any such purpose, or to manage such an unhandy vessel if so rigged; but under the pressure of an advantage, seen to be in this direction unbalanced by any counter advantage, allowance or equivalent, the limits of that which is practicable will always be found to stretch out, and the yacht fitted to win races will become more and more an undesirable and expensive thing to possess, and will appear upon regatta courses in a correspondingly diminished number. From this tendency and condition it has become urgently necessary that yachtsmen should be relieved, and toward the devising of conservative measures for this purpose the best energies and thought of your committee have been given; and your committee believes that to the New York Y. C., ever distinguished in its past history by the size, character and spirit of its racing fleet, the measures proposed would afford a needed help, would cause others to emulate its example, would increase the number of its racing fleet, and would contribute in an essential and marked degree to its prosperity.

In arranging for the divisions of the schooner classes by racing length instead of by waterline length, it has not appeared practicable to change with advantage the points of division or the intervals as they now stand. It is consequently recommended that these be as follows:

First class schooners, 100ft., sailing length and over.
Second class schooners, 90 to 100ft., sailing length.
Third class schooners, 80 to 90ft., sailing length.
Fourth class schooners, 70 to 80ft., sailing length.
Fifth class schooners, 70ft. and under.

In the division of sloop yachts it is recommended that the classes be:

First class, 77ft., sailing length and over.
Second class, 68 to 77ft., sailing length.
Third class, 60 to 68ft., sailing length.
Fourth class, 54 to 60ft., sailing length.
Fifth class, 48 to 54ft., sailing length.
Sixth class, 48ft. and under.

It is impossible to give a complete list which would show into which classes all the yachts in the club would come under the named divisions, for the reason that very many of the yachts have never been measured for racing purposes. Indeed of the largest class of schooners very few have been measured. It can, however, be assumed with little liability to error that the list which follows shows the vessels which would under the proposed rule be classed together, and where the measurement was known or could be safely approximated, it is in most instances given.

[The list of yachts is practically the same as that published in the FOREST AND STREAM of Nov. 21.]

In making these divisions in the classes the endeavor has been to make the intervals proportional as far as practicable and still to leave classed together the vessels that were fitted to race together. In a few cases it was found that vessels which have heretofore raced well together, but which varied considerably in size, could not be fitly included in any such divisions as your committee could recommend for general and long use, and these were necessarily separated under the new classification.

It was also, after much consideration, thought undesirable to fix the upper limit of the smallest class of sloops higher than 48ft. corrected length; but this limit will not include four of the most largely rigged of the 40ft. waterline sloops. A continuation in force of the proviso now existing which admits yachts already built to a class when they do not exceed its upper limit by more than a fraction of a foot, would, your committee thinks, best meet the cases which have been referred to, and this provision would be much preferable to raising the limits of the class beyond the point named.

There appears, however, to be no end to serve by extending this provision to any other than the smallest class of sloops; and it is accordingly recommended that the three lines contained in the club book which at present read, "Any yacht which shall have been launched prior to the 20th day of June, 1888, exceeding the higher limit in any class by not over the fraction of a foot shall be included in that class," shall be changed to read as follows:

"Any yacht in the sixth class of sloops owned by a member of this club which has been launched at the date of this report, and which shall not exceed its limit by more than part of a foot, shall be included in the class."

In presenting this part of the report your committee desires to say that it has found much interest and support from members of the club who were aware of its views and purposes. It has been found, however, that in some instances the precise aim of the committee and the special needs of this club as seen by it have been misconceived, and there has been a disposition shown by persons interested in the work of the committee, but imperfectly informed as to its figures and scope, to discuss the questions as if the whole, or at least the greater part of it, could be included in some measure which would meet the needs of correction in the 40ft. class. This is not practicable, and is not, as your committee see the matter, even a relatively important part of its task.

This class of small vessels has in the past season developed an extent of rig in relation to length that is without parallel in the experience of this or any other club.

If, in order to become winners of races, vessels in the larger classes are to be required to have rigs even approximately as large in relation to length as the smallest rigged of the racing 40ft. yachts, it may safely be assumed that in the next fifty years not one such vessel would be sailed over a race course. The rules, however, as they at present stand, leave advantage principally to progress in this direction, and it has been the purpose of this committee by taking sail more largely into account and by making it as well as length of waterline count in classification, or in other words, by making classification depend upon corrected length, in some degree to lessen the pressure toward advantage in the use of extravagant sail plans. It may be contended that in the 40ft. class as large sail plans have been used as there is advantage in. If, however, the least extreme of these can be carried with advantage, it must be allowed that such advantage has not been availed of in the larger vessels, nor can it be of service to the interests of this club or of racing, that there should continue to exist as at present such a coercive necessity to follow in this direction. It must be apparent with even a cursory view that in the smaller classes such a rule as would make it possible to win a race with a reduced sail plan or an extended length would admit the production of vessels much more in accordance with the wants of the average yachtsman, and much more likely to remain in favor for racing and cruising purposes than the present oversparred craft; while in the larger classes where a large margin of advantage yet appears to remain to the development of rig, it seems clear that a prime necessity to the production and appearance of racing vessels upon the course, is that such vessels should not be unfitted to a needless degree for cruising purposes, that the owner and designer should be given a reasonable alternative to take such advantage as added length gives, with its conveniences and speed, instead of sail—that sail should not in the equation be made too cheap, nor length too dear.

That the effect of the proposed changes will be very moderate may be seen by an inspection of the examples of well known vessels, having different proportions of sail in length, which are given below.

That such changes will still leave the best opportunity with the largely rigged vessels seems quite probable; the direction moved in is, however, believed to be right, and the measure urgently needed in the interest of yachting.

JOHN HYSLOP,

CAPTAIN ROBERT B. FORBES.

NO better framework could be found for a history of the rise and decline of the merchant marine of the United States than the life of Captain Robert Bennett Forbes; himself the most remarkable of American sailors. His life began among the thrilling experiences of the war of 1812, with its privateers and letters of marque; as a young man he sailed under the American flag to all quarters of the globe; in middle life he was known not only at home but in the most distant parts as an upright and honorable merchant; in later years he served his country unselfishly and most efficiently; while throughout his entire life, from boyhood to his latest years, his active brain and generous mind were given to the aid of all who go down to the sea in ships.

Captain Forbes was born at Jamaica Plain, near Boston, on Sept. 18, 1804, his parents being of Scotch descent. When but a child his mother, with him and an elder brother Thomas, sailed for Marseilles to join her husband; the vessel being captured by a British ship. After several years in France the united family sailed from Bordeaux in an American schooner for Boston; but, after outsailing two British cruisers and beating off a third, the schooner was taken by a British frigate and sailed with a prize crew for Plymouth. After losing her spars she put into Corunna, in Spain, and the Forbes family re-embarked in a brig, only to be captured after a week and sent to Lisbon; whence they finally found passage in a ship to Newport, R. I.

After some time at school at Milton, and a year in the Perkins store on Foster's Wharf, Boston, young Forbes, then 13 years old, sailed in the ship Canton Packet, owned by his uncle, Thomas H. Perkins. At the age of 16 he was a third mate, and four years later he was a captain. After following the sea for eight years more he settled in Boston as a member of the great firm of Russell & Co., long famous in the China trade. In 1834, when 30 years old, he married Miss Rose Green Smith, who died four years since. The panic of 1837 crippled the firm and made it necessary for Capt. Forbes to go to China, where he not only built up a large business, but took a leading part in the protection of foreigners during the opium war in 1841. When the Rebellion broke out Captain Forbes at once came forward, organizing a coast guard and doing a great deal, both as an officer of the Government and through his private means, to build and equip gunboats and blockading vessels. Of late years he has lived quietly at his home in Milton or Boston, his death occurring at the latter place on Nov. 23.

To tell of a few of his many acts of bravery or benevolence would make a very long story. During the Irish famine in 1846-7 he was placed in command of the sloop-of-war Jamestown, loaned by the Government to carry provisions to Ireland; later on, while returning from Europe in the steamer Europa, the bark Charles Bartlett was sunk in collision, Captain Forbes being one of the most active in saving life; after the war he was a leader in the great fair by which $240,000 was raised to establish the National Sailors' Home at Quincy, Mass.; while he has ever been active in inventing and introducing appliances for increasing the safety and comfort of seamen and for saving life in case of wreck. To him is due the invention of double topsails, while their general introduction was brought about through his able writings. A brave and skilful sailor, an ingenious mechanic, an able and honorable merchant, a ready and powerful writer, his time and talents have always been freely given to others, and he leaves a place that no one can fill.

SEAWANHAKA CORINTHIAN Y. C.—Arrangements have been made for a series of eight or ten lectures on yacht design and construction, to be given this winter at the club house by Mr. A. Carey Smith. The lectures are intended chiefly for yachtsmen who wish to obtain a general knowledge of how a yacht is designed and built, and will be similar to those delivered by Mr. Smith before the Seawanhaka Corinthian Y. C. six years since. The idea has met with general favor, and the class promises to be a large one. The usual course of club lectures will be resumed soon. Among the additions to the club's models is a very interesting one of the old cutter Mosquito, built in 1848, a remarkable craft in that she was not only the first iron yacht, but the first of the long-bowed craft in England. The model was presented to the club by Mr. John Harvey through Mr. George Mackrow, of the Thames Iron Works, Blackwell, England. The club has lately added to its library twenty volumes of yachting scrap books made up by the late Captain Coffin, covering a period of nearly twenty years.

A LARGE STEAM YACHT.—Mr. W. C. Storey, of London, has completed a design for an auxiliary steam yacht of 830 tons, which will be built by Ramage & Ferguson, for Mr. E. J. Wythes, who will start in her next summer on a two-years' cruise around the world. The yacht will be 184ft., tonnage length, 32ft. beam, with engines 20, 30½, and 51×30in., and two boilers 11ft. 6in. long and 11ft. diameter. Her ballast will be 100 tons of lead, half on keel, with iron and cement in addition. She will carry three masts, square rig on foremast, and will be fitted with a full complement of electric lights, including a search light. Her rating will be the highest ever given by Lloyds, 24 years, A1.

YACHT PORTRAITS.—Mr. N. L. Stebbins has now in press a handsome volume of photo-gravure reproductions, 75 in number, containing most of the new racers built since his book "American and English Yachts" was published in 1887, and forming a valuable supplement to the latter work.

NEW YORK Y. C.—A small pamphlet has just been published containing the letters and telegrams concerning the Dunraven challenge, which were received after the discharge of the committee, July 18, 1889. All of them have been previously published in our columns.

DIRECTOR STANTON'S NEW YACHT.—New York has always been noted as the birthplace and home of marine nondescripts, but the latest addition to her fleet is the worst we have yet seen. The owner of this craft is Mr. E. L. Stanton, the popular and efficient director of the Metropolitan Opera, and her sailing master, Herr Reichmann, probably commands a higher salary than Capt. Haff or Terry, but the vessel itself would disgrace the boat-letting establishments of Gowanus Bay, a square dry goods box, with a stick in the middle and two little red rags for sails. It is to be hoped that as Mr. Stanton is a member of the New York Y. C. he has deposited a model in the club, so that in the event of a fire in the Opera House, some suitable record will be preserved of such a historic craft. In these days of realistic tank dramas, with real water, real shells and real steam launches, such a tub as the vessel in the Flying Dutchman is a disgrace to the scenic resources and the reputation of the finest theater in the country.

WHAT IS A SPINAKER?—The question has arisen abroad as to whether, in a race in which spinakers were barred, a "bowsprit spinaker" could be carried, the latter being practically the same sail as is erroneously known in America as a "balloon jib," and properly termed a balloon jibtopsail. The cutter Stranger in the match in question, set her "bowsprit spinaker" twice, once flying and once hanked to the stay; and on being protested by May the case was appealed to the council of the Y. R. A., which decided that under the terms of the match no sort of spinaker could be carried. The English "bowsprit spinaker" and the American "balloon jibtopsail," the two being practically the same though cut and used a little differently, are both endowed with rather clumsy names, but the latter seems to be the more appropriate.

A SOUTHERN YACHTING ASSOCIATION.—The lively sporting paper, *The Spirit of the South*, published in New Orleans, has lately taken up the idea of an association of Southern yachtsmen, from the Carolinas to the Gulf, and is now pushing it vigorously. There is a wide field for yachting in Southern waters, and much may be done to attract Northern yachtsmen in the winter, as well as to encourage the local interests of the sport and to promote inter-club racing. The best means to this end is an organization which shall include all the clubs, with a few simple rules at the start.

BEVERLY Y. C. DATES FOR 1890.—The Beverley Y. C. is the first to announce its dates for the season of 1890, the following being set for the races north of the Cape: June 14, 28; July 5, 19; Aug. 2, 16, 30; Sept. 1, 20. With a calendar and a list of last season's fixtures it is an easy matter for a club to arrange its dates in good season, and we hope to have a full list of fixtures for 1890 before the new year. The earlier such work is done the less danger there will be of confusion and disputes over dates at the beginning of the racing season.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.

Commodore: HENRY STANTON.....
Secretary-Treasurer: F. L. DUNNELL..... } New York.
Vice-Com. *Rear-Com.* *Purser.*
Central Div..Geo. A. Warder....E. L. French.....F. F. Andrews, 4 Exchange place, Rochester.
Eastern Div..Dr. J. A. Gage.....A. S. Putnam.....Ralph Brazer, Lowell, Mass.
N'thern Div..W. J. White.....W. J. Read.....C. M. Whitelaw, Montreal, Can.
Atlantic Div..M. V. Brokaw.....I. V. Dorland.....W. R. Haviland, Yonkers, N. Y.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, 34 Montauk Block, Chicago, Ill

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

A FIFTEEN HUNDRED MILE CRUISE.

With the new year we will begin the publication of the log of a solitary cruise of 1,500 miles, made in a 14-foot Adirondack boat, on the Erie Canal, Lake Ontario, the St. Lawrence River, and other waters. The cruise began at Albany, finishing nearly two months later at Philadelphia, and the narrative includes exciting and dangerous episodes. The chapters will run through several issues. Cruisers should not miss this serial.

IANTHE C. C.

THE Ianthe C. C., of Newark, is rapidly making a place as one of the leading racing clubs of the Atlantic Division, and in spite of some disadvantages of location, especially for sailing, its record for the year compares favorably with clubs which have far better courses. One result of the limited sailing ground is that the club is turning out good all-round canoeists, as the following records show.

The club held fourteen record races during the past season, a summary of which is printed below. There has been a great deal of interest and skill displayed, and a marked improvement over last year's work noticed. The junior record has been a pronounced success, having brought out talent that never went in a race "because they did not have any show." The seniors had it nip and tuck all the way, especially in the paddling, for Mr. Fredricks held the lead until the very last race, when Mr. Douglass passed him. Mr. Stewart did the best work in the juniors, while Mr. Hobart did well to hold second place. Handsome silk banners for prizes were presented at the camp-fire held Nov. 25.

SENIOR RECORD.

	Club.	Canoe.	Sail'g.	Paddl'g.	T'l

12. H. S. Farmer	Ianthe	Falcon	3	..	3
13. C. V. Schuyler	Arlington	Nipsic	3	..	3
14. H. Morgan	Arlington	Lillian	..	1	1

Messrs. Hogan, Coe, Scott and Morgan did not compete for the general record, but simply received points in regatta record races.

THE A. C. A. RACING RULES.

THE following is an official copy of the changes proposed in the racing rules by the new regatta committee, and adopted at the meeting on Nov. 23. While the changes are quite important there is nothing radical about them, and they need cause no trouble in going into effect. Rule I. is materially changed in form, but practically all that is done is to drop the distinction between classes A and B, which has ceased to exist for some time past, and to combine the two. The investigation of the committee showed plainly that all racing is done in canoes within the maximum limit of 16ft.×30in. and the minimum of 28in., and the old limits for certain classes of 17ft. and 26in. are dropped. Even in paddling canoes the general minimum limit of beam is 28in., there being no 27 or 26in. canoe left to race, so the former limit has been set as the least beam allowed. The old class 1, *any* canoe, has been incorporated in the present rule, and will still be a part of the programme, so that a field is left open for experiment, an 18×24 canoe being eligible for this race. As only one 17ft. sailing canoe has been built, and she has not proved faster than the shorter ones, this size has been dropped. While the limits of size for sailing and paddling are now the same, there is added a minimum weight limit of 40lbs. for paddling races. No distinction is made between open and decked canoes, nor between sailing canoes which may wish to enter, and those built for paddling only, but a reference to Rule V. will show the application of the rule. In order to enter for the paddling trophy, a man must win a place among the first six in the principal record paddling race (unless selected arbitrarily by the regatta commi tee) and the winner will probably use a specially built paddling canoe 16×28 and 41lbs. weight. In order, however, to gain a place in the record, a canoe must complete the course in three races, sailing, combined and paddling, consequently the all-around canoe, though at a disadvantage for the paddling trophy compared with the paddling craft, has still open to her the A. C. A. Trophy, the chief prize (the record), the first prizes in the sailing and the combined races, and also a fighting chance for a prize in the record paddling and for the paddling trophy.

This arrangement promises to be fair alike to the all-around canoeist and his boat, as well as to the paddling man, and certainly offers sufficient inducement to cultivate the paddling qualities of man and boat, an end which has long been needed. As a result we shall probably see next year some very fine all-round canoes, 16×28 or 29in., suitable for both sailing and paddling; while there will be a number of handsome paddling craft built to the limits of size and weight. The sliding scale of length and beam is retained, so that a 15×31½ or 14×33 canoe is still practicable, if any one cares to experiment further on these or similar dimensions. The old clause relating to folding boards fastened to the keel is dropped, there being no further need for it, but the limits of weight of boards were retained, as they might be of use in the future, though not built up to now; the same being the case in regard to limits of keels.

The clause allowing ¼in. latitude in measuring was dropped, as canoes need no longer be built exactly to a limit, neither going under it for paddling nor over it for sailing, as was the case in classes 3 and A and 4 and B. It is now only necessary that a canoe shall not be under 28in. to enter a paddling race or over 30in. (if 16ft. long) to enter a sailing or combined race, and these limits are easily built to. It might be a good thing if the regatta committee would for a couple of seasons measure to the last fraction of an inch and admit no canoes that exceed the limit, as the practice now is to build a canoe so long and wide that it takes a very close measurement and an equally elastic conscience on the part of the measurer to keep a canoe in the class. The added speed due to a quarter of an inch of length or an eighth of an inch of beam would be hard to estimate, and the attempt to take a little more than the rule allows is the cause of a great deal of trouble and extra work for the measurer and the regatta committee.

Rule II. is changed only in the wording, the object being to prevent some quibbling over the old rule, though the meaning has always been plain: that one man, and one only, can use any one canoe at a meet.

Rule IV. is practically the same, though simplified.

Rule V. has been considerably changed, as noted in connection with Rule I. It is now necessary to enter all three races to win the record prize, and a man cannot make sufficient points in sailing alone to win without paddling, or *vice versa*. At the same time the sailing or the paddling man has a race for a special trophy, and also the first prize in the regular event; although, as is proper, the greatest inducements are offered to the man who both paddles and sails. The method of computing the record is so simplified as to lessen greatly the work of the committee.

The conditions laid down for the new paddling trophy limit the canoes to 16×28 and not over 40lbs. weight, and do not allow a special paddling canoe to be used by men who wish to compete for the record as well. This gives the advantage to the man who gives up all else but the trophy, and builds for it, over the man who, with one canoe, enters all the races; but there is still a chance that a good canoe like Narka or Eclipse may win against the lighter paddling boats. Nothing is said about competition by foreign canoeists, as in the case of the sailing trophy, which is probably an oversight, the two trophies should be offered under the same conditions, both open to foreign challenge.

Rule VIII. has been amended by the addition of an article once adopted but omitted by mistake in printing, relating to fouling marks.

Rule XIII. has been improved by the addition of the clause formerly printed only in the regatta programme and not a part of the roles. A windward start is made compulsory unless it cannot be had.

Rule XX. is very materially changed, the new wording being in accordance with the best yachting practice. All luffing is forbidden after a canoe has established an overlap, while a clear definition of an overlap is added. It is very satisfactory to find that the improvements made are in the direction of simplicity rather than of added complication, and at the same time they are changes of detail rather than the remedying of radical faults in the existing rules. The full text of the new portions is as follows:

RULE I.

A canoe, to compete in any race of the A. C. A., must be sharp at both ends with no counterstern or transom, and capable of being efficiently paddled by one man, and must come within the prescribed limits as follows: Maximum length, 16ft., and for that length a maximum beam of 30in. Minimum beam, 28in. Beam may be increased ½in. for each full inch of length decreased. Depth, inside from gunwale to garboard streak at any part of canoe not less than 9in., and at fore end of well, from under side of deck amidships to garboard streak not more than 16in. In paddling races the minimum weight of canoe shall be 40lbs.

In centerboard canoes, the keel outside of the garboard shall not exceed 1½in. in depth, including a metal keel oand of not over ¾in. deep. The total weight of all centerboards shall not exceed 90lbs., and they must not be more than 18in. below the garboard and when hauled up must not project below the keel. In order to be admitted in races without ballast, the centerboard or boards, including bolts and other movable parts, but not including fixed trunks or cases, must not exceed 15lbs. in total weight. Canoes without centerboards may carry keels not over 3in. deep from garboard, and not weighing more than 30lbs. Leeboards may be carried by canoes not having centerboards.

Measurement.—The length shall be taken between perpendiculars at the fore side of stem and the aft side of stern. The beam at the widest part, not including the beading, which shall not exceed 1½in. in depth. If deeper it shall be included in the beam. The word "beam" shall mean the breadth formed by the fair lines of the boat, and the beam at and near the waterline shall bear a reasonable proportion to the beam at the gunwale.

There may also be a special class of paddling canoes without limit, for which special races may he arranged; but such canoes shall not be eligible to compete in any other races. The foregoing rules of measurement shall not be interpreted to disqualify any canoe built prior to Jan. 1, 1890, which conforms to the rules prior to that date.

RULE II.

Amend second paragraph to read: "A member can enter but one canoe for races at any one meet, except for such races as the programme shall specially state otherwise, and no other member shall ne permitted to enter the same canoe. Crew.—The crew of each canoe shall consist of the owner only unless the programme of the regatta states to the contrary." * * * Strike out: "And must not exchange canoes for racing purposes."

RULE III., the same.

RULE IV.

Every canoe entering, except for an upset race, must have her entry number conspicuously placed on canoe or man when paddling, and on both sides of mainsail while sailing. The clerk of the course will provide each man, when he makes his entry, with three prints of his number on cloth.

RULE V.

Flags shall be given as prizes as follows: A first prize in each race, and a second in each race, where more than two fluish. The winners of the Paddling Trophy, the Sailing Trophy and of the five best scores of those who contest in all three Record races, shall be given large practical bunting flags, with the year and race plainly marked thereon; that of the highest Record winner to be specially distinguished in color from the others. Prizes donated for special races or competitions may be acccepted at the discretion of the Regatta Committee. No prizes of money shall be raced for.

Races.—There shall be three record races. No. 1, paddling; No. 2, paddling and sailing combined; No. 3, sailing. To obtain a place on the record a contestant must enter and finish in all three record races. Only such contestants will receive a credit number according to position, relative to each other in each race; the highest number given in each race being equal to the number of such contestants, the next one less, and so on; the three numbers given being added give the credit amount on the record. The contestant obtaining the highest aggregation of points becomes the leading honor man for the year. There shall be a race for the paddling trophy. The total number of contestants shall not exceed eight, and shall be selected from competitors in No. 1 record paddling race as follows: The first six at the finish and two at the discretion of the Regatta Committee. There shall be a race for the A. C. A. sailing trophy. Conditions as follows: Sailing canoe, A. C. A. rules, no limit to ballast or rig, time limit 3 hours, distance 7½ miles. Accredited representatives of foreign clubs, not exceeding five in number, shall be eligible. In case of more than five foreign entries the first five received shall be eligible to start. The total number of starters shall not exceed fifteen, and the ten or more vacancies (after deducting the foreign entries) shall be selected from competitors in No. 3 record sailing race as follows: Two at the discretion of the Regatta Committee and the balance the leading men at the finish.

RULES VI. and VII., the same.

RULE VIII.

Amend first sentence as follows: "A canoe touching a buoy or other canoe, unless wrongfully compelled to do so by another canoe, shall be disqualified." Add to end of rule as follows: "If a canoe in consequence of the violation of any of the rules shall foul another canoe, or compel another canoe to foul any canoe, buoy or obstruction, or to run aground, she shall be disqualified.

RULES IX., X., XI. and XII., the same.

RULE XIII.

Five minutes before the start a signal will be given and a flag hoisted, and four minutes later a second signal will be given and the flag lowered, and one minute later a third signal will be given to start by firing a gun, and the flag hoisted and left up. Any canoe, etc. * * * (Same as old rule, adding) A blue flag displayed signifies that buoys are to be left to starboard, a red flag means to port. The regatta committee may vary the manner of starting at their discretion, but all sailing races should be started to windward when practicable.

RULES XIV., XV., XVI., XVII., XVIII., XXIX., the same.

RULE XX.

A canoe may luff as she pleases in order to prevent another from passing her to windward, provided she begins to luff before an overlap has been established. An overlap is established when an overtaking canoe has no longer a free choice on which side she will pass, and continues to exist as long as the leeward canoe by luffing or the weather canoe by bearing away is in danger of fouling. A canoe must never bear away out of her course, etc. * * * (Same).

RULES XXI., XXII. and XXIII., the same.

LAKE WINNIPISEOGEE AND MERRIMAC RIVER.

AS I read "Chokie's" experience on Lake Winnipiseogee in last week's FOREST AND STREAM it calls to mind a few days spent on that lake preparatory to running the Merrimac. Not only were we caught in a violent squall out on the Broad, which we weathered by running with the wind, using our paddles for steering only; but as usual our trip was full of incidents both laughable and otherwise, and may prove interesting reading for some.

We had my old reliable 18ft. birch and were stopping at Wolfboro, taking daily cruises out among the many islands near there. Invariably on our way out and in we met the steamers from Weirs and Alton Bay—the Lady of the Lake and the Mount Washington; both good sized side-wheelers, the latter being considerably the larger, about the size of our harbor steamers.

We tackled the Lady first, and soon grew so bold that we would run our canoe within a few feet of her wheel, so that as soon as she passed we got the full benefit of her waves, which would vary from 4 to 5ft. high. Finally, these becoming tame, we tried the Washington, which gave us more excitement. I remember one day just as we were starting out, a dudishly dressed young man on the wharf, who from his talk knew more about canoeing than any one I had ever before fallen in with, asked us where we were going. He was a stranger, and I afterward found out a drummer on his first trip. We told him we were going over among the islands and should probably try the steamer waves on our way in; we would anyway if he would like to come along. This was a challenge he could not stand, so down he came and got in. Tipping a wink to my friend off we went. We had on our old clothes, but our dudelet, sitting on the bottom of the canoe, was carefully dressed and had on a new pair of lavender pants. We always took the waves bow on, otherwise they would have swamped us. As a natural consequence in an open canoe when the bow went down we generally shipped three or four inches of water; this time was no exception to the rule, and our little dudelet seeing the water coming in tried suddenly to raise himself, lost his balance and shot overboard. It has always remained a mystery to me why we did not follow suit, but we didn't. We towed him ashore hanging on to the stern, and we found out afterward that he took the next train out of town.

The next day was very squally and stormy and after staying indoors all the forenoon we concluded to take the waves of the Washington when she came in at 3 o'clock. It was noised around the different hotels unknown to us, so that when we started out quite a number had collected on the wharf and along shore to "see us drown" as one spectator put it. We generally met the steamer about a half or three-quarters of a mile out. This day we had prudently stripped ourselves of everything except Jerseys and trousers, taking nothing in the canoe. We had exciting sport getting out and finally met her as usual. As we were going to leave here and continue our trip around the lake the next day this would be our last chance. So I steered the canoe within eight—yes, I guess six—feet of her wheel. She passed and we got over the first wave all right, but the second—don't mention it. It was at least ten feet high and going over was like climbing a mountain. Getting on its top the bow went down and I in the stern went up into the air. It was only a second that my paddle was out of the water, but that was time enough for a gust of wind to strike us and throwing us into the trough of the sea the next wave covered us completely, the steamer going right on. Coming up we did not think of danger, but vented our wrath on the canoe. We were so disgusted we thought we would sink her, so each took one end, filled her and pushed her as far down as we could. She did not sink or rise, but stayed there. Looking toward shore we saw a great commotion and soon two boats started out and picked us up, after having been in the water some fifteen minutes. I then found that I had omitted to leave my watch on shore and after the jeweler had had it some two months I footed a nice little bill of $2! for cleaning it.

The next three days we spent in paddling around the lake, camping out, as usual, without tents. It was on the third day that we encountered a squall similar to that so well described by "Chokie." It soon subsided and we paddled to Weir's where we stopped over Sunday.

Early Monday morning we commenced our cruise in earnest. Paddling down what is locally called Long Bay about five miles, we reach Lake Village, where we leave Lake Winnipiseogee and carry across (about ½ mile) to Lake Winnesquam. Reaching Laconia we carry around the dams, which are on a small stream connecting the upper and lower parts of this lake. It was a perfect day, warm but not hot, there being just enough breeze to temper the heat. After leaving Laconia, we paddled five miles or so to the end of the lake, where we carry around a dam into the Winnipiseogee River, one of the lake's outlets. Before making this carry we found a shady nook, and after a refreshing swim had our lunch. When cruising I always make it a practice of taking a short nap after dinner, so lighting my pipe I dozed off and was soon asleep.

After four or five miles paddle down the river, which is a pretty, narrow and winding stream, we reach Tilton, quite a manufacturing village. Here we were informed that there were nine or eleven (I forget which) dams in the next four miles and we concluded to carry around to Franklin Falls, the source of the Merrimac, which is formed by the joining of the Pemigewasset and Winnipiseogee rivers; so hiring an express wagon we were soon across. It was now late in the afternoon, so keeping an eye open for a camping place, we soon found one near a sparkling brook. Upon looking around we saw a farmhouse about a quarter of a mile away, and were as usual kindly received. During six years of cruising, I have yet to find a farmer or his family, who would not put themselves out for me, very often refusing any money, which however, I invariably left where the good housewife was sure to find it. Of all good-hearted people, give me the New England farmers. It was strawberry time and they turned us into their strawberry patch, where we picked four quarts and ate with fresh cream and homemade bread. We then went to work on our "lean-to," and gathering pine boughs for our bed, we had just finished the preliminaries and got our fire under way—for the nights were cold—when the old farmer and his hired man came down. We entertained them for several hours with our stock of chestnuts, which were new and fresh up there. Finally bidding us good night, they went home and we turned in.

Upon getting up the next morning we took our regular plunge bath and were on our way by 5:30; the best hours in the day are from 5 to 8 o'clock in the morning, and we always paddled an hour or so before eating breakfast. We had no regular hours for meals and no regular diet. We were as likely to have pie for breakfast as anything else, it depending entirely upon our *menu* the night before; and still how we did thrive. I could and perhaps sometime I will tell you how a whole mince pie once saved my life, but as it was not on this trip it must wait until next time. We lived royally, although we carried no cooking utensils, only a tin can and pail. It was this morning that my friend distinguished himself milking a cow. We had stopped for breakfast and he saw several cows in a neighboring field. Now he had never milked in his life, but "knew it all," so started with the pail. I quietly awaited developments, having been there myself. "Co, boss, co. co boss, there, there, that's it, co boss," and just as he gets ready she quietly moves away. He follows her up and "co bosses" some more. This time she waits with a knowing look. But why this delay, the milk does not come. She evidently does not like the way she is handled, so lifts her hind foot and over he goes. No more "co, co boss," but "—— —— that cow," and he starts for another, when there is a loud haw! haw! near us, and looking around there stands the old farmer who owns the herd. We, of course, wanted to buy some milk, but he said that the cows had all been milked that morning, and if we wanted any we had better go up to the house, which we did. This was the last time my friend tried milking.

We reached Concord a little after noon. Leaving our canoes, we went up to the hotel and had a first-rate dinner. Every canoeist knows what that is. There is no class of sportsmen that have such appetites. On one trip last year we made an iron-clad rule to have something to eat at every carry, and the first morning out we had bitter berries and still ate a hearty dinner.

Leaving Concord, we paddled on until late, when we began to look around for a camping ground. Having picked out a spot we landed, when my friend complained of a sore back. During the last two days he had, outside of the town, stripped to the buff in his desire to get a good tan on his back and arms. Consequently, upon looking at his back I discovered three blisters fully as large as an egg. Knowing Suncook was not very far distant, we concluded to go on and stop at the hotel, as it would be impossible for him to sleep on pine boughs. After supper I, with the help of the housekeeper, made him comfortable for the night. He suffered with pain and had no sleep, but was ready to continue in the morning after I had again doctored the blisters

Carrying around Hooksett Falls, we stopped at the village for some milk and ran across a traveling photographer, who took our pictures after three attempts. Reaching Amoskeag, we were very kindly received by the Cygnet Club, of Manchester, who invited us to stop over for a clambake and dance that evening. Not feeling that we were in condition, we turned into the canal after receiving permission from the superintendent, and passed through Manchester flying, carrying with us the good wishes of some five thousand factory girls, who crowded to the open windows as we passed. The superintendent outdid himself in kindness. As we reached one end of the canal and got out to carry over into the lower canal and from that to the river, we found at both places he had telegraphed orders to his men to take out our canoe and assist us in every way they could.

I have omitted to speak of the many shallow and rocky rapids, as we passed them all after several narrow escapes for the canoe, but the rapids at Goff's Falls are not to be passed over so lightly. There is but one passage through this, the worst place I ever was in, and that was well over to the left through a very narrow channel, ending with a fall of 3 or 4ft. Knowing this was the only passage I steered for it, following the current and barely got through. Shooting out, grazing a rock here and there, we finally landed on a fine sandy beach below. I doubt if I could do this again, and was told at the village where we stopped over night that very few attempted it—only in two instances before had it been run successfully.

The next morning was cloudy—the first poor day we had had since leaving Weirs. We were told that there was a very dangerous rift below about two miles, so started out prepared for something dangerous, but found only long, but swift and rocky rapids, which we ran with ease. Just before reaching Reed's Ferry it began to rain. We paddled on through the day, stopping at a farmhouse in Litchfield for dinner. Here they gave us the use of their sitting room to dry up in. We built a large wood fire in the ancient fireplace and stripped. After drying up and getting something to eat we started again. We paddled along through the rain, passing Nashua, and finally drew up at Merrill's in Tyngsborough, having passed out of New Hampshire into Massachusetts. Here we stopped over night and spent the next day, for it still rained. We advise any one to stop here in preference to either Nashua or Lowell; as far as hotels are concerned, they will get better treatment. Carrying around the dams at Lowell and Lawrence, we reached Newburyport two days later, when we packed our canoe and shipped her home. We then took a "flyer" down Buzzard's Bay for bluefish and had three days of royal sport.

A. H. FORBUSH.

BOSTON, Nov. 27.

CANOE YAWLS.—The following definition of a canoe yawl has lately been adopted by the Royal C. C.: "Length over all not exceeding 20ft., beam not less than 3ft., depth from upper side of deck to under side of keel, measured at any point, not exceeding 3ft.; rating $\frac{(L \times S A)}{6000}$ not to exceed 0.5; no ballast outside or below the garboards, excepting centerplate or drop keels; no transom or counterstern.

THE A. C. A. TRANSPORTATION COMMITTEE.—The following named gentlemen are hereby appointed to be the committee on transportation of the A. C. A., the first named being chairman, namely: C. Y. Winne, of Albany, N. Y.; N. D. Bull, of Springfield, Mass.; M. T. Bennett, Jr., of Garden City, L. I.—HENRY STANTON, Commodore.

BOATING IN CHICAGO.—An effort is being made in Chicago to have an inclosed watercourse laid off in Lincoln Park for running races and boating, to be 1½m. long and 300ft. wide. If successful it will be a novelty and should add greatly to the interest in rowing and paddling races.

CANOE FITTINGS.—The Baker Mfg. Co., whose factory at Watertown, N. Y., was lately destroyed by fire, have completed their rebuilding and are now running 14 hours per day to replace stock for the spring trade.

A.C. A. MEMBERSHIP.—Atlantic Division: Dudley D. Gessler New York city.

MOUNTAINEERING IN COLORADO*.

IT will be remembered that in the February, 1889, *Scribner* there appeared an illustrated article by Mr. Frederick H. Chapin, entitled "Photographing the Bighorn," which at the time attracted deserved attention. From the same pen we have now a delightful little book sent forth from the University Press by the publication committee of the Appalachian Club. The volume is abundantly illustrated by photogravures made directly from photographs taken by the author, and it is in these illustrations that the chief value of the book lies. We have never seen any illustrations which give so true an impression of Rocky Mountain scenery as these. The text of the book is distinctly readable, and is very pleasantly written from the standpoint of a mountain climber to whom the Rocky Mountains are new. It gives a capital notion of the higher peaks, which are reached usually only by the big-game hunter. An account of the Hallett Glacier is very interesting, and the game seen in the high mountains is told of in an entertaining way. An extremely interesting appendix to the volume contains a partial list of plants growing in Esies Park, Colorado, observed during the months of July, August and September. The book is handsomely made and throughout a creditable one, but to our mind a serious blemish is its lack of an index.

REPELLENE.
An Infallible Preventive of the Attacks of **Mosquitoes, Black Flies, Gnats** and all other Insects.
Neat, clean and easily applied. No unpleasant odor, will not *stain* or *injure* the skin, easily washed off. May be carried without danger of *leaking* or *spilling.* In neat, oblong round-cornered box.
Price, 30 Cents, Postpaid.
Sold by Dealers in Sportsmen's Goods.
If your dealer does not keep it, I will send it on receipt of price.
A. FERGUSON, Proprietor and Manufact'er, Office, 65 Fulton street, N. Y.

GURDON TRUMBULL'S
Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understanded of the people.
Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, of books of which the need is felt in every department of natural history.—*Troy Press.*
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*
I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*
SOLD BY
Forest and Stream Publishing Co.
PRICE, $2.50.

SUCCESS has crowned our efforts to produce a Shaving Stick superior in *every respect* to any other. **WILLIAMS' SHAVING STICK** is the result. Those who have used others pronounce this *far* superior. The lather is richer and creamier, and *will not dry on the face* while shaving. The perfume is that of the finest selected attar of roses. The case is covered with leatherette, and is most attractive and serviceable. Do you not think it would pay you to Try it? It costs no more than others. It is a genuine toilet luxury.

☞ If your Druggist does not have WILLIAMS' SHAVING STICK, we will mail you one neatly packed, postage paid, for 25c. in stamps. One WILLIAMS' SHAVING STICK is enough for 250 shaves. 10 comfortable, refreshing shaves for ONE CENT. TRY IT.

Address **THE J. B. WILLIAMS CO., Glastonbury, Conn.,**

Established half a hundred years. Makers of the famous GENUINE YANKEE SOAP

YACHTS, BOATS AND CANOES,

WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.

BY

C. STANSFELD-HICKS.

AUTHOR OF "OUR BOYS, AND WHAT TO DO WITH THEM.

NUMEROUS ILLUSTRATIONS AND DIAGRAMS

AND

WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.

DESIGNS:

Model Yachts.—Defiance, Isolde, Bonny Jean, and 10-tonner with sail plan.
Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe.
Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehander by C. P Clayton, Puffin, 3-ton Racer, 3-ton Cruiser, 24ft. Auxilliary (steam and sail) fishing boat.

This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.
Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

The Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls, Etc., Etc. With 96 illustrations.

By C. P. KUNHARDT.

This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

OUR CHRISTMAS NUMBER.

THE issue of the FOREST AND STREAM for Dec. 19 will be the Christmas Number. Many good things are in store for that occasion. Here is a list of some of them:

IN FOREIGN LANDS.

On the Trombetas. An account of a daring expedition on the Trombetas River, North Brazil. By "NESSMUK." The story is in the author's best vein, and we need not add that it is intensely interesting.

Dogs, Dingoes and Kuris. An intelligent description of the native wild and domestic dogs of New Zealand. By EDWARD WAKEFIELD.

The Reporter. A sketch of partridge shooting with a "reporter" dog in Sweden. By "MARSTRAND."

Fishing a la Mode. An amusing description by "PODGERS" of one of the dude anglers of Paris.

Big Game in Boer-land. A letter descriptive of hunting in the wilds of South Africa.

First Spear. An account of a novice's first experience in pig-sticking in Scinde. By C. F. AMERY.

A Run after the Long Tails. Kangaroo hunting in Australia. By W. H. LIMOND.

Three Days in Jamaica. A short account of a recent visit to the island. By "F. J. M."

Notes from the Ten Thousand Years House. A letter from Tokio, Japan. By HENRY MACDONALD. A vivid and picturesque description of the phases of life that impress the American traveler in Japan.

DAYS WITH THE ELK.

Running Down an Elk. An account of the pursuit on snowshoes, and the tiring out and capture alive of one of the last elk in the wilds of Pennsylvania. By "ANTLER."

An Elk Hunt. A story of Rocky Mountain adventure. By "Yo."

The Trail of It. A mountaineer's story of a scuffle with a bull elk. By JEROME BURNETT.

The Elk in Harness. An account of personal experience in capturing and taming elk and breaking them to harness. By CHARLES M. DONNELLY.

Old Joe. Notes on a semi-civilized bull elk, which belongs to a Wyoming horse ranch. By MILLARD.

Illustrations. There will also be a double-sheet supplement with careful drawings of elk. By A. S. HIGGINS, JR. With its double supplement the Christmas Number will contain thirty-six pages.

The issue of Jan. 9 will be a special Florida number, illustrated. See announcement next week.

MORMON ENCROACHMENTS.

FROM an entirely trustworthy correspondent it is learned that during the past season there have been considerable encroachments on the southwest corner of the National Park by the Mormon settlers of Idaho. It is reported that on the Falls River meadows several thousand tons of hay have been cut and stacked, some of it in the National Park. Thousands of acres of country here have been burned over. The Mormons claim that these fires were set by Indians, who, after they had finished hunting, fired the country when they left. This is not the Indian way of setting fires for hunting purposes. On the other hand the hay haulers, most of whom are Mormons, have left a great many camp-fires, and it is probable that from some of these the fires got out. Much of the heavy timber was burning in October and November about Æneas Park and Lake. The only person who is known to have camped there is a German or Austrian count, whose men were certainly careless about their camp-fires, as appears from the fact that they left at least one burning in the Park, near Yellowstone Lake. They had thrown water on the middle of the fire, but it was still burning about the edges.

A fire started on the West Gallatin from the camp of a well-known New York gentleman who was hunting there. It appears now—although it was not known at the time—that this fire was due to the criminal ignorance of the cook, who, while the party was out, whittled kindlings and fired a "fat" pine tree "to see it burn." This fire is said to have burned for twenty miles. The cook ought now to be in the Deerlodge Penitentiary.

It is further reported that at least one fire got out from a Government road camp on the Firehole above Kepler's Cascades. The road gang, it is stated, left their fire burning when they broke camp in the autumn. In this last case, if we had any laws for the Park, the offending persons could certainly be detected and punished.

If any further proof were needed of the importance of Congress enacting laws for the protection of the Park, the terrible fires which have raged there this season and which have destroyed so many thousands of acres of living forests furnish that proof. Through the supineness of Congress the beauties of the National Park are being destroyed by fire, and there can be no remedy for this until laws shall be made for the punishment of careless and malicious persons.

SOME RECENT HAPPENINGS.

THE great football contest in this city on Thanksgiving Day between Princeton and Yale has moved the New York *Observer* to view with alarm the hold athletics are taking upon popular attention, and to deplore the growing importance of "sport," under which designation it lumps together athletic games, "hunting for amusement, racing and trotting horses, and the brutal exercises of the prize-ring." As may be inferred from this jumbling of diverse "sports," there is an odd mixture of sober sense and fantastic nonsense in the writer's argument. He fails to discriminate. And this subject of "sports" is certainly one which calls for intelligent discrimination. There is a point up to which athletic sports are justifiable and praiseworthy. The harmful tendencies of the generous competitions of rival college students are hardly deserving of grave discussion. It has been demonstrated again and again that undergraduate interest and participation in college sports are not in the least incompatible with a high attainment in scholarship. The young man who excels in baseball or football often excels likewise in Latin, and Greek, and chemistry. The leader in athletic games may lead in the class-room as well. Something more than mere physical strength is required to captain a football team; the same traits that put one to the fore in athletic games may lead to success in college work and in subsequent fields of activity after college days are past. A striking example of this is afforded by this number of the *Observer* itself, for on the same page with the discussion of the harmful tendencies of college athletics is printed a paper from a clergyman in the West, who, when in college, was one of the foremost baseball players of his class, and who since leaving college and entering the ministry has achieved in his special field a success not attained by any of his classmates.

The prosecution of a New York clergyman, Dr. W. S. Rainsford, rector of St. George's Church, for having killed a quail out of season on Long Island, has as a matter of course, attracted much popular attention. The affair ended in Dr. Rainsford's paying $25 fine, not for the offense with which he was charged and of which he protested his innocence, but for another quail, which he confessed to having killed unlawfully, but of which, he said, no one knew.

The discussion of this case has brought out in the daily press certain criticisms on the propriety of a clergyman's indulging in the recreation of shooting wild game. It has been urged that the use of the gun for the killing of game is at best only a relic of barbarism, inherited from the more brutal ages of the past, that "hunting as a sport is opposed to the humane spirit that is glorifying and ennobling modern life," and that a Christian minister cannot engage in it without impairing his influence and bringing reproach upon his calling. If it were true that hunting ought properly to be classed among degrading pastimes, it would as a matter of course, be conceded that no self-respecting individual, whether clergyman or layman, should take part in it. But the fallacy of any such contention is due to the abnormal perspectives with which mawkish closet philosophers regard field sports. In their imagination, the sportsman delights in cruelty, in the sight of suffering, in the infliction of pain; and the effect on the hunter of indulgence in the pursuit of game is debasing. As a matter of fact, there is no reason nor shadow of truth in such a view. The facts do not sustain it. Field sports do not brutalize those who participate in them. Quite possibly the theory that they should debase their followers is a very beautiful and logical theory, as theories go; but in experience the facts are not found to fit the theory. This does not and never will daunt the closet theorizers. They will go on denouncing the practices of shooting and fishing; and holding up field sportsmen as monsters of brutality and cruelty; and never omitting to take advantage of every incident like this Rainsford case to air their fallacious, foolish sentimentalism.

If shooting and angling are, instead of demoralizing, healthful and ennobling in their effect on the individual and on society, it follows that they may with propriety be engaged in by all men, of whatever profession and standing in the community, so long as the participants, however high their social position or important their calling, shall respect the laws which are made to govern all alike; and shall pursue their recreation in what the consensus of their fellow men recognizes as a proper manner. It is encumbent on each individual who shoots to obey not only the letter, but the spirit of the game laws; and the more prominent may be the place held by a sportsman in the public eye, the more strongly is he bound to conduct himself in the field without giving cause for reproach.

The Eastern Coursing Club, which is composed of gentlemen who are known as owners and breeders of greyhounds, has been making an effort to introduce the sport of coursing to Long Islanders. There being no native supply of game suitable for this purpose, the club has procured a number of jack rabbits from the West. These were put out in a field at Hicksville; and when the men and dogs gathered for the meet, one of the jacks was let out of the corral, as described in our Kennel columns, and the dogs were slipped. The fleeing rabbit was turned from its course by an officer of the Society for the Prevention of Cruelty to Animals, and was thus forced into the jaws of the greyhound and killed. Two of the handlers were thereupon arrested by the Society's officers; and one of them was immediately given a trial and was acquitted. The second trial was held last Tuesday. In the absence of Col. "Bob" Ingersoll, who was expected to represent the Society, Mr. Chas. J. Peshall took part as associate counsel for the prosecution. This trial ended like the first, in an acquittal of the charge of cruelty. The coursing club proclaims that it will course, and the Society proclaims that it will arrest. The end is not yet. As we said of the Hempstead Coursing Club, the charge of cruelty as here involved is not one that will appeal to the healthy mind. The practice of the Eastern Coursing Club appears to be free from the objectionable features that characterized the Hempstead mode of rabbit killing: and the Hicksville coursing, as done last week, was not open to the charge of unsportsmanlike surroundings. If the truth about the Eastern Coursing Club's mode were generally known, we are convinced that it would meet no opposition among the humane friends of the animal kingdom,

The Sportsman Tourist.

SPORT IN NEW MEXICO.

ONE of the most beautiful and well-stocked streams in New Mexico is the Brazos, an arm of the Chama. About the 12th of June the big fish begin to run up; then is the time to be out, and the angler will surely be well rewarded. On the 14th of June, last year, my friend E. caught 22 fish averaging 1¼lbs. Three-pound fish are plentiful at this season; but as time advances they ascend from pool to pool, till they are only to be met with near the headwaters, which is in an extremely rough country and somewhat high up in the mountains; consequently the inconvenience of getting there is considerable. This year we made very good baskets during June, the early part of July, and September, when the fish began to come down. During the latter month my friend Mr. E. made the best catch of the season, as far as our camp was concerned, not in numbers, but according to weight. He had over fifty fish, the smallest being very little short of half a pound, and the three largest weighing 12¾, respectively 4¾, 4¼ and 3¾, the rest ranging down, there being several about 2lbs., and so on.

Late in August three gentlemen came to camp with us, who were very anxious to engage in a hunt and see a live bear in his natural state and proper place in front of the hounds. We took a preliminary canter over the mountains in search of tracks, which were found about four miles from the main camp on a small stream. Owing to the scarcity of rain this year the so-called stream had degenerated into an insignficant water-hole and held only just enough *aqua impura* for ourselves, our horses, three donkeys and the bear. However, we could do no better, so here we camped. The river being only about a mile and a half below, we took our rods, as well as the guns and nine dogs. On our arrival the first evening it was too late to hunt with hounds, so C. and I went after grouse, while E. and J. took a turn at the trout. A., who was out for his health, remained in camp, promising to attend to the culinary department. We were not very successful, for although C. had an excellent pointer, the brush was so thick and the traveling so rough that our shooting was certainly faulty; we called it "bad powder." Be that as it may, we only got a brace of birds out of at least twelve that were flushed. The other two did not do much better, for J. was unaccustomed to the ways of the wily trout, and the big fish were for the most part higher up the stream. He did, however, hook one of about 2lbs. and tried to throw him out over the back of his head, with the usual heartrending result. No matter. They brought back plenty for supper and breakfast; and no one had cause nor excuse to grumble as yet; indeed Mr. G. performed his part well, and all went on swimmingly.

Early next morning we started with the hounds through fallen timber, stumps and thick undergrowth. The dogs were all coupled except Spot, a reliable old hound, who hunts like a pointer and rarely ranges out of sight until he strikes a fresh trail. I guess we traveled or rather rolled, fell and stumbled along in this way for a mile or more, having to go back every now and then to loosen the dogs, who have a wonderful knack of tying themselves up in all kinds of sailor's knots and other fantastic intricacies. Two will run in opposite direction around a bush; the rest jump over them, dive in between each others' legs and come up on the other side; and the thing is done, which takes ten minutes struggling and puzzling to undo. During this performance a puppy will usually escape, with one or two couples dangling from his neck, and go bawling through the wood as if on a hot trail, until caught and replaced.

After a mile and a half more or less had been traversed, we came to a creek with very steep ascent on either side. Here the old dog began to yell with all his might and we let the rest loose. In another three minutes the whole pack were in full cry, going up the worst side of course. They ran up for about half a mile and bayed in some quaking asp, but we were all too far behind to see anything; and they soon went on again upward you may be sure. All the time the rocks were getting rougher and the way more precipitous, but on we toiled. G. and C. were left in the dim distance. E. was ahead and J. and I a few yards behind, were not a little interested in the mineral we continually passed. However, he being better versed in mineralogy than myself, was sooner satisfied as to its intrinsic value and waddled on; thus it came about that I was left behind toiling slowly but surely. When I arrived near the summit, E. and J. were about 300yds. in front; on getting there I shouted and received no answer; they had gone! dogs and all, goodness knows where. Thus I reflected, "Any animal doubling on the hounds will have to come down the pass I have just come up; and if he does not double I have no chance on earth of ever seeing him or my dogs till sundown." So I lit a pipe and while taking in the situation, a fine pair of elk horns caught my eye. They were lying on a rock at the edge of the cliff, probably having been placed there by some Indian. A short examination satisfied me that I had not come all this way for nothing. Accordingly I shouldered them, with the intention of hiding, and getting them at a future date. But, alas! when I was well coiled up in them something rushed past me about 50yds. to my left through the brush, and made for the pass. I cannot tell what possessed me, but for some reason or other, or no reason at all, I thought it was a deer, so I took my time getting to the brink of the precipice, for we were not hunting deer. When I did get there I heard a "yap" behind me, and here was a hound in close pursuit; and about 300yds. below, disappearing into some scrub, was a cinnamon bear with two tiny cubs. I fired two or three random shots without effect. Then G. fired three times from the opposite hill, but the bear was too fast and too far off. The old hound went on, and then came a pup, both were tired and footsore, not having been out before this since early in the spring. The rest were in Jerusalem for all I knew, many of them being young dogs and wild from want of exercise; I reckon they overran the trail; anyway, they did not put in an appearance until late that evening. Having satisfied myself that the tired old hound and pup would never overhaul that bear with her two cubs to protect, I again shouldered my elk horns and rifle and began my descent, soon to meet C. and J., which latter gentleman was somewhat excited at having seen and shot at his first bear. "It was a buster," at least he said so, and of course it must have been, but I thought it was rather small. Some way below we met J. and E., who had gone round and come down ahead of us, having seen nothing. That evening I went out after trout, leaving G. in camp, somewhat fatigued after his tramp; E. and C. took a turn at the grouse, and J. went out exploring generally.

But the tale of the day has yet to be told, for shortly after we had left in the morning the Mexican tending the stock had run in to acquaint G. with the welcome fact that a bear was within 50yds. of his tent and had not yet seen him. Out he went with his little .44 Winchester, and there sure enough was our old cinnamon, minus her cubs, taking a bath in our drinking water to cool off a bit after her run. This was too much for G.'s nerves, and up went his gun. Snap! There was no cartridge in. She heard the click and was gone. Oh, mortifying moment for G.! He fired into the brush, but that was the last time the old lady visited the locality. I think had she been hit she probably would have turned to fight at such close quarters. That night the cubs came around camp to hunt their mother. I wished they had found her before, for they caused an awful commotion among the stock.

The next day we had another unsuccessful run, I think after the same bear; but she had been traveling all night and we ran all day without overhauling her. An amusing incident occurred to C. and G. They were again left behind, sitting on a log in the road indulging in the fragrant weed, when G. suddenly jumped up and shouted, "There's a bear!" C. fell backward over the log in his hurry to rise; and his gun flew over his head. He gained his feet, however, in time to take part in the roar of ineffectual shots that followed the intruder. It was a small brown bear, and was walking steadily toward them about 25ft. away, when first observed, doubtless having been frightened out of its midday slumbers by the distant baying of the hounds.

However, a great part of our object was achieved; and if we had not been able to kill a bear for our friends, we had shown them four in two days, running about wild in their native woods. They were pleased, and so were we, for the bears were thin and the hides poor; so there was not much lost, unless it was the $20 bounty on their heads, $5 a head, which would most likely have been invested for the benefit or misery of the crowd in that diabolical concoction of sulphuric acid and tobacco juice, blessed with the great name of whisky in New Mexico.

The next day we parted, J. G. and C. to their gold mine about thirty miles distant, and we to Stinking Lake, so named from its sulphuric properties. Here we brought to camp 459 ducks, mostly canvasbacks, 18 coyotes, 2 Canada geese, which my friend E. shot right and left with his 12-bore, a bald eagle, a pelican and numerous other specimens. Those ducks must have had a rough time, for the day before we left a large party from Denver arrived with boats and decoys. But there were plenty for all, and more too. Had we gone in for slaughtering them from the edge of the lake and on the water, the number of slain could not have been counted, much less used. But we prefer driven birds, for ducks flying over a hide on a narrow strip of land, from one water to another, go very fast and afford rare sport, besides requiring a certain amount of practice, as any of your readers are well aware who have tried it.

Duck shooting is getting stale, and having all the smoked birds we want for winter, we wend our way in the direction of Señor Patricio Chavez's ranch at the head of the Galena Cañon. We meet him on the road, and he tells us where one of his steers has been recently killed by a bear. The following morning the dogs are off again; we soon find the bear's track and it is fresh. Away they go, and after five miles scrambling and crawling over hill and dale, we come to a fine old cinnamon treed about 500ft. below us. The dogs are all there, yelling lustily at the foot of the gigantic pine, in which he considers himself safe. There he sits and smiles a sweet ursine smile at his pursuers, as a house cat will at a terrier, as much as to say, "Don't you wish you could catch me?" A glance showed that there is nothing for it but to run a mile or more around the cañon before commencing the descent. However, we are in for it now, so stumbling over anything and everything we roll to the bottom amid a shower of loose earth and rocks, some unpleasantly large ones, too. The first man who arrived within shot was Charlie, who fired at once, as the old fellow showed signs of coming down to make a firmer acquaintance with us; but this we did not at all desire. He fell, shot through the brain, and proved to be a beauty, with a long coat and a hundred pounds of lard on him. The meat was also very acceptable, for he had fed chiefly on the sweet little nut known as the piñon, with the addition of the prime beef he so lately brought to his larder.

The next day we got two black-tailed deer; but seeing no more bear sign we moved into the Chama Cañon; and here we are with 2in. of snow outside and six turkeys inside. There were more turkeys killed, but unfortunately the boys hanged them up with the intention of fetching them next day; the wild turkey has a strong scent and the cats and coyotes got there first. To-morrow I go to hunt a good winter camp and something more rare in a sheep and cattle country than bears, that is winter grass for my stock. When this is found, we will make off camps till the end of this month, among the piñons, where the Mexicans tell me our quarry are feeding in great numbers. I expect the foot of the Sierra Valdais or Pedro Nal will find us during the cold weather, wherever it may be. I will let you know with what success we meet. So *adios*, fellow sportsmen, and if you do not hear from me again before Christmas I wish you all a merry one and lots of good cheer.

NEW MEXICO. A. P. F. COAPE.

WEIGHT OF GROUSE.—Chews Landing, New Jersey, Dec. 6.—Thinking that some fellow sportsman who peruses the columns of "the Old Reliable" will be interested in the following little item I jot it down. While shooting quail to-day a pair of ruffed grouse flushed about 30yds. from where I stood. I killed one and hit the other hard, but I had only small loads of No. 10 shot, and he got away. The one I killed proved to be a young cock, and the largest I ever saw, weighing no less than 2lbs. 1oz. on two different scales to-night. I also killed the largest hen quail I ever pulled a trigger on not 100yds. from where the grouse fell; she pulled the scale at just 9oz. More than a dozen saw these birds weighed.—RUDOLPH VON OHL.

PHOTOGRAPHY AS A PASTIME.

WITH the advent of the falling autumnal leaf the peregrinations of the amateur photographer, as he pushes his way through the trackless avenues of nature, become invested with surpassing interest. When old Mother Earth begins to robe herself in the cerements of crimson and yellow and the grand old forests drop upon her bosom the brown garments of decay, it is then that the knight of the tripod is in his glory.

The wonderful growth of amateur photography as a popular outdoor pastime illustrates in a marked degree the elevating tendencies of the modern devices for health-giving recreation. To the lover of those polite diversions that are devoid of the elements of daring adventure and the prowess of reckless exposure the study of field photography presents attractions that are incomparably superior to those of other outdoor pastimes.

Photography enjoys an acknowledged supremacy over all other outdoor sports in that it cultivates the finer instincts and depends not for its fascinating features upon any exhibition of physical hardihood or athletic training. The pursuit of the pastime is beyond question ennobling and refining in its influence. It develops a keen and artistic eye for the beautiful in nature. Through the mystic and enchanting alchemy of the "dark room" it brings the receptive mind into close contact with the great Artist who has filled the earth and sky with such regal beauty.

The whole realm of nature with its green fields and woodland symposium of daisies and buttercups, its babbling brooks, where the laughing rivulets go clattering with their silver heels over the stony depths and the nodding lilies drink in copious libations from the perpetual fount—all this is the kingdom of the amateur photographer.

The pastime is one that not only conduces to physical exhilaration, but, through the fascinating mystery of its results, it engages our admiration and enlists our ripest mental endeavor. Other outdoor sports are largely calculated for the development of the body without rendering to the mind any adequate recompense. Moreover, such pastimes as hunting, fishing, lawn tennis and baseball combine elements of roughness that are incompatible with the refined delicacy of the gentler sex. Photography is a recreation admirably adapted to both sexes.

Those who imagine that outdoor photography is a mere sport are laboring under a lamentable misapprehension of the scope of this delectable diversion. Photography is a study; and to that fact it is indebted in a large measure for many of its elements of irresistible charm. Pure physical exercise is not satisfying to the cultivated mind. The pastime that makes only brawn and muscle does not adequately fulfill the requirements of a perfect ideal American pastime.

To the young man or young woman who seeks mere sport, photography will be a vexatious disappointment. Its tedious details cannot be mastered in one summer. To the patient student who is willing to give to it a fair allowance of time and study it has a fund of pleasure that is constant and exhaustless.

He who is gifted by nature with an instinct for discerning the beautiful, and is endowed with some inventive faculty, will find the rarest enjoyment in photography. No lunkhead ever made a success of it or thoroughly enjoyed it. Not every one who can wield a lawn-tennis racquet can develop a good negative or make a perfect "exposure." The cameras which come under the "touch-the-button" class are eschewed by the votaries of the art and are relegated to their proper place on the shelves of the toy shops. They are not designed to be used by persons who have artistic talent.

Those who contemplate joining the grand army of amateur photographers should be admonished that the only true satisfaction is to be derived from a camera that has been made for the professional artist. The average "amateur outfit" is to be abhorred by those who would be *en rapport* with the beautiful art. Such outfits are designed for the entertainment of boys, to be cast aside at the end of a summer's campaign to repose in the bric-a-brac of the garret. An investment of a twenty-dollar bill with one of those amateur concerns will bring in return a cheap box, a cheap lens and a varied assortment of nameless chemicals, together with a cheap lot of toy appurtenances that will be of no use to the genuine artist.

If you want a camera it is advisable to go or send to a photographic stock house and purchase a good instrument that will be a constant source of pleasure. If you have fifty dollars to invest put twenty-five of it in a lens. The remaining twenty-five can be judiciously expended in a box, tripod and plate-holders. A good formula for developing the negatives may be obtained of any local photographer. It is not advisable to purchase a box that is embellished with complicated mechanisms that are constantly getting out of order. A plain box, with a revolving front and swing-back, are preferred by artists of experience, who have studied the art with reference to accomplishing the best results. There are those who do not feel that they are properly equipped for a photographic outing until they own an expensive shutter with rubber tube and bulb. But some of the most skillful amateurs prefer the old-time "cap" for ordinary exposures, while the instantaneous exposures may be made with a wooden drop-shutter, that can be made for fifty cents.

After all, the excellence of the results accomplished are dependent upon the skill of the artist. The time of the exposure must be regulated according to the light and the character of the subject. To make indiscriminate "shots" at all sorts of objects is the pastime of the schoolboy and not of the artist. The most beautiful effects are obtained by a proper study of the lights and shadows of the landscape, coupled with a skillful exposure of such duration as is best calculated to draw out all the beauties of the scene. The dark foliage of trees will require a longer exposure than a house that has been painted white. And in this connection it is proper to remark that the most inane and insipid feature of the pastime is the photography of houses. No artist who is in love with the art will waste any of his precious negatives upon houses, except, perchance, those that are singularly beautiful and rustic in their architectural conception.

Landscapes constitute the poetry of photography. They make up the rhythmic beauty of the photographic melody. A proper appreciation of the art is predicted upon the delicate impressionableness of the artist with reference to natural scenery.

The photography of faces that have been previously prepared for the "ordeal" should be left for the "professional," whose appreciation of the art is circumscribed by the limitations of the almighty dollar. It is his business to flatter human vanity for sordid lucre. The amateur must not prostitute the art to such base ends. If he desires to embalm a sweet face or a graceful form on the unfading tablets of photography, he should "take" them by the instantaneous process, when they are not posing for it. Groups of merrymakers, taken at a picnic or outing, without any warning from the operator, form a laughable feature of photography, and the pictures have the rare merit of being exceedingly "natural."

The time is coming when an educated man will not think of starting upon a pilgrimage without his trusty camera, upon whose never-failing power he may depend to secure a panorama of his journey, which will be one of the comforts of his declining years. A glance at the pictures will revive a thousand tender associations of earlier days.

The time is also coming when every educated man who builds himself a home to live in, will give as much attention to the construction of the "dark-room" as he does to the library. In the dark-room, where may be developed at leisure the results of a day's tramp in field and forest, are to be found the true delights of photography. Here are evolved by the wand of the photographic wizard, the pictures that will hang on memory's wall for many years to come. After the day's battle and the ignoble strife for gain is ended, it is sweet to retire into the quiet seclusion of the enchanted dark-room, and bring to light the hidden sun-pencilings of a long ramble through the woods in the autumn days.

The dark-room is an institution that will mollify the asperities of connubial life and dissipate the corroding perplexities of business care. TRUMAN A. DEWEESE.

CIVILIZATION VS. SAVAGERY.

THE enthusiastic letter of John Elliott Curran in regard to Mr. Grinnell's "Pawnee Hero Stories and Folk-Tales," suggests a few reflections as to the real value of such a book and as to the true view to take of savage as compared to civilized life. I heartily agree with Mr. Curran as to the great value of such a faithful study of savage life by so competent and so artistic a hand as Mr. Grinnell's, and I welcome the book with great pleasure. It brings that breath of the prairies, that sense of contact with nature, that unrestrainedness and freedom which are always so refreshing and exhilarating to civilized men of healthy tendencies, but which are such mainly by way of needed vacation and rest and change from too long-continued confinement and routine. But over and above all this, the value of this book and others like it lies in the data they furnish for students of the great, growing and vastly important science of anthropology. The debt we owe to the men who were far-seeing enough to preserve these materials before general intelligence awoke to their value can never be paid. The time will come when all this will be appreciated, and when every remaining trace of primitive man will be carefully treasured, every burial mound and cairn and fortification and shell heap and cave will be faithfully studied; but it will not be till after millions of them have been ignorantly and ruthlessly destroyed, and many a dialect and many a body of folk-lore is hopelessly lost or remains in dim and unverifiable tradition, but which would have furnished priceless data to the specialists who are slowly and patiently gathering up and piecing together the story of man's advent upon and his gradual conquering of the earth. To the grand science of anthropology all the subordinate sciences—archæology, ethnology, philology, etc.—lend their aid, and nothing that can assist is unimportant.

In different ways the tribes of men have reacted upon their environment and wrestled with their problems, and the record of each may throw unexpected light upon every other. It is here, by the way, that the intelligent sportsman may often render yeoman service. Penetrating further and further every year into the wilds in quest of the retreating game, he is often the sole witness of important phenomena, which without his record would be lost to the world; and, therefore, his note-book should be as constant a companion as his rifle.

But my special wish was to say a word about a true and a false sentimentalism in regard to the savage and the savage life. As cities grow and as civilized life becomes more and more complex, we shall increase rather than diminish our love of nature, and our zest for a vacation stay in the wilderness will grow as the wilderness itself becomes hard to find, but it is not wisdom to mistake the life of the savage as in any sense higher or more desirable than that of the civilized man. The return to savage simplicity of life is only desirable as a temporary change and rest. Neither is it true in any true sense that the savage understands nature or is ennobled by his contact with it. It is because of his very submersion in nature, his failure to have arisen above it and out of it, that he *is* a "savage" and low in the scale. It is true, as Mr. Curran says, that "his first care is to get something to eat," but that is not to his credit nor to his ultimate advantage, nor is it true of any race of men, whose first or chief concern was to gratify the immediate demands of nature that they have risen much above the brute, over whom in the nature of the case they could claim no superiority of aspiration. It is never until men acquire the faculty of prevision and, even in the desire to minister to their bodily wants, can make the wants of the future superior to those of the present, that they can attain the best and surest means of gratifying them, and it is never until men conceive of moral and spiritual wants, for which they are willing to *give up* all other gratifications, that they become truly civilized and human.

Civilization with all its terrible evils is yet immeasurably better than savagery, and moreover, civilization sets itself intelligently and consciously to cure its own defects. Mr. Curran says that the Indian "has, in the main, much grander and more dignified thoughts and conceptions than are likely to fall to a man who, for instance, is always poring over books of account, or always writing letters, or always trying to get rich by trading with people." Again, in speaking of the intense physical life of the Indian, he says, "And living, he gets much nearer to God, nearer than we do who trot over our pavements day after day, enter our stores and do and think all things in our own miniature, unlasting world, erected by our own hand to the exclusion of nature."

This is the false sentimentalism of which I spoke, and the fallacy is that of taking, on the one hand, some real or supposed defect of civilization and holding it so close to the eye as to shut out the view of the universe, and, on the other hand, of imagining a universe of solid structure where little more than a vacuum exists. Yet this fallacy appears so often that it may be worth while to speak of it. Born of the same stock is the conceit that puts trust in the "doctor" whose only claim, forsooth, is that he has never in his life studied anatomy or medicine and never availed himself of one of the helps to knowledge which the combined study of thousands of men has furnished. It is of the same piece with the ignorance which scouts "book learning" and supposes that the Digger Indian, who lives on and whose whole concern is about roots and acorns and snakes and snails, must therefore know more about these very things than Professor Gray, the botanist, and Agassiz and Huxley and Darwin.

The truth is that the average civilized schoolboy has in one day far more "grand and dignified thoughts and conceptions" than a real savage has in the whole course of his life. Some recognizable germs of these thoughts he does have, and they are genuine as far as they go, but, compared to the far-reaching generalizations of civilized man, they are infinitesimal. The truth is that those who live in closest physical contact with material nature know least about nature and see the least in it. By so much as they depend upon the sharpness of the bodily senses, by so much are they ignorant of that infinitely more important secondary sense which avails itself of the thinking and reasoning of all other men combined. The savage knows things in their isolated singleness. The civilized man knows them in their far-reaching relations, and this is the only true knowing.

That which Mr. Curran calls "our own miniature, unlasting world erected by our own hand to the exclusion of nature," is precisely the reverse of what he describes it to be. It is the world higher than mere nature, the world of human nature, the world of art, the permanent world of institutions. The world of the savage is the little world, the immediate, and of all things the least permanent. It is a world so little as to neither merit nor secure for itself its own recorded history, unless that history is written by some one else and that, too, from a motive which would be unintelligible to a savage. A few dim and fanciful traditions, interesting as they may be to us for various good reasons, are not in any true sense history. An Arctic explorer questioned the leader of a tribe of Esquimaux as to the great decrease in numbers of his people, and showed him that in a generation or two the tribe would probably be extinct, but he found it impossible to arouse in the savage any emotion or concern at such a prospect, the truth of which he acknowledged with a grin. So long as his own belly was full he cared nothing for the future. Of course there are savages and savages, and many North American Indians are far more advanced than this, but because they are capable of somewhat less selfish interests, and just in proportion as they are, we call them "higher in the scale."

A lady, who lived two or three years with the Cree Indians and who learned their language thoroughly, and entered in all things into their life and interests, told me how extremely limited and commonplace these were. Beyond the few stock excitements of the hunt and the fight it was inane to an amazing degree. Because of reflection and study the civilized man becomes acquainted with principles, and thereby can truly know and interpret nature and make its most hidden powers serve him, and for this reason it is that, other things being equal, he will always in time surpass the Indian in the latter's own chosen field.

Mr. Curran declares that the Indian has been despised because he "has savage, that is natural ways." He should be reminded that it is only as man has brought art to his aid and conquered his natural ways that he became cleanly and self-respecting and able to combine with his fellows, and to transmit in ever-increasing volume the advantages he has gained to those who come after him. Mr. Curran says that the test of greatness of mind is not the power to "do calculus," but rather "that simplicity that bares the human breast to final things, to time, to space, sky and earth, to the last of human motives—the last in the crucible when all others are evaporated—the desire of life and companionship." This is indeed a strange confusion of thought. If "the desire of life and companionship" is the test of "greatness of mind," then it is one which can be triumphantly passed by nearly all the lower animals, and is certainly not the test by which any of the distinctions at present in vogue in the world have been established! As to the "simplicity which bares the breast to final things, to time, to space," etc., it is not simplicity but profound thought alone which conceives of space and time at all as such, a thought far profounder than any real savage is capable of; and it is just his simplicity itself which makes it impossible for him to do it, for he lives naïvely and unreflectingly in time and space, and for the most part innocent of any attempts at philosophy about them.

The whole matter has long ago been rightly summed up by Tennyson in "Locksley Hall," where, after indulging for a short time in some such bilious notions as I have been criticising, he comes to his senses and sees the folly of it all. He has been disappointed in love and "the world is out of joint" for him, and in the bitterness of his pain it seems to him that civilization is all wrong, is only a diabolically complex machine to torture a man, and that it would be far better to turn one's back on it and flee to the wilderness, to "burst all links of habit" and to "wander far away" where no echo of the civilized world can reach him. Listen to him:

"There methinks would be enjoyment more than in this march of mind,
In the steamship, in the railway, in the thoughts that shake mankind.

"There the passions, cramped no longer, shall have scope and breathing space;
I will take some savage woman, she shall rear my dusky race.

"Iron-jointed, supple-sinewed, they shall dive and they shall run,
Catch the wild goat by the hair, and hurl their lances in the sun;

"Whistle back the parrot's call, and leap the rainbows of the brooks;
Not with blinded eyesight poring over miserable books."

From the standpoint which I have criticised the picture seems to be attractive and complete. But it turns out that the thinking of the world for the last few thousand years has not been done for nothing, and there is some validity to human institutions after all. Listen to the poet after his delirium has passed and he can see things clearly:

"Fool, again the dream, the fancy! but I know my words are wild,
But I count the gray barbarian lower than the Christian child.

"I, to herd with narrow foreheads, vacant of our glorious gains,
Like a beast with lower pleasures, like a beast with lower pains!

"Mated with a squalid savage—what to me were sun or clime?
I the heir of all the ages, in the foremost files of time."

No, the picture is not a pretty one, and his wise and firm conclusion is that no amount of the sensuous pleasure of savage life would be a fair price for which to barter the smallest of the benefits of civilization, or as he states it in a single line,

"Better fifty years of Europe than a cycle of Cathay."

Having already in another number of FOREST AND STREAM expressed myself as keenly appreciative of Mr. Grinnell's fine book, I am glad to join hands with Mr. Curran in his warm praise of it, only dissenting from some of his side reflections and philosophy.

C. H. AMES.

ROD AND GUN IN SISKIYOU.

EVERYBODY knows that the railroad line between Portland, Ore., and San Francisco, Cal., passes through immense regions where the hunting and fishing are especially fine, and which were not accessible until a few years ago. The country along the upper Sacramento, the McCloud, and the lesser streams of Shasta and Siskiyou, is covered with great forests; it is, in fact, one of the last fastnesses of the superb coniferous forests of the Pacific coast, and it is being pierced in a dozen directions by the lumber men. Wood flumes are being built, railroads are surveyed into the heart of the pineries, and inside of twenty years this magnificent mountain paradise of animal and vegetable life will probably be as desolate as the worst wastes of the Adirondacks. Therefore let those who can afford it come while the woods are still unviolated.

Fishing is said to close in northern California with October, but I heard and saw enough in a few days spent in this region during the middle of November this year, to justify any sportsman in trying the journey, ordinary seasons, even later. I can promise a man a good time almost all winter.

The territory which I wish to describe lies in an irregular square, cut north and south by the railroad, and comprising a district perhaps fifty miles square. It lies around the base of such noble peaks as Eddy, Muir, Scott and the giant of Shasta. The weather the middle of November in Strawberry Valley, and in fact everywhere at that elevation—of about 4,000ft.—was clear, bracing and delightful. No snow had as yet fallen much below the forest line, above which the great white domes of Eddy and Shasta rose, the latter the most noble and satisfactory sight imaginable. There was frost at night, and a fire was very comfortable after sunset, but all day everywhere in the streets of the mountain towns, men went to and fro in their shirt sleeves, or worked in the lumber mills. Green grass was springing under the pines and in the meadows, while through innumerable ditches ran the cold snow water from the heights. Such a region of contrast it has seldom been my good fortune to discover.

The Sacramento River heads a little beyond Sissons in a large spring bursting from the mountain side. Among the larger tributaries are the Pitt and the McCloud; and all are fed by the glaciers of Shasta. North again, the Shasta River, rising at the foot of Scott Mountain, flows many a tortuous mile into the Klamath, one of the great rivers of California. The lesser streams are almost countless, and there are a number of mountain lakes, besides lagoons in the larger valleys. All winter wildfowl abound in the region. They frequent the lakes and lagoons, and the meadows in the valleys. The Indians snare them; the pioneers count them a timely addition to the bill of fare, and their numbers do not appear to diminish in the least. Hardly a hunter finds his way to the region in the winter, and it is almost virgin soil in that regard. The manager of a large lumber mill told me that ducks, geese, curlews and other wildfowl in little Shasta Valley "are often too tame and too plenty for real sport." There are no fences for miles. One drives about the rolling foothills, the lava rocks, and the meadow borders, and gets shots every few minutes, either at birds flying over head or by flushing them from the pasturage or the small ponds.

Fly-fishing on the McCloud closes with October. The native fly of the region has a yellow body and brown wings. "Benn's McCloud" is a good one; so is the "golden-brown hackle," the "blue miller," the "royal coachman," and "Benn's orange-gray and brown." The pot-fishermen are guilty of using salmon roe, which every true disciple of the line abominates as nothing less than murder. The rainbow trout (*Salmo iridea*) is most abundant, but the large Dolly Varden trout offer the best sport. Salmon are very plentiful in the season. All along the Upper Sacramento, from Redding north for several hours of travel, the railroad trains pass within casting distance of the beautiful river, and one can see trout from the window of his car, "head on" below the rocks, or moving across the shallows.

The Indians spear them at this season (November) and they are in excellent condition, but in the whole country one cannot find a devotee of the rod; it is the society season in San Francisco, and besides there is a superstition abroad that the weather is too cold up here. The pioneers and the loggers and mountaineers could tell a different story. They love the winter better than any other time of the year.

The large game of this mountain region is very interesting. The Rocky Mountain sheep still live and breed 12,000 or 13,000ft. above the sea on the Shasta crags. Muir speaks of "the cradle of this little mountaineer, aloft in the sky, rocked in the storms, curtained in clouds, sleeping in thin icy air." Another extremely rare animal is the American chamois (*Aplocerus montanus*). The antelope is another, though thirty years ago there were many thousands of them in California. Mr. Sisson, the old pioneer of all this region, says there were a few specimens of a species of polar bear with black heads and snow-white bodies living on Mount Shasta, and there were others that were all white. The pioneers of Siski-

you killed a number of these bears and learned to dread them more than the grizzlies, but it is twenty years since the last one was seen. Elk used to be abundant and there are probably a few left.

The days when deer were shot by the hundred, and wagons loaded with the hides, are gone, and the game laws are reasonably well enforced, but an even closer season is desirable if this region is to maintain its reputation. An effort to pass a stricter law to apply to these northern counties will be made before the next Legislature. The blacktails (*Cervus columbiana*) are the most numerous species of deer in the Siskiyou forests, and any respectable shot can pick up a few. The whitetails (*C. leucurus*) are more difficult to find in this district. The large mule deer (*C. macrotis*) is one of the finest game animals left. Black bears are often seen. The grizzly is less common, but not unattainable to the hunter who is certain that he wants grizzly. The cougar and the lynx complete the list of large game of the Mount Shasta region.

A young Pullman car conductor met on this trip, W. C. Marshall, formerly of Chicago, proved to have had considerable hunting and fishing experience in the Southwest. He thinks that the Gallinas River, New Mexico, some fifteen miles from Las Vegas, is the finest trout stream in the Territory. His last expedition to this district was with J. Winslow Judson, Jr., a railroad director from St. Joseph, Missouri. "We could have caught," he said, "300 mountain trout in half a day; we lived mainly on trout all the time we were there."

In 1885, Marshall and Tom Coulson, a noted hunter from Wichita, Tex., started from Herold, in that State, and went to the "Forks of Pecos River," 150 miles west, on the hills, where the scrub oak of that district grows in great thickets, and in November they are crowded with deer fattening on the acorns. In thirty days they made the trip and returned to Herold with the hams and hides of fifty-four deer. Coming back, they camped a day in a motte, near Herold, and "filled the wagon box of the second wagon" with wild turkeys. One of them carried a Winchester and the other a Marlin.

It is now Marshall's fate to go back and forth across this magnificent game region, and see it in the distance without being able to leave his Pullman. He crosses the Shasta range and the Siskiyou range, and sooner or later sees every sort of wild animal to be found in the district; here a deer drinking at daybreak at a spring, there a bear grubbing roots on a hillside for his breakfast. The thing he seems most to regret is that the train passes for miles so near the Sacramento, that if it were not for the telegraph poles he could cast a fly into a pool now and then from the platform of his car as it slowed up on a difficult grade. He is said to watch the river with longing and loyal eyes from Redding to Upper Soda, and when the salmon begin to go up the Sacramento a straight jacket may become necessary. I tell him that he is being punished a little for his "dried venison Texas trip," which resulted in the death of three times as many deer as he should have been responsible for, and he replies that the California Siskiyous have taught him a lesson.

Apropos of the wisdom of knowing when one has had enough, I have a story to tell. An old Shasta pioneer was going up the mountain with John Muir, and they came on a band of mountain sheep. The settler raised his rifle, but Muir yelled and spoiled his shot. Said the old hunter to me, "Guess Muir knew I had shot one only the night before, and he thought that was enough."

CHARLES HOWARD SHINN.

[The black-headed and black-bodied polar bears must have been creatures of mythology.]

SPORTING IN THE FAR WEST.

Editor Forest and Stream:

In a recent trip to the Pacific coast not a buffalo, elk, deer, mountain sheep, goat, bear, panther, nor lion (except in captivity), not even a prairie hen nor quail (*Ortyx virginianus*) was seen. We regarded this as quite singular since we passed over sections once the home of all these animals. Forty years ago grouse were plentiful, even around Chicago, and we bagged our first prairie chicken (about that time) within the present limits of that city. We had confidently expected to see game in crossing the plains or along the river bottoms, and especially in the Yellowstone Park, where all animals are exceptionally exempt from fear of man. The squirrels and small birds seem to know they are protected by Uncle Sam, and will almost come and take food out of one's hand. But the large animals kept well out of sight. One of the tourists claimed to have seen a deer in the Park, another a mountain sheep near Pueblo, a third a bear in Firehole River. We did see at the Lower Geyser Basin beaver working and feeding on the river. They come out of their house, which looked like a big pile of logs and driftwood, at even tide, swim around, dive and pull up grass and roots, then get upon a low stone and munch as undisturbed as if the dozen pair of tourists' eyes that were fixed upon them were not there. Any one who has seen musquash playing, feeding, building nests, and attending to domestic affairs around in our waters, has seen in miniature the far-famed beaver in his home, for in many of their ways and habits they are almost exactly alike.

Coming out of the Yosemite Valley, near the Grub Gulch silver mine, we saw a real coyote, a mean-looking pirate, every inch the cunning thief he is reputed to be. He fearlessly stood up on the top of a knoll, within easy gunshot, and coolly exhibited himself as the stage stopped; he then trotted on with nonchalance. The leer of those eyes and the smart, erect ears indicated a desire to dine on one of the lambs in a near pasture.

In the same neighborhood we observed several California quail. But their habits are not gamy. They do not lie well to a dog, but run on the ground, hop on to a rock or low spreading tree and run along the branches or step from one to another, acting more like barnyard fowls than wild game. We should think they would afford a sportsman or his dog very little satisfaction. In fact, this was the report of the gunners in that section. Nor do they fail to find the most inaccessible coverts, among chapparal, cactus, manzanito and the meanest tangled vines, rendering pursuit of cripples almost impossible, and even finding dead quail quite difficult. Hard by were two or three mountain quail (*Oreortyx pictus* Baird), but these, too, took to their heels and were instantly out of sight in the thicket. One may occasionally see, in forest ranges, gray and red squirrels. They have in the Park the queerest little striped squirrel with a short tail, and a little darker color than ours, and about half as large as our chipmunk. In fact, the fauna and flora of the Pacific side of the Rockies differ from the Atlantic. For instance, take the bluejay, kingfisher, brant, and most of the woodpeckers. Even the crow, lark and blackbird, so common everywhere, appear different. The crow seems smaller and less enterprising, the lark is also smaller and has a different note, and the blackbird appears like a cross between *ferrugineus* and *quiscalus*, They have many species that we do not, and *vice versa*. The cormorant and the pelican, so common there, are almost unknown here. Gulls are numerous—no pun intended—and seem to differentiate our own, and terns we do not remember having seen. Nor did we see a hawk that looked like a New England species. The swallows, swifts, robins, bluebirds, solitary sandpipers, turtle doves and a few other specimens, if not identical, very much resemble our own. No ruffed grouse nor woodcock in that section. Near the celebrated Ramona ranch we observed a beautiful white heron, and at Buenaventura were flocks of large shore birds, probably curlew, though the distance and motion of the cars rendered it impossible to determine. Everywhere from New Mexico to southern California one sees those filthy, lazy fellows, turkey buzzards, lying almost motionless on outspread wings. It really seems as if they were asleep and had no movement of a pinion for nearly half an hour. Is he inflated with gas? Touch him and see. One experiment will satisfy you. But certainly he is a mascot. Both these and the mockers are identical with those of the Southern Atlantic States. The ground squirrel resembles one of our very fat gray squirrels with a short tail and white ring about his neck, and the little perky prairie dog, so common everywhere in southern California, would deceive almost any one into the belief that he is a mere stub.

One may sit the livelong day at the Cliff House, in San Francisco, and be amused by the sea lions, disporting themselves on the "Seal Rocks." Great monsters they are, the largest ones reported to reach a weight of at least 3,000lbs. It is laughable to see the huge creatures wriggling their way slowly on to the rocks, 30ft. from the water, looking dark brown or seal color as they emerge from the water, but after basking in the sun and becoming dry, assuming a sort of grayish drab. And then the struggle to get back to the water is a queer exhibition of their awkwardness, but they will leap many feet from a precipice to the liquid element. They growl fearfully at each other for place on the rocky islets, and the sound is much like that of a big hog, though they do not seem to bite. Some of them bark like a dog, reminding one of a hound in pursuit of a fox. Mixed up with the seals were immense numbers of cormorants. They are lazy creatures, all they seem to do is to just skip down to the water, dive, bring up a fish and return to their rocky perch and devour it. The sea lions generously concede the right of joint occupany, and the two divergent families get on harmoniously together. The same thing may be seen at Monterey and other places. That the sea lions, cormorants, pelicans, and other predacious species lead such an idle life, is abundant proof of the myriads of small fish inhabiting those waters.

But the fishes of the Pacific differ as widely from the Atlantic as do the other animals. A codfish from the Pacific Coast would hardly be recognized as a congener of the fish at Cape Cod by the same name. And so of the smelt and other species. But we hardly think the Western waters produce as fine fish as the Eastern. They seem to lack that fine flavor, that edible quality that makes the fish of the Atlantic in request all over the world. Baracouda and salmon when fresh and in good condition are very fine, but the mountain trout and other fish do not compare with ours. Most of the mountain streams are fed by melting snow, and this may be less favorable to fine flavor than the pure spring water flowing from hillsides in New England. Nor do the trout of the far West bear the same markings.

We had some trifling experience in trout fishing during our tour—at the Yosemite Valley, Chamber's Creek, Lake Pend d'Oreille and on the Yellowstone River. Our first attempt was in the Yosemite. The valley is some eight miles long by one and a half wide, and is walled in by mountains whose almost perpendicular sides reach an altitude of three to four thousand feet above the valley, or seven to eight thousand above tidewater. Through this valley flows the Merced River, whose source is in the snow-capped mountains that environ it. These elevated streams come rushing along and plunge down into the valley. One, the Yosemite, leaps at a single bound 1,502ft., and the pretty little "Bridal Veil" exhibits a length of 860ft. Great stories were told, for the amusement of tourists, about the size of trout in the Merced, reaching 5 or 6lbs. We had seen some small trout caught in the river, and desired to try our hand at the large ones. On the 29th of May, rambling about the valley, we met a Digger Indian with some thirty small trout on a withe. The Indian is the principal fisherman in that section, and it is from him that the hotels draw their supply. Fishing tackle and bait are not easily obtained. We tried to negotiate with "Lo" for the use of his pole, a mere sapling sprout, 7 or 8ft. long; but "Indian no talk much," and we found it difficult for the "high contracting parties" to arrive at a definite arrangement. Finally it was agreed that a trial should be made. He had no flies, but a few worms, which he carried in a rudely constructed bag made of long grass, through which the worms would crawl as fast or faster than he could use them. A cheap hook and line completed the outfit, and with this simple gear we essayed our first mountain trout. After about a half hour of patient, and at times discouraging, effort, a bit of a "gnaw" was felt. A nervous jerk of the pole—and see the big fellow jumping in the sand on the river's bank. He was immediately released from the hook and taken to the hotel by his captor, washed, weighed, and an accurate sketch made. Over the portrait are these significant words. "Length, 7¾in.; weight, 2½oz." The trout caught at Chamber's Creek, which we should call a small river, twelve miles from Tacoma, Wash., were all small and were at once returned to their native element. These, with the small ones taken in the Yellowstone River, were identical with the one caught in the Yosemite, but the large ones were not.

On our return home over the Rockies via Northern Pacific R. R., we were detained several hours for repairs to a burned trestle near the great Lake Pend d'Oreille. The lake is some sixty miles long by twenty-six miles wide and has the reputation of being well stocked with trout running up to 6 or 8lbs. Our desire to capture one of these large trout became much inflated, and as we had ample time we secured a boatman, boat and tackle, and set out with buoyant heart, thanking our stars that at last fortune had so smiled upon us as to offer this rarest of opportunities. We cast here and there, along the shore, in the cove, around the point, in deep water and shoal water, tried different flies, small fish, grasshopper and frog for lure, but not a rise. It took four hours for our ardor to cool, when a signal from the train summoned our return; we cheerfully responded, leaving our benison for Lake Pend d'Oreille and its big blotched denizens.

Our next and last effort in the way of trout fishing was on the Yellowstone River above the Upper Falls. Most of the streams in the Park are so impregnated with mineral matter as to destroy any fish that might enter there, and the hotels are supplied from the Yellowstone. Through the courtesy of the landlord of the "Norris" we were shown into the ice house where were two large boxes of the beauties from ½ to 1½lbs. On arriving at the Grand Cañon Hotel we at once secured a rod and tackle, with a son of W., of Hyde Park, as a companion, and taking a peep at the Upper Falls, hurried on for a dash at the big trout. Now the goal of our ambition was reached. We should certainly be rewarded for all our toils and disappointments. We made casts at intervals along up river for about two miles, but did not get a rise. Downcast and disappointed we started for the hotel. It was mortifying to be obliged to return "skunked." On the way down river we espied a point of rocks which had escaped observation on the way up. It was getting late and our youthful companion began to clamor for dinner, but generously waited for us to make a last effort to retrieve the day. A few casts were made, and lo! floundering on the greensward in silvery sheen, lies the symmetrical 12½in. beauty. A few more casts and another of 14½in. in length lies a fit companion to the first. Another of 7¾in. is landed, and our joyous steps are quickened for our hotel and dinner.

The next day, July 2, we accompanied the party to the Grand Cañon and Lower Falls, which are among the marvels of this wonderland. The river, which discharges a large volume of water, has cut its way for miles through the soft rock to the Lower Falls, or even to the Upper Falls, leaving cliffs some two thousand feet high. Some parts of the rock formation is much harder than others, and these, having resisted the erosive current, are left in various shapes, some in columns, as if hewn out by human hand, several hundred feet high. On the top of one of these columns a bald eagle had built her nest, just below Prospect Point. Some of the tourists became anxious to see more of our national bird. We screamed; she responded shrilly. Another yell and response, and the majestic creature stood up, spread her huge wings, and from her eyry floated gracefully away up and down the cañon, apparently determined to resist any attack or defend her young to the last extremity. She was soon joined by her consort, who flitted about as if in search of some intruder, and after some twenty minutes, passing up and down the cañon many times, now high, now low, the female, which seemed the larger of the two, hovered over the nest, and finally dropped into it as gently as a snowflake. Everything about the cañon is on such a grand scale that objects look small. While the alar extent of the bald eagle is about eight feet, this one did not appear over one-third that size, but we were five hundred feet above her and probably half to three-quarters of a mile distant. From Inspiration Point, lower down river, another nest was witnessed, that of a golden eagle. On a similar column on Gardner River, as we came out from the Mammoth Hot Springs, we saw still another. Nature seems kindly to have reserved these pyramids for these noble birds. In the afternoon we again tried for large trout without success, except in a single instance. We took several small ones seven or eight inches in length, and of the seven captured three fell to the fly of young Whiting; and we cannot help thinking the small ones are of a different species from the large ones, though the natives persist in calling them all "mountain trout." But the large ones have no lateral red lines, have square tails, and almost entire absence of the black blotches. The small ones seem to be a true rainbow, while the others do not, and the little ones are constantly breaking water at eventide for insects, while the large ones do not seem to feed at top. Large trout are said to be abundant in Yellowstone Lake, some sixteen miles away, but as they are reported at this season of the year to be infested with worms, no one cares to go for them.

We hardly know where the line between the speckled trout of the East and the blotched trout of the West is drawn. We could not say those of the Pacific slope have black spots and those inhabiting the waters that empty into the Atlantic have red spots. The Snake River and the Yellowstone both rise in the immediate vicinity, and the trout of each have the same markings, and yet one empties into the Pacific and the other into the Atlantic via the Gulf of Mexico. In Minneapolis we saw the real speckled trout (*Salmo fontinalis*), which were said to have been taken in Canada.

Buffalo shooting was, no doubt, to the man who could perpetrate such inhuman slaughter, very exciting. The number of animals destroyed about fifteen years ago, in many cases simply for their skins and horns, is truly astonishing. "Col. R. I. Dodge"—we quote from Dafoe in *Pop. Sci. Monthly*—"author of the 'Plains of the Great West,' estimates that in the three years ending with 1874 no less than 5,500,000 buffaloes were slaughtered." Let those, however, who mourn the loss of the rich, light, warm robe when out sleigh-riding on a cold winter day, be consoled by this bit of information, that through the experiments of Mr. C. L. Bedson, near Winnipeg, Manitoba, a better robe has been produced by crossing the buffalo with the Galloway or polled Angus cattle, and that Mr. C. J. Jones, of Garden City, is continuing the work so nobly begun by Mr. Bedson. We trust others may be induced to embark in an enterprise which not only promises financial success, but bridges over the chasm made by the loss of the buffalo. Again, let us consider that the millions of domestic cattle now feeding upon the old buffalo ranges, are worth to a beef-eating community, immeasurably more than the displaced buffaloes. There is undoubtedly a matter of sentiment about these noble animals which prompts a desire for their preservation. The Yellowstone Park is now specially set apart for this and kindred purposes. Still it is found to be very difficult to keep the buffalo on the Park and the poachers off; not generally Indians, but white

renegades. The two troops now stationed there in summer cannot patrol a tract of wilderness 65 miles long by 55 wide, or over 3,000 miles of territory. In winter there seems to be very little protection of any sort to the animals, and it was estimated when we were there this summer that not more than 200 or 300 were resident there. If our Government means to preserve the buffalo and other animals in the Park, so that future generations may look upon them, more stringent measures must be resorted to before it is too late. We see no other way of preventing the animals from getting off the Park and being killed than by running a palisade fence entirely around it. It would cost next to nothing except for labor. There is abundant of the finest timber in the world for such paling right on the ground. The thick growth of pines is perfectly wonderful; not large enough for lumber, but trees from four to eight inches in diameter, about as thick as they can stand, and running up fifty to seventy feet without a limb, except the clump at the top. Let these be cut in poles twelve or fifteen feet long and set close together in the ground, where that can be done, or spiked together with lateral supports. As the trees are cut along the boundary line a road could be cheaply made, so that patrolmen could pass around the Park to guard the property; or tourists that are coming here every year by thousands from all parts of the world to see the marvelous works of nature, could utilize it as a popular driveway. Many species of animals from foreign lands might be introduced, in fact there is hardly a limit to the variety that could be successfully introduced or kept there, and then this country would possess a zoölogical garden as much superior to that of any other country as it is nobler, grander and more prosperous than any other. It would fitly symbolize the progressive spirit of our people. The cost would be comparatively trifling. Is any man's soul so dry that he would not cheerfully pay a contribution of one or two cents for each member of his family to gratify the national pride?

W. Hapgood.

Natural History.

OUT-OF-DOOR PAPERS.

VI.—THE BROOK.

THERE is a brook—a tiny little brook, so small that it might properly be called a brooklet—which trickles down through a hillside orchard so old and mossy and shagbarked that it can scarcely tell itself from the pine grove on the knoll above, and drops musically (the brook now, not the orchard) over stones not thicker than your hand, gurgling with a diminutive murmur suited to its own diminutive size, around clean pebbles, spreading out over sandy shallows as large as your palm, or maybe larger where they are very large, and losing itself in a great forest of forget-me-nots a rod square, until after a quarter-mile of such wandering it gets down to the pond where the great bullfrog lives. It is strange if you never heard of this brook; for a poet lives right beside it, a lady whom you all know, and a novelist, a very famous novelist, whom you all know, too, lives just beyond, and near by a professor whom you all ought to know; but I am not aware that the poet or the novelist or the professor care very much for the little brook, which is left to babble on to its ferns and apple trees and its pines and forget-me-nots.

However, the birds know it, all of them, and trim little sparrows delight to flirt in and out of brush piles on the bank, playing hide-and-go-seek with themselves; warblers beyond number inspect the old apple tree boughs every morning, and great fat robins take the whole stream to bathe in, covering both banks with their motherly wings. There is no danger of the birds forgetting the little brooklet. All winter long in the far South they think of it, and it is the first place they visit in the spring, passing by the pond where the great bullfrog says *per-r-uke* and the middle-sized frogs say *tr-r-ronk*, and the little ones (which the learned professor declares are not frogs at all but toads), being neither wig dealers nor trunk makers, keep up an auction din by proclaiming that their articles are *cheap! cheap!* In the spring the birds fly directly past this Vanity Fair and seek the brooklet cuddled down among the apple trees and pines.

If any one has a mind to wait here, lying at the foot of the big white pine on a bed of brown pine needles, with curtains of low bushes and the sky for a tester—if any one has a mind to lie here all the morning, and can forget that he belongs to a very busy world which is moiling and toiling and hammering its life out half a mile away, he may see wonders. For the little birds, after they have splashed and drunk and drunk and splashed to their hearts' content, grow very tame and come close up to him, so close that he can seen their bright little eyes, the bristles about their tiny bills and their sharp little toenails. Somehow everything about the brooklet is little, just as it should be; and if any one lies down beside it for a time, and doesn't think too hard, he will find himself shrinking, small, smaller, until at last he is about as large as a happy, well-fed baby; and there is no mistake about this, though the professor didn't tell it me.

This may be the reason why the birds are so tame, but whether it is or isn't, they will come to you as you lie there, just as I have told you, a long procession of them. First there is the robin; but he doesn't come very near, for he knows all about you, has seen you down town many's the time, and you can't tell him anything. So after his bath the robin sits on the fence-post and tries to make you believe that the welfare of the world depends on his being in that particular place. But the song thrush and the veery who have not moved in society as much as the robin, show their country breeding by their curiosity, and come and perch on the dry pine limb near by, quite shy and silent unless the veery gives a tender little serenade that seems to come from far, far away. By and by, when you least expect it, there is a soft flutter of brown wings and the large-eyed visitors are off.

Hardly have the thrushes gone before an inquisitive black and yellow warbler in all the bravery of his new spring coat lights on the swaying limb and eyes you with as much self-possession as if you were the intruder, not he—a gay fellow with his striped waistcoat of black and yellow, a regular "blazer," his gray jockey cap, and the black coat which he seems to wear not because of its appropriateness to the rest of the costume but because he has it; shrewd, energetic, and like most nervous people, with a sharp, incisive voice. But the brook, bless you, doesn't mind that at all; it doesn't mind even the chattering red squirrels and the bluejays in the pines with voices as harsh as a rusty gate hinge. The brook keeps on blab, blab, blabbing to itself softly as a baby, not caring whether any one listens to its sweet voice or not. The novelist would tell you that is what makes it so sweet to hear when any one does stop to listen.

But the procession keeps marching along, big birds and little, all busy until the shadow of a hawk's wings frightens them into silence; gay orioles, testy as the Lords Baltimore whose livery they wear, sweeping past with a blaze of black and orange and the snap of wings; droll, big-headed fly-catchers that remind you of a boy you used to go to school with—the same boy whom you could beat seven times running at "four old cat," but who always outwitted you at "tag," the boy that is now a judge in the Supreme Court, while you are—no matter what; gay, little redstarts, so unlike in color that you never imagine they are mates; neat black and white creepers as trim as barbers' poles; grosbeaks with their breasts red as a pelican's in her piety. And how the trees have to be inspected by this keen-eyed crowd! Busy vireos travel along each limb, peering in every crack and warbling snatches from old songs; warblers of all kinds go round and round the branches, heartlessly tearing baby caterpillars out of their silken cradles; woodpeckers inspect the trunks by traveling upward, nuthatches repeat the operation in reverse order, so that, like Jack Spratt and his wife, between them they leave nothing, and brown creepers search the ground over again, following a special direction round and round. What a company there is of them, each seeming to find plenty which the other has left behind, as if worms were a sort of heavenly manna to birds and increased by being fed on. But how do the poor worms manage to live? The professor, if you asked him, would talk to you for an hour about "the survival of the fittest;" but you would best not mention the matter to him, for the birds all believe in "natural selection," and they have an undoubted taste in worms.

There, now, across one of the shallows of the brooklet, walks a water wagtail, walks, not hops, while a chewink and a chipping sparrow sit on the fence to watch the feat and criticise his gait. A kingbird swings in the top of the apple tree; a catbird down in the alder bush is trying to make himself heard; and now, just as you are going off into a drowse and are ready to believe wonders, an animated windmill spins up to you, buzzing as if struck by a "norther." It is only a humming bird come to inspect. He frequents the place, for he knows a spot up the brook where the jewel weed hangs its golden horns among tender leaves, and he was on his way thither. The windmill buzzes off again, but there is no more time to dream by the brooklet; for the world will no longer stay outside the happy valley, and the noon whistles, seconded by a ready response within, urge you to leave the brooklet. But it stays there still, and will be there long after you have ceased to visit it; and so long as it remains hard by the house where the poet lives, near to the novelist and not far from the professor (for it is so very small that it has now and then to remind itself of its own existence by these famous landmarks)—so long as it stays the little birds will seek it early and it will be there, as now, a part of "Paradise" to all who know how to make the best of what this world gives.

Fannie Pearson Hardy.

We are willing to forgive the compositor much—misspellings, abbreviations which we never thought of writing, and a free and easy style of punctuation which puts most of the work on the commas; we will bear in meekness all reasonable objurgations on the subject of poor penmanship; we will even forbear to scold the editor if matters are not borne according to our mind; infallibility is as far from us as from the compositor. But is it not a little too much to be made to say that Polyphemus was "the victim of Woman?" We protest against the use of our name in any such libel on a sex of which we are justly proud, and of which we would say no harm, whatever the room for improvement.

The allusion was to Ulysses's visit to the Cyclops, to whom he gives an assumed name:

> "Cyclops, thou hast asked me my illustrious name.
> No-man is my name, and No-man father, mother and
> All my comrades call me."—(Odyssey IX., 363-366.)

Later, when Ulysses has blinded the Cyclops, the wounded giant calls out to his fellows:

> "No-man is slaying me by craft and not by force,"

who, understanding him to say that no one is troubling him either by craft or by force, reply:

> "If no one harms thee, and thou art alone,
> Reflect there is no way to escape great Jove;
> But pray thou to thy father Neptune."—(410-413.)

But the joke—one of the grimmest in literature—acquires a new and heightened horror by making poor, unoffending Woman the giant killer.

Brewer, Me. Fannie Pearson Hardy.

A Long-Haired Rabbit.—St. Louis, Mo., Dec. 7.—Mr. Fred Hugunine, of this city, the past week received from a friend who resides in the vicinity of Fairfield, Ill., a rabbit which is without doubt a remarkable freak of nature. It is about the size of the common cottontail, but was covered with long hair of a golden yellow color. Mr. Hugunine exhibited the rabbit on 'Change Friday, where it was seen by hundreds of people, and all without a single exception, stated they had never seen anything like it before in their lives. Mr. Hugunine will have the rabbit set up so as to preserve it.—Unser Fritz. [A *Lepus sylvaticus* differing from the one spoken of only in the color of its long hair, which is blue, was brought to this office some years ago, and was at that time noticed in Forest and Stream. It was mounted and is now in this office, where it may be seen by those curious in such matters.]

Snowy Owl in Massachusetts.—Boston, Dec. 4.—On Nov. 15 I shot a fine female snowy owl (*Nyctea nyctea*) on the beach at Scituate, Mass. She was in good condition and in beautiful plumage, with very heavy black bars. Stomach empty save a few partially digested pieces of coarse grass. She was intently watching small birds, enabling me to creep within range. Extent of wings spread five feet.—C. W. C.

Snowy Owl in Connecticut.—Portland, Conn., Dec. 9, 1889.—On the 25th of November a male snowy owl was shot at Westbrook, Conn., and is now in my cabinet.—John H. Sage.

Recent Arrivals at the Philadelphia Zoological Garden.—Purchased—One green monkey (*Cercopithecus callitrichus*), one Rhesus macaque (*Macacus erythræus*), three Campbell's monkeys (*Cercopithecus campbelli*), three white-crowned mangabeys (*Cercocebus æthiops*), two sooty mangabeys (*Cercocebus fuliginosus*), four beaver (*Castor fiber canadensis*), one wildcat (*Lynx rufus*), one short-eared owl (*Brachyotus palustris*), two sparrow hawks (*Falco sparverius*), two royal pythons (*Python regius*), two Fox's snakes (*Coluber vulpinus*), one green snake (*Cyclophis vernalis*), one garter snake (*Eutænia sirtalis*), one brown snake (*Storeria dekayi*), six hog-nosed snakes (*Heterodon platyrhinus*), one corn snake (*Coluber guttatus*), one Osceola's snake (*Osceola elapsoidea*), two pine snakes (*Pityophis melanoleucus*), one Cyclops watersnake (*Tropidonotus cyclopium*), one indigo snake (*Spilotes cærebennus*), four ground rattlesnakes (*Crotalophorus miliarius*), and one American crocodile (*Crocodilus americanus*). Presented—One coyote (*Canis latrans*), one turkey vulture (*Cathartes aura*), one red-tailed buzzard (*Buteo borealis*), one alligator (*Alligator mississippiensis*), one banded rattlesnake (*Crotalus horridus*), two Arizona diamond rattlesnakes (*C. adamanteus atrox*), and one wood frog (*Rana sylvatica*). Born—One leopard (*Felis pardus*), and three king snakes (*Ophibolus getulus*).

Game Bag and Gun.

DUCKS IN GREAT SOUTH BAY.

WE have hunted through forests and have fished fresh water streams, but for all-round pleasure there is nothing that can equal a week spent on board a catboat in the Great South Bay after ducks. And ducks do not seem to decrease in number; we were told last month, by an old bayman, that there were more ducks there this season than he had seen before in years.

For several seasons past we have used the Lilly S., a catboat 24ft. long, owned by Johnny, one of our party, and built just as he wished her to be. She will easily accommodate six. On either side of her cabin are benches, which are not fastened, and so can be picked up and placed outside when we wish to turn in, leaving room on either side of her centerboard for two, with room in the forecastle for two more. There is no waste room on board. Extending fore and aft on each side of her cabin are shelves where we can stow our small duffle, and in her stern are lockers for our guns, etc. In one corner of the cabin is built a three-cornered closet for our dishes and cooking utensils; and opposite is placed a kerosene stove burning four wicks, which is large enough to cook a good square meal. This stove, too, will keep the cabin so warm at night that we do not need many blankets.

What an appetite we build up out here and how sleepy we become. We have to turn out before daylight, for there are so many gunners we have to be early to secure the best points. We have tried battery shooting, but it is such tiresome work that we prefer point shooting. True, we can slaughter more birds from a battery, but we are sportsmen.

Our party this season consisted of Uncle Dan, Ell, Capt. Jack and Doc. Johnny, who was with us last year, is in Texas after quail. We missed the jolly yarns he used to spin after supper, but hope he will more than make up for the loss by relating to us, at some future period, his hunting experiences in the South.

For twenty years Uncle Dan and Ell have spent a week together each fall after ducks, and how they do love to sit and talk of the ducks they bagged, and the bars they ran on to; and to relate anecdotes of baymen who used to take them out—some of them long since gone under.

Our trip this season lasted six days. All through the first five we had fine weather with winds from the northwest; this is bad weather for ducking, as it keeps the birds east. What we want are cloudy days with east winds. Our last day out was of this kind, but it rained so hard we preferred to hug the cabin rather than take our points.

The old bay furnished us with our fresh food. As Ell said, "Boys, we have oysters, we have clams, we have fish and we have eels. What more does a man want?" And as for cooking, in our opinion Uncle Dan's duck stew or Jack's oyster fry cannot be equalled by any French chef.

We bagged about sixty birds during the trip; sheldrake, black duck, broadbill, coot and bitron. We left Freeport at 3 A. M. Monday morning. Arrived off Amityville about 6 A. M. Went immediately to points. Ell and Jack put out stool on south side of Thatch Island, and got nine sheldrake and one bitron. Uncle Dan and Doc rowed over to North Island, and returned after the flight was over with five sheldrake. In the afternoon Ell and Jack poled over the flats in search of oysters, while Uncle Dan and Doc hoisted sail and went flying before the wind over to the beach, two miles away. Here we whiled away the afternoon watching the surf and hunting the sandhills for owls. We did not see any, however. On returning to the Lily just after sundown we found Ell and Jack there with a fine basket of oysters and a black duck, which Jack had shot.

So the week passed only too quickly. The wind was too strong for battery shooting until Friday. Then we heard the guns booming all day to the east, over by Fire Island. Hundreds of ducks must have been shot that day.

Friday afternoon we wended our way westward, spearing a fine basket of eels on the trip, which gave us an eel chowder for supper. That night we anchored off a point at the Jones's Inlet, which is one of the best places to put out stools in the vicinity of Freeport. Here we hoped to get a number of coot in the morning; but when morning came it rained so hard we did not go out. Toward noon the rain moderated and we started for the boat house, arriving in an hour, and the trip was over.

To those sportsmen who have never shot ducks in the Great South Bay, our advice is, try it; there are plenty of boatmen to take you out, and it does not matter where you go, ducks can be found at all points in the bay.

B. L. L.

[By "bitron" does our correspondent mean bittern?]

A Score Near New York.—New York, Dec. 10.—J. and H. von Lengerke killed in five days' hunting, including two rainy days, within fifty miles of the City Hall of New York city, in New Jersey and New York State, this list of game: Fifty-four ruffed grouse, twelve woodcock, eleven quail, ten rabbits, one gray squirrel. What two guns have beaten this within ten years?

GAME PROTECTION IN WYOMING.

Editor Forest and Stream:

I desire to correct beforehand some impressions sportsmen may receive after reading a communication from "W. H. W." in FOREST AND STREAM of Oct. 31, headed "On a Wyoming Ranch." I think, in the first place, there must be a mistake in the date of the letter from Mrs. Frost, as the incidents related in that letter occurred about a year since. I have myself heard that worthy lady tell of the killing of the bear and cubs and I know myself all about that dance, as I have been there myself. I recollect also hearing of the hunt of that "Eastern gentleman," and also recollect hearing that for that or a previous hunt he was arrested by the game constable, taken before a Justice of the Peace, but on promise of not again breaking Wyoming game laws was let off with a gentle reprimand.

The Mr. Frost mentioned by "W. H. W." is one of our worthiest and most law-abiding citizens, who at one time acted as guide to hunting parties. But when told of the strictness of Wyoming game laws, and of the efforts, then for the first time assuming tangible form toward enforcing them, at once gave up his predilections for hunting and became a strong advocate for enforcing them. He is now making money on his road and stock ranch, and I don't believe could be hired as guide for hunting parties where there was the least probability of breaking the game laws.

Wyoming has been for years past apparently at the mercy of the skin and meat hunter and of the so-called sportsmen. It is difficult to say which class have ruthlessly destroyed the most of our big game. From the time of the advent of that English sportsman, Mr. Baillie-Grohman, ten or twelve years ago, who in the columns of the *Field* (London) boasted of having killed 400 head of large game, within the space of a few months, to the present time, this slaughter has been going on. That sportsman (it was said) was driven from the Territory by his indignant countrymen, his steps being followed by an officer of the game laws, but his place was soon taken by so-called sportsmen of lesser caliber of both the foreign and domestic kind, until at this time our large game has been almost completely exterminated. This class of sportsmen embraced all phases of life, lawyers, doctors, politicians, statesmen (not Christian statesmen) and divines, among the latter a noted clergyman of your city.

Even as late as last summer some so-called sportsmen passed in from Rawlings and Lander to the head of Wind River, got among a band of elk, and the result was that they passed out through Lander with the heads of twelve bull elk. If this party killed twelve bulls, how many more elk died from wounds afterward? Doubtless double that number. Unfortunately through the negligence of the sheriff and his deputies this party was not arrested and passed out of the Territory unscathed. Their names are, however, on file, and if the Grand Jury at its next session can bring them back through an indictment, a very strong effort will be made to do so. Next season arrangements will be made to intercept such vandals, either going or coming from their hunting grounds.

The foregoing recapitulation of facts are given in justice to the people of Wyoming to indicate from what causes resulted the present rigid game laws. Since the days of Baillie-Grohman, at each biennial session of the Legislative Assembly the game laws have been made more rigid, until at the present time a non-resident of the Territory can kill game on no account whatever, and a citizen can kill only a limited quantity for purposes of food for himself and family.

Game laws, as with other laws, never enforce themselves; and unless there is a power behind them sufficient to furnish the money to employ officers to see that they are enforced, they generally remain a dead letter on the statute book. So it was found with our game laws. This experience led in this locality to the formation of the North Wyoming Game Protective Association, composed of persons in northern Wyoming who took a decided interest in preserving the big game. For the first two years moral suasion was tried in the shape of proclamations and offers of rewards for violators of the law. This had little effect on what may be called the vandal class of sportsmen or the skin and meat hunters from Montana. As grass and sods had no practical effect, it was determined in the summer of 1888 to try what virtue there was in stones. Funds were raised among those interested, and game constables were employed, whose duties were to patrol the foothills of the mountains and arrest all violators of the game laws whoever they might be, and particular attention was given to that part of the Montana line contiguous to the western edge of the Yellowstone Park, from whence a good deal of game had been killed and taken into Billings and Red Lodge, Montana.

Altogether about half a dozen arrests were made last fall and winter of sportsmen and meat hunters, principally from Montana, some of whom have the reputation of being desperate men, and had made threats that they could not be arrested. The game constable on that part of the line had some reputation himself of "being on the shoot," and had no trouble in bringing them before the justice, one of them being arrested at his camp high up in the mountains. As soon as it was demonstrated that the game law was to be enforced, most of those engaged in its violation skipped across the line. The task was made the easier from the fact that the great majority of the citizens of northern Wyoming were heartily in accord as to game protection, and every instance of its violation was promptly reported.

The effort last winter was so successful that it was resolved to redouble the effort this summer and fall, and accordingly posters were distributed along the Northern Pacific road giving the details of the law and that constables would be on the watch along the northern line in search of violators of the law. Fortunately thus far there has not been a necessity for making arrests, as both sportsmen and hunters from Montana have kept away, and our own people conform to the law and report all violations of it by others.

I have thus given in some detail the result of enforcing the game laws in Wyoming, in the hope that similar efforts will be made elsewhere. You may rely upon it, that unless there is sufficient force in public opinion to employ officers to see that these laws are enforced, they will forever remain a dead letter on the statute book.

The letter of "W. H. W." is misleading in regard to the abundance of large game in northern Wyoming. He who comes to Wyoming expecting to find game anywhere except in the high mountains and among the snow (except antelope and deer at certain times in the late fall) will be very much deceived. Besides, I am sure if any sportsman journeys to Mr. Frost's ranch, in hopes of his assisting them in violating the game laws, they will also be equally disappointed. He would in all likelihood advise them to return the way they came.

Any one deserving the name of sportsman will not knowingly violate the game laws of any locality. Any sportsman who knowingly violates such laws deserves no consideration if arrested, and will not receive it in Wyoming. We have magistrates who will execute all laws whenever instances of their violation are brought to their attention, and in this they will also be backed by public opinion.

The people of Wyoming are becoming very restive under the long-continued and repeated violation of her game laws, as described heretofore. About a year since this took shape in the summary hanging of two hunters for gross outrages on the property of a ranchman who had merely remonstrated with them for breaking the game laws. This was of course all wrong, but here, as elsewhere in almost all the States, a resort will occasionally be made to the "higher law" when the ordinary processes of law fail or are too slow in operation. It is to be hoped the letter of "W. H. W." may not be misleading to other sportsmen in regard to Wyoming game and game laws.

In making my first bow to the readers of FOREST AND STREAM I feel a good deal as the boy did when making his first speech before the public—

Don't view me with a critic's eye,
But pass my imperfections by.

OTTO, Wyoming, Nov. 20. J. Q. A. JONES.

A FIRST BUFFALO HUNT.

IT WAS in 1881. My brother Robert and I started from our ranch in Dakota the first part of December to be absent about two weeks. Our ranch is situated in Lawrence county, close to the Black Hills, just at the foothills of Crow Peak, five miles west of the town of Spearfish. Our neighbors had been out and got a winter's supply of buffalo meat, and we thought we would do the same. We procured two rifles, one a .50-70 Springfield, which was stamped 1864 and was originally a muzzle-loader, usually called a "long Tom." The other was a mate to it in size, age and weight, a Remington. After practicing so that we could hit a box 2ft. square at a hundred yards, we were ready for game. We took three ponies and started. Striking the Little Missouri where it is now called Stoneville in Montana, from there we followed up the river twenty miles, and leaving that we went over the divide and struck Little Powder River. This trip occupied five days, and we traveled twenty-five miles a day. We expected to find game over there and asked a cowman we met on the road if there was any game near by. He said, "No, but you will find plenty up the river forty or fifty miles." We traveled up stream two days and then made camp. We had a good time going out. The weather was fine, and there was plenty of grass for our horses.

We had seen several coyotes, but did not shoot at any or anything. We had a little experience that night which was laughable after it was over, but quite the reverse just at the time. We had found a splendid place to camp, and hauled our wagon up close to a large cottonwood tree, about 40ft. high and 2ft. 6in. diameter and perfectly dry. After unharnessing our horses and picketing them out, we lit a fire close to the tree, so that the smoke would follow up the tree instead of into our eyes, as it had been in the way of doing. We had nearly cooked our supper, when all at once we heard a tremendous roar. Robert looked at me and I at him for a moment without saying a word, and then as the sound seemed overhead we looked up and there was a stream of fire coming out between the main forks of the tree about 25ft. high like a blast furnace. We looked at our campfire and the whole blaze was going into the tree where it had burned a hole into the hollow of the tree. In a few minutes the tree would fall and set the whole prairie on fire, and probably come down on our wagon. It was just the distance off to receive a crushing. My! didn't we fly around. We got in our horses and harnessed them up as quickly as possible and hauled the wagon away, and then picked up most of our camp equipage and grabbed a sack each and ran to the water to get them wet to fight the fire with. The grass was at least 14in. high and as thick and dry as could be. We had no sooner done this than down came the tree right where our wagon had stood; and of all the lively times we ever had it was for the next few minutes that followed. It seemed as though it was impossible for us to stop the flames. They were everywhere at once. If any person could have seen our antics just then without the fire they would have thought we were raving maniacs, more fit for the lunatic asylum than the prairies. However, we conquered it at last and learned a lesson we shall not soon forget.

The next day we went to some hills about two miles from camp and could see any number of buffalo, herd after herd, on the hills and in the valleys. We crawled within 50yds. of a herd of about fifty and commenced shooting at them. They did not know where we were, and all rushed together in one bunch and stood there. We kept on shooting until we had fired from fifteen to twenty cartridges each, and then decided that we must have killed a dozen. We rose up so they could see us; and as soon as they did, they scampered off over the hills. We looked around to see how many dead ones there were, and, lo! not a single one. They had all gone.

We were thunder struck, and could not imagine why we had not killed any. Looking around, Robert spied a lone buffalo down in a low place, and said, "I am going down to see if I can't get that fellow."

Away he went. When he got at about 200yds. from it (he could not get nearer) he shot at it, and in an instant the buffalo took after him. I have seen Robert run before in foot races, but I never saw him throw so much energy into it as he did on this occasion. He fairly flew. He might have touched the ground occasionally; but from where I was I could not swear to it. But he still hung on to the "Long Tom." All at once he came to a ravine or washout that was about 15ft. deep, and the sides were perpendicular. He hesitated a moment, and then glancing around saw that the buffalo was pretty close. (He said afterward he looked like a mountain coming.) He jumped down and sat on the brink, intending to jump over if the buffalo came right up. In the few moments he had to wait for developments, he hastily slipped a cartridge into the chamber of his gun, and prepared to jump or shoot. When the buffalo got up within a few feet of Robert in his mad charge, he must have noticed the ravine, for just as Robert was sliding off, the animal wheeled about and disappeared. Robert caught himself by the grass and drew himself back before he was overbalanced. I asked him afterward why he did not shoot as soon as the buffalo wheeled off; and he said he was perfectly satisfied to have come out of it as he did without any more trouble. What troubled him most afterward was that when he jumped down to a sitting posture on the brink, he landed on a sharp rock, which made it very uncomfortable for him for several days.

We hunted for four days and could not kill a buffalo. Game was very plentiful, and we had no trouble at all to get plenty of shooting. Several times in those four days deer would jump up and run off at a distance of about 100yds. and stand and look at us; but we would not shoot, because we thought if we could not kill a buffalo at 50yds. we could not kill a deer at 100yds.

The next morning as we were trudging to the hills Robert said: "Now, to-day let us both shoot at the same buffalo and see if we cannot kill it." It was not long before we sighted buffalo, and in half an hour we were within 15yds. of a fine cow. We both shot at her simultaneously and saw her fall, and thought we sure had one at last; but she jumped up again and ran off to the main herd about 100yds. away; and there they all stood, about seventy-five of them. We kept firing until we were tired, and finally concluded we had one if not more, so we got up in sight and away they went, every one of them, our cow with the rest. We decided then that our guns were not powerful enough for buffalo and gave it up. The next thing in order was to find a hunters' camp and try to get some meat to haul to Deadwood on shares, that being home and twenty-five miles further. After considerable traveling around we found two hunters encamped and told them what we wanted. One of the hunters said if we would stay with them for a week and help to haul game into camp we could have all the meat we wanted and keep it ourselves; that he didn't want us to haul on shares, and that he was going to Deadwood in that time and would go back with us, so we concluded to do that. One day one of the old hunters said: "Why didn't you kill your own game?" We told him our experience, and he said he had a gun like the Springfield once and he could kill anything with it. He wanted to try it a shot. He shot at a black knot in a tree about 125yds. away, and the bullet came within an inch of the center of it. He said he could not see what was wrong with the gun, and then said: "Maybe you don't hit 'em in the right place." We told him we thought if we hit them at all we ought to kill them. "Oh no," he said. "Now, I'll tell you where to hit 'em." He drew out a rough sketch of a buffalo in the sand with a stick and pointed out the vital spot behind the shoulder; and told us we must take as good aim as if we were shooting at the head of a chicken. This was new to us, and we thought now we could kill a buffalo if we had the chance.

In a day or two we were to start for home, and were very anxious to try our hands once more on a buffalo; but did not get an opportunity until the day came that all were to stay in camp and prepare for the start for home on the morrow. In the morning I looked over the bank close to our tent and saw six buffalo not a mile away. I grabbed the needle gun and a handful of cartridges and struck out to head them off. I soon got ahead of them and awaited their coming. A fine cow took the lead, and as they were walking by me, at about 100yds. away, I took careful aim at the vital spot and pulled trigger. Down she went a dead cow. I soon got another cartridge in the gun; and after they ran about 100yds. they stopped. I hastily took aim and fired at a two-year-old bull, and down he tumbled. Then the other four stampeded toward the hills, and not finding a way clear they turned and came almost direct toward me. I hid behind a big sage bush, and as they rushed by, about 30yds. away, I fired at the leader, a fine heifer three years old. After running about 75yds. she dropped dead and never kicked. By this time the young bull I had shot was up again, and I shot at him twice at 200yds. distance and he fell for good. I was then going to turn loose on the remaining three, and found that I had no ammunition. I sneaked up to camp and told Robert if he wanted some meat to take the gun and some cartridges and go down the creek and shoot some buffalo. He went and I with him to see him shoot. When he got up to about 125yds. he commenced to shoot at them. He killed two with three shots, and the fourth shot wounded the last buffalo, which struck off for the hills and disappeared. It was not yet noon. After dinner we skinned the buffalo, cut off the hams, humps and shoulders, took out their tongues and suet and took it all to camp, and left the carcasses for the coyotes.

The next day we pulled for home. One little accident happened on the road which was annoying. The third day the roads were frozen harder than usual; it had snowed some during the night; and the wagon made a great clatter. The hunter was about 50yds. ahead of us when our horses became frightened at the rattle of the wagon (they were real Indian cayuses) and started to run away. Robert was driving and walking by the side of the wagon. He hung on to the lines, but the ground was slippery and I saw him slide, and then pitch headlong to the ground, and after plowing it a little he stopped. The team went on. They ran up close to the hunters' wagon and wheeled off to the left, when the rim of the front wheel struck inside the rim of the hunters' wagon and in an instant the whole rim (felloes and tire) was completely torn off the hub of their wagon. Every spoke had been broken at the felloe and at the hub, which let the hub down to the ground. Our team circled; and we caught them without further harm. After procuring a pole and tying it up, so that one end dragged like a sled, we continued our journey and came home by way of what is now the town of Sundance, Wyo. We were gone five weeks and one day.

We have been out on several trips since and my last buffalo hunt was a very curious one, with a great many more adventures than the first. We secured fifteen buffalo, four deer, two antelope, several jack rabbits and chicken. The above story is a true one.

JOHN T. LILLY.

CHICAGO AND THE WEST.

BY mere accident I am placed in a position to give the exact facts as to the death of the grizzly bear, old Bob, of which late mention was made in other columns. In the issue of Nov. 28 I stated, for the benefit of Mr. Ames, that Bob broke into a cage where there were other bears, and was killed in the general fight. That was the local paper account of it. It was while talking of something not in the least *apropos* of this subject, the other evening, that my friend, Mr. A. H. Harryman, editor of the *Sanitary News*, of this city, happened to say that he "saw the biggest fight of his life when old Bob was killed, over in Lincoln Park."

"Did you see that?" I asked, and he replied that he did, and to further questioning described the affair as follows:

"I lived near Lincoln Park at that time—the early summer of 1886, I believe it was—and I used to go over every Sunday afternoon to look at the animals. On this afternoon I was standing directly above the bear pit, and I saw the beginning of the fight. Old Bob was lying in his corner of the pit, where he always staid—he was kept in that pit with five or six other bears—and he was quiet and peaceable as he always was. There was a smaller bear, a black, or very dark brown bear, a good, chunky bear, very wide and strong looking, and weighing 600lbs., I should think. This bear was a younger one than Bob, and though not so large, by any means, was an ugly looker. This fellow came out of his hole in the rocks and stood square in front of Bob, and humped up his back and growled out something at Bob. Old Bob raised up on his forefeet and answered. He knew in a minute that he had to fight, right there. Then the little bear said something—I suppose he called Bob a liar—and then with a great roar both bears sprang directly at each other. They caught each other square in the mouth, and you could hear their teeth clash at a great distance off. The polar bears in the next pit quit walking and came up and looked on through the bars. The cinnamon bears in the pit next to that, all climbed up their trees, and there they lay all through the fight, as quiet as mice. They seemed frightened. All over the park, while this fight was going on, the animals were restless and uneasy, and made a great deal of noise. They all seemed to know that something big was happening.

"The bears remained clinched and worrying this way for quite a while. It was strange to see old Bob. He knew very well that he had to husband his strength. He knew he was old, and that this was a fight for his life. He would work himself around, easy like, till he got his hind feet under the other bear, then he would give a raking kick that always lifted the other bear up and made him grunt. If Bob's claws had not been so old and worn he would have ripped his enemy wide open. As it was, you could hear his nails tear down the other bear's ribs and belly till it seemed as if they would disembowel him any way.

"The other bear was a fighter, and he came back at Bob right along. He got Bob by the neck and they clinched again, and he nearly choked Bob to death. While Bob was fairly gasping, with his mouth wide open, the keepers began playing two streams of water on the bears. One of these streams was directed right into Bob's mouth as he lay there. I declare I felt like whipping the keeper who did that. There was a big crowd there by this time, and there wasn't one of the crowd but what wanted to see Bob kill that other bear. Everybody knew Bob and liked him.

"I think the bears fought this way fully an hour, and they couldn't get them separated. At last the little bear, wet but not whipped, drew off and went back into his hole.

"I hung around the pit awhile after that watching poor old Bob. He was bleeding a little on the neck. The other bear did not seem much hurt. Bob's teeth were too worn and old to hurt him. There was quiet for about an hour, and then the other bear came out again, walked over to Bob's corner and called him the same name over again, humping up his back the same way. With another great roar the bears sprang at each other and clinched. They fought savagely this way for three-quarters of an hour, I should think, and then the keepers got them separated again, and each bear retired to his part of the pit again. No attempt was made to put these bears in separate pits. They were left where they were.

"I do not think there was any more fighting that week, but next Sunday, at about the same time, these bears got to fighting again, and kept at it a long time. They got them apart again, but on the next morning, Monday, old Bob was dead in his corner when they went down to the pit. There was a general sadness when this was known, and Bob's murderer was universally hated.

"Old Bob was skinned, and his carcass, after the skin was removed, without disemboweling, weighed 1,600lbs. The skin was mounted.

"It is a mistake to say Bob was killed in a general fight. He was killed by one bear, a smaller one than himself, in a prolonged fight in which no other bear took part, and it was right in the pit where they all lived. Bob was too old to fight. But you could see in the old fellow's eye, as he grappled with his younger adversary, that he wished for but one-tenth of his former strength. And I am sure we all wished he had had it."

Dec. 2.—During a recent visit to Lake Koshkonong, Wisconsin, I had opportunity to learn something of the wild celery which gives that lake such a reputation as a resort for the canvasback duck. In company with Mr. W. Y. Wentworth, superintendent of the Blackhawk Club, and Mr. Duane Starin, perhaps the best-known shooter of that locality, I went out on the lake and was shown how the wild celery seeds are gathered from the bottom of the lake—for that is where they must be gathered, if at all. These gentlemen probably have more practical knowledge of the wild celery plant and its seed than any one else, for they used to sell the seed to parties wishing to plant waters to wild celery. They experimented for themselves and found that the seed taken from the bottom of the lake would grow, and they have heard from successful results from different lots of seed they have shipped to clubs, etc. It is a simple matter to plant the seed, the only thing necessary being to drop the pods at the spot where the celery is wished to grow. The seeds should doubtless be kept wet all the time, as that is their natural condition. In Koshkonong Lake the wild celery grows out of sand, clay, mud, or almost any other kind of bottom, and there is no apparent reason why it should not grow in any shallow water where it was well planted. To head off anybody, however, who may wish to send FOREST AND STREAM or myself, or either of the above-named gentlemen, with letters asking about wild celery seed, I will state plainly that the seed cannot be had at Koshkonong, for the reason that it is too late to get it out of the lake and there is no supply on hand. I have sent in some samples of the seed pods to FOREST AND STREAM, and if there is time to have an engraving made, anxious inquirers can look at the picture, which is about as close as most of them will ever get to this rather rare article of duck furniture.

The scientific description of this plant will be the best premise to this method of gathering the seed, and that is as follows:

"*Valisneria spiralis*—A genus of plant remarkable on account of the very curious manner in which the process of fertilization is effected. A perennial herb bearing a tuft of thin, narrow, green, grasslike leaves. The two sexes are borne on separate plants. The male flowers are extremely minute and sensile, but when mature they become detached and rise to the surface of the water. The female plants, on the other hand, are borne singly on the end of a long, slender, spirally-twisted stalk, uncoils more or less, according to the depth of the water, so as to allow the flower to float on the surface, where it expands and is fertilized by the floating pollen, after which the spiral stem coils up again and conveys the flowers to the bottom of the water."

At the bottom of the water the fertilized seed-pod lies until moisture and decomposition have released the seeds from their covering. At any time before the pods have reached the bottom on their return journey, it is probable they are not fertilized sufficiently for growth. It is on the bottom, therefore, that the celery hunters look for the seed. The only implement they use is a rake with a wooden head about 16in. long, into which are set 10in. teeth of stiff wire, about ¾in. apart. Koshkonong is a shallow lake, hardly more than 6 or 8ft. at its deepest, so that the rake needs not be very long or ponderous.

We rowed out of the mouth of the pretty Rock River, crossed the head of the lake, along where the canvasback blinds are, and in front of the big bluff where "Koshkonong Place" sits looking out over the lake. We fell to raking like toilers of the seas. Three or four ineffectual hauls were made, bringing up moss, pickerel weed, decayed stems and a few young croppies and bullheads, when Mr. Wentworth called my attention to a long, dark, slim-looking affair, tapered at both ends and slightly curved. It was five or six inches long and an eighth of an inch thick, and looked more like a frozen and disgruntled angleworm than anything else.

"There's your celery seed," said he. And in this way, after a half hour of hard work in the icy water—this was Nov. 24—we got half a dozen pods or so, including a good specimen, and several in which the natural decomposition had gone so far as to leave the seeds exposed to view. We then went home, and it appeared to us that the acquisition of wild celery seeds was a very slow and laborious process.

That night we divided a pod into 1in. sections, and counted the number of seeds carried in a 1in. length of the pod. We found that the seeds ran about 60 to the inch, and we figured that from this there must be about 500,000 seeds in a quart jar of the pods. It is very probable that there are normally more than 60 seeds to the inch, as the specimens we counted had already partly opened and perhaps some of the seeds had escaped. The seeds are very minute, slender and pointed. They resemble ant eggs, but are very much smaller and a little darker in color.

From what we saw of the seeds and their great numbers, it would appear that the wild celery is a plant which could easily and abundantly be sown and grown in any shallow waters. I have heard of, and I believe in the mention of the Hennepin Club last winter I described, an attempt to plant the wild celery roots. This attempt was, I believe, unsuccessful. I don't believe it is the natural or rational way to plant wild celery, and I think any one who would tear up the roots of this plant from a water where it was native, would be doing a very unwise, wasteful and foolish thing.

Dec. 3.—Mention has been made several times of "Koshkonong Place," and I shall need to speak of it once or twice again. This pleasant abode is managed and partly owned by Mr. C. E. Gordon, once president of the National Humane Society, a former member of the Audubon Society, and well acquainted with all the men prominent in the latter organization. Mr. Gordon has about him a very choice collection of mounted game birds, and a few rare specimens of other sorts. During our visit there he called our attention to an odd-looking and diminutive bird, whose contour was rather similar to that of the auk, apparently. None of us could identify it.

"It is no wonder that you can not," said Mr. Gordon, "for that is the second bird of its kind ever known in North America, and the only one ever killed in the United States proper. I shot that bird in 1882, in the midst of one of the worst blizzards I ever faced. The canvasbacks were flying splendidly, and I was having grand shooting in my blind. A big canvasback and this little bird dropped in to my decoys together, and I killed them both. I sent the bird on to Dr. Coues. He mentions it as the black-throated guillemot, found once in Alaska, once in Wisconsin. The latter was my specimen. I value this bird rather highly therefore."

Talking of other and allied topics, Mr. Gordon remarked as follows:

"I wish you would ask, in FOREST AND STREAM, whether any one knows of a canvasback duck ever having been killed in Europe at any season of the year; and I would like to know, too, whether anybody knows of an instance of the canvasbacks nesting in any part of North America. I believe the canvasback nests only in Asia, far north in Siberia. It is known to nest there in untold numbers, and in that place it loses all its fear for man, so that it can be approached within a few yards. I should like to know if it nests anywhere else. It seems to me that this bird goes yearly all those thousands of miles north into the circumpolar regions, and yearly returns solely for the benefit of us, the favored people of the earth. When I think of the tremendous flight of this bird, and of its patient though mysterious persistence, I cannot help feeling an added respect and sympathy for it."

Wisconsin has had respect and sympathy enough for this bird and its kin to prohibit its killing in the spring, and to hedge about its killing with all the difficulties possible. I should say that Mr. Gordon has been active always before the Legislature in his efforts for proper game laws. Before the committee he was once reproached by a market-shooter who was present in the interests of butchery.

"Mr. Gordon," said the latter, "what are you driving at anyhow? It looks to me as if you didn't want us to kill any canvasbacks at all!"

"That's precisely it," was the reply. "I don't want you to. Failing of that, I want to see such a law as will make it just as hard as possible to kill a canvasback duck inside the State of Wisconsin; and I only wish we could legislate for the other States also."

Mr. Gordon was formerly a minister of the gospel in an important charge of Milwaukee, and is valued as a forceful speaker. In connection with Mr. Geo. W. Esterly, a prominent citizen of Whitewater, Wis.; Mr. W. Y. Wentworth, game warden for the southeastern district of Wisconsin, and keeper of the Blackhawk Club, and Mr. E. D. Coe, chief clerk of the Wisconsin Assembly, and very probably the next Secretary of State, he has worked hard and given much time to the cause of rational game laws. I should not like to name one of these men before the other in this work, but I believe I am right in saying that the present rigid State laws on duck shooting are due to the efforts of these four men more than to any other cause. They all live near Lake Koshkonong, and much remains to be said about their locality and their work. They are mentioned in this column because each of them loves a live bird more than a dead one.

On Nov. 25 four white swans settled in an open bit of water within 200yds. of the foot of the big bluff. Thousands of bluebills and golden-eyes remained in the open holes. The canvasbacks had all departed on that date.

A great flight of waxwings occurred on Blackhawk Island last year. Last spring thousands of sparrows perished in that neighborhood in a sudden cold wave that caught them.

Dec. 5.—Holzhay, the Gogebic murderer who killed Mr. Fleischbein on the stage coach last summer, has been sent up for life.

Mr. G. O. Shields, of this city, and Fish Commissioner McDonald, of Washington, give a stereopticon lecture before the Fish and Game Club of Louisville, Ky., in a few days, for which extensive preparations have been made.

Mr. C. D. Gammon, Mr. Harry Loveday, Mr. John Grey, Mr. Major and Mr. Nichols start next week for the St. Francis country, Arkansas, after quail, deer and bear, for all of which they are duly loaded.

Weather here at this date is warm and rainy. Our first cold wave is past. No ducks to amount to anything reported as left in this country. There has been no duck shooting here this fall except on Tolleston Marsh, and some of the old shooters sigh and say the flight has gone permanently West. Yet ducks in adjacent bodies of open water have undoubtedly been seen, if not shot, in exceptionally large numbers this fall. Another freak of duck-shooting fortune. E. HOUGH.

NEW YORK ASSOCIATION.

THE Association for the Protection of Fish and Game held its first meeting for the season of 1889-90 at Pinard's Monday evening, Dec. 9.

As it was the first appearance of its president, the Hon. Robt. B. Roosevelt, since his return from Holland, the meeting was, as might have been expected, one of the best-attended and most enthusiastic ever held. After the usual dinner the Association adjourned to the big parlor, where they devoted the evening to the regular business, including the reports of committees and officers, reading communications, etc. Mr. Simeon J. Drake mentioned the fact that Mr. Pond, the game warden having the counties of Essex and Franklin in charge, had been very energetic; and had arrested twenty-three or twenty-four persons, including hotel keepers, visitors and others, for killing deer out of season. Mr. Holberton called the attention of the club to the fact that around the Raquette Lake and Blue Mountain Lake region there were a number of instances of violations of the close season for grouse and deer, also that netting of ducks was going on in the neighborhood of Good Ground, Long Island.

There was some talk of asking the Legislature to prohibit the killing of does in the North Woods at least until Sept. 15, but while they thought such a law wise, the majority were of the opinion that it would be very dangerous to attempt to change the present law, particularly regarding deer, as it had been hard work to get it passed. All needed, it was thought, was to try and have it enforced. All agreed that the season for selling venison in this State should end Dec. 15, and not Nov. 15.

Mr. Imbrie called the attention of the club to the difficulty of understanding the many complex clauses of the game laws and urged the appointment of the commission to codify and arrange them.

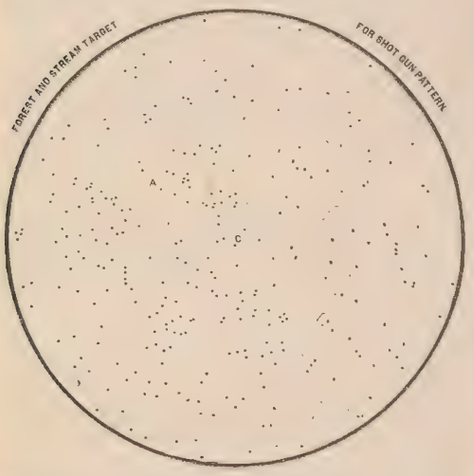
Mr. Blackford, on behalf of the Fish Commission, promised to have the abstract of the game laws ready for the association as soon as the next Legislature adjourned. The club adjourned to meet the second Monday in January, 1890.

GUNS AND GAUGES.

Editor Forest and Stream:

Your correspondent "Cohannet" has undoubtedly made a grand point in reference to light guns with small bores. What is the use of carrying a 9 or 10lb. gun all day, fatiguing yourself, and doing no better work perhaps than with a lighter weapon? The many advantages he names are very evident. As for killing qualities, a 14 or 16-bore will generally do as good shooting as a 12 gauge. According to the tests which FOREST AND STREAM has kindly given, the 16-bore that was tested ranks high both in pattern and penetration.

Early last fall I saw a "water hen" killed at 40yds. with a 16-bore, and a moderate charge of powder and shot; this bird, by the way, is very hard to kill.



The pattern and penetration tests have been interesting and instructive, and would like to see a few more of the smaller gauges tested. E.

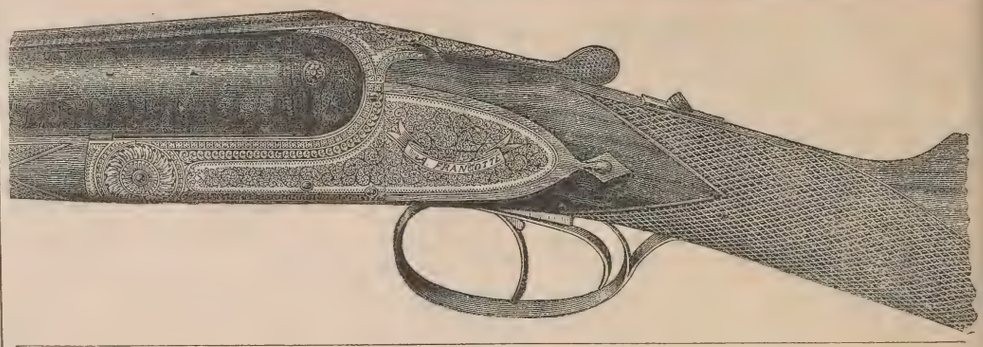
FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

PATTERN AND PENETRATION.

FRANCOTTE 12-GAUGE GUN.

THE gun which was put to test on Nov. 20 was one of a make which has so far been little known on the American market, although it comes from a maker who has a world-wide fame, and whose works at Liege do an immense amount of work of all grades in the gun line. The Francotte gun comes from the shops of Auguste Francotte, and while he makes all sort and manner of arms, in this particular one he has aimed at making the lightest possible weapon, consistent with safety and good execution. A gun running less than 6lbs. in weight would be considered by many shots, especially our Western friends, as nothing more than a toy. How much of a toy this particular feather-weight weapon is a glance at the record will show. The particular arm tested is one

FRANCOTTE GUN, 12-G., 40YDS., RIGHT BARREL, NO. 8 SHOT, 335 PEL.



which had been sent over on a special order, and its cost of $400 is due in no small measure to a display of extra fine engraving upon the lock plate and other exposed parts. Besides, it has an extra set of barrels in which a cylinder and choke are linked together. In the pair tested both barrels were choke. The ordinary price of this arm with a single pair of barrels and with less engraving on the plate is about $110. Von Lengerke & Detmold, the American agents, expect by another season to have a sufficient supply of the new arms to meet the large demand which they confidently expect will spring up as soon as the merits of the dainty little weapon become fully known. "The owner objects to the injury which would result from the use of black powder," said Herr Von Lengerke as he started out with the FOREST AND STREAM man to make the test. So Schultze powder

FRANCOTTE GUN, 12-G., 40YDS., LEFT BARREL, NO. 8 SHOT, 338 PEL.

only was used, but to bring out the full capability of the arm and make a comparative double test, two sets of charges were loaded, one with No. 8 and the other with No. 4 shot. Really it was a test for pattern with one charge and for penetration most particularly with the other. The illustration is taken directly from the arm used in the trial. It has a full ejector device, and when this is omitted the weight of the arm may be reduced. The locking action is very similar to the Greener, with the cross top bolt, and so perfect was the fitting that when shut a pair of microscopic eyes would be necessary to discern the joint at the breech.

The day was not altogether a happy one for a test. Yet with expert Von Lengerke at the firing point manipulating the arm, it is fair to say that the best possible work was done. There was an ugly wind, a gusty one blowing from the 12 o'clock quarter, right up the range from the targets toward the shooter. Now and then a charge of shot seemed to take a drift to one side of the circle aimed at, but in striking the selected circle for best pattern it was not found necessary to shift the center many inches at 40yds.; for instance, with the No. 8 shot the average variation of both barrels for the entire 10 shots was 5in., and with the No. 4 shot it was 4in. with the left and 2⅔in. with the right barrel. That is the distance between the point A, the center of the aimed circle, and C, the center of the selected circle, as shown in the diagram averages as given. At 60yds. the aberration due to wind or personal irregularity was 4½in. for the No. 8 and 8½in for the No. 4 shot, and in not a few instances there was nothing gained in pattern by any shifting of the center of the 30in. circle.

The hard-hitting quality of the arm, especially when taken in connection with its light weight, is deserving of special attention. With the No. 8 shot at 40yds. the penetration was above the average of a dozen previous guns, while with the No. 4 shot the record ran high enough to convince any gunner that a duck would drop if hit at 60yds.; the falling off here was not great enough to call for special comment, or rather, to deserve comment, for the well-sustained average. The gun was shot throughout without cleaning, and the test, judged by our correspondent "Nick's" fashion of reducing results to percentages, shows that with the No. 4 shot the 40yds. record leads the entire procession of guns so far tested, while at 60yds. it held up very well. At a future date another Francotte is promised to be fired with all the varieties of powder, and then we may see the captivating little feather-weight beauty in a new light.

FRANCOTTE GUN, 12-G., 40YDS., RIGHT BARREL, NO. 4 SHOT, 134 PEL.

The formal record of the test shows:

CLAREMONT, N. J., Nov. 20, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Francotte Hammerless Ejector. Cost, $400. No. of gun, 17,910. Weight, 5 15-16lbs. Length of barrels, 27in. Gauge, 12. Right barrel, full choke. Left barrel, full choke.

Weather—Clear. Direction of wind, 12 o'clock. Force of wind, 6 miles per hour. Thermometer, dry, 48°. Do., wet, 45°. Humidity, 79°. Barometer, 29.8in.

Charge, as given by holder of gun:

BOTH BARRELS.

Shell—Von Lengerke & Detmold Metal Lined.
Powder, Brand—Schultze.
Powder, Quantity—2⅞ drs.
Shot—*Make*—LeRoy. *Quantity*—1⅛ oz. *Size*—No. 8 Chilled.

FRANCOTTE GUN, 12-G., 40YDS., LEFT BARREL, NO. 4 SHOT, 116 PEL.

CARTRIDGE ANALYSIS.

Three Cartridges Taken at Random.

Editor Forest and Stream:

In your issue of Dec. 5, while commenting on the results of pattern and penetration trials of Remington gun

you ask how it is that with the use of Schultze powder in this gun one or two patterns dropped considerably below the average of the other shots with same ammunition. I account for these "unaccountables" in this instance as follows:

The gun which made these patterns was bored so large, in common with many American-made guns, that by putting a wad of same size as bore of gun into the barrel daylight could be seen all around the wad throughout the whole length of barrel until the choke was reached. For this reason the 12-bore wads contained in the shells were not enough confinement for a powder burning as cleanly and giving as high initial velocity and pressure as Schultze does. The better and stronger the powder and the cleaner and quicker burning it is the more necessary it is to use large enough and sufficiently good and thick wadding over it to prevent any gases from coming in contact with the charge of shot by burning past or through the wads.

To this same cause I attribute the rather irregular and mediocre results of your trial of wood powder in a Smith gun. It is impossible to load cartridges which will act equally well in all guns. Wadding which will do well in one gun will be worthless in another. Also wadding which will do well with one load and kind of powder will not prevent flukes or occasional open patterns with another powder in the same gun. As you correctly say, "There does indeed exist a perfect load, but it is for each gun only, and it is for each gun holder to work out the effective capabilities of his own weapon."

JUSTUS VON LENGERKE.

RIFLE AND REVOLVER.

Editor Forest and Stream:

My main reliance for a rifle is a Winchester .45-60. Once in a while for a few moments I take it out of its case just to feel it in my grip, to glance through the barrel to see if it is bright and to put it through a dumb show; but during forty-eight to fifty weeks in the year it rests undisturbed in its case. I use the regulation ammunition and never reload a shell, and am not deeply versed in trajectories and the different theories in loading, etc., but with my old Winchester on my arm I feel a deal of confidence and am never tired. With it I have made some good hits (and misses) at long distance, and would rather have a heavier than a lighter arm. I used to take with me to the Maine woods an assortment of guns, consisting, in addition to the aforementioned Winchester, of two Maynard rifle barrels, a .44 and a .22, and a Maynard shot barrel, all fitting into one stock—each an admirable piece and entirely satisfactory in its particular sphere—but of late years I am prone to leave the Maynards in their case and to use the Winchester for everything.

There are seldom enough broad-billed ducks on the inland lakes of Maine to be worth consideration, at least at the time of my autumn trips, and I can kill with the Winchester all the partridges I need for camp use; and for everything else in the way of real game the rifle is the proper weapon. If one is collecting small birds, that is another matter; but if one learns to rely on the rifle alone, he will never be caught with the wrong gun in that particular and unexpected moment which sooner or later comes to every man, when the possession of a repeating rifle will give him noble spoil and memories of triumph, and when the absence of it will leave him lasting regret and chagrin. My guides seem generally to have known little about any heavier rifles than .44cal., and to be perfectly content with them; but are always surprised at the greater power of the larger caliber, and to admit its superiority under certain circumstances. It is interesting to see their surprise at the distance to which it will throw a bullet on a still lake.

One day on Seboois Lake, an Indian summer day in October, a day so beautiful that no words could convey its charm, the sky one absolute sapphire and the surface of the water absolutely motionless, I succeeded in an experiment which I had tried many times before, but in which I had always failed, viz., discharging my rifle into the air and hearing the returning ball strike the water. Sitting in the canoe I held my watch and both guide and I almost held our breaths. We waited long without a sound and had given it up when we distinctly heard the faint "zip" with which the bullet cut the water some distance away. Encouraged we tried again and the interval was between 51 and 52 seconds. How far up into the clear air must have leaped that bit of lead! I suppose the height could be calculated easily enough from the single datum, and wish some of the "trajectory" men with talent in that line would solve the problem and let me know. At the same time I wish they would tell me why the bullet is made of the precise shape it is. What would be the objection to a bullet with perfectly conical point? Is it made blunt that it may spread on meeting resistance and make a more tearing wound? I have repeatedly sharpened a bullet with my knife and found its penetration to be greater (3 or 4in. greater in seasoned timber) than that of the blunt bullet, and that it more nearly retained its shape, while the blunt bullet would spread and make a much more ragged hole.

I am reminded of another question I want to ask about pistol shooting. For my own part, and as far as I ever had anything to do with the pistol, I heartily wish it had never been invented. I believe that for one case where it has served a good man a good turn there have been five hundred where it has done harm, and that it is, generally speaking, a nuisance. There are, however, men who are so expert with it that in their hands it rises into dignity and usefulness. They are usually trappers, who often have to tramp long distances carrying heavy loads of traps or peltries, and who find a rifle-pistol or revolver no trouble to carry and who have learned to make it serve all the purposes of a gun. I know one such man, a handsome young fellow, one of the best shots and canoemen in Maine, a successful hunter and trapper, and whose services as a guide are deservedly in great demand. To him the revolver is rifle and shotgun combined. With this he can "head" a partridge almost every time, and it is his favorite weapon when still-hunting deer. But the peculiarity of his method is that it is two-handed. He grasps the butt with both hands and holds the revolver straight before him, and thus can take the steadiest aim and without the slightest tremor of muscle.

I should be glad to know of others who have tried this method. I never knew of but one other expert with the pistol who used it. He was a Texan, and pistol shooting was his one accomplishment. For a small sum he was always ready to give an exhibition of his skill, and would snip off the heads of chickens at an amazing distance, and seldom made a miss. I am no shot at all with a pistol held in the ordinary way, but with the two-handed method I hit my own visiting card pinned to a tree the first and second time I ever tried it and at a distance at which I would not have been at all sure of hitting the tree by the one-handed method. Let any one make the experiment who has never tried two-handed pistol shooting, and I think I can assure him that he will surprise himself at his success. It will be worth trying once for amusement at any rate.

C. H. AMES.

A FLORIDA SIDE-HUNT.—Marianna, Fla., Nov. 29.—*Editor Forest and Stream:* It was my pleasure to accompany the Jackson County Gun Club on a 24-hours' shoot, ending Thanksgiving Day at noon. The Jackson County Gun Club was made a permanent organization Tuesday, with about thirty members, with G. A. Bozell president, and J. D. Smith secretary and treasurer. The meets are to be every thirty days, open to residents of the State and to visitors, the contest to be in Jackson county fields. On this occasion the club presented a gold medal, which was won by an old hunter here, J. P. Perry, on the killing of a 146lb. deer and twenty-five quail. There were fifteen hunters who left the Chipola Hotel Wednesday at noon, and although they encountered very unfavorable weather, owing to rains and strong winds, they returned Thursday at noon with 155 quail, one deer, one wild turkey, 61 squirrels, 14 doves and 6 rabbits. Aside from this 22 birds were thrown out by referees on account of having been killed on the ground. Other birds and game were killed, but no points were given on them. A Thanksgiving supper, at which the hunters took their lady and gentleman friends, was given by A. J. Sweetser, proprietor of the Chipola, a new, large and well-kept hotel, to whom the game was turned over on the return from the shoot. Toasts and speeches, together with a meeting of the club, were included in the order of the evening. The next hunt will take place Jan. 10, at which sportsmen from everywhere are invited, and may be sure of bagging plenty of game and having a good time.—H. P. HEVENOR.

FOX HUNTING IN THE CITY.—Lockport, N. Y., Dec. 7.—*Editor Forest and Stream:* On Thanksgiving Day John Gooding, of the second ward, shot a fox within the city limits, on the C. L. Hoag Niagara White Grape Vineyard. Mr. Gooding presented his claim for the bounty to Supervisor M. C. Conlin and received an order on the County Treasurer for $3. Reynard probably thought that he could cheat Mr. Hoag out of his Thanksgiving turkey. There are a good many foxes killed in this county on which the bounty is paid. The slayer has only to present and make oath before any Supervisor or Justice of Peace, that on such a day he killed the fox, the officer then mutilating it by cutting off or making a hole through the ear. Some of the orders presented to the County Treasurer are unique as to composition, as the following (neatly written) document will show: "You solemnly swear, that on the 10th day of Nov., 1888, you killed a full grown red fox, so help you God. [Signed,] J. S. H———, Justice of the Peace of the town of C."—J. L. DAVISON.

THE CONNECTICUT ASSOCIATION.

Editor Forest and Stream:

I, as well as Mr. A. C. Collins, noticed the communication of "A." in FOREST AND STREAM of Nov. 14, and I heartily agree with Mr. Collins in all his article of the 5th implies. "A." did not mention the place of his residence, which is, and has been for some time, Brooklyn, N. Y., although he formerly resided in Haddam, this State. I perfectly recall his article of last year referred to by Mr. Collins, in which he stated that in his ride over the Shore Line road he encountered a certain messenger who was the party carrying the 2,500 birds to New Haven that season, and intimating there were many snared birds in the string this messenger had that morning, etc. Now, I am well acquainted with the messenger mentioned (Mr. T., of Clinton), and know him to be a man of integrity, and one who would not knowingly violate the State laws by handling snared birds. He has been on the road in that business for years, and is well and favorably known all along the shore. "A." forgot to mention how he purchased some of Mr. T.'s string of birds to carry out of the State, and also how he wished to sell his dog, etc.

Mr. Collins and his deputies are doing a grand work in this State. Any sportsman who has hunted any section of Middlesex county this fall will agree with me when I say that snares are seldom met with. I myself have hunted from Clinton on the west to Chester on the north during the past fall, and have only run across one snare fence, and this not set. This one was quickly up-rooted by a few "foot ball" strokes of my foot.

In conclusion, we have no "patent coffee mill" in this State, which every spring grinds out a different code of laws for each county, but we have ample laws for the protection of game and fish, and I for one speak from experience when I say they are fully as well enforced as are those in "A.'s" State.

A. W. J.

CENTER BROOK, Middlesex County, Conn.

The Hartford *Telegram-Record* of Dec. 6 reports:

Orrin J. Whiting sent some game [ruffed grouse and quail] from Thompson, Conn., to New York city, which is contrary to law. Game Warden A. C. Collins laid violent hands on that game in the Adams Express Company's office in this city. Yesterday Detective W. C. Fielding, of this city, arrested Whiting and brought him before Justice of the Peace Randolph H. Chandler, of Thompson. Whiting pleaded guilty, and his fine and costs amounted to nearly $60. While the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish of this city occupies this mundane sphere, it behooves game and fish violators to look out. Here is what the New York *World* says of the Association: "Never in the history of the Nutmeg State have the game and fish law violators got such a fearful shaking up as in the past year. The work of the Association is bearing fruit; the illegal shippers, shooters and snarers are awakening to the fact that they 'can't monkey with the buzz-saw' without leaving a finger or two as a pleasant memento of their sport."

The success of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish has been phenomenal, out of thirty-six cases brought into Court they have only lost two. One of these, the famous Simsbury decision, the justice did not agree with the two Supreme Court decisions on the point in question and discharged the party. It may be fair to add that the justice in this case did not know of these decisions or of any other. The other case the justice (a very facetious one) discharged the party because he said "he was in fun" when he offered several snared partridges for sale. "Mark Twain" had better hang his laurels on a tall sapling when in the vicinity of Kent, Conn.

Book buyers are reminded of the crowding of the mails as Christmas approaches, and are urged to send in their orders to the Forest and Stream Publishing Co. in season to prevent vexatious delays and disappointments.

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this coming winter will find it to their advantage to inspect the superior tackle for tarpon and other fishes, manufactured by Thomas J. Conroy, 65 Fulton street, New York.—*Adv.*

Sea and River Fishing.

THE MATERIAL BENEFITS OF FISH PROTECTION.

THE sole aim of the organizers of the Anglers' Association of the St. Lawrence River in 1883 was the preservation, protection and perpetuation of game fishing in the St. Lawrence River. Probably no one of the persons active in its organization had any other idea in view; but they builded better than they knew.

At the time matters on the St. Lawrence River were at a standstill; there were very few persons going there for the sake of the fishing for the simple reason that, owing to the activity of the netters, it had been almost destroyed. But a small number of the islands had cottages built upon them. There were a few people who passed down the river on tourists' tickets from Niagara Falls to Montreal, but there were no inducements for them to stop over on the way. Some of the anglers who had resorted to the river for many years for fishing still continued their yearly visits. The organization of the Anglers' Association created a sort of excitement in reference to the possibilities to be accomplished by it, so that its members lived for two or three years upon faith, believing that the efforts of the Association in ridding the river of netters would very soon have its effect in much better fishing. Its members continued to visit the river year after year and to induce their friends to do the same. The results of the exertions of the Anglers' Association are now known to every one who is interested, and its efforts in ridding the river of fish netters have been attended with so great success that it is now possible, and has been for the last three years, for any angler to obtain all the game fish he desires. The object of the organization of the Association has thus been effected, in part by increasing the supply of game fish in the river, and in part by ridding the river of the fish pirates. Its efforts in preventing net fishing will not be slackened, but will, on the contrary, be increased.

The material benefits which have come from the efforts of the Anglers' Association of the St. Lawrence River have been entirely unexpected, but they are, however, no less welcome. As an object lesson which should be carefully read, marked and inwardly digested, the following facts are given, showing the material benefits which have come to Jefferson county from the Anglers' Association of the St. Lawrence River.

Jefferson county, the county lying along the St. Lawrence River, from Cape Vincent to Alexandria Bay, a distance say of fifteen miles, embracing the celebrated Thousand Islands, is naturally one of the most attractive regions in the county for the tourist and sportsman. Its exquisite river scenery, its banks and islands and its delightful air leave nothing to be desired—if the fishing is good.

There were in 1889 about 600 persons employed as oarsmen on the river: in 1883 there were perhaps 100. In 1886 there were about 250 employed in connection with steam and other boats; in 1883 there may have been thirty. There were last summer thirty-six hotels capable of accommodating 4,000 people. Six years ago the hotels could accommodate scarcely 1,000 people. Besides these there are now thirty boarding houses, with a capacity of 500 guests; there are between 600 and 700 cottages used exclusively by summer residents. From $1,000,000 to $1,250,000 was spent on the river last summer by tourists, exclusive of railroad fares. A large and increasing business has also grown up in building steam yachts and the celebrated St. Lawrence skiffs.

The total tax assessed against the town of Alexandria (the central point on the river) was $10,906.97, of which $2,351.28 was paid by summer property holders. In other words, nearly 22 per cent. of the taxes of the town of Alexandria was paid by summer property owners. The assessed value of summer hotels and island property in the town of Alexandria in 1888 was $256,000, the basis of assessment being one-third of the actual value, while the total amount assessed was $1,218,029.

Here then is a veritable gold mine lying at the feet of Jefferson county by which every resident of the county is benefited either by a reduction in his taxes, by being given employment, or in his business. The population of Jefferson county is 66,000, every one of whom is constantly being benefited by the Anglers' Association. That is one side of the question. The other is this: there were during the netting season of 1888 about sixty or seventy persons engaged in illegal net fishing within the limits of the county, and of this number more than one-half were non-residents. When it is borne in mind that these net fishers do not make nearly as much if allowed to carry on their netting as ordinary farm workers, it will at once be apparent that Jefferson county could, as a business speculation, afford to hire and pay them a fair salary to remain perfectly idle, and to pension them in their old age.

Would the property owners of Saratoga consent that their celebrated mineral springs should be ruined if it could be shown that half a hundred men would gain a precarious living thereby? Should the taxpayers allow the prosperity of an entire county to be jeopardized by the unlawful pursuits of a score or two of men? Emphatically, no.

The Anglers' Association does not propose to give up the fight in which it has been engaged during the last five or six years, and the ringing letter of Mr. H. H. Warner in accepting the presidency of the Association at the last annual meeting is a reflection of the feeling of all of its members.

The organization of fish protection associations accomplishes three distinct things: protects the fish, furnishes the people with cheap fish food, and last, but not least, is of enormous material benefit to the surrounding country.

NEW YORK, Dec. 6. H. S. CHANDLER.

NATIONAL ROD AND REEL ASSOCIATION.—New York, Dec. 8.—*Editor Forest and Stream:* The National Rod and Reel Association will hold their annual meeting for the election of officers, etc., on Saturday, Dec. 14, at 2 P. M., at the laboratory of Mr. E. G. Blackford, Fulton Market. Business of importance will be transacted, and a full attendance of members desired.—G. POEY, Sec'y.

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st. Boston, or 199 Fulton st., N. Y.—*Adv.*

AN OPEN LETTER.

C. H. Ames, Esq.:

DEAR SIR—Through the kindness of an angling friend, I now and then see a copy of FOREST AND STREAM, which I greatly enjoy in my retired home. But in the issue of Nov. 21 I was painfully shocked to come upon the severe, and, I think I may add totally unfounded, strictures which you pass upon the family to which I have the honor to belong. In their behalf, and "By Way of Protest," I respectfully address you this open remonstrance. I might, it is true, have communicated with you privately, but as your aspersions were made publicly, it is not out of place, I think, to choose the same vehicle of reply.

You say "he" (referring to our family in general) "is no friend of mine," "is only better than a pickerel," and you call us "coarse" and "beastly."

As to the first charge, it is a matter which I, for one, greatly regret and deplore, but which, I can assure you, is no fault of ours. Though we are personally unacquainted, yet I have heard of you often, and more particularly from a certain young relative of mine, who once, in the heedlessness of youth, mistook an invitation addressed by you to Salmo Fontinalis, as meant for himself, and to this day he is never tired of extolling the gentle courtesy with which you received the unbidden guest, the tenderness which you showed in endeavoring not to inflict unnecessary pain while rescuing him from the false position in which he had placed himself, the patience which enabled you to bear undisturbed his petulant "kicking" when he discovered his mistake, and the pains you took to restore him safely to the school of which he was a member. In short, I am well acquainted with your reputation as a genuine angler, which I have found to include most of the virtues and few of the vices which are the lot of humanity, and knowing you to be such, I express the sentiment of all the connection, in regretting the lack of personal friendship between us. So you are wrong in saying, "he is no friend of mine." Had you written, "I am no friend to him," your meaning would doubtless have been more clearly expressed, since, on our side of the house, there are none but friendly feelings toward you, and, as I have already intimated, it is a matter of genuine regret with us, that those feelings are not reciprocated.

But to your second charge—"only better than a Pickerel!" My dear sir, what have we ever done to you that you should rank us thus low in the scale of animated nature? I appeal to all who know both families, if the charge is not totally unfounded and unjust? There never was a Pickerel yet who was not a tyrant, a bully, a coward and a thief—qualities which no one has ever imputed to us. Do not Jordan, Garlick, Thad Norris, Dr. Henshall, "Kingfisher," "Wawayanda" and a host of others bear witness to our conjugal fidelity, our zeal and assiduity as parents, our pluck and gameness, and our fair, equal, straight-forward style of fighting? Did you ever know a Bass to "sulk," as every Pickerel will, and even as royalty, in the person of Salmo Salar himself, sometimes does? Did you ever know a bass to yield himself abjectly at the first prick of the steel, and then, when he thought his captor's attention was momentarily diverted, meanly endeavor to escape, as a craven Pickerel will? "Only better than a Pickerel!" That misbegotten progeny of a water snake and an alligator, that slimy, speckled, slab-sided cousin of the shark, and foster brother of the eel! Take back the charge, my dear sir, and acknowledge that you spoke in haste, as did David, after he had been listening to the tales of some members of the "Galilee and Gennesaret Fishing Club."

You say we are "coarse." If by this you refer to our looks, I will admit that we have not the personal comeliness of the Salmo family, and yet—with modesty let me say it—there have been some good judges, such as Maurice Thompson, Myron Read, Jay Beebe and others, who have not found us wanting in elements of beauty. After all, it is simply a question of taste, as to whether one prefers the slimness of shape and the pink and gold prettiness of the Salmo family or the greater *embonpoint* and the green and bronze blazonry of the Basses.

But if "coarse" refers to our manners or customs, I respectfully, but firmly, deny the allegation, and defy the alligator. That our tastes are refined can be proven by the care which you and your brother anglers exercise in finding suitable viands to set before us whenever, in homely phrase, you ask us "to take a bite" with you. You acknowledge we are cleanly, else why be so careful that the meats—whether minnow, frog, grasshopper or cricket—shall not be tainted with even a suspicion of staleness. You recognize our fastidiousness, else why the great variety you so generously provide to tempt our appetite, ransacking earth and air and water for tid-bits to tempt our appetite—offering us May-flies in August and soft (rubber) crayfish in October? You realize that we are æsthetic, else why the splendors of the scarlet-ibis, the royal-coachman, the Seth-Green, the Cheney, the oriole and others?

Again, if by "coarse" you refer to our gastronomic qualities, may I ask if you ever tried one of us, fresh from cool water, with the accompaniments of a bed of glowing hard wood coals, a clean gridiron, a hot plate, and a dash of lemon juice? Have you not perhaps maltreated us by allowing us to die slowly in the bottom of a boat, kicked around for hours in the hot sun, and then, when our subtle evanescent flavor had all exhaled, added insult to injury, by simmering our poor remains in a greasy skillet, with—I shudder to mention it—more or less lukewarm malodorous bacon fat?

Lastly, you call us "beastly." The only beast with whom we are acquainted is the one you skinned in that self-same article, the bass hog, and you certainly can not mean that we resemble him. That would be "the most unkindest cut of all," and I cannot think you would be so cruel as to bring such a heavy charge as that against us.

May it not be, my friend, that your acquaintance with us has been confined mostly to that branch of the family who reside in the South, especially Florida, and whom the hot sun and sluggish waters of that country have caused to deteriorate from the normal type? Sure am I, that if you will visit certain localities I could name, such as Lost Lake in Minnesota, the North Fork in Ohio, or Metawasset in Canada, you would find there certain relatives of mine, whose pluck and vigor would fill your soul with delight, and as you saw their bronze armor glittering in the air, as the silvery drops fell from their sides like a shower of pearls, or as you took breath after the last fierce rally and relaxed the tension of your aching rod arm, you would frankly acknowledge, in the words of the great historiographer of our family, Dr. Henshall, to whom I lift my operculum in friendly greeting, that "inch for inch, and pound for pound, the Black Bass is the peer of any fish that swims."

With assurances of the highest respect and esteem, and the hope that I have disabused your mind of some erroneous impressions concerning a family who would feel themselves honored by the friendship of so genuine an angler and so worthy a gentleman,

I am,

Yours very truly,

MICROPTERUS DOLOMIEU.

P. S.—My present address is The Riffles, Crystal Brook county, State of Coldwater, where, if you are pleased to drop me a line, I shall be glad to give it my prompt attention.

TROUT AND GAME IN WEST VIRGINIA.

WE are indebted to Mr. Jones, of New York, for recent and valuable information about the fish and game of one of the wildest and most picturesque regions within our borders. Mr. Jones penetrated the wilderness on business connected with the utilization of the forests, and came away at the close of his mission with the most lively impressions also of the glories of the mountain streams. He found brook trout unusually abundant and easily caught in Gandy Creek, a tributary of Dry Fork, which empties into Cheat River, in Randolph county, West Virgina. The nearest railroad station is Hendricks, on the West Virginia Central, and this is forty miles distant from the lumber camp on Gandy Creek. Wagons and horses are to be had at Hendricks. Horses are usually hired by the initiated for $3.50 per week.

The Randolph (W. Va.) Boom Company own the Anderson tract, comprising about 60,000 acres of unbroken forest, and this tract contains many things calculated to arouse the enthusiasm of the sportsman and the student of animated nature. We are assured that gentlemen who brave the fatigue of the tramp through the wilderness will meet a hearty welcome at the camp of the company above mentioned.

Gandy Creek, at the ordinary stage of the water, is about 40ft. wide and 2½ft. deep. It is about thirty miles from the lumber camp to the source of the stream. The creek is very crooked and moderately rapid. The bottom is made up of slate, boulders and sand. Wading is everywhere easy. The largest brook trout caught by Mr. Jones were 13in. long, and he never failed to get at least one about a foot long every time he went fishing. The average size of the trout, however, was 6 to 8in. Artificial flies of various kinds were tried faithfully, but without success. These trout crave worms, and will touch nothing else, unless the angler's experience differs altogether from that of our informant.

Brook trout are not the only attraction in the Gandy Creek Valley. Wild turkey, bear, deer and ruffed grouse abound here. By traveling a half mile from the lumber camp, the sportsman can reach open country, suitable for grazing and overrun with quail. Raccoons are very plentiful. The people are peculiar and interesting to the ethnologist.

In order to reach the camp one must penetrate nearly ten miles of unbroken forest. Spruce is the prevailing timber associated with hemlock, white pine, beech, ash, walnut and wild cherry. The last grows so large that certain trees cannot be encircled by three men with their hands joined.

The Dry Fork contains a fish locally known as "salmon." The species grows to a length of from 12 to 20in. and is caught plentifully at the dams below Hendricks. We suppose this fish to be the wall-eyed pike (*Stizostedium vitreum*).

Mr. Jones is very much in love with the fine scenery of this locality, and we are prepared, from personal acquaintance with similar mountainous portions of West Virginia, to fully appreciate his enthusiasm. We spend a lot of money and waste a deal of time, in attempting to reach remote localities with far less of interest to recommend them, than this wild region in West Virginia, so near at hand, so beautiful to look upon, and so full of creatures dear to the heart of the lover of nature. Besides the animals we have named, there is a great wealth of birds of beautiful plumage. Thousands of acres of deadened trees near the camp attract an endless number and variety of woodpeckers and other birds. There must be, also, many species of beetles and butterflies. A few gentlemen from Pittsburg visit this angler's paradise, but there is room for many more and we trust that the fame of Gandy Creek will go abroad.

BLACK BASS IN BAKER'S POND.

BAKER'S POND, in the vicinity of Wellesley, Mass., is a favorite body of water for anglers, although its bass for the most part are unusually small. Some of us who are interested in the fishing, have introduced full grown shiners, hoping that they will multiply and improve the size of the black bass. One day last fall, in company with a friend, I tried the water in several parts of the pond and caught next to nothing. Finally we started homeward and arrived at a shallow place where the water was about 2ft. deep and full of weeds, lily pads and sunken trees. In sheer desperation I cast in with a live frog, not expecting to get a strike. The bait had scarcely touched the water, when a bass took it and I landed him. My companion had the same experience. In a very brief time we caught seven bass of fair size, weighing from 1lb. to 1¾lbs., after which we could get no more and our success elsewhere during the day was not worth mentioning. I discovered by a mere chance, that there were bass in the deeper water near our shallow fishing spot. Upon throwing out a live frog it disappeared very suddenly after a few lively struggles. We then made preparations for casting in a rather primitive fashion, made necessary by circumstances. The line was extenned to its full length on the grass behind us, and we then threw the frogs as far out as possible. The bait was hooked through the body under the backbone. The frogs never remained long kicking in the water, before they were in the jaws of the bass. These fish seem to run into shallow places of the kind described, in small schools, and at certain times they will bite until the last one is hooked. My brother caught 13 one day in a brief time, in a locality such as I have mentioned.

WASHINGTON, D. C. S. F. DENTON.

ANGLING NOTES.

MR. J. C. HERBERT, of New York city, an enthusiastic fly-fisherman, and well known to anglers who frequent the Chateaugay Lakes, has just returned from a trip to the Pacific coast. Though on business, he managed to put in a few days with the trout and salmon in the waters near Seattle.

He relates that while stopping at a ranch some sixty miles up the Snoqualmie River, he had a little spare time and made up his mind to try the fishing, though assured it was too late to use the fly. An Indian was called in who was supposed to be an authority and questioned as to the chances. George replied with a shake of his head, "Him too late; may be you try salmon egg, you catch him."

"But, George, if they will take salmon spawn, why not flies?"

With a discouraging shake of the head the Siwash only answered, "Well, you try him." So they did. George led the way to a dilapidated wet and muddy dugout, which he called his canoe. Mr. Herbert had to seat himself on the bottom of the boat near the bow (there were no seats), while a young friend, who wished to see the fun, took his position in the center. At first they did not meet with much success, but after a while the Siwash suggested casting inshore instead of in the deep pools, and almost immediately he hooked a trout which was soon killed. He caught quite a number, and was about to quit well satisfied, when a big one took the hand fly. Mr. Herbert says he has taken very many trout, but he never saw such antics before, jumping, running, sulking and every other trick to get rid of the fly were tried in quick succession. After half an hour's fight the Indian put him ashore on a sandbar, where he thought he could land the fish, for he had no net. He handed his rod to his friend, thinking to wade in and throw the fish on the beach, but no sooner had he taken a step into the water than away started the trout with 100ft. of line, to go through the whole performance again. Finally George threw the fish ashore, using his broad-brimmed cowboy hat as a scoop, and killed him, Siwash fashion, by pounding his head with a stone.

It was a superb specimen of the black-spotted trout (*Salmo purpuratus*), measuring 22in. in length, and when weighed several hours later turned the scales at 4¼lbs. The fly was a coachman dressed on a No. 6 sproat. George said, "Him much big," and at the ranch they told him it was the largest specimen they had ever seen taken out of the river.

Mr. Clarence M. Roof, of this city, who owns several miles of the west branch of the Neversink, states that while visiting his stream this summer he saw a salmon that was certainly over 24in. long. He learned upon investigation that some eight or ten years ago the Fish Commission had placed salmon in the Delaware River, but that this was the second instance only of one being seen in the Neversink.

A gentleman recently returning from the West over the Northern Pacific Railroad, was told by a fellow passenger that last season, while fishing on the Columbia River, he had the good fortune to kill several California salmon on the fly one afternoon. This was the only time during an experience of several seasons that he had been successful in taking salmon with the artificial fly, though he had tried time and again.

SMELTS AT PLYMOUTH.

ONE noon I found myself in old Plymouth, Mass. I always make it a point to find out about the fishing when I am in a fish country, and I soon learned that smelts were very plenty. Business would keep me in Plymouth until Monday noon, so I determined to have a "good square meal" of fresh fried fish. For a fellow that knows how fresh fish taste, the article under that name found in the markets has no charms. I had no time to fish, so the only tackle I took was my pocket-book.

The first fisherman I came to was a very diminutive gentleman of color. I could not understand why he caught his hook on the logs under the wharf at every cast, until I looked over and saw that it was his ambition to hook on to a tin can lodged there. I walked to the end of the wharf where some boys were fishing; but they were not catching anything. I was about to turn away, when a boy in a dory laid down his rod to bail his boat. Now, I thought, he will have a bite if there is a fish in the harbor. Sure enough, no sooner had he dipped up his first bailer full than down went his tip. He grabbed his rod and pulled in a smelt about three inches long. I waited until I was satisfied that this was the only fish in the harbor, and then walked away. This day, for some reason, was an off day for the smelt, so I had to content myself with stories about them. A man who runs a fish market told me he had done a rushing business until people had learned that in each smelt was a worm about an inch long.

People tell me that every night after half past six the wharves are crowded with men and boys, fishing, everybody catching all they wanted. A gentleman caught a smelt 13in. long, and thinking he had beat the record, offered $5 for one that would measure 14in. This fish was caught and the gentleman offered $10 for one 15in. long. One this length was taken; and I could not learn that the gentleman had offered any more prizes.

BROCKTON, Mass., Nov. 19. DARBY.

BRASS FERULES.

Editor Forest and Stream:

Some time ago one of your correspondents, in giving advice about the loosening of fishing rod ferules, made the curious statement that if a piece of brass be heated and at once plunged into cold water it would become hardened after the manner of steel treated in the same way. I have been waiting for somebody (including the editor) to contradict such a very simply absurd assertion. As a matter of fact a hot piece of brass plunged into cold water at once becomes softer than copper. Inclosed herewith you will find some brass wire that I have just treated to your correspondent's "hardening" process on one-half its length. You can test the matter with your finger and thumb. After doing so heat the hard end red hot on a gas jet, then plunge it in a glass of water and note the result. THOMAS CLAPHAM.

ROSLYN, Dec. 6.

THE EUTOPIA AND TROUT LAKE FISH AND GAME ASSOCIATION was organized in June, and has secured one of the best fishing privileges in New Brunswick. Lake Eutopia, about six miles long, near the village of St. George, N. B., besides being famous for its trout, is one of the most beautiful lakes in the Province. During the last season a club house was erected on the "Bluffs," a high point overlooking the lake, which commands a most charming view. Mr. Handren, president of the club, erected a mammoth tent, where he remained during August with his family, and other members and visitors availed themselves of his generous hospitality, and several remained during September. Besides others, Dr. Vosburgh, Vice-President, and daughter; Mr. Barclay, Treasurer; Dr. Tucker, Dr. Cameron, Mr. Taintor, Mr. Bigelow, Mr. O'Thayne, Mr. Clark, Mr. Marsh, and Mr. and Mrs. Street visited the grounds, and were charmed with the place. Miss Vosburgh distinguished herself with the gun as well as the rod. She shot eight partridges within a few yards of the club house. The property of the club covers about a thousand acres, and includes a stream which connects Eutopia with Trout Lake. Few trout weighing less than two pounds are taken in those waters. Dr. Vosburgh and Dr. Tucker were so favorably impressed with the climate and scenery that they purchased several acres adjoining the club property, and intend to build summer cottages. There are already about fifty members on the list. Gentlemen desirous of joining the club may get further information from the secretary, Mr. T. McGrath, Equitable Building, N. Y.

Fisheulture.

MISSOURI FISH COMMISSION WORK.

ABOUT ten days ago the work of draining the fish-breeding ponds in Forest Park, this city, which are under the personal supervision of resident Fish Commissioner Capt. H. C. West, has been completed, the fish all separated, and the superintendent is ready to distribute a large number of young fish to residents of this State for stocking private ponds. German carp, croppie and bass are the species propagated by its Commission. Of the three kinds, the German carp has been much the most successful, and the croppie come next, with the bass bringing up the rear. As near as could be ascertained from Superintendent Chaplin, the number which the Commission has for distribution is as follows: German carp, 200,000; croppie, 125,000; bass, 75,000. These are now all in separate shallow ponds, where they can be easily taken when wanted for parties who wish to obtain them. The stock fish have all been placed in deep ponds for the winter season. Among the stock carp there are several which are quite large, weighing in the neighborhood of 20lbs. Of the stock bass there is not one that will weigh over 6lbs., while the largest croppie will not exceed 1½lbs. Considering the number of ponds which the Commission has, this season has been a most successful and entirely satisfactory one. UNSER FRITZ.

ST. LOUIS, Mo., Nov. 30.

FISHCULTURE IN WYOMING.—It is understood that Fish Commissioner Lou Miller, of Laramie, Wyo., has drawn up the plans and specifications for enlarging the fish hatchery. The land has been purchased and the appropriation of $2,000 for that purpose is now available. The proposed addition will increase the producing capacity threefold. Wyoming Territory has with but small appropriations made a great start in fishculture, and promises to make a thorough success of it.

OPPOSITION TO GILL-NETS.—Gill-net fishing for mackerel is arousing public opposition on Prince Edward Island, and meetings have recently been held to memorialize Parliament in behalf of legislation, prohibiting this method of fishing.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 9 to 14.—Fourth annual show Northern Illinois Poultry and Pet Stock Association, Rockford, Ill. John Teague, Secretary.

Jan. 6 to 11, 1890.—Annual Dog Show of the Michigan State Poultry and Pet Stock Association, at Bay City, Mich. W. F. Brace, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer Superintendent.

Feb. 19 to 22, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

CENTRAL FIELD TRIALS.

THE inaugural meeting of the Central Field Trial Club began on Monday, Dec. 2, at Lexington, N. C. The weather was all that could be desired by the sportsmen, although it was hard to find birds in the morning, as there was a heavy frost and they did not move much, but toward evening they came out on the stubble fields and were found in abundance. The grounds worked over were very similar to those at High Point, except that there were not so many dense thickets here; the briers, however, are just as thorny and a trifle more plentiful. We are assured that much of the remaining ground is vastly superior in character to that on which the Derby was begun. Birds were in abundance, in fact there are too many, as in order to thoroughly test the merits of the dogs it is absolutely necessary to see them at work where they must get out and search for game instead of being put down right in its vicinity when a few strides will take them up to a bevy. It is certain that the old order of things is doomed and that "points will count" will perhaps never again be the watchword at any field trial of importance. The natural ability and bird sense of our hunting dogs is what we all wish to bring out, and we are far from pursuing the right course when we take them up to the birds and teach them to hustle for points instead of learning them to search for their game in a workmanlike manner over a country where there is at least some difficulty in finding it.

THE DERBY.

The Setter Derby was the first event on the card. There were 42 nominations, 8 of which filled. They were drawn to run as follows:

ROD'S LADY (Roderigo—Guy Gladstone), owned by Mr. A. M. Hildebrandt and handled by F. R. Bevan,

against

ROYAL C. (Roderigo—Countess House), owned by Memphis & Avent Kennels and handled by J. M. Avent.

ROWDY ROD (Roderigo—Juno A.), owned by Memphis & Avent Kennels and handled by Avent,

against

NANNIE B. (King Noble—Queen Vashti), owned by Mr. J. I. Case, Jr., and handled by C. W. Barker.

SAM C. (King Noble—Cricket), owned by Mr. J. I. Case, Jr., and handled by Barker,

against

LETTY LYNN (Roderigo—Countess House), owned by Memphis & Avent Kennels and handled by Avent.

HARRY C. (Roderigo—Countess House), owned by Memphis & Avent Kennels and handled by Avent,

against

MARQUIS N. (King Noble—M'liss C.), owned by Mr. G. W. Ewing and handled by W. B. Stafford.

When the drawing took place Marquis was not in, but as Mr. Ewing, his owner, had telegraphed to Stafford to complete the entry and he had not received it in time, he was allowed by unanimous consent to start and was run with Harry C.

The running was watched with great interest, as all were anxious to see the working of the new rules, which in the first or preliminary series are in conformity with the spotting system, the remaining series being run in heats as at other trials. We believe in the spotting system, and until it has been demonstrated by a thorough test to be more faulty than the heat system, it should be adopted at all our field trials, not in a half-way, compromise sort of way, but in a manner that will bring out what good there is in the system, and at the same time show up its faults if any there be. If a set of judges are qualified to fill their positions, they are certainly competent to select the best dogs in the stake and place them in their proper order, unhampered by any rule of thumb or set of instructions as to how or why one dog should be placed over another. When this course is pursued we shall hear no more talk of dogs being placed over their betters "under the rules." It is often the case that a fourth-class dog will run for an hour and do work that will carry him into the next series, but it is generally the case, as has often been shown under the heat system, that he cannot repeat or stay up to his work well enough to win a place over better dogs, unless he has the luck to run through the stake by meeting dogs of less merit than he possesses. On the other hand, a really good dog may not be at his best, although showing sufficient merit to remain in, but if given an opportunity his superiority will in a large majority of cases be clearly demonstrated. Of course if a dog shows no merit whatever during an hour's run he is either worthless or not in condition to compete and consequently he should be retired. A dog may for the moment be off in nose, but unless he is seriously indisposed he will plainly show the judges by his behavior whether he is worth a future trial; then again, the weather conditions may be such that scent is poor and consequently the dogs do not show up to advantage. Many dogs of high courage, with good speed, range and lots of bird sense, become rattled when they find that they cannot smell the birds, and losing confidence, their pace and range are restricted, and they are for the time entirely different from their usual form, while the dog with little sense will go his usual gait, the flushes will not disconcert him in the least, and often he will show to better advantage than his high-strung competitor, who may really be several classes above him in all that constitutes a good dog. There is also an element of luck that attends all competitive trials of whatever nature they may be; especially is this the case at field trials, and it is hoped that under the spotting system much of this element will be eliminated, and that far more satisfactory results will be obtained than under the old system.

In the preliminary series nearly all of the work on game was of an unsatisfactory nature, scent was undoubtedly very poor, and a lot of ground was worked over where birds are known to be plentiful, but they evidently were not moving and but few of them were found. The judges were Messrs. Davidson, Wallace and Tallman.

The first brace in the series were put down at 8:48 and the last brace were taken up at 2:17. In selecting the dogs for the second series the judges kept in six of the eight, and threw out Rod's Lady and Marquis N. Both were either sick or very stale, and evidently were in no condition to run; of the others, Rowdy Rod, Nannie B. and Harry C. had done much the better work, but the judges probably were not satisfied with the test given the others, as they had all shown more or less disposition to hunt, and they decided to give them another trial. The rule in relation to the draw for the second series was waived by consent, and the dogs were run in the order in which they were drawn in the first series.

Royal C. and Nannie B. were the first brace in the second series, and as Nannie had done much the better work in the first series, it was expected that she would have an easy win, but she had let down greatly in speed and did not range at all well, while Royal let out a link and worked out his ground fairly well, and won his heat with something to spare.

Rowdy Rod and Sam C. then came together, Rowdy scoring an easy win. He ranged wide and was lost in the early part of the heat, but soon showed up and worked out his ground in good shape. Sam did not show much speed, and his nose appeared to be wrong, as his work on birds was not at all satisfactory. Near the close of the heat a very wicked-looking bull-brier somehow got under the tail of Dr. Glover's horse, and for a few minutes the fun was simply indescribable. The gallant steed bucked, kicked and jumped seven or eight different ways at once. The doctor did not appear to enjoy the situation nearly so much as the spectators did, as amid their enthusiastic plaudits he gently slid to the ground and, with the assistance of the bystanders, removed the cause of the trouble. It was hinted that the brier was purposely placed in position, but, knowing the boys as well as we do, we can hardly believe this. This heat ended the work for the day.

Tuesday the weather was fair a portion of the time, but some cold-looking clouds were banked in the west in the afternoon, giving promise of rough weather; but toward evening they cleared away and it was warmer, and the prospect was bright for good weather. There were now only four in for first money, all of them owned by the Memphis & Avent Kennels. It was nearly 9 o'clock when Letty Lynn and Harry C. were put down. Harry won the heat, having the best of it in pace and range and in the character of his work on game. Letty did much better than in her trial heat, and some of her work was very good.

This ended the second series, and at 9:55 Royal C. and Rowdy Rod were put down to run the first heat in the third series. Rowdy scored an easy win, having much the best of it all around. Royal did better than in his previous heat, and beat out some of his ground in a workmanlike manner. Harry C. and Rowdy Rod were now the only dogs left in, and at 11:08 they were cast off in an open lot to decide first money. It was plain to be seen after a short time that Rowdy was a sure winner, as he had the best of it at all points, and when the allotted hour was up he was awarded the heat and declared winner of first prize.

The more we see of Rowdy the bettter we like him. The timidity when working among scattered birds that he sometimes showed to a marked degree at High Point appears to be wearing off, and his work through the stake was greatly improved in this respect, and take him all round he is undoubtedly the best dog that has ever run in the Derby Stakes in this country. At the conclusion of the heat we went to lunch, when it was announced that the remaining heats would be run on Wednesday, and the afternoon was devoted to the pointer division.

On Wednesday the weather was all that could be desired, hardly a cloud was to be seen, the air was cool and bracing, just right for comfort, and we left the hotel in anticipation of a good day's sport. The judges decided to run a heat between Royal C. and Sam C. to decide which should compete with Harry C. for second place. The dogs were put down some five miles south of this town on the best ground of this club and worked toward home. These grounds are much better than those worked over on the previous days and are most excellent for the purpose. Large open fields where the work of the dogs can be readily seen, with plenty of birds, make this an ideal ground for holding trials.

The dogs were cast off at 9:35. They were about equal in speed, Roy showing the better range. In work on birds we could not decide which was ahead, or rather which was behind. The work was nearly all of it wretched, as the dogs were hustled for points when on singles and turned and twisted around until they did not appear to understand what was required of them, and flushes or indifferent work were the rule. Near the close of the heat they were given a chance in the open, but neither did anything of consequence. When time was up Sam was awarded the heat, and the pointer division were taken in hand and run until 2:30, when setters were again brought up and the last heat was run. Harry C. and Sam C. ran to decide second place, which Harry secured very easily, beating Sam in speed, range, style and in character of work. This ended the Setter Derby, which was excellently well judged throughout. Following is the summary:

Preliminary Series.

Rod's Lady and Marquis N. ruled out. The others ordered to run in the order in which they were drawn.

Second Series.

Royal C. beat Nannie B.
Rowdy Rod beat Sam C.
Harry C. beat Letty Lynn.

Third Series.

Rowdy Rod beat Royal C.
Harry C. a bye.

Final for First Place.

Rowdy Rod beat Harry C. and won first prize.

Ties for Second Place.

Sam C. beat Royal C.

Final for Second Place.

Harry C. beat Sam C. and won second prize.
Sam C. placed third.

THE POINTER DERBY.

The pointer division of the Central Field Trial Club's Derby begun Tuesday, Dec. 3, after first money in the setter division had been decided. There were fifty-three nominations, sixteen of which filled, and they were drawn in the following order:

JOY, JR. (Flockfinder—Ion), owned and handled by Mr. W. B. Meares, Jr.,

against

LOU (Reximus—Katy), owned by Castleman Kennels and handled by W. B. Stafford.

CARLGROVE (Lou—Neno), owned and handled by Mr. W. B. Meares, Jr.,

against

NYE (Naso of Kippen—Virginia), owned by Lebanon Kennels and handled by Luke White.

F. F. V. (Flockfinder—Ion), owned and handled by Major J. R. Purcell,

against

SALLY P. (Graphic—Meally), owned by Mr. Charles Heath and handled by W. T. Mitchell.

MISS MEALLY (Graphic—Meally), owned by Mr. Charles Heath and handled by Mitchell,

against

CONVEX (Consolation—Graceful), owned and handled by Luke White.

TOUGH NUT (Consolation—Grace), owned by Col. C. H. Odell and handled by Luke White,

against

NASO PESHALL (Nick of Naso—Jipsy P.), owned by Mr. Wm. Hepsley and handled by John Lewis.

LADY HESSEN (Duke of Hessen—Lemon), owned by Mr. Thos. Bond and handled by Luke White,

against

MAMIE BANG (Devonshire Sam—Nellie Bang), owned by Mr. W. H. Hyland. (Did not start.)

FLIRT (Mainspring—Merry Legs), owned and handled by Mr. Alex Morten,

against

HEINCKEN (Flockfinder—Ion), owned and handled by Major Purcell.

RIP RAP (King of Kent—Hops), owned by Mr. Ed. Dexter and handled by Capt. C. E McMurdo,

against

MET (Lumbryer's Phil—Nell), owned by Cashman & Meeker and handled by A. Vaughn.

The judges were Messrs. Davidson, Wallace and Tallman. Col. Merriman was to have acted, but was called home by the death of his sister, and Mr. Wallace filled his place.

Preliminary Series.

In the preliminary series the average quality of the work was of a very low grade, and many of the heats were tiresome in the extreme. The judges selected eight of the sixteen starters as worthy to compete in the second series, but upon what grounds some of them were allowed a further trial our notes fail to show, and their performance in their subsequent heats clearly proves that our notes did them no injustice. The judges informed them that they were more liberal in spotting than they were inclined to be by request of the club. This is all wrong, and the club had no voice in the matter, and their request was not entitled to the slight-

est consideration, and the judges owed it to themselves, to say nothing of their duty to others and to the best interests of field trials, to have followed the dictates of their own judgment in selecting dogs that will now pose before the public as being in the judges' opinion good enough to win a place at a field trial. Not only was the spotting system emasculated, but great harm was done, unintentionally of course, by bringing it into dispute by keeping in dogs that neither of the judges would give a five dollar note for.

The dogs selected were by consent placed by the judges to run as follows: Joy, Jr., against Miss Mealy, F. F. V. against Convex, Lady Hessen against Met, and Flirt against Rip Rap.

It is not necessary to describe the work in the preliminary series in detail, as in a large majority of cases there was not much of merit in the performance of the dogs. Joy, Jr. did some very good work when on game, but he did not get out and hunt in very good form. Miss Mealy, F. F. V. and Convex, all pointed some of the many birds they were shown, and all flushed some, but neither of them showed much inclination to hunt, nor any bird sense, although Convex did strike out a little at times. Lady Hessen ran her heat alone, as her brace-mate was absent and she did fairly well, both in searching for birds and when they were found. Met did not show much pace or range, and hunted but little; he did some quick and accurate work on singles, but showed little bird sense. Flirt was ordered up at High Point for want of merit. She showed up here, however, in better form, and had a little speed, worked her ground and handled her birds fairly well. Rip Rap totally eclipsed everything in the stake, going as well as he did at High Point. Had the judges selected Joy, Jr., Lady Hessen, Flirt and Rip Rap, to run for the money, they would have been very near the mark.

Second Series.

The first brace in the second series, Joy, Jr. and Miss Mealy were put down at 9:45, Thursday morning, in a large stubble field, some four miles south of the town. It was cloudy in the morning and it looked like rain, but the clouds broke away soon and we had a very good hunting day. The fields were large and open, with but few thickets and birds are said to be abundant; not many were found, however, but enough to test the dogs. Joy had much the best of it in pace and range, and showed the most bird sense; both pointed and backed nicely. When the hour was up, Joy was awarded the heat. Miss Mealy showed up better than in her previous heat, and with more experience she may turn out a fairly good dog; she appears to have an excellent nose, and is quite stylish.

The heat between F. F. V. and Convex was decided in favor of F. F. V. She made two or three points when taken to the birds, but neither showed much ability.

Lady Hessen won over Met. She beat him in pace and range and bird sense. Met loafs and does not appear to be hunting at all. He is quite good on scattered birds, and if he takes to hunting he may make a good one.

Rip Rap had an easy win over Flirt, ranging wide and working out his ground in a manner that few old dogs can equal. Flirt ranged fairly well and showed some speed, but she had not much chance at the birds, although she got the first point on a single, Rap finding two bevies in capital style. This ended the second series with the result as follows:

Joy, Jr. beat Miss Mealy.
F. F. V. beat Convex.
Lady Hessen beat Met.
Rip Rap beat Flirt.

Third Series.

The first heat in the third series was between Joy, Jr. and F. F. V. At the start, First Flight Virginian, as she was slowly walking along, put her nose to the ground and inch by inch puzzled along in the grass for at least four feet and greatly to the surprise of every one, rooted up a quail. After this we worked slowly along with Joy well in the lead, but finding nothing until they had been down 59m. 30s., when Joy made a nice point to a bevy, and before the birds were fairly in the air the dogs were ordered up with Joy the winner of one of the most tedious heats we ever saw run. This was the last heat for the day, as through some mismanagement no further progress was made, although there was plenty of time to run another heat.

On Friday it was quite warm and a few drops of rain fell in the afternoon, but soon cleared and toward evening the weather was delightful. At 8:37 Lady Hessen and Rip Rap were put down in a sedge field and worked through to a large stubble. Lady started out fairly well, but she was not well acquainted with her handler and did not show up so well as in her trial heat, and her work on birds was far from good. Rap won the heat very easily, although he was not quite up to his form in his previous heat. This ended the third series with the result as follows:

Joy, Jr., beat F. F. V.
Rip Rap beat Lady Hessen.

Final for First.

Joy, Jr.,' and Rip Rap were the only ones left in and they were put down at 9:56 to run for first place. Joy had improved in speed and range and worked out his ground fairly well. His owner informed us that he had been worked only a month previous to the trials, and that he was a bit stale when he ran his first heat Rap won his heat easily and was declared the winner of first prize. He did not show up at his best in this heat, owing in a great measure to the manner in which he was handled, being pulled here and there on short turns before he had finished his casts until he became somewhat confused, and in consequence his speed and range were contracted. The heat and the briers undoubtedly had something to do in slackening his speed and wind. Under the circumstances we thought he held up remarkably well.

Final for Second.

The judges selected Flirt to run with Joy, Jr., for second place, and after a long wait Flirt, who had been, through mistake of one of the drivers, taken in a wrong direction, they were put down at 11:56. There was considerable talk of throwing out Flirt on account of her absence, but as no one seemed to know just how the mistake occurred, and as Mr. Mears refused to take advantage of an accident, she was allowed to start. Joy ran fairly well and had no trouble in winning the heat. Flirt hunted as well as in her previous heats, but spoiled it all by her behavior when on game, being uncertain when she had scent and flushing most of her birds, and she was also unsteady to wing. At the expiration of the allotted hour Joy, Jr., was declared winner of second prize, and the judges placed Miss Mealy third.

In placing Rip Rap and Joy, Jr., at the head of affairs the judges made no mistake, but right there they should have stopped, and shown by refusing to award third prize that they placed a proper estimate upon the performances of the other dogs in the stake. The honor of a win, even of the lowest position, at a field trial, is held in high estimation, and it should be won by and awarded to merit alone. The standard of field trial excellence is a high one, made so by the ability of the very many good dogs that have gallantly contested for supremacy, and wrested their hardly won laurels from worthy competitors. Let us not then lower this standard by placing upon the roll of honor the name of any contestant that has not conclusively shown by good performance that he is worthy.

We have no doubt that a number of the dogs in the stake with experience and proper handling will be able to do creditable work, but of course nothing of this nature can be taken into consideration in a competitive trial. In selecting Miss Mealy for third place, the judges, perhaps, did as well as any one else would have done under like conditions. Had Flirt in her last heat behaved as well to birds as she had previously done she would undoubtedly have won, and even with this against her we thought her a little the best of a bad lot. This ended the Pointer Derby, and it only remained to run the winners of the two divisions, Rowdy Rod and Rip Rap, together to decide which was the absolute winner. As Rap had already run two heats and Rod was to run in the All-Aged Setter Stake next day and Rap was entered in the All-Aged Pointer Stake, it was decided to postpone the running of this heat until such time as would place them upon even terms, and they will probably not run until after the finish of both All-Aged Stakes. Following is a summary of the Pointer Derby:

Preliminary Series.

Joy, Jr., beat Lou.
Carlgrove beat Nye.
F. F. V. beat Sally P.
Miss Mealy beat Convex.
Tough Nut beat Naso Peshall.
Lady Hessen beat Mamie Bang (absent).
Flirt beat Heiniken.
Rip Rap beat Met.

Second Series.

Joy, Jr., beat Miss Mealy.
F. F. V. beat Convex.
Lady Hessen beat Met.
Rip Rap beat Flirt.

Third Series.

Joy, Jr., beat F. F. V.
Rip Rap beat Lady Hessen.

Final for First Place.

Rip Rap beat Joy, Jr., and won first prize.

Final for Second Place.

Joy, Jr., beat Flirt, and won second prize. Miss Mealy placed third.

First, Rip Rap, $400; second, Joy, Jr., $200; third, Miss Mealy, $100.

THE ALL-AGED SETTER STAKE.

The running of the All-Aged Setter Stake begun on Friday, Dec. 6, at 1:37. There were 16 starters, and they were drawn to run in the preliminary series in the following order: Cora of Wetheral and Chance, Princess Beatrice II. and Little Gift, Count Howard and King Leo, Cassio and Desmond II., Rowdy Rod and Roger, King's Mark and Whitie, Blue Mark and Miss Monarch, King's Dan and Dash. The work in this series covered a wide range from very good to very bad, and some of the heats were tiresome. The judges profited by their experience in other stakes, and in spotting the dogs they made an excellent selection, keeping in only those that had shown considerable merit. The 8 left in were drawn to run as follows: Little Gift against Roger, Chance against Desmond II., Cassio against King's Mark and King's Dan against Rowdy Rod. The last named brace was drawn first, but as King's Dan ran in the last heat in the first series the order of running was changed, and Little Gift and Roger were put down at 3:35 to run the first heat in the second series. Roger was showing the better pace, range and style when in motion. Gift showed the most style when on game. Both were steady to wing and shot and did fairly good work, with the advantage slightly in favor of Roger.

Chance and Desmond II. were put down at 4:37, and after running a half hour they were taken up to finish their heat on Monday. This finished the work for the week. The weather has been as good as could be wished and with the exception of a few unnecessary delays as good progress has been made as was possible under the rules. The club has been very fortunate in securing good grounds for the trials and good accommodations for those who attend. The March House, where most of us are stopping, is excellently kept with plenty of well cooked food and good comfortable rooms, and no pains are spared to make the guests feel at home, and, as the trials will continue at least two weeks longer, we are all thankful that we are so pleasantly situated. Matters so far have run with perhaps as little friction as could be expected at a first meeting, and as experience is gained we have no doubt that the management will be all that could be desired.

[*Special to Forest and Stream.*]

LEXINGTON, Dec. 9.—The weather to-day has been warm and cloudy. In the unfinished heat between Chance and Desmond II. both did good work, Chance winning. Rowdy Rod beat King's Dan and King's Mark beat Cassio. In the third series Roger beat Rowdy Rod and King's Mark beat Chance. This ended the work for the day.

There were fourteen that filled their entry for the Pointer Stake. They were drawn as follows: Arthur and Duke of Hessen. Bannerman and Roger Williams. Rod's Sal and Tammany Boy. Sally Brass II. and Rip Rap. Ajax and Pontiac. Meally and Lebanon. Duke of Vernon and Lalla Rookh.

LEXINGTON, Dec. 10.—In the deciding heat for first place won first prize. The heat was a long and very poor one. Chance then beat Roger for second place, and Roger was in the All-Aged Setter Stake, King's Mark beat Roger and placed third. Three heats were run in the Pointer Stake. Weather warm and birds not plentiful.

INDIANA KENNEL CLUB.

INDIANAPOLIS, Ind., Dec. 7.—*Editor Forest and Stream:* The annual meeting of the Indiana Kennel Club was held Dec. 2. The following officers were elected: D. C. Bergundthal, President; R. P. Daggett, 1st Vice-President; J. E. Dougherty, 2d Vice-President; J. M. Freeman, 3d Vice-President; S. H. Socwell, Treasurer; P. T. Madison, Secretary; J. W. Patterson, Royal Robinson, A. P. Craft, W. B. Allen, F. W. Samuels and H. Hulman, Jr., Directors. The reports of the treasurer and secretary were accepted. On motion of Mr. Socwell, the awards of the judges at the club's late field trials were concurred in.

On motion of Mr. Allen, which was seconded by Mr. Daggett the club decided to hold field trials again next year, and decided on the first Monday in November as the date, at which two stakes will be run, viz.: a Derby for all setters and pointers born on or after Jan. 1, 1889, and an all-aged stake for all setters and pointers that have never been placed first in any all-aged stake in any recognized field trials in the world. The forfeit in each stake will be $10, with $20 to fill. The sweepstakes plan adopted by this club will again prevail. The purses will be divided as follows, after deducting expenses: 40 per cent. to first, 30 per cent. to second, 20 per cent. to third and 10 per cent. to fourth.

After the chair had appointed Robinson, Socwell and Madison a committee to revise the running rules the meeting adjourned. P. T. MADISON, Sec'y.

SPANIELS AT TORONTO.—*Editor Forest and Stream:* Mr. P. G. Keys, of Ottawa, Canada, writes me as follows: "My attention has been called to your report of the Toronto (Ont.) show in the FOREST AND STREAM, in which you have my dogs misnamed, or rather the right name applied to the wrong dog. It was Bob Obo and not Obo, Jr., that won first and special at Toronto; Bob is a new importation, made by me last summer; Obo, Jr., has been in this country for some years. Your criticism of Obo, Jr., applies to Bob Obo, and *vice versa*. The mistake no doubt arose owing to an error in the catalogue of the show, which gave Obo, Jr., the number attached to Bob Obo's collar and stall."—CHAS. H. MASON.

THE EASTERN COURSING MEET.

A MORE perfect day for the inaugural meet of the Eastern Coursing Club could not have been had than Saturday, Dec. 7. The cold snap had vanished, the sun was warm, the air balmy as an October day, the ground just right, and all the dogs in perfect condition and spirits. The owners and guests of the club were jubilant over the prospects of an enjoyable day, for they had had an inkling that the Society for the Prevention of Cruelty to Animals would not interfere unless they saw evidence of wanton torture and cruelty. So firm were they all in the conviction that the meet was sportsmanlike in the broadest and truest sense of the word, that they felt sure of generous treatment at the hands of the society.

The large preserve where the jacks were kept was furnished with a corral, and from this a gate opened into a long and wide lane, beyond which was an immense field, which opened on to the Hempstead Plains, reaching far beyond the vision.

The following is the drawing of the dogs as was to have been run, and among them will be found some rare good ones, with wonderful field and bench show records and blood from the best and raciest stock England possesses:

Woodhaven Kennels' blue bitch Fleet
against
Mr. J. H. Watson's fawn dog Waverly.

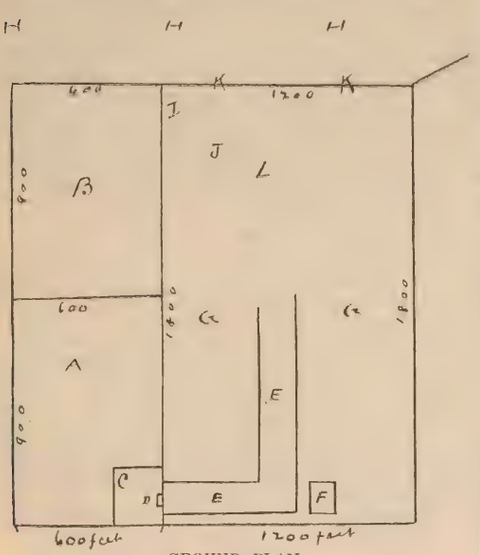
M. H. W. Huntington's black and white dog Balkis
against
Hornell-Harmony Kennels' black dog Hazelhurst.

Mr. W. R. Caminoni's blue bitch Wanda
against
Mr. W. H. Huntington's white and black dog Highland Chief.

Hornell-Harmony Kennels' black and white bitch Harmony
against
Mr. R. Lambert's black dog Timor.

Mr. C. L. Griffith's brindle bitch Gypsey
against
Mr. H. W Huntington's black and white dog Andy McGregor.

Mr. C. S. Webber's black bitch Sister in Black
against
Ide & McCoy's fawn dog Glenboig.



Mr. W. H. Blackham's black bitch Clio
against
Mr. E. A. Garbutt's fawn bitch Forest Queen.

Mr. J. H. Work's brindle dog Prince
against
Mr. C. D. Webber's white and black bitch Mother Demdike.

After some delay the blue bitch Fleet (George Washington—Loisette) and the large, well-muscled fawn dog Waverly were put into the slips and made ready to decide which was the faster and better dog. Quick from out the cover shot a whitetail jack rabbit, the quickest and wariest of the whole family. It seemed but a second before he had gained his freedom, for with great bounds he flew over the ground, heading for the plains. The slipper watched her closely, his 100yds. law was increased to 125 ere he was able to sight his dogs, when quicker than thought both dogs strained to the jack, the slips were loosened, and the first brace of greyhounds of the Eastern Coursing Club meet bounded after the nimble, fleet-footed jack. Fleet was thought to have been sighted, but as the slips fell it was seen that she had not been, and seeing her owner she made for him; but a "Loo! loo!" to her directed her attention, she sighted her game, and away she went, straining every muscle and making every effort to do her best. Waverly, however, had full ten lengths the start. The jack was scarcely touching the ground, when right in front of her, not 50yds. away, she caught sight of the Society officers' blue coats. Of all the wild animals, none perhaps is so afraid of man as a jack rabbit; and puss, true to her fears, turned not less than 45 degrees from her course. Fleet, coming up at a rattling good pace, forced her again to turn, when Waverly got in a rapid succession of points, held her well in hand, and finally killed, with a score of 20 to the bitch's 6. A season's coursing could scarcely have brought out a prettier sight of nimble, quick turning on the part of the jack; and had she not been frightened out of her course by the presence of the S. F. P. C. A. officers, she would never have been headed, and the officers would have been deprived of the excuse for arresting both slipper and slip steward. This they did; and the officers with their prisoners set off for the Court house. Here Judge Steiner, held session, and the slip steward demanding immediate trial by jury, one was impaneled and the trial for "willfully and unlawfully setting on foot, instigating and engaging in an act of cruelty to a certain animal, to wit, a rabbit," was begun. The defense admitted the killing, but claimed it to be as legitimate, honest, and as sportsmanlike as any other mode. Dr. Cryer on cross-examination stated that the sport was acknowledged and recognized all over the known world; and it was the law to allow 60 or 80yds. before slipping the dogs, whereas the Eastern Coursing Club gave him, as judge, instructions not to give order to slip till full 100 to to 125yds. had been allowed. He further added and was corroborated by Mr. E. H. Morris that this particular jack was allowed even more than instructed to him, and had not the officers of the S. P. C. A. been so situated in the field, the jack would never have been caught and would probably have reached the end of Long Island before the jury was impaneled. The officers in question stationed themselves at the far end of the large lot, and though twice requested by a gentleman on horseback to return to the center of the field, so as not to be in a position to interfere with the jack reaching the plains, they stubbornly refused to stir one foot. The result was that when the jack was within 50yds. of them they were sighted, and quick as lightning she darted across the field at a perfect angle of 45deg., which enabled the dogs to close in upon her. To them alone should be attributed the kill of the jack and not to the E. C. C. or the dogs. She was simply flying over the ground, gaining rapidly on the dogs, but once turned from her course her death was certain, and though she doubled and turned with great quickness she was unable to elude her pursuers. One of the Society officers acknowledged on cross-examination that the jack could not be caught by a greyhound if she was allowed fair play, and the interference of the officers by their presence in an obstructive position led to her death.

The jack was taken from Waverly's mouth, her back and leg broken, yet because there was still a slight pulsation of the heart the officer who claimed he was a sportsman clubbed the poor dead animal till he broke her thick frontal bone and the blood flowed copiously from her nostrils. The society tried to prove this flow was caused by the dog's bite, but Dr. Cryer, an expert from the Philadelphia College of Surgeons, proved it was the inhuman, unnecessary blow of the officer. Such an officer as this is called upon to decide what is and what is not true sportsmanship, and his utter ignorance of the fact that a rabbit needs but one stroke of the hand on the neck to kill it, proves he knew as little of sport as he does of humanity. The wretched complaint of the society, the want of knowledge of distance, *i. e.* calling 100yds. 100ft., in apparent ignorance of the fact that the dividing fence on the plains was taken down, and many other items of vital importance to a defender of the jack elicited such outbursts of repeated laughter from the people who crowded the court

room that Judge Steiner had many times to call for "order." Upon examination of one of the witnesses for the defense, it was stated and proved by the rules of coursing, that the sport is not for the purpose of killing or torturing the rabbit, but rather to prove the speed, endurance and cleverness of the dogs; and as the society's officer acknowledged in open court, that a greyhound could not catch a jack rabbit if it was not interferred with, the complaint fell flat, and the jury was sent out for a verdict without being even charged by the judge. A few moments later it returned bringing a verdict of acquittal. The shouts and hurrahs, the cheers and applause that welcomed this verdict were simply deafening, and it was considered all the more gratifying to the club and its development of the sport of coursing, since not a member of the club knew a single man in the town or neighborhood, except the owner of the ground,

GROUND PLAN.

A, Preserve. *B*, Vacant lot. *C*, Corral. D, Wire gate leading into *E*. *E*, Lane opening into field *G*. *F*, Slipper's box. *G*, Open field. *H*, Hempstead Plains. *I*, Position of S. P. C. A.'s officers. *J*, Point where jack saw officers. *K*, Fence, removed previous to slipping. *L*, Where kill was made.

Mr. England, and he was known only to two of them. Judge Weller addressed the jury in a very able speech and carried conviction to every one in the court room, that the society's action was uncalled for: that the sport was conducted in a legitimate manner, as is done in our Southern and Western states, and California, etc., where no interference would be tolerated, nor a jury be found to convict a man for enjoying the sport of coursing. One gentleman stated he had come 400 miles to see the sport, not to see the rabbit killed or tortured, for that he could do on his own farm, if his inclination was that way; but that he came to find out if his dogs were good ones, to compare their speed and endurance not only with the other dogs, but with the jack; and the statement, that a man would travel all that distance to see a dog kill a jack was as preposterous as the society's complaint.

The jack rabbits provided for the running were absolutely free in a large 8-acre lot. From this lot they were by means of a long canvas net forced into the corral. Here a gate led into the long lane opening into the open lots, and as soon as a jack approached it was opened, the jack shot through it, and the gate closed quickly to prevent the escape of others approaching it. The officers of the society tried to prove that the jack had been handled by the slip steward, but the evidence of any one's inability to catch it was so well known by all in the court that the statement evoked great merriment. The same officer on cross-examination stated he judged the hounds were fully 5 minutes in pursuit of the jack before catching it.

From the East there was present one of Maine's most ardent sportsmen, Mr. N. Q. Pope. From Massachusetts there was Mr. Heald (of Mr. Thayer's kennels), from Covert, N. Y., Mr. Wixom; from New Jersey, Mr. Webber and Mr. Rackham; while from near by were Messrs. DeLancey Kane, L. C. Whiton, Judge E. P. Vacheron, J. H. Watson, C. L. Griffiths, H. W. Huntington, German Hopkins, H. W. Lacy, W. R. Caminoni, E. A. Garbutt, Harry Baird, P. Segur; Dr. M. H. Cryer, of Philadelphia, noted both as a horseman, sportsman and breeder of far famed pugs; Mr. Chevalier, and many other gentlemen well-known in greyhound circles.

FELIX.

AMERICAN FOX-TERRIER CLUB.

Editor Forest and Stream:

A committee was appointed in the spring, consisting of Messrs. Winthrop, Rutherfurd and Fred Hoey, to inquire into and report upon the feasibility of holding a summer show at either Long Branch, Coney Island, or some suitable place other than Saratoga and Newport, the summer shows at the last named places not having been financially successful for the past three years. After careful inquiry Messrs. Rutherfurd and Hoey report unfavorably respecting a summer show.

The question of holding a specialty show in November or December at Boston or New York was thoroughly discussed by the board of governors, and it was decided that, while the prospects for a show in the autumn or early winter were favorable, it would be better, in view of the fact that the treasury had suffered somewhat during the past years from the heavy expenses of the club, to forego holding a club show during the year. To offset such a loss to the fox-terrier fancy it was decided to distribute the various Stakes of the club and add special prizes among the different dog shows during the spring of 1890 in such manner as to serve the best interests of the club. The following programme was therefore adopted:

STAKES AND SPECIALS OFFERED BY THE AMERICAN FOX-TERRIER CLUB, 1890.

New York, Feb. 11.—Stud Dog Stakes, second division of Grand Produce Stakes of '89, first division of Grand Produce Stakes of '90, grand challenge cup, Yankee Stakes 1889, $10 for the best fox-terrier in the show, $10 for the best fox-terrier in the open class, $10 for the best fox-terrier in the puppy class, $10 for the best brace of fox-terriers.

Chicago, Feb. 19.—Tomboy Stakes, $10 for the best fox-terrier in the show, $10 for the best fox-terrier in the open class, $10 for the best American-bred puppy in the show.

Rochester Kennel Club, March 11.—$25 for the best exhibit of fox-terriers.

Buffalo Kennel Club, March 18.—$25 for the best exhibit of fox-terriers.

Massachusetts Kennel Club, Lynn, March 25.—$25 for the best exhibit of fox-terriers

New England Kennel Club, Boston, April 2.—Home-bred Puppy Stakes, grand challenge cup, $10 for the best fox-terrier in the show, $10 for the best fox-terrier in the open class.

Albany Kennel Club.—Apollo Stakes, $25 for the best exhibit of fox-terriers.

Philadelphia.—Tomboy Stakes, $25 for the best exhibit of fox-terriers. H. P. FROTHINGHAM, Sec'y and Treas.

DEC. 4.

THE CLUMBER SNOW.—I have purchased of Mr. H. H. Simmons, of Crouch, near Sevenoaks, England, the well-known Clumber bitch Snow (champion John o' Gaunt—Foxley Beauty, a K. C. first prize winner). From her photo Snow looks a lovely bitch, all white, and, as she is litter sister to Clover, Cherie and Cynic, and the best of the lot at that, comes by her good qualities honestly. Among many firsts, she has won first at the Jubilee show and first at Birmingham. My blue belton setter dog Ben II., vhc. puppy class, Ottawa, died on the 2d inst. of distemper. He was of the very best blood and of a grand working family, consequently I greatly regret his loss.—F. H. F. MERCER.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Satellite—Bruce II. Alpine Kennels' (Fairfield, Conn.) St. Bernard bitch Satellite (Monk II.—Sheila) to J. S. Bache's Bruce II. (Beresford—Banshee), Oct. 1.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Satellite. Alpine Kennels' (Fairfield, Conn.) St. Bernard bitch Satellite (Monk II.—Sheila), Dec. 3, six (two dogs), by J. S. Bache's Bruce II. (Beresford—Banshee).

Lady Alice. Norham Kennels' (Joliet, Ill.) St. Bernard bitch Lady Alice (champion Valentine—Miss Meg), Dec. 3, ten (four dogs), by Marmion (Sero II.—Hetty).

Trixie. R. J. McLaughlin's (Cleveland, O.) Yorkshire terrier bitch Trixie (Tiny—Flossie), June 20, three bitches, by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady).

Flossie. Thos. McAlvon's (Bangor, Me.) Yorkshire terrier bitch Flossie, Nov. 10, four (one dog), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady).

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

SUBSCRIBER, N. Y.—Terrier's ear has large swelling which contains pus. I have cut it and taken pus out as much as possible, but it has swollen again and is as large as ever, and is painful to touch; has also lameness in hindquarters. By kindly advising me what to do for same you will oblige. Ans. Abscess must be opened freely so that all matter may be evacuated. Rub hindquarters with chloroform liniment.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ST. LOUIS, Mo., Dec. 7.—The scores of the members of the St. Louis Pistol Club show a very marked improvement over those of several shoots previous. This is attributed to the fact that the club has dispensed with the short cartridges and are now using the special long exclusively. The medal for the coming week was won by Summerfield, who made a beautiful 90. This is the first time he has quit high on the present tourney, and to say that he is proud of the trophy would be putting it mildly. But two more shoots remain of the present tourney, when it is quite probable the club will drop the standard American target and return to the one it used when first organized. A 20yds. standard American target is used for all shooting. The scores:

M Summerfield	9	9	7	10	8	10	9	9	10	9—90
E Mohrstadt	10	9	10	9	9	8	8	8	9	9—89
G Alexander	7	7	9	10	9	9	8	9	9	8—85
W Bauer	9	6	6	9	9	10	10	6	8	9—85
W Hettel	8	8	9	7	9	5	9	7	10	6—78
W J Lord	5	9	8	9	8	8	4	7	7	6—71
A E Bengel	9	6	9	8	6	4	9	7	5	6—69

The annual meeting of the club for the election of officers took place at the Laclede Gallery last Wednesday night, and resulted as follows: J. A. Lee, President; W. Bauer, Vice-President; W. J. Lord, Secretary and Treasurer. W. Mackwitz, W. H. Hettel, E. Mohrstadt and M. Summerfield with the officers constitute the Board of Directors.—UNSER FRITZ.

SAN FRANCISCO, Dec. 1.—Harbor View Rifle Range was the scene of several club medal shoots to-day, and, despite the rain and wind, good scores were the order of the day. The Germania Schuetzen Club held its regular monthly medal shooting, the following being the winners in the various contests: Champion class, Geo. Helm, 425 rings; first class, C. Heeth, 401 rings; second class, R. Finking, 405 rings; third class, B. Overmohle, 364 rings; fourth class, G. H. Bahrs, Jr., 322 rings. B. Overmohle secured the first and last best shots. The Eintracht Shooting Section also held a medal shoot at Harbor View with the following result: Champion class, F. A. Kuhls, 391 rings; first class, H. Patt, 345 rings; second class, A. Wirtner, 359 rings; third class, A. Thiele, 256 rings. H. Roepke made the first best shot. The shoot of the Gruetli Club resulted in the following marksmen winning medals: First class, G. Orsi, 399 rings; second class, W. Van Wye, 368 rings; third class, E. Weber, 366 rings. Shell Mound was comparatively deserted, though a number of marksmen assembled for practice. The independent Rifles turned out, however, and made the following scores at 200yds.:

Lieut F Staude	5345434434—39	Corp Tonnemacher	5444445444—42
Sergt H Staude	4434454444—40	Corp T C Hamann	2434444344—36
Capt T Schmalholz	5443444334—37	J G Wintjen	4344433443—36
Lieut H Beverson	3433444053—33		

On Sunday next companies C and G of the First, and the San Francisco Schuetzen Verein will hold regular shoots, and Messrs. Carr and Hovey, using Sharps' rifles, will shoot Messrs. Young and Johnson, using Springfield rifles, a 50-shot match. These gentlemen are among the best riflemen on the coast, and the result of the match is looked forward to with much interest.

ST. PETERSBURG, Dec. 3.—The Russian army is to be supplied as rapidly as possible with a new rifle of Russian manufacture. The new arm is lighter than the Berdan rifle now in use, and has, it is claimed, a great advantage in economy of ammunition, because it can be used for single fire or with a repeating apparatus, the repeating breach being easily adjusted or detached. The soldiers will carry separate cartridges for single fire, and will not use the rifle as a repeater except in urgent circumstances and by special orders.

REVOLVER CHALLENGES.—Springfield, Mass., Dec. 7.—*Editor Forest and Stream:* The Smith and Wesson Revolver Club are open for a challenge from any club in the United States. Conditions: Each club to send marked targets. Score 10 shots, 5 shots on a target, off-hand; scores to be telegraphed after match. Distance 10yds., 10 men on a side. Who will be the first to give us a challenge?—D. W. WAN, Sec'y.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

LINCOLN, Ill.—The score of the monthly badge shoot of the Lincoln Gun Club, held Tuesday, Dec. 3, is appended herewith. The match is shot at 15 singles and 5 pairs Peoria blackbirds, American Association rules. Weather cold and strong wind in face of shooter. Birds out of left and middle traps frequently "sky scrapers," and right trap as often foul:

L C Schwerdtfeger	111111111110110	11 10 11 11 11—22
George Atwell	101110010111110	11 10 11 01 00—16
Robert Schuster	111110011010010	10 10 10 11 11—16
Jerry Parker	101101111010011	00 10 10 11 01—16
Robert M. Wildman	001001010111000	10 11 11 01 10—14
Harry Webber	001001010001000	10 00 01 11 01— 9

Schwerdtfeger takes gold medal and Webber will wear the leather badge for 30 days.—SACHEM.

CLASS VS. THOMPSON.

TUESDAY afternoon, Dec. 3, at the North End Driving Park, White Plains, N. Y., these men came together, to see which was the better man at the traps. The Westchester county people swear by Thompson, while the Jerseymen stuck to Class to a man. There was so much money, however, ready to be wagered on the Yonkers man, that the betting, which was even at the beginning of the match, turned strongly in favor of Thompson. Ten to six was finally offered on Thompson. The day was a very peculiar one. In the morning the sun rose clear and bright, the ruddy clouds betokening pleasant weather; an hour afterward the sun went behind a bank of clouds, and at 10 o'clock, when a large party of interested men left New York for the grounds, the sun was again shining and the air soft and springlike.

The grounds were in the inclosed space, surrounded by the trotting track of the Westchester Agricultural Society. These are located one mile north of the village, and apart from the trouble of getting there, were admirably situated for the purposes of a shooting contest, being level as a floor. No less than 400 persons were interested spectators in the match from start to finish.

Before the main event was started, a little 5 bird sweep was started. Score:

First event, at 5 live birds, American Association rules, two moneys, ties div.:			
Goff	02011—3	Class	11112—5
Irwin	21111—5	Riggotts	11211—5
Erb	12101—4	Welch	21112—5

At 1 o'clock it began a spitting rain, and at 1:30 o'clock, when the big shoot was started, the outlook was gloomy in the extreme. Al Heritage was selected as judge for Class, while Charles Rowley acted in the same capacity for Thompson. John Erb officiated as referee. Thompson won the toss and sent Class to the score. The match was for $500 a side, 100 birds each, Hurlingham rules:

Class	21122120211110121202010 21—20
	20212232212021022212022 10—20
	11012101120200011022101 22—17
	11102221120111222222222 112—23—80
Thompson	01210212122211222212012 00 1—21
	10210110110220102211221 0—18
	12111001121222211122102 21—22
	22212102220221111011112 11—22—83

The birds were not a hard lot for picked ones, not 100 being capital flyers. The others were somewhat slow in getting off and of slow flight when started. Thompson, in his use of second barrel, was wonderfully effective; in the use of first barrel he was deficient, and in a single-barrel race would be heavily handicapped. In the luck of the birds he had slightly the best of it. He used his second barrel 39 times and had 2 drop dead out of bounds. Class had 5 dead out of bounds and used his second barrel 43 times; his last barrel was used, however, to put a bird out of misery and not owing to a miss. On the contrary, many of Thompson's birds were clean misses, and then a kill followed with the second. The Yonkers man made some magnificent shots with his second barrel.

Thompson used a 7¾lb. L. C. Smith gun, Climax shells, loaded with 3¼drs. Schultze powder, 1⅛oz. No. 7 chilled shot in both barrels. Class used his favorite Lefever gun, 7⅞lbs. weight, Climax shells loaded with 3½drs. trap wood powder in first barrel and 3½drs. Curtis & Harvey black powder in second barrel. At 2½ o'clock the rain changed into hail, and at 3 o'clock it again changed into snow, and from that out the match was shot in a blinding snow storm. Never was there a more disagreeable day for a match. At the conclusion of the affair so much talk was indulged in that a match was arranged to take place on Dec. 18.

The following day a guaranteed purse of $150 was hung up by W. P. Updegrove, owner of the park, and had 13 entries, over filling, which made it $195, divided into three moneys, 50, 30 and 20 per cent. The day was just the reverse of the one before, the sun shining brightly, but owing to the cold it made the boys hang around the fire, or chasing themselves around to keep warm. Before this event a 4-bird sweep was shot to a finish, ties div; score:

Gettle	1101—3	Manly	0101—2
Lindsley	2200—2	Welsh	1221—4
Hedden	1212—4	Castle	1011—3

Following came the main event, and after this, all the boys being satisfied, all thanked Mr. Updegrove very heartily, and left for their homes. Mr. Updegrove returns the thanks of all and hopes to see them up again very shortly.

Match at 15 live birds, $150 guaranteed, Association rules, three moneys:

Class	211221222102212—14	Welsh	102210221200100— 9
Manly	122111202211121—14	Rowley	111102220110111—12

NEWARK, Dec. 7.—The Orange and Blooming Grove gun clubs shot the first match of the series yesterday afternoon at Erb's Park, Newark. The score:

Orange Gun Club.

Senaj	11121123212212202112 2—24
Nampake	02212211111110211112111—23
Thims	21102122121121101200101—19
Semmins	02001011121201002212021 1—17
Nilmmore	11212020011002021022202 1—17
Thurf	02112222026002200112202 12—16—116

Blooming Grove Gun Club.

Ecnerwal	20100121212221111012121 10—20
Elgne	01212010212220212211102 1 —20
Neddeh	01212202100221202111110—19
Thims	01200121010002220022012 22—15
Snave	10202000100001000001000 110—13
Slie	10100220020012122000010012—13—100

The Orange Gun Club won by 16 birds and could have won by a larger majority had they been so disposed. The club from Pike county, Pa., was away off in the shooting quality of its members on this occasion. They fell in the rear so early in the race that they were practically out of it from the start. The men are not all Arabs or Swedes or Russians, as the names would indicate. They have simply indulged in the harmless freak of using *noms de fusil*.

LONG BRANCH, N. J., Dec. 2.—The Central Gun Club had its op-ning shoot at this place to-day. Clay-pige ns (bluerocks) were used. William C. Price, 16yds., and Philip Daly, Jr., 19yds., shot at 15 each, Daly knocking down 14 and Price 11. A sweepstake followed, in which Philip Daly, Jr. won first money and Frederic Loeb and John Shaw divided the second. In the third shoot, 10 pigeons each, Messrs. Van Dyke, Shaw and Elisha Price tied with 9 each, while Philip Daly, Jr., took second money and William C. Price took third money. Price, Van Dyke and Shaw shot off their tie in the next match, also of 10 birds. In which Price and Shaw again tied at 8, when they divided first money of both events. Luke Bright and J. Van Dyke divided second money, while C. Woolley took third. Six birds each was the last event, when Price, Daly and Van Dyke tied at 5. They shot in sf, miss and out, Van Dyke and Daly dividing first money, Edward Reid taking second and Woolley third.

TORONTO, Dec. 4.—A contest took place at the Woodbine to-day between the trap-shooters of the eastern section of the city and the trap-shooters of the western section, Yonge street being the dividing line. Mr. George H. Briggs, the promoter and originator of the match, captained the west end team, and Ald. C. C. Small the east end. The weather, though cold, was well suited for shooting, and the result was a contest of intense interest, on the issue of which considerable money depended. The birds were decidedly lively, and compelled a steady hand and a watchful eye. Mr. W. Pearson, for the winners, did some excellent shooting, bringing down his ten straight, and only twice using his second barrel. Messrs. Ellis and Sawdon also grassed their birds straight, while Messrs. Townson, McDowall, Wright, Beldan and Parker were each unlucky enough to miss a teaser. For the losers Mr. Rice killed his ten in good sportsmanlike style, and Jeff Worden wounded one that got away that might have tied the score. Messrs. Bugg, Staneland, Barrett and Clark also each missed a single that might have been dropped, but wasn't, and that might have turned the scale, but didn't. The captain of the west-enders has, however, this much satisfaction, that he outshot the leader of the other band, and that had the result depended upon him alone he would have won. As it is, the westerners have to pay for two barrels of the best flour for the Boys' and Girls' Home. Mr. Joseph Taylor was the referee, and neither sound nor murmur was heard at anything he said. Following are the scores:

Teams of 14 at 10 birds each, 26yds. rise, East Toronto vs. West Toronto, Toronto Gun Club rules to govern:

East End.		West End.	
Pearson	10	Rice	10
Ellis	10	Worden	9
Sawdon	10	Staneland	9
Townson	9	Bugg	9
Parker	9	Barrett	9
McDowall	9	Clark	9
Wright	9	Loudon	8
Belden	9	Wakefield	8
Smith	8	Purse	8
Ayre	7	Sinclair, Jr	8
Armstrong	6	Sinclair, Sr	6
Jones	6	Briggs	6
Andrews	5	Blea	6
Small	4—111	Maughan	4—110

Dec. 17.—The Stanley Gun Club held its sixteenth fortnightly shoot for the president's gold watch at McDowell's grounds this afternoon. The day was delightful, and a large number of sportsmen were present. Several good scores were made, but Mr. Emond went to the front in grand style, scoring 22 out 25, which gave him the handsome gold watch as his personal property. Mr. Emond shot a 10-bore Greener hammerless, using 3½drs. of Hamilton trap powder, and 1¼oz. of No. 7 shot. His handicap was 28yds. from the traps. A number of sparrow shoots were also shot. These are the scores; watch shoot, handicap from 15yds. to 28yds.:

Emond (28)	22	Bayles (18)	18	Mallett (23)	11
Beatty (19)	21	Draisy (22)	16	McDowall (22)	11
Carruthers (19)	20	T Sawdon, Jr (24)	11	Harristan (18)	3
T Sawdon, Sr (24)	19				

The following are the scores of the former winners:

Wm McDowell	19	T Sawdon, Jr	19	Charls	19
J Wells	20	S McClure	18	F Emond	23
W Felstead	23	Charls	23	F Emond	22
T Sawdon, Jr	22	T Sawdon, Jr	18	Charls	19
F Mallett	21	T Sawdon, Sr	17	Draisy	18

The winners of the sweeps, which were at 10 sparrows, were:

First sweep:

Pickering	9	Smith	7	Heatherington	4
Peterson	9	Daisy	5	Orr	4

Pickering and Peterson div. first and second.

Second sweep:

Emond	8	Pickering	6	Smith	5
James	8	Winchell	5		

Emond and James div. first and second.

Third sweep:

George	8	James	7	McDowall	6
Emond	7	Cook	6	Wright	5
Pickering	7	Jones	6	Phillips	4
Tracey	7				

NEW HAVEN, Conn., Dec. 6.—Regular shoot of the Elm City Gun Club. The day was very windy and not favorable for large scores, nevertheless some fair shooting was witnessed. On New Year's day we will give an all-day shoot, which all are cordially invited to attend.

Event No. 1, match at tongueless bats, three Keystone traps, 15 and 18yds. rise:

Bates	111111—6	Hill	011011—4
Gould	111111—6	Whitney	011110—4
Ortseifer	111110—5	Bristol	111001—4
Tyler	111101—5		

Event No. 2, same conditions:

Ortseifer	111111—6	Whitney	111011—5
Bates	111111—6	Bristol	111011—5
Tyler	111111—6	Gould	110110—4
Hill	011111—5	Sackett	000010—1

Event No. 3, match at tongueless bats, three Keystone traps, 16 and 18yds. rise, 6 singles and 2 pairs, 50 cents entrance:

Bates	11111	11 10—9	Bristol	11010	01 11—7
Whitney	01011	11 11—8	Gould	11001	10 11—7
Ortseifer	01101	11 11—8	Sackett	00010	11 11—5
Tyler	10101	10 11—7	Hill	01001	10 01—4

Event No. 4, 12 birds, Hurlingham rules:

Gould	111111111111—12	Bristol	001111011111— 9
Bates	111111011111—11	Hill	011110111011— 9

Whitney	101111111111—11		

IRWIN VS. VAN CAMP.—To-day at Holt's farm at Wilburtha, N. J., Irwin and Van Camp, noted trap shots, had a close run of it. Van Camp is prominent among the very best of the local shots at Trenton, while Irwin is equally well known to the sportsmen of Philadelphia as an expert with the breechloader. The shooting was done in a large pasture field. The weather was cold—the coldest of the season. This with a raw easterly wind made things quite unpleasant for the spectators, of whom there were some 200. Scouts fired recklessly in all directions and no less than four spectators were shot. William Ferry was struck in the chin, J. Grigg caught it in the lip, while one unhappy individual caught it on the jaw bone and chin. Still another got a grazed cheek. As all these wounds bled freely the looks of the men can be imagined. The match began promptly at 10:30 o'clock and was rapidly shot to a conclusion. The match was for $100 a side, 35 pigeons each man, Hurlingham rules to govern. The boundaries were staked out by pegs driven in the ground and a white cord run from peg to peg until the 80yds. circle was thus marked out. The rise for both men was 80yds. The rear line was some 15yds. back of the contestants, and a post and rail fence defined it clearly. Van Camp won the toss and decided to shoot first.

R Irwin	10110112112021210221221212021229020—28
C Van Camp	20222212110212200220120012212221112—27

The pigeons were a singular lot. Of strong muscles and quick of wing when started, they were so slow in getting off as to be wearisome to both contestants and onlookers. Once up, however, they went like bullets and taxed the shooting power of both men to the uttermost. Van Camp missed with his first barrel many times, but was singularly effective in the use of his second. Irwin shot a clean race, and never lost the advantage he secured at an early stage of the match.

THEY THINK THEY HAVE THE RECORD.—Crown Point, Ind., Dec. 4.—*Editor Forest and Stream:* The Crown Point Gun Club has bought and used since the first day of April, 1889, 1,000 bluerocks, 3,000 Ligowskys and 49,500 Keystones, making a total of 53,500 inanimate targets. The club has also shot 675 pigeons and 250 English sparrows. We have a curiosity to know if there are any country clubs that can "knock out" our score on the number of inanimates used since the above date. We feel like challenging any club of ten men for $100 that can beat our record.—H. MARBLE, Pres. C. P. G. C.

MONTREAL, Dec. 1.—The first big handicap shoot of the season was held on the Athletic club house grounds yesterday afternoon, and was in every way a big success. It was the inaugural winter event of the Montreal Gun Club, and was also the first of the Montreal Gun Club, and was also the first of the club's series of three open handicaps, the remaining two of which will be shot off Dec. 14 and 28. As the prizes offered are costly and handsome, viz.: first, a canoe, value $125; second, a silver cup, value $25; third, gold medal, value $15, much interest had been excited among patrons of the gun, and as a consequence the number of competitors and spectators at the first match of the series was very large. The weather, though slightly cold, was otherwise delightful, making the drive out to the club house behind the mountain most enjoyable. The light at the traps was also excellent, and consequently, notwithstanding the cold, the shooting was above the average. Of the thirty-two who had entered for the match, twenty-five put in an appearance at the traps; among whom will be seen the best shots of Montreal. The shoot was under the conditions of the Montreal Gun Club, 20 birds, 18yds. rise. The following is the result of the shoot, the handican number of birds following the name of each competitor, these handicaps being in every case included in the number of kills:

The New Haven Gun Club will hold a tournament on Christmas Day, to which all are invited.—C. B. BRISTOL, Pres.

TOWANDA, PA.—There will be a New Year's trap shooting tournament, at Towanda, Pa., under auspices of Towanda Rod and Gun Club, Wednesday, Jan. 1, 1890. Open to all comers. Prizes consisting of bags of shot, loaded shells, primers, wads, etc., will be competed for, also sweepstakes. Commencing at 9 A. M., and continuing throughout the day. All communications will receive prompt attention by addressing W. F. Dittrich, Sec'y.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

THE CHANGES IN THE RACING RULES.

AT a meeting on Dec. 4 the following report was presented to the Eastern Y. C.:

To the Eastern Yacht Club:

The undersigned committee of the club, appointed to report on any changes which may seem desirable in the sailing regulations, begs to call your attention to the changes of measurement and classification now under the consideration of the New York and Seawanhaka Y. C.'s.

Reports by special committees have been made to these clubs advocating the adoption of a classification based on racing measurement instead of the present classes limited by waterline length. It is also proposed that the New York Y. C. shall adopt the Seawanhaka formula for rating in place of its present formula.

It is, of course, of the greatest importance for the development of yacht racing in this country that the leading clubs should have similar rules of measurement and classification, so that yachts built by members of one club may not be practically debarred from racing under the rules of another club. Your committee supposes that the object sought by American yachtsmen in wishing to impose a greater tax on sail is simply to prevent the production of enormous rigs, such as we have seen in some recent boats in the smaller classes, and not to radically change the type of American yachts; but your committee holds the opinion that the classification proposed by the New York committees taxes sail so severely that its general adoption would produce a racing yacht comparatively long and narrow, and would lead either to the total extinction of centerboard racing yachts, or else the development of a dangerous and undesirable craft of the "canoe" type, thus going much further than what we have above supposed to be the wish of American yachtsmen.

In addition to this objection that the proposed rule will develop an undesirable type of hull, there is also the objection that any such severe tax on sail—at least as sail area is computed and valued by any present or proposed rule for its measurement—will be an irresistible temptation to spoil the shape of good rigs in order to obtain such sail plans as will yield the maximum effect with the least sail, or, still worse, with the least sail measurement.

If, however, a classification on racing measurements under the present New York Y. C. formula should be adopted, your committee believes there is less reason to fear that the tax on sail would be severe enough to confine racing to long and low-powered yachts, and, although the objection on the score of danger of badly-shaped rigs is not entirely removed, it will at least be diminished, and your committee believes it quite clear that the object above stated—preventing the production of over-sparred yachts—will be accomplished by such a classification.

Your committee, therefore, suggests that the following vote be passed by the club: Voted, That the Eastern Y. C. is prepared to adopt, in conjunction with our other leading clubs, a classification based on the formula which places twice the value on waterline length that it does on sail area.

C. J. PAINE,
AUGUSTUS HEMENWAY,
C. H. JOY,
G. H. RICHARD,
EDWARD BURGESS.

The committee give no reasons for their belief that the proposed New York rule will produce long and narrow craft, either deep or narrow. Mr. Burgess lately conferred with the New York Y. C. committee and suggested that it accept corrected length by New York rule, as mentioned in the report. It is of course essential that the rules of the New York, Seawanhaka and Eastern clubs should not conflict, but at the same time a rule that is bad in itself cannot be adopted merely for the sake of uniformity. A meeting of the New York Y. C. will be held tonight, at which the several important questions touched on in the committee's report will be acted on. The first and most important is the basis of classification, whether it shall remain as now—the waterline length, or be changed to corrected length. The principle involved is an important one, and deserves to be considered alone on its own merits, and not merely in the light of the effect on any one boat or class. Closely connected with it is the particular formula which must accompany it, and which exerts a controlling influence over the yachts to be built. In the opinion of the committee of the New York and Seawanhaka clubs, and of many who have given thought to the subject, the present formula of the New York Y. C. will give little or no chance for experiment, and will do little to restrict the growth of sails; while on the other hand the proportions of the Seawanhaka formula are better in both respects, and at the same time offer no inducements to extremely narrow boats. Besides these two questions there is the division of the classes, a very difficult matter, but one that should not stand in the way of the adoption of the new rule if it be considered desirable in other ways. Some difficulties must be looked for in any marked change of rule, and those attending the divisions of the new classes can probably be adjusted to suit all interested. As the largest of the three clubs concerned, the action of the New York Y. C. is of special importance, and will undoubtedly have a great influence on a number of other clubs. A rule, if adopted at all, should be made for a period of five years at least, in order to test it fully, and the idea that some have of adopting corrected length by a series of small bites, first by the New York formula, then by the Seawanhaka, and then perhaps by another, is utterly impractical. Any good rule adopted now by the New York Y. C. will in all probability be very generally adopted by the leading clubs; but an attempt to try a rule for a little while and then perhaps to change it again shows a lack of self-confidence that will deter others from following.

A BRITISH 10-RATER.

IT has been claimed by the opponents of the proposed new rules in the New York and Seawanhaka Corinthian clubs that the immediate result of the change would be to produce a very long and narrow keel yacht with small sails that would drive out the existing yachts, both keel and centerboard. Such figures and statements as have been presented in support of this view have been very indefinite and unsatisfactory, but still they have carried weight with some yachtsmen who have taken them on faith without the trouble of a personal investigation. The ultimate result of this line of argument is a curious sort of craft that has been evolved chiefly from the inner conciousness of the opponents of the new rules, and is held up by them as a sort of bugaboo to scare American yachtsmen. This phantom ship is long, narrow, deep, with no deck room nor accommodation, costly to build, and with all the disadvantages of the old tonnage rule cutters, while at the same time she is warranted to do what they did not, to outsail, with very small sails, all moderate American craft. Such yachts are pictured as racing and winning now in Great Britain, and as ready to up killick and cross the western ocean for fresh prizes as soon as classification by corrected length is accepted by the clubs here.

In our issue of Nov. 21 we gave a list of the new British yachts, with a description of the principal ones, and in a previous issue, Aug. 8, was published the interior of a 20-rater. We now give, through the kindness of Mr. Arthur E. Payne, of Southampton, Eng., the sail and cabin plans of the most successful yacht yet built under the new rules in Great Britain, the 10-rater Decima. The dimensions of Decima are: Length over all, 48ft. 6in.; l.w.l., 35ft. 3in.; beam, 10ft.; draft., 8ft. The sail plan is interesting as forming a basis of comparison between the British and American methods of measurement, as alluded to in previous articles on measurement. The plan is peculiar in one respect; the sail allowed for the length is 1,680 q. ft. by actual measurement from the sail plan, except that all headsails are measured by triangle bounded by mast and headstay. In disposing of this amount of canvas Mr. Payne has taken a comparatively large mainsail, a small clubtopsail, and has thrown away entirely all jibtopsails and the usual spinaker, using a spinaker as shown, that hoists to the masthead only. In this way the area of the head triangle, which would be 759sq. ft. if measured to hounds of topmast as usual, is but 496sq. ft., being measured to jibhalliard block only. The official measurements of the sails are:

Mainsail	906sq. ft.
Clubtopsail	277sq. ft.
Headsails	496sq. ft.
	1,679sq. ft.

With the whole head triangle measured the area would be 1,942ft., or 263ft. more; so that if the jibtopsails and large spinaker were to be carried, the base and height of the sail plan would need to be reduced to give an area about 13 per cent. smaller than that shown.

The merits of this sail plan are still doubtful; in some cases in which it has been tried it has not been an improvement; but Mr. Payne is of the opinion that Decima is faster than she would have been with the usual distribution of canvas.

The measurement of the sail plan by the present Seawanhaka rule gives an area of 1,760ft., while by the proposed method the area would be 1,793ft., or 33ft. greater. The Seawanhaka rule is supposed to measure the headsails, mainsail, working or jibheaded topsail; the area of the same sails by the Y. R. A. method would be 1,857ft. This difference, 98ft. in the case of the present method, and 59ft. in the case of the proposed, shows that in this sail plan at least the American measurement is nearly enough correct for all practical purposes.

As Decima is the direct offspring of a similar rule to that proposed for the American clubs, and built too under conditions that have heretofore encouraged very narrow yachts; the fact that she, the widest, has won against all comers, is conclusive proof that the rule does not produce narrow yachts, and that it does produce yachts of moderate proportions and cost.

There are so few racing craft of her length in American waters, that the 30ft. class affords the best basis of comparison. The largest yacht of this class is Kathleen, shorter by 5ft. 8in., wider by 6in. and with 4 to 6in. less draft. Her sail area is 2,045ft. by Seawanhaka rule, compared with 1,760ft. for Decima by the same rule. Kathleen's corrected length is 37.57ft., and Decima's is 39.03ft., so that under her present rig, but allowed to carry the usual jibtopsails and spinaker, Decima would allow Kathleen 1m. 12s. over the American course, the average distance sailed by these yachts. Whether Decima with this rig could allow Kathleen her time must remain a matter of opinion; but all observation and experience shows that speed cannot be had in ordinary racing weather here with so small a proportion of sail, but 117 per cent. of l.w.l. Judging from successful yachts of all types that have raced in America, Decima's rig would need to be increased until the square root of sail area was at least 125, if not 130 per cent. of her waterline. The former figure would be practically putting Kathleen's sail plan over the longer boat, with an increase in the allowance from 1m. 12s. to over 3m.

When it is considered that Decima, as she stands, is about as wide, as deep and with the same sail as the Burgess thirty, Tomboy, and at the same time nearly 6ft. longer, it does not seem that she could allow the shorter boat a couple of minutes or more and yet beat her with the same sails, yet this is what the problem reduces itself to. If she can do this, then why is she not a better boat, with the same beam, far greater accommodation, and no longer spars? If she cannot do it, but must increase her sail and her measurement considerably, in order to attain her maximum speed under the conditions which maintain here, there is no reason of being afraid of her.

The faults of the present 30-footers are very apparent, however speedy they may be; they are lacking in room, the Burgess boats in particular. Kathleen is comparatively roomy, but at the expense of an extravagant rig, requiring 9 or 10 to race her. If sailed here under her present rig, Decima would in all probability be under-canvassed for racing and not be successful; but if canvassed more nearly in proportion to Minerva or Pappoose she would undoubtedly be very fast. Even then she would require a crew no larger than Kathleen's.

The accommodation plan shows a rather peculiar arrangement, one long cabin, with two permanent berths forward, with drawers under, and the sofas and buffets aft, in place of the "ladies' cabin" of Kathleen. The headroom under a flush deck is 6ft. 8½in., or about 1ft. greater than in Kathleen. The extra length gives a great advantage over the American thirties in two ways; the forecastle is much longer and roomier, and a good space is given besides for a toilet room on one side and a pantry on the other. In addition, the boat has a good cockpit and plenty of space for sails. Comparing Decima very nearly with the thirties, she has the same breadth and even more available room on deck; her stability is as great, she has better accommodations below, both for owner and crew, she requires no larger crew and costs no more to run, while her first cost is but little greater.

Just as Decima has been the winning boat in the 10-rating class, so Lollypop and Humming Bird have won in the 5 and 2½ classes, both designed and built by Mr. Payne. Lollypop is 29ft. l.w.l., 9ft. beam, and 7ft. draft, a handsome little plumb-stemmed cutter with pole mast and very moderate rig; while Humming Bird is 20ft. l.w.l., 7ft. 6in. beam and 5ft. 8in. draft, with pole mast, single jib, and a jug mainsail, with a yard on head in place of a gaff. Her stern is nearly square, and with her open cockpit and cuddy hatch she might readily be mistaken for an American boat. Mr. Payne is now busy on a 20-rater which will meet Dragon and Vreda next year, and as she is likely to be considerably wider than either, the experiment will be a very important one. With such yachts as these built and racing successfully in England to the practical exclusion of the old narrow cutters, there are no grounds for asserting that the same rule will produce very narrow yachts in America.

THE NEW RULE ON LAKE ONTARIO.—A very lively and interesting controversy is now being carried on in the Toronto *Mail* over the measurement question, one writer, who boasts that he never reads any yachting books or journals, attacking the new rule and advocating a rating by sail area alone. The result has been a number of letters from various yachtsmen defending the new rule. The lake yachtsmen on both shores are all active and progressive men, and the comments on the rule thus far show that they know pretty clearly what they want and when they have it.

"DECIMA"—10-RATING CUTTER, DESIGNED BY MR. ARTHUR E. PAYNE, 1889.

Length, 35ft. 8in. Beam, 10ft. Draft, 8ft.

THE RIGHT TIME TO TACK.

THE first rule of racing, as all yachtsmen know, is "Never leave your opponent when you are beating him." If this is true in sailing a race, it is no less true when applied to rules and methods, and no better guide can be had in the question now before the clubs. The continual contest which must always exist between the two great yachting nations, and which is but a race on a large scale, has resulted very decidedly of late years in the favor of America. Convinced that the tack they were on was a wrong one, British yachtsmen went about in 1887 and started on a new and very different course, under a rule that is by far the most perfect in theory of any yet tried. Not only have the immediate results in the way of a revival of building and racing been most satisfactory, but the new yachts are in themselves of a moderate and healthy type, and, most of all, designers are given a greater opportunity than ever in the past. Thus far there is but one verdict from both designers and racing men, that the new rule is a success; and while time will probably show some defects, there is no doubt that the rule is the best thus far known.

Meanwhile, in spite of the complaints against existing rules in America and the huge rigs which they have produced, there are some who propose that the same state of affairs shall be continued, or if any change be made, it shall be so small as to have no practical effect.

Just now American yachtsmen are carried away with their late victories, perhaps to a point of over-confidence, and are giving little thought to the different directions in which they and their opponents are going. The whole force of the rules here tends to the development of big rigs on a limited length; and, though the yachts thus far built have proved successful, there is no guarantee as to the future fleet. The British rules, on the contrary, have produced boats of moderate proportions in hull and sail, giving good accommodations and requiring small crews; and while designers are trying various proportions, the one fact that is most unmistakable is, that a reasonable amount of beam is essential to speed under the rule.

At present there is a cessation of international racing, and no one can say how the yachts of the two nations which have been built since the Volunteer-Thistle race will compare; but with one side running in a very deep rut and the other branching out in every direction in which progress is promised, there is a strong chance that when the two meet again in tacking, the positions of '85, '86 and '87 may be reversed, and that Britain may be to windward instead of to leeward.

The recommendation of the measurement committee is briefly that American yachtsmen shall tack with their opponents and follow them in a modification of the British rule to American conditions. The opponents of this course bring forward no arguments, offer no facts or figures, but rest their case on the bare assertion that the proposed change will bring in very narrow boats; an assertion with nothing to support it and everything in the actual fleet built abroad to contradict it.

If those yachtsmen whose votes decide the fate of the rule will consider the question on its merits, weighing such facts as are advanced on each side, there is little doubt that the decision will be that now is the time to tack, before the other craft is so far away in the course of progress that she cannot be overtaken.

SEAWANHAKA COR. Y. C.—The following programme of lectures and entertainments has been announced: Dec. 14, 8:30 P. M., musical entertainment; Jan. 18, Cruising Yachts and Yacht Cruising, by Vice-Com. Robert Center; Feb. 1, annual dinner; Feb. 8, an Account of the Hurricane at Samoa, by Lieut. R. G. M. Brown, U. S. N. Navigating Officer of the U. S. Flagship Trenton, one of the lost vessels; March 15, Tides and Ocean Currents. The lectures on Yacht Construction by Mr. Cary Smith will begin early in January on alternate Tuesdays. The weekly mess dinners on Thursday evening have become a popular feature in the club.

A POSSIBLE CHALLENGER.—The time for a challenge for 1890 has about expired and none is forthcoming, but there is a report that Sir Roderick Cameron, a member of the New York Y. C. and owner of the schooner Lady Evelyn, will build a 90-footer from Fife designs and challenge for the Cup.

YACHT BUILDING ABROAD.—Messrs. Forrest & Sons, of Wyvenhoe, will build a 40 rater from Mr. Watson's design for Col. Bagot, owner of the Clayton 40, Mohawk. Fay & Co. have cast the keel of Mr. Jameson's new cutter.

INTERNATIONAL SKIFF RACING.

Editor Forest and Stream

In your edition of Nov. 7, in giving an account of the sailing race at Prescott, Canada, between Yukwa and Evangeline, both Canadian built skiffs, you say, "They are undoubtedly the fastest design of boats for their size that are sailed on any water." This we deny, and claim that the Clayton design of St. Lawrence River skiff, as built by the St. Lawrence River Skiff, Canoe and Steam Launch Co., familiarly known as the "Bain boat" is the fastest sailing boat of its size built, and this is admitted by all aquatic sportsman, and proved by actual contests, times without number. We are the original builders of the present design and style of boat peculiar to the St. Lawrence River, and have kept the lead in improvements. Others have followed and imitated. These boats had no notoriety until taken hold of by our Mr. Bain, when they were known as the "Bain boat" until he gave them the name of "St Lawrence River Skiff." Skiff sailing was first introduced at Clayton, and the first folding centerboard with watertight trunk was manufactured at Clayton and put into a Bain boat, owned and used by Dr. Bain for nearly two years before any others were used, or were on the market. There have been more skiff races, both for honor and money, sailed at Clayton, than at all other places put together, and these races have always been open to the world. None from Brockville or Prescott has ever offered to enter one of these contests, and Mr. Wallace of Montreal, the owner of Yukwa, admits they could not compete successfully with us, when he writes to Mr. Sauve, ordering another boat, and at the same time expressing the wish that "she might be fast enough to enable him to carry out his long cherished idea of crossing the line and doing battle with the Yankees." (See Brockville *Recorder*, Nov. 23). At the A. C. A. meet at Stave Island last summer, Mr. Ford Jones, winner of the A. C. A. trophy, and also one of the Yukwa crew, was telling the boys that he had, with his canoe, beaten all the Brockville and Prescott skiffs, and though he could beat a Clayton skiff, and would like to try it for $100 a side. Mr. Fraser, book-keeper to the St. L. R. S., C. & S. L. Co., heard of the conversation and immediately offered to accommodate him, and put up the money right there, and arrange the details of the race to Mr. Ford Jones's convenience. Mr. Geo. C. Forrest, another crack canoeist, who was of Mr. Jones's opinion until a week or two previously, when he had come in contact with the Clayton boats a few times, advised him to keep his money in his pocket, so there was no race. The Clayton boys are never backward in accepting challenges, and when Mr. Wallace "crosses the line" with his new and fast skiff, if he comes to Clayton, he will find our boys with their "lamps trimmed and burning," and their sails ready to unfurl to give him a lively race. A. BAIN, Manager.

St. Lawrence River Skiff, Canoe and Steam Launch Co.

"ILL-CONSIDERED RULES."

"CLASSIFICATION BY CORRECTED LENGTH WORKS BADLY."

"DESIGNER BURGESS made a little haphazard drawing last week, which turned out to be an effective commentary on the system of classification by the corrected length, proposed to the New York Y. C. He took the Baboon's sail plan, placed the mast a trifle further forward, and then erected a sail plan which would measure the same as the Baboon's by the proposed rule. He drew a mainboom of the same length as Baboon's, a gaff one foot longer, a mast one foot longer, and a topmast two feet longer. The new sail plan had a larger mainsail, a considerably larger topsail, a slighty smaller foresail, and even a larger jib than Baboon's. The proposed sail plan contained 100ft. of effective sail more than the Baboon's, while measuring the same by the proposed rule.

"While this sail plan was not as good as the Baboon's for all-round work, it is the one which will be used by our racing craft if the rule proposed is adopted. By placing the mast further forward a designer can add 100ft. of sail without extra tax, or can add a foot to the length of his boat and still put on the same sail as he had on the shorter boat with the mast further aft.

"Mr. Burgess recently got a letter from a gentleman in Belleville, Ont. This gentleman ordered a 30ft. centerboard yacht before the recent change to a corrected length classification in the Lake Yacht Racing Association. After the change was made he countermanded his order for a centreboard boat, as he knew that such a craft could not win under the new rules. He then thought that he would build a cutter, but found that she would cost so much more than the centerboard boat that he gave it up.

"He now writes that since the rule was passed there is a great deal of objection to it in the Hamilton Yacht Club, and a move is to be made to go back to the old rule. The members are finding out that they have made their whole fleet obsolete.

"A 30ft. centerboard boat, with the usual sail plan, would just come into the 36ft. racing length class proposed for the L. Y. R. A. Such a boat would stand no show at all against a 32ft. cutter, with smaller sails racing at the same rating. The gentleman referred to writes that he expects the rule to be changed back, when he will go on with the centreboard boat, which he wants."

The Boston *Globe*, in its zeal to defeat the proposed change of rule, lately printed the above article and heading, which have been copied into other papers and have turned up in the Canadian papers in the guise of special correspondence from Boston. The statement in regard to Baboon's sail plan was made by Mr. Burgess to the committee of the New York Y. C. when on a visit to New York recently as a representative of the Eastern Y. C. Mr. Burgess did not even show the sail plan, and the figures which he gave were so obviously incorrect that they convinced none of the committee. The effect may be as he states, but men will not be convinced by mere statements when it is so easy to show the actual drawings and calculations, which has not yet been done. Even if it is true that the new sail plan is inferior to the old one, which is as yet very uncertain, the most that can be proved from it is that the details of the method of measuring sail are as yet imperfect; and not, as the *Globe* would infer, that the principle of classification by length and sail together is entirely a false one.

The latter part of the *Globe*'s story reads very prettily and contains the following premises and conclusions: A centerboard yacht of 30ft. cannot race against a keel yacht 2ft. longer of the same corrected length; the keel yacht costs so much more than a centerboard that none will be built; consequently the new rule kills racing. If Mr. Burgess now thinks that the centerboard has no chance with a slightly longer keel boat, he did not think so two years since, when he designed the centerboard Merle, 34ft. l.w.l., for Lake Ontario under the same classification by corrected length that has just been re-adopted there. He had the option then, as now, of taking length in place of sail, but did not do so. Merle has been a very successful boat for three seasons, and though she might be outbuilt now by a longer boat with less sail, there is nothing in her record, or in the racing elsewhere, to justify the assumption that she has no chance in racing against a long, narrow keel yacht with small sails. Keel boats have always been in great favor on Lake Ontario, but there has been, and still will be a large number of centerboards.

The statement that the keel boat will cost more than the centerboard is one that can easily be disproved; boats such as Nymph and Baboon cost practically the same, the keel craft being if anything cheaper through the absence of the centerboard and trunk and of a cabin house; in fact, the whole structure is less complicated and costly than a centerboard boat, while the latter now must have practically the same lead keel as the keel craft. The keel boat that would be built under the Lake Y. R. A. rules for the 35ft. class would be 32×9ft. x9ft. 6in., with 1,441sq. ft. of sail, and this boat would cost no more, if as much, as the centerboard 30×11ft. 6in.×5, with 1,600sq. ft., that would race on even terms with her.

We have assumed thus far for the sake of argument that the *Globe*'s statements were facts, but a careful investigation leads to the belief that they are all without foundation. The Belleville *Intelligencer* prints the above story with the following editorial note: "The above item is erroneous in that no person in Belleville has ordered or is likely to order a yacht from Mr. Burgess. It is also in error as to the failure of classification by corrected length, which was retained by the L. Y. R. A. on motion of the writer, and was changed after his withdrawal. The change was an error, and the old, satisfactory rule was restored this year through the able and persevering exertions of Mr. Jarvis."

The following letter in the Toronto *Empire* settles the Hamilton matter, and is corroborated by similar information from other sources to the effect that the new rule is generally satisfactory to lake yachtsmen:

Editor Empire:

In your issue of the 4th inst. you publish information received from a correspondent in Boston, who gives you a gist of an interview he had with Edward Burgess, to the effect that the members of the Hamilton Y. C. are objecting to the new classification rule, and that a move is going to be made to go back to the old one. I beg to say that your correspondent has been wrongly informed as to the feeling of the members of the club. Up to date I have not heard a member say he was dissatisfied with the new rule; on the contrary, those to whom I have spoken on the subject are all of the opinion that it is a just and fair one, and that it was passed just in time to stop the introduction on our lake of a class of boats that would be very expensive and unwieldy, on account of their extensive sail spread, etc. In reference to our members finding out that our fleet has become obsolete, I think Mr. Burgess's informant is also wrong. The following is a list of yachts that shows in what manner the H. Y. C. fleet will be classified next year under the new rule, which classifies them as almost every member of this club says, "in much fairer form than what they were under the old rule:"

* * * * * * *

Our fleet is not obsolete under the new rule. But it would have been in a couple of years under the old one.

* * * * * * *

This will show to your readers that the members of the H. Y. C. are not objecting to the new rule; on the contrary, they give the committee which proposed it great praise for suggesting a rule that compels yachtsmen to build boats that cost less and carry a sail spread within reason and common sense.

J. H. FEARNSIDE, Hon. Sec., Hamilton Y. C.

HAMILTON, Dec. 5, 1889.

The Hamilton *Evening Times* of Dec. 5 reprints the *Globe*'s story with the following comments: "Surely there is some mistake here. No rule that has ever been adopted has been more universally acceptable to the members of the Hamilton Y. C. than the classification by corrected length. Instead of making the fleet obsolete it has classified them in such a manner that far better racing must ensue. The Belleville gentleman who keeps Mr. Burgess posted about the H. Y. C. must be anxious to furnish the designer with material for his fight against the new classification in the East, but why should he not stick to facts?"

Perhaps we can enlighten the *Globe* as to the real facts in the case. Some time since a Lake yachtsman, but not of Belleville, wrote to Mr. Burgess on the strength of Merle's success for a design for the 50ft. l.w.l. class. Mr. Burgess recommended a centerboard yacht 30ft. l.w.l., and the owner decided to build for next year. When the classification was changed Mr. Burgess advised instead a keel boat of 33ft. l.w.l., whereupon the owner countermanded the order because he preferred to go to Fife or Watson for a craft of that kind. Apart from any other considerations a 32ft. keel yacht can be delivered from England on Lake Ontario, for less money than a 30ft. centerboard boat from Boston, while she would be as much superior in finish and outfit as Minerva is to most American forties. The owner in question is himself in favor of the change just made, and will probably have a new yacht for the 35ft. class this winter.

A SHORT TRIP ON THE PACIFIC.

WHILE attending to my usual routine of business, the mail brought me a note, the stamp on which—a tiny flag—sent a ray of sunshine into my duty-burdened mind. Said the note: "You are ordered to report on board the Aggie Friday morning, for a trip to San Diego."

The days passed slowly until I met our generous host, D. A. MacFarland, the owner of the Aggie, and the rest of our jolly company at the depot early on Friday morning.

Arriving at San Pedro we saw the beautiful Aggie lying alongside the wharf. Our traps were soon aboard and we left the harbor at 11:30 for Catalina Island, course south by east.

As we got outside the harbor we were delighted by a view of the seaside hills; back of them the fields of grain; then orchards, and beyond and over these the lofty Sierra Range, with old snow-capped Mount Baldy overtopping all. A distinctive feature of southern California in the dry season is the brown and yellow color of its hills, which in the distance have a lovely appearance.

When outside we threw lines over, and were soon fast pulling in the bonita, a gamy fish averaging from 10 to 15lbs. in weight.

Getting beyond the fishing grounds we had leisure to look over the Aggie. She was in fine shape as usual. Everything first class above and below, and a new set of sails made her look more beautiful than ever. You may be sure we did not overlook the well-stocked larder, which promised good things for the sailor's appetite.

An easy breeze brought us into harbor at Avalon, a pretty hamlet on Catalina Island, in good season. The bottom is bold close too, and we anchored within 200ft. of the shore in 20 fathoms of water. Some of us took the tender, and rowing to a point were soon catching smelt, sheepshead, perch, bass, and a peculiar-shaped flat, brown eel. The fish called smelt here are not like those with which we are familiar in the East, of the salmon family, but are evidently of the herring tribe.

The little harbor of Avalon is a paradise for yachtsmen, water wondertully clear and mild in temperature, while shoals of fish, gulls, seals, etc., give life to the place. We were too early for the jewfish, which are caught in good numbers here in season, some weighing over 300lbs.

Saturday morning saw us on deck early enjoying the magnificent weather. Our brother yachtsmen of the East never know how the wind will blow or whether the day will be fair or foul. Here the days are always sure to be clear, and the breeze as sure to blow from the same quarter as before, the southwest, and to commence at a certain time.

After a fine breakfast of rock bass we again tried the fish with good success. A native was seen coming from the hills with a wild mountain sheep which he had shot, both goats and sheep running wild on the island.

After a row about the harbor, which is like an aquarium on a grand scale, we left Catalina at 3 P. M. Our course was laid for San Juan, distant thirty-three miles, east-northeast. Being near the high hills of the island the wind was light, and dropped away at sundown to a zephyr. We dropped anchor off San Juan on the following morning near Dana's Point, a place made known in Dana's "Two Years Before the Mast."

A Spanish barbecue was to be given at San Juan on this day, and our host, the Commodore, and through him our company had been invited to go ashore and enjoy it.

I am reminded just here of an amusing incident which will not be forgotten while I am capable of smelling cheese. A good friend once said to me, "I have heard that Limburger cheese is not considered to be in prime condition until its odor can be detected at least one mile from the factory." His statement seemed a little wild at the time, but I now think the distance under-estimated. While enjoying the sleep of innocence as the yacht was rolling between Catalina and San Juan, one of our company became slowly and painfully conscious of a most overpowering and lonesome sensation. What could be the matter? Had any old fish been stowed near his berth? Pillows and bedding were hastily examined and no cause found. And yet the thing was terrible and constant in its assafœtida-like odor. In despair he happened to push up his mustache, when, heavens! his defeat was complete, and he was struck by something worse than a squall, and returned in haste to the wash room. To explain, a sportive companion had anointed said moustache with Limburger cheese.

Breakfast over, part of our company remained on board. The rest were landed through the surf at the point where Dana once scaled the hides down from the high cliffs and lowered tallow down on his back.

Our host for the barbecue, Don Marco Foster, a wealthy ranchman, met us and drove us to San Juan, some three miles distant. On the way a runaway horse was seen coming toward us. A man and wife had stopped at a brook and unloosed the horse to drink. Our company being gallantly inclined, jumped from the wagon and formed in line across the road. One was lucky enough to catch the animal, and feeling quite elated by his success, and sure of his hold, he cried exultantly: "Now go, you devil, go!" The beast, a powerfull spirited mare, had evidently heard the word go before, for giving a quick turn to her head, and taking in the vain man at her halter at a glance, she gave a bound and was off like a deer. Her woulk-be captor held on, but his feet were more in the air than on land, and things grew more squally fast. So all sheets were let go and the beast was off. The yachtsman came to anchor suddenly, while his companions rolled on the ground in laughter.

Arriving at the barbecue, we were at once placed at tables loaded with the best of eatables served in Spanish style. Near us were holes, in which were hot fires each tended by a Spaniard, who spitted the tender meat and delicious ribs of beeves and roasted them in a style far superior to anything cooked in an oven.

Dinner over, Don Marco had us driven back, loaded with good things for those on the yacht, the band playing "La Paloma."

Leaving our anchorage at 3 P. M. we sailed for San Diego. Before breakfast the following morning and just outside of San Diego Harbor we caught 22 bonita. We passed the light at 12 M. and went up the harbor with a fine breeze aft. J. A. OSGOOD.

LOS ANGELES, Cal.

In this city and surrounding country are a large number of gentlemen who, in the seasons for field sports and angling, are worthy disciples of Jim Norris and Izaak Walton. Some of them have FOREST AND STREAM, that elegant caterer to the enjoyment found in handling the rod and gun, but not all realize the pleasures which its weekly visits afford to those who are its constant readers. This publication has such a fascination about it that when its broad pages—diversified in every department of its class of literature, embracing much history and many sketches of life as it is found in the forest, the field, the seaside, and along the streams—are opened, they are not closed till all are taken in. —*Staunton Spectator, Staunton, Va., Dec. 4.*

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

A FIFTEEN HUNDRED MILE CRUISE.

With the new year we will begin the publication of the log of a solitary cruise of 1,500 miles, made in a 14-foot Adirondack boat, on the Erie Canal, Lake Ontario, the St. Lawrence River, and other waters. The cruise began at Albany, finishing nearly two months later at Philadelphia, and the narrative includes exciting and dangerous episodes. The chapters will run through several issues. Cruisers should not miss this serial.

THE RACES OF THE A. C. A. MEET.

A REPORT has been received from the '89 regatta committee, which was forwarded to Com. Rogers too late for the meeting of Nov. 23. As it contains merely a summary of the races and prizes we do not publish it. The following complete record of all races, similar to that published in former years, was compiled by Mr. C. B. Vaux:

ENTRIES.

Sailing Number.	Name.	A.C.A. No.	Canoe.	Class.	Club.
1.	W. G. McKendrick	995	Mac	B IV	Toronto
2.	H. F. McKendrick	957	Chum	B IV	Toronto
3.	Colin Fraser	284	Una	B IV	Toronto
4.	Will. H. Fraser	740	Beaver	A III	Toronto
5.	W. F. Lees	1501	Levite	B IV	Ubique
6.	Ford Jones	869	Canuck	B II	Brockville
7.	D. B. Jaques	990	Hyla	B IV	Toronto
8.	J. Wilton Morse	1538	Gwen	B IV	Ogden'burg
9.	D. A. Poe	1345	Inez	A III	Montreal
10.	W. J. Read	1454	Effa	B IV	Bobcayg'on
11.	W. A. Smith	1306	Erie	B IV	Toronto
12.	H. B. Tilley	1561	Dixie	B IV	Toronto
13.	M. J. Collins	1364	Little Bob	B IV	Bobcayg'on
14.	T. McCamus	1394	Rokeby Lass	A III	Bobcayg'on
15.	Geo. Sparrow	1404	Petrel	B IV	Toronto
16.	J. Wilson	1603	Iola	B IV	Bobcayg'on
17.	Robt. Baldwin	86	Irene	A III	Ottawa
18.	Robt. Tyson	66	Isabel	B IV	Toronto
19.	A. Macgachan	991	Kate	B IV	Lindsay
20.	A. H. Mason	903	Cecebe	B IV	Toronto
21.	Geo. P. Douglass	1239	Nenemooska	B IV	Ianthe
22.	Reade V. Bailey	940	Notus	B IV	Pittsburg
23.	Everett Masten	1291	Alpha	B IV	Yonkers
24.	H. L. Quick	1217	Evangeline	B IV	Yonkers
25.	W. E. Pentz	1046	Molly	B IV	Knickerb'r
26.	B. W. Wood	WCA	Wood	B IV	Tippy
27.	J. W. Cartwright	1484	Ilex	B III	Puritan
28.	Paul Butler	754	Fly	B IV	Vesper
29.	J. A. Gage	1303	Owl	B IV	Vesper
30.	D. S. Goddard	1093	Blanche	B IV	Vesper
31.	R. F. Brazer	1802	Elida	B IV	Vesper
32.	Chas. Archibald	1513	Mab	B IV	Montreal
33.	C. Bowyer Vaux	33	Atom	A III	New York
34.	A. S. Putnam	1033	Mad Cap	II	Worcester
35.	Wm. Whitlock	35	Cyrus	B III	Brooklyn
36.	G. W. Ruggles	804	Hero	B IV	Rochester
37.	A. R. Post	1396	Ixion	B IV	Ogden'burg
38.	G. C. Forrest	1065	Dimple	B IV	Hartford
39.	Geo. C. Dempsey	1321	Drift	B IV	Vesper
40.	F. F. Walsh	1323	Wasp	B IV	Vesper
41.	Geo. A. Warder	1141	It	B IV	Jabberw'ck
42.	H. S. Rogers	539	XX	B IV	Petersboro
43.	H. M. Stewart	458	Marie	B IV	Rochester
44.	C. F. Wolters	798	Sofronia	B IV	Rochester
45.	W. S. Lister	1071	Bat	B IV	Lakefield
46.	F. F. Andrews	371	Hornet	B IV	Rochester
	M. F. Johnson	217	Ada	III	Toronto
	Henry Wright	1413	Sheila	IV	Toronto
	Alex. Cudmore	1587	Kaloola	III	Brockville
	J. F. Smillie	1588	Koorale		
	J. N. McKendrick	....	Wm. English	IV	Ubique

THE RECORD, 1889.

Name.	Canoe.	Points.
1. W. G. McKendrick	Mac	27,887
2. J. A. Gage	Owl	24,478
3. R. F. Brazer	Elida	23,479
4. H. L. Quick	Evangeline	20,242
5. Colin Fraser	Una	16,674
6. D. S. Goddard	Blanche	15,523
7. Wm. Whitlock	Cyrus	15,027
8. Paul Butler	Fly	12,887
9. M. F. Johnson*	Ada	10,000
9. A. Torrance	Kaloola	10,000
9. H. Wright	Sheila	10,000
12. Ford Jones	Canuck	9,650
13. J. W. Cartwright	Ilex	9,180
14. F. T. Walsh	Wasp	8,574
15. B. W. Wood	Wood	8,268
16. R. W. Bailey	Notus	7,924
17. G. C. Dempsey	Drift	7,09
18. C. B. Vaux	Atom	6,882
19. F. F. Andrews	Hornet	5,536
20. G. P. Douglass	Nenemooska	5,844
21. A. F. Putnam	Mad Cap	5,500
21. J. F. Smillie	Koorale	5,500
23. J. W. Morse	Gwen	5,498
24. G. C. Forrest	Dimple (3)	5,068
25. T. McCann	Rokeby Lass	4,806
25. D. B. Jaques	Hyla	3,768
27. Chas. Archibald	Mab	3,422
28. H. S. Rogers	XX	3,076
29. E. Masten	Alpha	3,000
30. C. F. Wolters	Sofronia	2,730
31. G. W. Ruggles	Hero	2,384
32. Geo. A. Warder	It	2,038
33. W. S. Lister	Bat	1,692
34. R. W. Baldwin	Irene	1,346
35. D. Strickland	——	1,000
35. J. N. McKendrick	——	1,000

THE RECORD RACES.

*No. 1. Paddling, half-mile, Classes II. and III. Monday, Aug. 19:

1. Johnson.....10.0 points. 3. Masten..... 1.0 points.
2. Putnam..... 5.5 points.

This race was so published on the bulletin, as also was the Record. The regatta committee later ruled out Johnson and Putnam—therefore they should be ruled off the Record, and Masten given 12 points instead of 3.

*No. 2. Paddling, half mile, Class IV. Tuesday, Aug. 20:

Points.		Points.
1. MacKendrick.....10.000	7. Quick.....	.5,090
2. Cartwright.....9.182	8. Butler.....	4.272
3. Fraser.....8.864	9. Whitlock.....	.3,454
4. Brazer.....7.546	10. Dempsey.....	.2,636
5. Gage.....6.728	11. Forrest.....	.1.818
6. Goddard.....5.909	12. Walsh.....	.1.000

There was but 36 seconds between first and last man.

No. 3. Paddling, half mile, open canoes, Classes II. and III., single blades. Monday, Aug. 19:

1. Torrance.....10.0 points. 3. Strickland..... 1.0 points.
2. Smillie..... 5.5 points.

No. 4. Paddling, half mile, open canoes, Class IV.:

1. Lees.....10.0 points. 3. J. MacKendrick.... 1.0 points.
2. Wright..... 5.5 points.

No. 5. Combined sailing and paddling, three miles, all canoes. Monday, Aug. 19:

Name.	First Round.	Time.	Points.
1. Quick	2	3 52 45	10.000
2. MacKendrick	1	3 54 04	8.875
3. Gage	5	3 54 25	7.750
4. Brazer	3	3 54 28	6.625
5. Goddard	6	3 57 50	5.500
6. Whitlock	7	4 00 13	4.375
7. Forrest	9	4 02 15	3.250
8. Fraser	10	4 03 24	2.125
9. Masten	8	4 03 40	1.000
Douglass	4	Upset while paddling.	

Total time of winner, 49m. 51s., best on record. Start was made at 3:03:07 P. M.

No. 6. Unlimited sailing, Classes A and B, three miles, Monday, Aug. 19, start was made at 10:12:

Name.	1st Round.	2d Round.	Time.	Points.
1. Gage	1	1	11 14 07	10.000
2. Jones	6	3	11 15 07	9.654
3. Brazer	3	2	11 16 52	9.308
4. MacKendrick	2	6	11 17 07	8.962
5. Butler	5	4	11 17 15	8.615
6. Wood	8	8	11 18 00	8.268
7. Bailey	4	5	11 18 01	7.924
8. Walsh	7	7	11 18 30	7.574
9. Whitlock	12	12	11 19 30	7.228
10. Vaux	10	11	11 19 53	6.882
11. Andrews	9	10	11 20 00	6.536
12. Fraser	20	14	11 21 07	6.190
13. Douglass	21	17	11 21 45	5.844
14. Morse	17	16	11 22 60	5.498
15. Quick	15	13	11 22 07	5.152
16. McCann	33	27	11 22 45	4.806
17. Dempsey*	16	15	11 22 52	4.460
18. Goddard	23	18	11 23 00	4.114
19. Jaques	19	19	11 26 52	3.768
20. Archibald	18	20	11 28 00	3.422
21. Rogers*	25	22	.. .. ..	3.076
22. Wolters	22	21	.. .. ..	2.730
23. Ruggles	26	23	.. .. ..	2.384
24. Wardor	29	26	.. .. ..	2.038
25. Lister	30	24	.. .. ..	1.692
26. Baldwin	31	29	.. .. ..	1.346
27. Masten	11	25	.. .. ..	1.000
H. F. MacKendrick	24	Canoe filled.		
Tilley*	32	Withdrew.		
Pentz	27	Withdrew.		
Cartwright	14	Withdrew.		
Forrest	13	9 Fouled.		
Post*	28	Withdrew.		

Forrest got eleventh place at the finish, but was ruled out for fouling Whitlock on wrong tack. The first twelve in were entitled to enter the Trophy race. The other three Trophy contestants were selected by the regatta committee, Douglass, Forrest and Goddard. Goddard also sustained a foul in the above race, which upset him and put him far behind. One hour and 10 minutes was winner's time.

The novice race was included in the above event on the result of the first round. Tabulated it stands thus:

1. Dempsey. 3. Tilley.
2. Rogers. 4. Post.

THE TROPHY RACES.

No. 7. Trophy sailing, 7½ miles, 5 times around triangle. Tuesday, Aug. 20, start made at 3:35 P. M.:

	1st.	2d.	3d.	4th.	5th.	Finish.
1. Jones	3	3	3	1	1	5 15 40
2. Butler	5	4	4	2	2	5 16 26
3. Douglass	2	2	2	3	3	5 17 50
4. MacKendrick	4	5	5	4	4	5 17 58
5. Goddard	7	6	6	5	5	5 18 39
6. Gage	10	9	7	6	6	5 18 56
7. Brazer	6	8	8	7	7	5 20 52
8. Fraser	8	10	11	8	8	5 21 01
9. Andrews	12	13	11	9	9	5 24 28
10. Walsh	14	14	13	10	10	5 25 08
11. Vaux	13	12	12	11	11	5 27 31
12. Forrest	11	11	14	12	12	5 31 08
13. Bailey	1	1	1	Tiller broke.		
14. Wood	9	7	9	Dropped out.		
15. Whitlock	15	15	15	Dropped out.		

Winner's time was 1h. 40m. 40s.

No. 8. Paddling, Classes II., III., IV., open or decked, Trophy. Wednesday, Aug. 21:

1. Johnson.....8m. 59s. 4. J. Smillie.....9m. 55s.
2. Putnam.....9m. 09s. 5. Cartwright.....10m. 05s.
3. Jas. Torrance.....9m. 28s.

The regatta committee unanimously declare Messrs. Johnson and Putnam ruled out of race No. 8, as their canoes do not comply with the conditions regulating such race, their boats not being properly equipped sailing canoes. This rule also applies to all other races in which these gentlemen took part.

D. B. JAQUES.
(Signed) R. W. BAILEY.
E. L. FRENCH.

Torrance, therefore, was awarded the honor flag, and will receive the Trophy cup when purchased.

OTHER EVENTS.

No. 9. Paddling, tandem, half mile, Class IV., open canoes, single blades, decked, double. Monday, Aug. 19:

1. McKendrick, H. Wright — Open canoe.

3. Torrance, Smillie — Open canoe.
4. Quick, Masten — Decked canoe.

No. 10. Club fours, half mile. Tuesday, Aug. 20:

1. The Four McKendricks.....Ubique crew.
2. Wright, Shaw, Tulgee, Mason.....Toronto crew.

No. 11. Paddling Upset, 150yds. Monday, Aug. 19:

1. Andrews.....Decked canoe. 4. Whitlock.....Decked canoe.
2. McKendrick..Decked canoe. — Johnson.Open. Did not finish.
3. Goddard.....Decked canoe.

No. 12. Hurry-Scurry. Thursday, Aug. 22:

1. A. Torrance. 3. Cartwright.
2. Douglass. 4. Smillie.

No. 13. Sailing Upset. Tuesday, Aug. 20:

1. Goddard. 3. Rogers.
2. Andrews. Forrest and Douglass could not finish.

No. 14. Sailing, cruising race, 3 miles. Thursday, Aug. 22. The start was made at 10:07, with sails on deck, and at the end of the first round they were lowered and hoisted again. The four starters were:

	1st Round.	2d Round.
1. H. L. Quick	10 29 09	10 52 37
2. D. B. Jaques	10 32 52	10 58 23
3. W. G. MacKendrick	10 36 09	11 01 27
4. D. A. Poe	10 39 05	Withdrew.

MacKendrick capsized on first round, but righted and finished the race.

No. 15. Gymnastics. Thursday, Aug. 22: Won by Forrest. No tournament was held.

EXTRA RACES.

Pecowsic Cup, Thursday, Aug. 22. Presented by Mr. Barney in memory of his son, the late George M. Barney. The cup must be sailed for at each annual meeting until won twice by the same man: the winner of the A. C. A. Trophy not being eligible for this race. The distance was set at 6 miles, but for this race was reduced to 3. Start at 11:35:

		1st Round.	2d Round.
1. Cyrus	W. Whitlock	11 53 37	12 13 15
2. Owl	J. A. Gage	11 53 23	12 15 29
3. Blanche	D. S. Goddard	11 55 17	12 15 30
4. Alpha	E. Masten	11 57 55	12 16 46
5. Nenemooska	G. P. Douglass	11 56 00	12 17 30
6. Drift	J. C. Dempsey	11 59 48	12 23 26
7. Uno	Colin Fraser	12 01 28	12 24 20
8. Fly	Paul Butler	11 54 11	12 25 21
9. Mac	W. G. MacKendrick	Broke rudder.	
10. Chum	H. F. MacKendrick	Capsized at start.	
11. XX	H. Rogers	Capsized.	
12. Evangeline	H. L. Quick	Mast step broke.	
13. Ellida	R. S. Brazer	Steering gear broke.	

Cyrus mistook the flags at the starting line and did not cross properly, so the cup goes to Owl. Owl sailed her last leg, a reach, with her well full of water. Nearly every boat which finished capsized during the race, but was righted by her crew and continued.

A special race, paddling, with turn, for a Brough centerboard, presented by the maker, was won by A. Smillie, of Brockville.

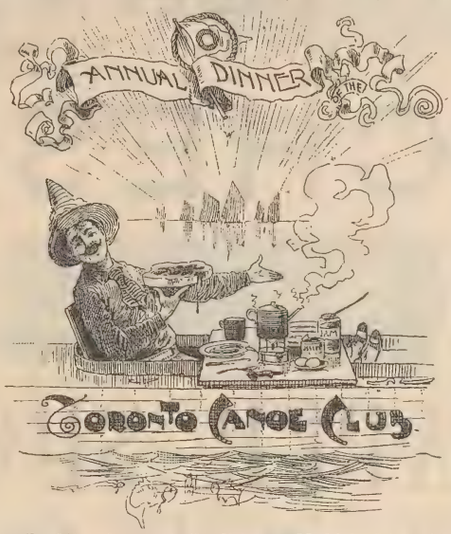
The Toronto crew won the tug of war.

Northern Division cup race. Six miles. Friday, Aug. 23:

	First.	Second.	Third.	Fourth.
1. Colin Fraser	3	1	1	11 15 00
2. D. B. Jacques	2	2	2	11 16 08
3. Chas. Archibald	4	4	4	11 16 45
4. W. G. MacKendrick	5	5	5	11 19 30
5. W. Lee	1	3	3	11 19 40
6. D. A. Poe	8	8	6	11 55 00
7. A. H. Mason	6	7		Withdrew.
8. G. E. Sparrow	7	6		Withdrew.
9. H. B. Tillie	9			Withdrew.
10. Robt. Tyson	10			Withdrew.

Class I. Paddling. Not on programme:

1. Smiliee..... 9 52 3. Cartwright..... 10 40
2. Torrance..... 10 05 4. Johnson..... Did not finish.



TORONTO C. C. ANNUAL DINNER.

Editor Forest and Stream:

I've just come in from an annual dinner with such an air of comfort and fullness pervading that portion of my anatomy covered by waistcoat that I feel as if I would be guilty did I not send you a short description of the event.

The menu card, gotten up by our club artist, Mr. John D. Kelly, is so artistic and thoroughly emblematic of the sport that I send it along.

The cruising canoeist on the first page, as he sits in his comfortable craft with a generous portion of bread and jam, which deftly balanced on his right hand, he is just about to discuss, has his mind withdrawn from it for a moment as he views with pleasure and contentment the beauties of the rising sun, partly hidden by

the sails of the schooners in the distance. Methinks I hear him remark as he turns from this scene of beauty, "Who wouldn't be a canoeist! to rise with the lark in the morning and drink in the fresh morning breezes ere our brothers in town are out of their comfortable bunks." Spread out before him is his "box of tricks," around the plate of which there is just a faint odor of bacon, while on the saucer is seen a couple of numbers of "hen fruit," which, we trust, for his sake, are of a recent issue. The spirit lamp, with an eye to business, burns merrily along, sending its bluish-tinted flames dancing around the tin kettle, which, also, taking in the beauties of the scene, has commenced singing to itself in its own peculiar way.

On page 2 Commodore Powell, with tooting horn and clanging bell, has just announced "Dinner!" Last year the start was with "single blades," but finding that, for some of the boys, the pace was so hot they could not keep stroke, the artist very thoughtfully gave the lean chap the double blade. A close examination

of his personal appearance at the "finish" will give the reader an idea of the use he made of that double ended article.

The turkey was discussed with all the solemnity due to the occasion, and we found "Old Dan McCan, the foreman," not such a bad old cuss after all, provided he got a place among the five and sixty tarriers that drilled the old gobbler.

After passing Partridge Point the fleet bore down on Duck Island with all sail set, but the first half dozen to get under the "lee" of the island made such a demand for clothes pegs that, barring a few gamie-e chaps who like their fruit a trifle (s)hy, the fleet passed to windward of the island. With eased sheets, and in some cases waistcoats and backstraps, they headed for Puddin Marsh, in the neighborhood of which some of them got so mixed up that it's "drop rudders agin screw-nails" they don't just know what wharf they tied up at, or who did the tying.

In the upper portion of page 3 can be be seen the veteran form of Major Leigh with his single blade as he gently paddles along, keeping his weather eye on the novice who is out for a spin with brand newest of canvas, which he is afraid will drown him ere he gets ashore.

From the peculiar shape of his hat with the grommet ventilators in it and from the general rig of his craft I should judge the other chap was he who wears shoes so large that he can't conveniently stow them in a 30in. canoe, and so had to take to the hiking seat, where he can be seen taking his *dolce far niente*. As he sits complacently smoking an Havana he is troubled with a little twang of conscience when he thinks of the time, not long ago, when he used to see all such bits of machinery kicked into the back yard where the small boy might make kindling wood of them.

After the toast the Queen, Mr. Jacques proposed "the Craft," which was duly replied to by Henry Wright—"Jock McCraw"—

for the paddlers, H. Tilly for the novices and Mr. Colin Fraser for the racers. Mr. R. Baker proposed "the A. C. A." and dwelt at some length on the fun we had at the last meet, and the gentlemanly, good-natured amateur sportsmen we met there. Ex-Vice-Com. Tyson responded and finished up by singing "Drill ye tarriers, drill." In responding to the British Canoe Association, Mr. W. G. MacKendrick remarked the great difference in the proportions of the three American honorary B. C. A. members from those usually attributed to Johnnie Bull, as a longer, leaner or hungrier trio than Messrs. E. B. Edwards, Peterboro; W. P. Stephens, New York, and the speaker could scarcely be gathered together under one roof, but it would be a sorry day for the owner of the aforesaid roof should he have the misfortune to have them foregather there about meal time.

Dr. E. E. King responded to the W. C. A. in a very happy manner, considering that five minutes previous to his rising he was not aware that there was such an association. He said he was much pleased at being present as the representative of the W. C. A., seeing that it included the invitation and also a free pass to and from his home in the West. Com. Powell had claimed for the T. C. C. a very old record, but he wished to state that long, long ages ago the W. C. A. had been enjoying canoeing in the West, that many of their Past Worthy Grand Chief Commodores were in the realms beyond, but he had no hesitation in stating that, provided the canoes would not warp where they had gone to, these old chaps were still hitting it up with the single blade. The W. C. A. he stated were going ahead very rapidly, and as the representative of that body he wished to extend to all those present a very hearty invitation to call at the W. C. A. club house headquarters at—at (*sotto voce*, to his neighbor on the right, "Where the d—l are our headquarters, anyway?"). The laugh was general when several of the boys who did not know that the speaker belonged to the club, thought he had actually come over from Cincinnati or some of the cities out West to tuck a few provisions under his waistcoat.

"Our Sister Clubs," proposed by Mr. W. H. P. Weston, was responded to by Mr. Fraser, of the Argonaut Rowing Club; Mr. Goinlock, of the Toronto R. C.; Mr. Schofield, of the Lacrosse Club, and Mr. Sherrard, of the Tammany Club.

During the evening Mr. A. Mason sang that rollicking song—

"We don't look gay in our camp array,
But we're dudes when we're in town."

Mr. Klesier gave a couple of recitations which were encored.

"Quiet, but not secluded," was one of the hits on the programme that caused much conjecture, and each of the ladies' men were in turn heard to declare that they were never in such a position. The identity of the sinner was placed beyond a doubt when the carelessly thrown down hat was examined.

At an early hour in the morning the "Unc" ambulance was at the door, so that those (if any) who found a 12-foot sidewalk just a trifle too narrow for them might be accommodated with a good, firm seat, warranted not to wobble. MAC.

NEW YORK C. C.—The annual meeting of the New York C. C. was held on Dec. 6, the following officers being elected: Com.-B. H. Nadal; Vice-Com., Dr. B. F. Curtis; Sec'y-Treas., C. J. Stevens; Executive Committee, Poultney Bigelow and Schuyler Schieffelin. The club has decided to build during the winter a large floating house to replace its present one, which will be sold. The date for the annual regatta is set for June 21, 1890.

A. C. A. MEMBERSHIP.—Atlantic Division: Frank Bowne Jones, New York.

"BIRDS THROUGH AN OPERA GLASS."

BIRDS THROUGH AN OPERA GLASS. By Florence A. Merriam. Boston: Houghton, Mifflin & Co.

In this little volume we have another and very welcome addition to the list of popularly written natural history works based on original observation, and its author will at once take her place among the older writers in this field, who, headed by Burroughs, appeal to that large class of readers who love nature in her woods and fields and care not to follow the specialist to his study. Miss Merriam seeks to implant ornithological love in the mind of the most unlearned in birds and bird-ways, she takes her student into the fields and in the clearest manner points out to him the feathered kinds they meet, and further instructs him how alone he may discover and recognize birds which to him were before unknown. Our author has in this no easy task; a first day afield with glass and notebook is very apt to result in a confusion of sights and sounds—hieroglyphics on a previously blank page of our experience; but her methods are clear and cumulative. We must go easily and content ourselves with a gradual acquisition of knowledge, which she shows how to label and pigeon hole, and not imagine we shall learn it all in our first outing.

These are, it is true, but first lessons, and herein lies the chief value and importance of the work. How many of us, without desiring to acquire a complete or scientific knowledge of ornithology, would gladly call by name the songsters of our lawn and orchard; we "hate botany but love flowers," and in our search for some simple, pleasantly written volume devoid of technicalities, find only advanced text books which appall us by the weight of knowledge they display, and render it an apparently hopeless task to trace therein the name of some especial bird friend whose acquaintance we would gladly cultivate. Fortunately for us, we have this growing class of writers whose works address a popular audience, nor can the importance of their writings be easily overrated, for in the popular audience of to-day shall we find the scientist of the future.

The leaders of American ornithology should remember this and also their own early strivings after knowledge; their experience should more than teach them that naturalists are born, not made, and it is, therefore, as much their duty and as worthy their rank to guide the first steps of their possible successors, as to address the most abstruse paper to their equally scientific co-laborers.

GURDON TRUMBULL'S
Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understanded of the people.
Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, of books of which the need is felt in every department of natural history.—*Troy Press.*
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*
I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

Steam Yachts and Launches;
THEIR
MACHINERY AND MANAGEMENT.
The Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls, Etc., Etc. With 96 illustrations.
By C. P. KUNHARDT.
This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*
Cloth, 240 pages. Price, postpaid, $3.00.
FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
SAMPSON, LOW & CO., London, England.

CANOE HANDLING.
By C. B. VAUX ("DOT.")
A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.
NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

LIVE WHITE HARES (*Lepus Americanus*), captured and properly boxed and delivered to express in Bethel, Me., in good condition on receipt of orders and remittances at $3 per pair. Refer to Hon. H. O. Stanley, Dixfield, Me., Fish and Game Commissioner. J. G. RICH, Bethel, Me. dec16,1t

GUNS. CLOSING OUT FINE SCOTT Guns at less than cost. Don't buy before examining these. CHARLES L. RITZMANN, 943 Broadway. nov14,3mo

Chester White, Berkshire and Poland China Pigs, fine setter dogs, Scotch Collies, Foxhounds and Beagles, Sheep and Poultry, bred and for sale by W. GIBBONS & CO., West Chester, Chester Co., Pa. Send stamp for circular and price list.

Wanted.

WANTED.—A TRAVELER WELL POSTED in guns and sporting goods, visiting the large cities of U. S. and Canada, would like to arrange with manufacturer or large sporting goods house to represent them in connection with other goods in the same line. Address TRAVELER, 251 Winchester ave., Chicago, Ill. 1t

WANTED. Live Deer, Prairie Chickens, Partridge, Quail and Turkeys. Address full particulars, no21,4t P. O. Box 3350, New York City.

Field Trial Winners.

We now have ready for delivery pictures of the following celebrated dogs, winners of prizes at Field Trials, on toned paper, size 10×12.

RANGER, SEFTON, CROXTETH.

Price for the full set of three pictures, 40 cts. or 25cts. each sent post paid. Address

Forest and Stream Pub. Co.,
P. O. Box 2832. New York City

YACHTS, BOATS AND CANOES,

WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.

BY

C. STANSFELD-HICKS.

AUTHOR OF "OUR BOYS, AND WHAT TO DO WITH THEM.

NUMEROUS ILLUSTRATIONS AND DIAGRAMS AND

WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.

DESIGNS:

Model Yachts.—Defiance, Isolde, Bonny Jean, and 10-tonner with sail plan.
Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe.
Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehander by C. P Clayton, Puffin, 3-ton Racer, 3-ton Cruiser, 24ft. Auxilliary (steam and sail) fishing boat.

This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.

Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

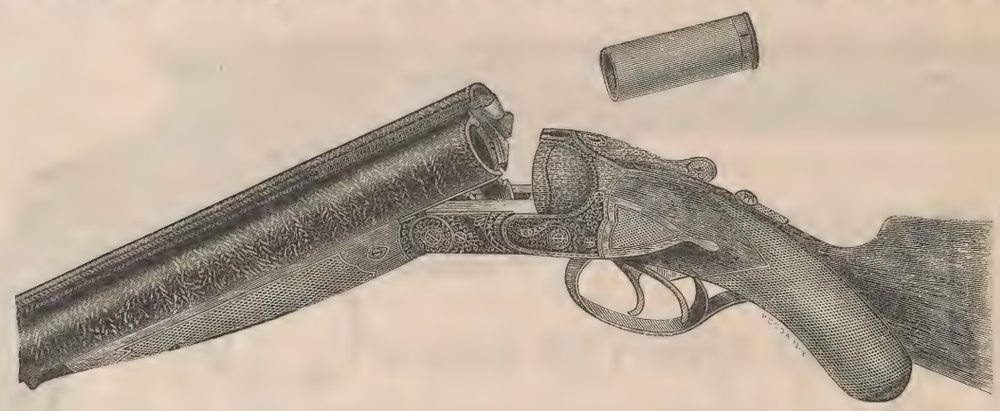
By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY NEW YORK.
DAVIES & CO., London, England.



DOG TRAINING:

BY

S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

For sale at this office. Price $1.00.

Charles Daly Automatic Hammerless.

Made under DEELEY'S PATENT, the strongest and simplest, equal in every particular to any other AUTOMATIC HAMMERLESS costing DOUBLE the price. No. 150, price $175. No 250, Diamond Quality, price $275. Charles Daly Hammerless, $100 to $225.

Charles Daly Three-Barrel Gun.

Shotgun Sizes
10, 12 & 16-BORE.
Length of Barrel,
28 to 30 Inch.

Rifle Sizes
.32 W.C.F., .32-40, .38-55, .40-70, .45-70.
Weights, 8 to 10lbs.

THESE GUNS HAVE DRIVEN ALL OTHERS OUT OF THE MARKET. IF YOU HAVEN'T SEEN ONE, INSIST UPON YOUR DEALER ORDERING IT. SHOOTING QUALITIES AND FINISH PERFECT.

Raymond Extension Skates.

SOLE N. Y. AGENTS FOR THESE CELEBRATED SKATES. SEND FOR SPECIAL LIST AND PRICES.

We have renewed our agreement with Messrs. Wright & Ditson for Lawn Tennis, and A. J. Reach & Co. for Base Ball Goods, and shall be better prepared than ever to fill orders for these goods. Wholesale dealers in Indian Clubs, Dumb Bells, Foot Balls, Gymnasium Goods, Bicycles, Fishing Tackle, Canvas and Leather Jackets and everything in the Sporting Goods line.

CATALOGUES ON APPLICATION.

SCHOVERLING, DALY & GALES,

302 BROADWAY and 84 DUANE ST., NEW YORK.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 19, 1889.

VOL. XXXIII.—No. 22. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

OUR CHRISTMAS NUMBER.

THIS issue of the FOREST AND STREAM consists of thirty-two pages, with an added illustrated supplement. It is the largest number ever issued; and in the wide geographical range of contents and their diversified character and entertaining qualities, our Christmas Number has never been surpassed by any issue of a sportsman's paper in this country. Without emulating the ignorant and arrogant cartographers of the old times, who used each one to reckon his own city as the exact center of the world, we may yet with a good show of reason claim that the FOREST AND STREAM office is a center to which converge good things from the remotest corners of the globe.

Our pages to-day are rich in accounts of sport, life and adventures in foreign lands—Jamaica, Brazil, France, Sweden, South Africa, India, New Zealand, Australia and Japan—what a world-embracing list it is. And the best of all is, that for the most part, these strange scenes are described as seen by American eyes. "Nessmuk" in the Brazilian forests is a live Yankee, looking at things from a Yankee standpoint; "Podgers," an American in Paris, finds in the Seine mode of fishing a ludicrous element not recognized by French eyes; Henry Macdonald, who will be remembered as the author of a series of papers we printed last year on Western frontier life, paints a picture of Japan as it presents itself to American eyes, and an exceedingly vivid and living picture it is. Taken all in all, there is material in these pages for more than one evening's entertainment in this Christmas week; and with this substantial contribution to his pleasure, the FOREST AND STREAM wishes each one of its thousands of readers and friends a very Merry Christmas.

NETTING WILD DUCKS.

THE business of netting and snaring wild ducks for market is carried on extensively on the Atlantic coast, particularly in Virginia, whence hundreds and thousands of the fowl are shipped to the cities. There are laws forbidding this, but not by any means preventing it. In the case of a Maine duck netter something has been done; Detective McNamara, of the State game warden force, recently arrested and secured the conviction of a man who has for a long time netted ducks on one of the lakes of Township 10. The netting has been carried on to such an extent in Maine that some species, notably the beautiful little woodduck, have become quite rare.

New York has a law forbidding the taking of ducks in nets, but it does not amount to anything, for when taken to task the netters have always found an easy way out by lying. They claim that their nets are set for fish, not for ducks, and if the ducks will persist in getting into the nets, they, the netters, cannot help it. This plea usually works well. It will be remembered that State Game Protector Whitaker, of Long Island, made trouble for himself when he destroyed certain nets which he declared (and we have no doubt truly enough) were designed for taking ducks, but which the owners claimed were set for fish. Now Protector Armstrong, who has been investigating the duck-netting at Hood Ground, which we reported the other day, states that under the law this abuse cannot be reached, since the old claim is made that the nets are intended for fish only. If that is the case, a revision of the law is in order.

THE LONG ISLAND COURSING.

AS was reported last week, the slipper of the Eastern Coursing Club, who had been arrested for participating in the sport at Hicksville, Long Island, was acquitted of the charge of cruelty preferred against him by the Society for the Prevention of Cruelty to Animals. This was the second case decided against the Society and in favor of the club; and the members were quite justified in accepting the result of the two trials as at least a local indorsement of the propriety of their mode of coursing. They then proceeded to finish the programme of the meeting, only to see the officers again interfere and arrest the slipper for the second time.

The practice followed by the Eastern Coursing Club at Hicksville was described last week in our Kennel columns. In brief, the jack rabbits are driven out from a corral, are given a fair start, and have a free field before them. The point at issue between the club and the Society is as to the cruelty herein involved; and inasmuch as the Hicksville methods differ in no essential details making them more cruel than the established and popular form of coursing as practiced in the West and in other countries, the question resolves itself into the cruelty, or freedom from cruelty, of coursing.

There is nothing whatever in the Eastern Club's mode of procuring the jack-rabbits in the West and restricting their liberty in a large field that affects the question of cruelty. If there is any cruelty involved it must be in the actual chase of the jack and in the actual putting to death of it by the dog. A studious effort has been made to befog the public mind as to the conditions preceding the actual chasing. It has been represented that the jacks were dropped from the hands of attendants in front of the hound, and that the victims were then torn apart; but all this is purely imagination on the part of those who make such statements. The Society has an appearance of having been misled by these mistaken descriptions of the Club's mode; to have made up its mind when so misled; and now to be persisting in its prosecution—or persecution—of the members purely for the sake of consistency. We have so high a respect for the Society and for the magnificent work it has done that we regret exceedingly to see it thus led into what appears to us to be a grave mistake.

If it be cruelty within the statute to chase a jack rabbit with greyhounds, it must likewise be cruelty within the statute to chase hares with beagles or other dogs; yet this is a regularly recognized form of sport, and has never been interfered with by the authorities. Again, hares are killed with the shotgun. It is well understood that when a hare is killed by a greyhound, the death is instantaneous. This is not always the case with a hare wounded by the gun. Of the two modes, the actual killing by the dog is quite as speedy as by the gun; and the pain inflicted surely cannot be greater. If it be cruelty within the statute to kill hares with greyhounds, it must likewise be cruelty within the statute to kill hares with guns. If one be allowed by law and by public approval so must the other be also.

After all, it is a reasonable view to take of it, that the members of the Eastern Coursing Club may be quite as competent and worthy judges of the ethics of the case as are the officers of the Society. These coursing men are not, as some of the hysterical editorial paragraphers of the press allege, dudes, nor dudlets, nor apers of British customs, nor idle young fellows with more money than brains. They are business and professional men, holding positions of trust, engaged in honorable pursuits. Taken one and another, they are fairly representative of the respectable right-thinking, intelligent class of society. In coursing they seek and find the recreation which others find in lawn tennis, boating, yachting, deer hunting or fishing. They participate in their form of sport led by much the same motives that induce others to go shooting or fishing. It is equally untrue to aver that the man who goes hunting is led by a morbid taste for blood, and that coursing men enjoy the infliction of pain on a jack rabbit. If on the ground of cruelty coursing is to be condemned, we see no logical halting place short of abolishing all field sports where animal death is involved. As a matter of fact, coursing has been practiced for years in the West; it has been there approved by public sentiment. There is no reason to doubt that rightly understood it would be approved by public sentiment in the East.

A PARK FENCE.

THE project of fencing in the National Park, suggested by a correspondent in last week's issue, is not new. It has been brought forward a number of times before, but never, we fancy, by any one who had thoroughly familiarized himself with the reservation and its needs. The matter is not one that requires to be seriously discussed at present. Before this is done the boundary lines of the Park must be settled by law, and a survey made to show where these lines run. After this has been done, which will not be this year, it will be time enough to show the inpracticability of fencing in the National Park as suggested. At the same time it is always encouraging to receive suggestions of this kind, for they indicate the great and increasing popular interest which is felt in this reservation.

OUR FLORIDA NUMBER.

THE issue of Jan. 9 will be a special Florida number, with an illustrated supplement giving portraits of the fishes of those waters, with descriptive text; and accounts of shooting, fishing and adventure in that sunny land. It will be a welcome addition to the FOREST AND STREAM'S already voluminous and many-sided literature relating to that State.

OUR illustrations of the elk have been very carefully drawn from instantaneous photographs, and they furnish accurate, as well as life-like representations of this grand American game. Quite the most noteworthy point in all the papers which accompany the illustrations is the fact that the scene of "Antler's" exploit in running down a live elk was amid the mountains of Pennsylvania. In that region to-day the elk is as unknown as the megatherium. That within the memory of men now living this game should have roamed the wilds of the Eastern States, and should long ago have been exterminated, is only a presage of what will soon be accomplished in the West, where the species is not gradually nor unwittingly but rapidly and wantonly being destroyed. Under present conditions the elk in the West is doomed to extinction. It is high time that the intelligent citizens of Western States and Territories joined in a concerted and determined movement to secure for this species some adequate system of protection. At this stage of civilization it should be known that there is a better use for large game than to permit it to be butchered by the wholesale for its hides or for market, or by trophy-mad foreign sportsmen.

NEXT week we shall give a most interesting chapter on the white goat in captivity; also a record of the work accomplished by the New York Association for the Protection of Game.

Natural History.

OUT-OF-DOOR PAPERS.

VII.—A BOY'S EYES.

AFTER all, a boy is your ideal naturalist, for he pursues the logical method in scientific discovery, seeing first and theorizing afterward.

I am happy to say that I know some boys who already deserve the name of observers. For one, there is my Japanese friend, who expects some day to go back to his country as a scholar and physician. When he is one of the best and greatest of Japan's scientific men, will he still keep up his love for birds and occasionally wear an opera glass strapped to his shoulder? We hope so. But this young Japanese is too much of a public character to be talked about without his knowledge and consent.

The boy of whom I write has no public career planned out as yet, unless to run full tilt through the streets of the town may be called a "public career." He is still in knickerbockers, a tight-built youngster with legs as firm as a two-year-old's, a back as straight as a rush, and well-set shoulders, on which his head balances as squarely as a rocking stone; a lad not yet twelve, excelling in all boyish sports, full of quaint thoughts and labor-saving devices, cautious without being cowardly, brave without rashness, honest and open-hearted always, a pleasant boy to have talk with you because he is sure to have something worth the saying.

So far as I can determine, the secret of his popularity with his mates and elders is his eyes. They are not particularly handsome nor striking; honest blue eyes, very steady when sober and very merry when amused. What is remarkable about them is the way they spy out reasons for what they see. Now we all know that everything has a reason under it, but most of us are too dull-eyed to see the reason even if we lift the object and look all around it, "hot" and "cold," "cold" and "hot" as the children say. But these blue eyes see the why in things, and are continually on the alert, watching birds, toads and beetles with equal interest, to see why they do this or that and what they are going to do next.

Two years ago, at the seashore, this boy amused himself by watching the great black hornets hawking at the flies on the piazza. The girls were annoyed at the hornets buzzing so close to their ears and every now and then bumping against them, but the small boy was ready with a reason. "They're scared, you see, the flies are, and they light on you; but the hornets get them all the same." So after that the girls harbored the flies against the hornets and the boy still continued to watch. After a short time he saw something more. "Their eyes are poor. See that big one there? He just lit on a nail head; thought 'twas a fly; he got fooled."

He is never at a loss to find something to observe. Last year a heavy shower caught him while he was fishing. (In summer, showers, night, mosquitoes, other boys—everything finds him fishing.) From his retreat he kept an eye out to see whatever there was to be seen, and shortly observed the dragon flies, great and little, settling in the tall brook grass for shelter from the rain. Before the shower was fairly over he saw the cedar birds come and drive the dragon flies from their covert, hunting them down in all their lace-winged finery. The great three-inch dragon flies, painted with black and yellow, were too strong for the birds, but the little slender fellows done up in fancy colors, brown, green, blue and dusky, became meat for the hunters. This fall, when paddling up Caucomgomoc stream, we saw cedar birds sitting out on the rush beds near the middle of the stream. This was just after a shower. Had they been catching dragon flies? The boy was not there to tell us. Some time ago I remonstrated with him for throwing stones at a kingbird, but I was told that he was doing it only to please the bird. True enough it did please the bird. From his perch on a high twig the kingbird calculated the curve of each stone, chattering his defiance as the missile whizzed by, rising a few feet when he saw that it came too near, only to settle again in the same place. As it amused both bird and boy, I allowed it to continue, and for several days the kingbird returned daily to enjoy the sport.

One could not be even the best of boys and not sometimes enjoy hectoring other creatures; but frequently the most distress is caused by the most innocent intentions. The boy is always bringing home "chippies" and young robins, leaving the distracted parents to mourn until their offspring is returned. One poor song sparrow doubtless denounced him as a murderer because he choked one of her yellow-mouthed nestlings by feeding it with strawberries against her expressed wishes, although the jury impaneled on the case gave in an acquittal. Once I knew him to catch in his hands a full-grown yearling common tern, perfectly able to fly. From babyhood this boy's cry has been for "sumsin live to play wiv." No matter what the creature was—a dog, a kitten (any stray kitten was treated by him like a princess in disguise), a bird, a young mouse, or even a toad. The great frog transaction, too long to tell here, was the most original and laughable of all his schemes for getting "sumsin live to play wiv."

As a fisherman he is unexcelled. He can angle you any kind of fish out of water. A different length of line, a change in bait or in the time of day, and he can give you cunners, flounders, tomcods or sculpins. He has the "knack" of catching breams—not an easy fish, as you may know, to hook. Chubs, suckers, eels, minnows, bass and perch seem unable to resist him. He can land a pickerel skillfully, and the shy brook trout often sees the world from his fish basket. No kind of fish is unworthy of being caught. He is as painstaking in angling for minnows as for trout. He has the unwearying patience, the delicate hand, the contempt for discomfort which mark a true fisherman. Then he has theories of his own about bait, lines, hooks and sinkers, and to me he divulges at times the secrets of his art which the *vulgus profanum* may discover for themselves, if at all. Dead clams he tells me are poor bait; the fish do not like them. The operculum of the white rock snail, properly trimmed, is a dainty morsel for a cunner. A black rock snail does not meet their fancy. At your request he will tell you how sculpins eat little crabs, and how big crabs eat little sculpins, which is a fairer arrangement than obtains generally. He will catch you either crabs or starfish if you want them. For the former a piece of fish lowered to the right spot; for the latter a line left to lie on bottom. They will crawl some distance to get at it. "How do they know it is there when they can't see?" I ask. "I should 'spose they must smell the bait," he answers, misled by the analogy. One day I met him coming up from the shore with a disappointed look. "What luck?" said I; "good?" "Not very," he replied, "they bit *too* fast."

This is a boy full of thoughts and fancies, seldom at loss for an apt answer. "Walter, why are you buttering your bread on both sides?" inquired his father. "I had to," was the quick reply. "I buttered it on the wrong side first." At the age of five some misdemeanor called down his mother's displeasure. He fled and managed to intrench himself strongly. Recognizing the disadvantages on the side of justice, his mother called a parley, hoping for a capitulation. "Will you promise never to do it again, if I let you off this time?" she asked. The young rebel saw his chance. With dramatic effect he sent back a spirited refusal, "I will not promise. I cannot tell a lie:" and the mother surrendered unconditionally. It was not long ago that he worsted his grandmother in an argument on Abraham's obedience. "Seems to me, grandma," objected he, "Abram was awful slow 'bout 'obeyin', 'cause God said He'd send a lamb for sacrifice, and when Abram got there it had grown up into a ram."

"Eyes and no eyes"—did not we all read the tale in our school days? It was from "Sandford and Merton," I believe, how two boys took a walk, and while one saw nothing the other was able to tell his tutor of many remarkable things which he had noticed. Both had eyes. But it is not so much the eyes that see as the brain that lies behind the eyes. We never see truly until we are interested in what we look at, and the secret of having eyes is nothing less than knowing how to use them, trying like this boy to see the reasons in things, making the brain do most of the work and the eyes help the brain.

FANNIE PEARSON HARDY.

GROUSE NOTES.

Editor Forest and Stream:

Commissioner Stilwell's story of the grouse that had been "tamed" by starvation recalls an experience of my own some two years ago. A Toledo friend who is an enthusiastic sportsman, and who knew and sympathized with my peculiar weakness, met one day an honest farmer who had brought into town a fine live ruffed grouse, evidently a female. It was one of several, so he informed my friend, which had become quite tame under his skillful care. The bird was in perfect plumage, apparently unruffled by captivity, and seemed to have become quite accustomed to the presence of its greatest natural enemy. My friend bought the bird at once, and placing it carefully in a basket in his office telegraphed me to come down. I took no time in reporting, and after hearing a graphic account of his purchase returned my thanks to Mr. L., who insisted on presenting me with it. But not till we had talked the matter over fully did I go to the basket which contained the prize. The bird was dead. Dead as a last year's campaign document, without a scratch upon it, and without a feather ruffled. A close examination showed that it was scarcely more than skin and bone, and the presumption was strong that it had died of starvation. It was evidently too weak to make any show of alarm at its proximity to man, and had evidently been found by the honest farmer in some situation similar to that of Mr. Stilwell's bird, the story about having several grouse on hand and taming them having undoubtedly been manufactured for the occasion. Both my friend and I have often sought for the gentleman who had such skill in handling grouse, but unfortunately we have never encountered him again. The bird was probably so near gone when brought in that it only needed the excitement incident to handling to cause its death.

Your correspondent "G. W. Z." (FOREST AND STREAM, Nov. 28) does not say whether his "faded grouse," so-called, was a male or female. Very probably it was the latter, and a young bird as well. At one time I should have thought it an indication of immaturity, but I have had within a few years a Massachusetts female (adult), which had a liver-colored ruff and light plumage. This bird was in my possessien nearly two years, and laid a nest full of eggs the second spring. But what I wished to say was that few persons who are familiar with the ruffed grouse in only one locality realize what a wide range of coloration these birds exhibit in different territory. During the last six years I have acquired some seventeen live grouse, which represented Maine, Massachusetts, New York, Pennsylvania, Ohio, Michigan, Iowa, Wisconsin and the Province of Ontario. The difference in color and markings was geat enough almost to lead to the conclusion that they were of different species. The birds of the more northerly latitudes, especially those in the pine regions, are of a gray or ash color, while as we come further south and into the territory of the oak and the beach, the ashy tones are gradually replaced by the brown shades. More than this, birds brought from the more northerly latitudes, when they moult here after a year's stay, lose the ashy shades of plumage and acquire browner ones. Perhaps I may be pardoned for the suggestion, but the Ohio birds have seemed to be the handsomest grouse in all the collection, the brown shades in their plumage showing the greatest variety and richness. The birds from Canada and Maine are the strongest and boldest, becoming more readily accustomed to captivity, while their feathered legs would seem to indicate a closer relationship to their cousins, the ptarmigans. This of course is only a climatic modification, which becomes less marked in warmer latitudes. I have never owned any grouse from the Pacific slope, but specimens of the plumage show that these birds have the "faded plumage" that your correspondent describes.

Somebody sent me the other day a copy of the Webster (Mass.) *Times*, containing the article on the capture of grouse in that town, afterward republished in the FOREST AND STREAM. And speaking of this leads me to express the surprise I have often felt that in all these accounts no one alludes to the interesting legends of the ruffed grouse, which explains why it is that these birds so commonly seek the settlements in the fall. If no one else does it, I shall hope some day soon to tell the story as it was told to me by an old Indian guide in northern Michigan. Indeed I am only waiting now till I can verify by a little research some of the vague pre-historial traditions on which it is based. It is very curious if true.

JAY BEEBE.

TOLEDO, O., Dec. 5.

THE SWIMMING HARE.

Editor Forest and Stream:

In answering "T. G.," of Savanah, Ga., about the "aquatic or swimming" hare, you said you had no knowledge of such a distinct variety, but that the common hare will occasionally take to the water when pursued. That there is such a variety has been held by several first-class authorities. It was first scientifically described, I believe, before the Academy of Natural Sciences of Philadelphia and the account published in their Transactions in 1836. It may be distinguished from other hares by its color, its marked habits, its short and broad ears, its short tail, which is never pure white underneath, by its narrow hindfeet, which have so little hair on them that the nails are exposed, and by the size of the eyes, which are fully one-third smaller than the common variety. Its scientific name is *Lepus palustris*, and its common name marsh hare. Its geographical distribution is from the southern part of North Carolina, through the South Atlantic and Gulf States to Mexico. It has not been found in the West, and never on high ground nor salt marshes. It is most abundant in Georgia, Alabama and Louisiana.

Its marked characteristic is of course its fondness for water. It not only takes to the water when pursued and swims streams and mill ponds with ease, but resorts thither for sport, swimming and playing about in deep water with apparent pleasure. It will, when started, hide in deep water among weeds with only its nose and eyes exposed like a frog, and when kept in captivity, if given water, will lie in it for hours at a time. J. B. B.

[Our correspondent has our thanks for calling our attention to the inadvertence in the answer referred to. Two species of water-loving hares are found in the southern United States, *Lepus palustris* and *L. aquaticus*. The former is about the size of the common gray rabbit (*Lepus sylvaticus*); the latter, which appears to be somewhat more western in its distribution, about as large as the varying hare, *L. americanus*. The first named, the marsh hare, has been observed on the Atlantic coast as far north as South Carolina, but will very likely be found to range northward as far as southeastern Virginia. It seems to occur along the whole southern coast, at least as far as Vera Cruz, Mexico, and the opinion is expressed that it may exist along the Mexican coast from Texas to Yucatan. It has also been found inland, in swamps and along streams as far north as southern Illinois. The habitat of *L. aquaticus* is from Alabama west, through Mississippi, Louisiana, Arkansas and Texas. It has also been taken in southeastern Mexico and Yucatan. The range of this species also extends inland, and it is abundant in southern Illinois, near Mount Carmel and Cairo. The marsh hare is slightly smaller than the gray rabbit; it has shorter ears; its eyes are one-third smaller than those of *L. sylvaticus*. The body is proportionately heavier, and the legs shorter than in that species. The feet are sparsely clothed with hair. These are the most obvious physical differences between the two species. The home of the marsh hare is in swamps and low wet ground along the coast, or on the borders of streams. It is abundant near the rice swamps of Georgia and in the low, muddy meadows of islands along the coast. It is rarely or never found on the high, dry land far from water. It is extremely slow of foot, and can be overtaken, it is said, by any dog; but the situations in which it is found are not often invaded by men or dogs, and it is seldom disturbed. It is a capital swimmer, and when alarmed readily takes to the water for safety. Very often when pursued it plunges into the water, and after swimming a short distance lies hidden among the floating vegetation of a pond or sluggish stream, with only its nose and eyes above water. It often enters the water not only for safety, but for amusement as well, and sometimes in localities where it is abundant a number of these animals may be seen swimming and playing in the water. So rapid are their movements in their element that it is stated that some escaped from a Newfoundland dog which was pursuing them. The marsh hare is readily tamed, and after a short captivity becomes very gentle. One owned by Mr. Bachman freely took food from the hand a few days after it had been caught. It was fond of lying for hours in a trough of water, and seemed uneasy and restless when this was removed from his cage. When the trough was replaced it plunged into it, lying as deep as possible in the water. The nest of the marsh hare is rather large for the animal and is usually constructed of rushes, and is often more or less hidden by bending rushes or other surrounding vegetation over it. The mother enters by a hole in the side. The young are said to number from five to seven. The larger water hare (*L. aquaticus*) in many of its habits resembles the marsh hare, and so differs from the northern hare, with which in its physical character it would naturally be compared. It is a good swimmer and very much at home in the water, and its feet, as in the marsh hare, are but thinly clothed with fur. It is noticed that the tracks of both these water hares made in soft earth leave distinct impressions of the individual toes and nails. The swamp hare runs with great swiftness, and when pursued usually takes a course toward water, and throws off its pursuers by swimming.]

A DECEMBER ROBIN'S NEST.—Meadville, Pa., Dec. 12.—*Editor Forest and Stream:* On Monday, Dec. 9, I found a robin's nest with two eggs in it. It was built on one of the under timbers of the N. Y. P. & O. R. R. bridge, about three miles below this place. The female bird was on the nest when found. Both birds were contented and happy as if it were May instead of December. We usually have very cold weather during this season of the year, but the weather has been mild. Robins began migrating from this latitude about Sept. 1. Game of all descriptions is scarce here, except rabbits, which are very plentiful, hundreds being shipped to Eastern markets.—A. C. KIRKPATRICK. [A singular case and one well worthy of record.]

"BITRON."—Brooklyn, N. Y., Dec. 13.—*Editor Forest and Stream:* As you supposed, in your issue of Dec. 12, I meant by "bitron" bittern (*Ardea stellaris*). It may be not generally known that bitterns are fine eating. They are fat, their flesh is tender, and when properly cooked with bacon they are equal to chicken. The common heron (*Ardea cinerea*) also is considered quite a delicacy among us; and when in the bay we hunt these birds quite as eagerly as we do ducks.—B. L. L.

FOREST AND STREAM.

SUPPLEMENT No. 7——IN FOREIGN LANDS.

ON THE TROMBETAS.

THE Rio Trombetas rises in the highlands a few leagues north of British Guiana, and in latitude 2° N.; flows in a southeast direction for some twenty-five miles, and enters the Amazon about four miles above Obidos, a Brazilian town of 500 habitants. It is a "fever river," and not much visited by Europeans on that account. Just below the falls *tertianos* are very bad, and often fatal.

It is a wide river, and the water is clear; unlike the Amazon, which is muddy; or the Rio Negro, which is wine-colored; or the Rio Blanco, white and milky. The natives call the valley of the Trombetas "a world by itself," under the impression, I suppose, that it is pretty well cut off from the rest of the world. It *is* a strange country. You may leave the main river at almost any point below the *caxoeiras* or rapids, following the deep *canos* or channels far into the gloomy forest, and cruise for weeks and weeks without coming in sight of the main river. Game—nowhere abundant in the Amazon Valley—is more plentiful on the Trombetas than elsewhere; and perhaps it was this that caused me to plan a canoe voyage up that river.

Let me premise that I am a live Yankee, and had been waiting on Brazilian officials with their tardy ways from May until August. It was driving me to the verge of insanity. Like Sterne's starling, I wanted to "get out." Not that the city of Para, North Brazil, is a bad place for an indolent man who can enjoy swinging in a hammock twelve hours per day, in a climate where the mercury does not drop below 80° nor rise above 95°, summer or winter, by night or day. But there are fragile constitutions that cannot stand so much sleep. Wherefore, when I had waited three mortal months for nothing; when I had gone daily to the palace, only to be put off with "*pacienza*" and "*logo mais*"; in a word, when my stock of Yankee patience was utterly exhausted, I suddenly resolved on a canoe trip.

It was in August, 1867. Professor Agassiz had made his celebrated exploration the year before, and his lectures, delivered in Cooper Institute the previous winter, were in my pocket, while I had the gist of them in my head, and found them of little practical value. I had what was better, *i. e.*, letters of introduction from the highest officials and best known scientists at home. The letters helped amazingly. Without them I should have been a sort of pariah. With them, I could go anywhere.

Among others, I luckily had a letter to Major Coutinho, the officer who had been detailed as guide to Prof. Agassiz and his party, and the Major was supposed to know more of the Amazon and its tributaries than any living man. I found him affable and ready to give all the information in his power. He dissuaded me from my original intention of ascending the Tapajos, and recommended the Trombetas instead. Obidos was a cheaper town to fit out from than Santarem. To the *caxoeiras* of the Trombetas it was a short two days' paddle; to the rapids of the Tapajos, twice as far. And game was much more abundant on the former stream. He even thought it likely I might get a shot at a jaguar, an event for which I was pining. Lastly, I could make a canoe trip cheaper than I could live in the old Hotel de Europa, by nearly one-half. He said, "You can hire a good *montaria* for $2 per month. Pay your paddlers $2 a month each, and your *puntero* $4, with their salt fish, farina and coffee. Your crew of four, with the canoe, will cost $12 a month. Provisions and your own expenses will about double that. You can live a river life for a dollar a day, provided you can stand it. And you can pay off your crew in hickory shirts and cheap jewelry at 100 per cent. profit." The Major gave me letters to several of the principal men in Obidos, and after the usual amount of vexatious red tape that pervades Brazil, I found myself afloat in one of the fine iron steamers that plow the waters of the Amazon. From Para to Obidos is 700 miles, and the steamer made it, against the current, in less than two days and a half.
